These volumes contain an invaluable mass of data regarding this interesting epoch. Most of the documents are new to the general public, and even the existence of many of them was unsuspected by students until patient and long-continued search brought them forth. Their appearance must cause the rewriting, to a considerable extent, of American industrial history.

Modern Christianity, or the Plain Gospel Expounded. By John P. Peters. New York: G. P. Putnam's Sons. $1.50.

This volume by Dr. Peters is not at all a systematic presentation of the doctrines or essence of Christianity, but is composed of selected sermons, preached at St. Michael's, in which the author interprets some of the dogmas of the Church in the light of present knowledge and applies Christian teaching to many sides of modern life. The best part of the book is that devoted to the social teaching of Jesus, which Dr. Peters takes very literally and expounds in direct relation to the social conditions and problems with which the Church is now struggling. To the author the essence of the Gospel is brotherhood, and this in its various manifestations he contrasts with mere respectability, freedom from vice and villainy, and even self-culture. The true Christian is he who breaks the shell of caste and custom and enlarges his life thru a ready response to human need in service and sympathy. The subject matter of these sermons is not new or strikingly exprest, but their deep sincerity, their fearlessness and simple conversational style enlivened by anecdotes of personal experience make them attractive reading. Flashes from Dr. Peters's full and accurate knowledge of Eastern manners and customs light up here and there some dark and difficult Biblical passages.

The O'Flynn. By Justin Huntly McCarthy. New York: Harper & Brothers. $1.50.

This is a Munchausen tale of love and adventure, so rakish and whimsical that the very words on the page jest and wink at each other. It is the story of The O'Flynn, an Irish soldier of fortune who returns from the wars to take possession of his ancestral halls, only to find them in ruins, his one retainer starving, and two bailiffs awaiting his arrival. Meanwhile, on his way over, Irishman that he is, he has fallen in love with Benedetta Mountmichael, who is bringing jewels of great value from France to the exchequer of James Stuart, who holds his court in Dublin. The O'Flynn accepts the misfortune of his poverty-stricken inheritance with philosophy and the fact of his love with optimistic enthusiasm. His fanciful impudence bears him up upon the gossamer wings of good fortune, and in the service of James he wins honor and the lady of his desire. The story is delicate, quixotic and volatile, and is jestingly written "in memory of a jest."

The Literature of the South. By Montrose J. Moses. New York: Thomas Y. Crowell & Co. $2.50.

The purpose of this volume of some five hundred octavo pages is excellent—to justify the sectional point of view in dealing with literature produced in the South by showing its connection with the distinctive evolution of Southern culture. The author has accordingly ransacked various and sundry monographs and histories (noted in a bibliography) dealing with social and economic conditions in what he names the Colonial, Revolutionary, Ante-Bellum, Civil War and New South periods. The result is a series of introductory chapters on the social forces in each period. The reader is disappointed in meeting with no analysis of the influence exerted by this carefully studied environment on the developing literature, no concise characterization of the spirit of Southern letters,

if indeed that be as distinct an entity as the author alleges. The only typical traits or tendencies pointed out are intellectual isolation in its prose and the persistence of spiritual life in its poetry. The vagueness with which even they are discussed deepens the impression that if these social essays had been presented more tersely, and with a larger and firmer synthesis of fact and interpretation, the object of the book would have been much more satisfactorily attained. The remaining chapters are more successful, with few obvious slips in statement of fact. Mr. Moses does not intend to furnish a handbook of biographical detail, yet nearly all the Southern writers from John Smith to Ellen Glasgow receive consideration, the important figures up to 1876 being treated at length. The reader will carry away rather hazy notions of their lives, but he will have found much discriminating criticism of their work, interspersed with references to the influence of surroundings on their thought. In literary matters the author does not allow his enthusiasm as a native Southerner to get the better of his judgment. He recognizes that the small men are small, and he sets up no very extravagant claims for the leaders. He is even willing that Poe should not be counted as a true Southerner, and he admits that Timrod came perilously near to being a fire-eater. He has added an index of names and titles that makes the book a useful as well as an unbiased and trustworthy discussion of Southern literary accomplishment.

The Doctrine of Grace; and Kindred Themes. By the Rev. George Sayles Bishop, D. D. 12mo., pp. 509. New York: Gospel Publishing House.

Dr. Bishop is the ablest and most brilliant of all the preachers who cling to the extreme doctrines of Augustine, Anselm and Calvin. With him salvation comes wholly by free grace, with no admixture of free will. This includes divine election and perseverance of the saints, and with it goes an absolute infallibility of the Scriptures. One of the chapters in this volume—sermons rather—is devoted to proving that the Hebrew vowel-points are inspired, and were used from the beginning; also that the square Hebrew letter did not develop from the Phenician letters. Another chapter argues that the cosmogony of Genesis is purely literal truth, the twenty-four days of creation, the woman from the rib, the serpent and all. The atonement by substitution is defended on business principles; while Arius is condemned as a higher critic and Arminius as false to his trust. Dr. Bishop holds his flag high, and there is a certain measure of poetic feeling and a larger and fascinating amount of eloquence in maintaining positions that are untenable in history, criticism and philosophy. Yet he is a real scholar and his spirit is as gracious as his theology is severe, and we heartily commend the volume to the interested reader.

A Village of Vagabonds. By F. Berkeley Smith. New York: Doubleday, Page & Co. $1.50.

Lift-Luck On Southern Roads. By Tickner Edwards. New York: The Macmillan Company. $1.50.

We are a message-ridden generation of readers who have browsed for some years over the arid fields of serious, problematic novels, with but a languid hope for fresh pastures and subjects new. Occasionally, however, we strike in our aimless path a cool, peaceful stretch of soothing fiction that heals our furred minds and imaginations. Of such a nature are these two books—*A Village of Vagabonds* and *Lift-Luck on Southern Roads.* Both tell of a desultory life amid many sweet kindnesses of people and of Nature. The "village of vagabonds" is a little Norman hamlet located, as the author says, "snug at the lower end of the bay, a long mile from where the plovers rise." There is no story in our nervous, excited conception of the word. On the contrary, a certain quiet pleasure creeps into our reading as we pass casually and without tension from one day to another along with the narrator. His house, gathered in the embrace of a low stone wall, "green with lichens," draws us slowly but surely into its roomy hospitality; his dog, his cat and his maid servant become householders in our affections; his friends become our friends and their interests our interests. *Lift-Luck on Southern Roads* is a meandering story of a pilgrimage

thru five southern counties of England. The author, in a dedication to a friend, says, half deprecatorily, of his vagabond spirit:

"Sweet are the uses of infirmity. And when one's infirmity is no worse than a sort of picturesque slacking of all members but eyes and ears—and these alert, very much and at all times—no great harm is likely to accrue."

The book is, in fact, a rare account of English roads, English villages and English people as met with in a poetically simple autumn journey along unfrequented routes. The reader, together with the traveler, experiences the unusual pleasure of going forward without a purpose and trusting to the hospitality of a passing teamster who gives them a "lift" to the next village and sometimes even warily shares with them his opinions upon life and people These two books should be reserved by the wise reader as periodic antidotes for restlessness and too earnest purposefulness.

The Wisdom of the Apocrypha. New York: E. P. Dutton & Co. 60 cents net.

In the "Wisdom of the East" series has now been published *The Wisdom of the Apocrypha,* with an introduction by C. E. Lawrence. The form of this little volume is altogether convenient, and its contents are always readily accessible. Here we have the revised text, permission to use which has been granted by the delegates and Syndics of the University Presses of Oxford and Cambridge. Some deletions have proved necessary, principally the last nine chapters of the "Wisdom of Solomon." This volume is not for the Biblical scholar alone, or even chiefly. The modernity of most pages is as great as that of any classic we know. On page 99, which happens to reproduce several verses from Ecclesiasticus, one reads:

"Rebuke not thy neighbor at a banquet of wine, neither set him at nought in his mirth; speak not unto him a word of reproach, and press not upon him by asking back a debt. . . . Pour not out talk where there is a performance of music, and display not thy wisdom out of season."

These and other maxims are more to the point in the year 1910 than are the observations of a writer in the *American Magazine* on "Eating in a Wicked City."

The Ohio Country between the Years 1783 and 1815, including Military Operations that twice saved to the United States the Country west of the Alleghany Mountains after the Revolutionary War. By Charles Elihu Slocum, M. D., Ph.D., LL. D., New York and London: G. P. Putnam's Sons. 1910. Price, $2, net.

Dr. Slocum has written an antiquarian's account of the Indian wars in Ohio and Michigan and the final struggle with the British around Detroit. His enthusiasm for the subject is considerably greater than either his information or his literary ability. At times he touches upon the pedantic, as when he consistently uses the terms "savages" or "aborigines" in speaking of the American Indians. He makes much of the refusal of the English to surrender the frontier forts after the peace of 1783, using constantly the words "conspiracy" and "treachery" to describe their conduct. But he appears to have made no important new discoveries and to have used no materials not already well known. We fear that his book must be classified among those of a group of authors whom Dr. Slocum explicitly condemns in his preface—the many who "write so much and yet impart so little of practical information."

Literary Notes

....Endeavor for social betterment is no new enterprise for the Church of John Wesley, and some of the best organized effort in relief in recept years has been conducted by Methodists, especially by their deaconesses. In November, 1908, Methodist social workers held a conference at St. Louis, and the addresses there presented are included in *The Socialized Church* (New York: Eaton & Mains. $1 net).

....A new venture of an ambitious character is the *Logos, Internationale Zeitschrift für Philosophie der Kultur,* published by J. C. B. Mohr, of Tübingen, with Dr. Georg Mehlis, as editor. The contributors include Professors Rudolf Eucken, Ernst Troeltsch, Heinrich Wölfhin, Frederick Meinecke and others. Three large brochures will appear annually, dealing with the chief problems of theology, jurisprudence, politics, economics, art and philosophy. The cost is 9 marks per annum.

....A new definition of art is found in the unpublished papers of Gustave Flaubert, many of which are being made public in the issue of the new definitive edition of his works. "Art is the quest for the useless," he writes: *la récherche de l'inutile.* "Art is, in speculation, what heroism is in morality." Criticism, this novelist called "the sixth Muse," and of his

own casual criticism there are many examples among these papers. Of Renan's *Acts of the Apostles* he wrote: "An early morning odor, a sea-breeze, if I dared to call it so. . . ." Again, "Hope for no philosophical progress," he wrote, "so long as men tumble over themselves in decorating God with attributes."

....Additions to "The Bible for Home and School" are *Genesis,* by Dr. Hinckley G. Mitchell, and *Galatians,* by Prof. Benjamin W. Bacon (New York: The Macmillan Company. 90 cents net and 50 cents net). The series is an excellent one—for the books thus far treated as good a brief commentary as has appeared. A succinct introduction gives the salient facts as to the authorship, literary character, historical credibility, and period of composition of the several books, and the running commentary on the text supplies information on every difficult phrase. The authors are Americans, but the series promises to equal, if not surpass, the well-known "Cambridge Bible for Schools."

....An indefatigable polygraph has recently died in the person of Léopold Delisle, as is shown by the fact that Lacombie's bibliography of his works (1902) has almost 2,000 entries, totalling over 500 pages. Tho he died at an advanced age, M. Delisle retained his keenness and much of his vigor to the end. Born at Valognes (Manche), October 24, 1826, he was, besides scholar and author, a former Administrator-General of the French National Library. In that capacity, he started the printing of the General Catalog (still far from completion), and presented to the nation his own private library of 30,000 volumes and pamphlets. He was elected to the Institute in 1857.

....The Western world has more often thought of Japanese travel as a diversion of Occidentals than as a means of education for the Japanese themselves. But nowadays the Japanese is not even content with seeing the foreigner *en voyage.* Instead, he must track us to our lair, and the native press actively organizes tours directed upon the lines of our own tourist-agency voyages. "Hardly a day passes," according to a London *Times* correspondent, "without the publication in some of the newspapers of accounts of various tourist parties." Visitors "do" not China and Japan alone, but Europe and America as well; and all according to the recipe of Cook.

....The third edition of *The American in Paris.* Eugene Coleman Savidge's "Biographical Novel of the Franco-Prussian War, the Siege, and the Commune," is reissued, many years after the volume's original appearance, by the J. B. Lippincott Co. ($1.50.) In the preface to this new edition Dr. Savidge reminds us that the book "was conceived during the author's student days at Paris, and written during his hospital interne service." His young American is, however, an embryo diplomat, and not a student; thus he has the neces sary *entrée.* The book in which he is the nominal hero belongs to a bastard genre, so far as it is a genre at all. Even so, that book is spirited, and its author was an observing witness of great events.

Pebbles

A WOMAN'S glory is her hair. But jute is not hair.—*Atchison Globe.*

HE—I always make it a habit to kiss the girl I go out riding with.

She—Well, that's not a bad riding habit.

FIVE Atchison women hired a rig yesterday, and went out in the country where they had quite an adventure; while in a pasture picking up walnuts, a farmer's dog barked at them.—*Atchison Globe.*

"WHAT's a dilemma?" asked one small boy.

"Well," replied the other, "It's something like this: If your father says he'll punish you if you don't let your mother cut your hair, that's a dilemma."

LADY CUSTOMER (in furniture shop)—What has become of those lovely sideboards you had when I was last here?"

Salesman (smirking)—I shaved 'em off, madam.—*Boston Transcript.*

"OH, why has every old maid a cat?"
Said Algy one day to his wife.
Quoth she, "I can answer you that,
It gives her a *purr puss* in life!"
—*Judge.*

MODEL.—I think I shall spend a week in Paris."

Artist.—How the dickens can you afford to do that?

Model—I can't, but I can think I will.—*Illustrated Bits.*

AT breakfast recently Andrew Carnegie indulged in a piece of pie. A diet reformer present remonstrated.

"Why, Mr. Carnegie," he said, "do you eat pie?"

"Of course," replied the noted philanthropist benignly. "What do you do with it?"

A CARD TO FOREIGN CRITICS.

We chew gum.	You chew garlic.
We often spoil our wives.	You often beat them.
Our Puritans burned heretics.	Your heretics burned Puritans.
Many of our best families are being supported by graft.	Many of yours don't need it—their ancestors fixed it for them.
Our houses are like steam ovens.	Yours are like cold-storage plants.
What can be worse than our habitual use of ice water?	Your habitual use of absinthe.
We have no interesting ruins.	You have no modern plumbing.
We think too much of ourselves.	So do you.
Our struggle for equality is comic.	Yours is tragic.
Many of our institutions have become corrupt.	Many of your corruptions have become institutions.
Our custom house is obnoxious.	You doubtless have bandits of your own.

—*The Metropolitan Magazine.*

The Independent

Entered at New York Post Office as Second Class Matter
Publisher, Clarence W. Bowen
130 Fulton Street - - - New York

A WEEKLY MAGAZINE. FOUNDED IN 1848.

One Year, $3.00. Single Copies, 10 Cents.

Single copies over six months old 25 cents. Postage to any foreign country in the Universal Postal Union, $1.75 a year extra; to Canada, $1.00 extra. Subscriptions will be received for other periodicals, and clubbing rates will be granted as low as offered by any responsible agency.

Order for the change of an address should be received two weeks before change is to take effect. The old as well as the new address should be given.

For the convenience of our subscribers we will send on receipt of publisher's price any book reviewed or advertised in our columns.

Volumes of The Independent are completed at the end of December and June, and a full index is furnished free on application. Neat binders holding in book form thirteen current issues will be furnished for 45 cents.

If the numbers comprising any semi-annual volume are returned to us prepaid in good condition with $1.50 we will bind the volume in handsome and substantial half buckram and deliver it free anywhere in the United States.

We are always glad to receive articles for examination, but writers desiring the return of their manuscripts, if not accepted, should send a stamped and addressed envelope. We cannot, however, even so, hold ourselves responsible for their return. Authors should preserve a copy.

Advertising rates will be furnished on application.

A Constitution for Great Britain

THERE is now proceeding in Great Britain an unofficial conference of a very few gentlemen who, by common belief, are to inaugurate a most momentous epoch in the history of the world, one which has no equal in the present generation, unless it be the establishment of the Hague Conferences, the emergence of Japan as a world power, and the probable establishment of constitutional government for China, with all which that will involve in the growth of national consciousness and patriotism. And yet it is a conference to which American journals pay almost no attention, so absorbed are we with the local and the insignificant.

These gentlemen sitting around a small table in a small conference room are the leaders of the two great antagonistic political parties in Great Britain. They came together to see if they could not come together. The question at first was one of mending or ending the House of Lords; but that question has lost its prime significance in the much larger questions that it was seen were involved. Back of the question of the supremacy of the hereditary House of Lords is that of home rule, and with home rule for Ireland is bound up the question of home rule for England, Scotland and Wales: and that also forces consideration of the imperial question of the binding together in some federal way of the entire Empire. All these immense questions have to be considered, and it is to the great honor of British statesmanship that these gentlemen can put aside their partisan interests and meet and confer as simple patriotic statesmen, and plan for the fundamental interests of Great Britain and of Great Britain's larger Empire.

Of course everything thus far is confidential, but sufficient intimations are given, partly intended to test public opinion, to make it clear in what direction their conclusions are nearing; and they are in the direction of federal home rule.

If we can gather correctly from present indications there will be proposed a convention consisting of members officially appointed to represent Britain and Ireland, who shall meet, probably by themselves, so that they can discuss freely, and who shall draw up a constitution, which will have to be in fact, if not in form, a written constitution. It will provide for a reconstruction of the present British Parliament, by reforming the House of Lords and redistricting the membership of the House of Commons. The hereditary members of the House of Lords will be much reduced in number, and those retained will be selected, as is now the case with the Scotch members. The non-hereditary members will be largely increased beyond those now members, namely the Lord Bishops, whose number may be reduced.

Then the next and even more important proposal is likely to be that of four local parliaments, one each for England, Scotland, Wales and Ireland, to which shall be committed their local interests. It may seem amazing that Conservatives and Unionists can consent to this for both islands, which they so bitterly opposed in Gladstone's time; but conditions have greatly changed in thirty years. The new land laws have pacified Ireland, and the old age pension acts have aided, for in this matter England helps pay Irish pensions. There are no more outrages, the peasants are becoming landowners, emigration has ceased, and Fe-

nianism has dwindled almost to a vanishing point. The Irish who then called themselves a nation, and their party Nationalism, are now ready to be content to accept a local parliament under an Imperial Parliament. T. P. O'Connor will not object, nor Mr. O'Brien, and Mr. Redmond appears to be on the fence, ready to drop down. So far as Ireland is concerned the only word of protest we hear comes from Protestant Ulster, some of whose old fighting Orangemen fear that they will, in a new Irish parliament, be opprest by their South of Ireland Catholic foes. But this is by no means a universal fear. Many of them wish for a local parliament; and any such apprehension is groundless if we can judge from the harmony with which in Canadian provincial parliaments French Catholics and English Protestants get along together very peacefully.

If Ireland wants her own local parliament England needs one. The present Parliament is fearfully overburdened with local business. Very important business it has no time to take up and consider thoroly and act upon promptly. Instances are given in the English papers in which bills of very great importance, and which would call for no special discussion, have been shoved aside for years without action. What it was not easy to give as a special privilege to Ireland can be allowed even by Conservatives to the four at once as provinces under the one Imperial Parliament.

To Americans it has long seemed strange that home rule of this general sort has not been given long ago. THE INDEPENDENT has again and again brought up the parallel of our own Government, with its central Congress and its local State legislatures. But in the British discussions the American precedent has been kept somewhat in the background. They have looked rather to the Canadian example, with its Parliament at Ottawa, and then its several parliaments for its nine several Provinces. This has been enforced lately by the remarkable success of the federation of all Australia, and the even more remarkable federation of all South Africa, both of them with their greater and lesser parliaments, and all of them, Canada, Australia and South Africa, patterned so nearly on that of the United States. These examples are very potent and convincing. What these self-governing colonies can do why cannot Great Britain do, and so heal a running sore? To this is added the example of Germany, which is the most compactly and strongly governed country in Europe, and its government is federal. It has its central Reichstag, representing the whole empire, but Prussia and Saxony and all the rest of the twenty-six subordinate states control their own internal affairs in their own diets. It is the same with Switzerland. The only considerable nation of western Europe which is a real exception to the federal scheme of government is France, a very compact country, geographically, in which conditions seem to favor unusual concentration of governmental functions.

There remains to be considered one other question of supreme importance, which has long been before statesmen, which has been much urged by Mr. Chamberlain, and which must be carefully considered by the present conference, that of tying the colonies to Great Britain by representation in the British Parliament. It is notable that they have not asked for it, have seemed a little cold toward it, but yet are proud of their relation to, and nominal dependence on, the mother country. Something of the sort may come later, probably not as a result of this conference, but it is not undesirable. Canada, Australia, South Africa and New Zealand are self-governing colonies and very jealous of their virtual independence. They make their own tariffs, and to a certain extent have their own diplomatic representatives. They contribute nothing to the imperial exchequer.. They raise their own revenue in their own way and spend it as they please, asking no permission or advice. They are dependent only in name, attached only by sentiment, which is, after all, the strongest bond. When asked to consent to a common tariff law they refused, and that had to be given up. The most they would consent to was to make certain preferential tariff agreements with the mother land. What the result of Canadian reciprocity with this country will be, we do not yet know. These free, independent colonies, so

American in their institutions, with no established Church, may consent to build a battleship or two to be added to the British navy, but not to be moved from their own waters except with their consent, and to be wholly under their control. They feel competent to attend to themselves, and it is only sentiment and the vanishing possibility of war that holds them fast to Great Britain. Just how they could be represented in Parliament, and what rights they would have to give up in such a Parliament and what advantages they will gain, it will tax Mr. Asquith and Mr. Balfour to tell them. With the present light some further connection seems desirable, but perhaps not in Parliament, but in a separate Imperial Senate, limited in the number of its members, and with little absolute power, but with great influence of advice and agreement for promoting the interests of the total empire.

We cannot believe this momentous conference will fail. Its members do not wish it to fail. The British people wish it to bring peace and to introduce a new epoch of good will, harmony and prosperity, with an enormous influence on the future of the world. Great Britain, more than any other power, rules the world. But it is Greater Britain that rules, for that wonderful little island has overspread all the earth.

Why Go to College?

President Lowell, of Harvard University, in an address at the Regents' convocation in Albany the other day, made the surprising statement that it is, or should be, to study and learn that a young man should go to college. As we read the papers at this season, and at almost any season, we would suppose it was to gain muscular, not mental, training. The daily journals are giving columns and pages to college football, and at other times it is college baseball or college boat races. We know that most of the professors in our colleges act as if they thought that mental equipment is the purpose and aim of the college, but as we read the papers edited by the students themselves we should judge that the professor ranks below the coach. We remember that in the English universities the word *coach* has had a scholastic sense, but in American collegedom it is applied solely to those who give training in athletics, and even so not to the students generally, but to those proud wearers on their breast of the college initial. It is these students who gain distinction; it is they who give fame to their college.

But this is a fading fame, lasting but two or three years, and it is hardly worth while to go to college to get it. It can be had—or at least the physical strength or dexterity can be found—better in the professional field in which one does not have to attend so many lectures and fail in so many recitations. The professional baseball players will beat the best college teams at any time.

It may be old-fashioned to defend the statement, but we hold that one should attend college chiefly and first to learn. A father should regret it much that his son is training for one of the intercollegiate meets. The student most honored in college should be the one who, character being equal, shows the quickest, the cleanest, the most comprehensive grasp of what he is required to learn in the routine of study. Call him a grind, if you will, but to grind away is most honorable. Of course, gentlemanliness is essential, and the breadth which employs time also for the graces of culture as well as for the acquisition of knowledge along the tasks assigned. Yet let it be remembered that scholarship is the best of all college acquisitions. It indicates superior brain, which is better than superior muscle, and further, superior intelligence in grading values, and putting highest those which will hold longest.

President Lowell says that at the present time the appreciation of scholarship among students is very low, that they honor "sports" more than they do "grinds." It is a common saying among students, he tells us, that they believe, or say, that labor devoted to scholarship is no evidence of superior success later in life, and the honors they give are rather to athletes or to men of social prominence than to scholarly ability. This is too true of our large Eastern institutions, but not yet of the Western State uni-

versities and smaller colleges, and herein is one of the reasons why we may expect the West to gain influence over the East. Boys ambitious to succeed in later life go to college in the West in larger numbers, while in the East a larger number simply wish to "pass thru," and get what pleasure they can out of it. But it is scholarship more than anything else that tells out of college. It is the Phi Beta Kappa men, the few high rank men, that gather the prizes in the struggles where man meets man, nine to one.

The Law and Its Makers

If anybody doubts that the "substantial citizens" of a great community can get into a state of mind indistinguishable from the psychological solidarity that has been described in the works of Le Bon, Boris Sidis, and other specialists on "the mob," he should sit down, now that election is over, with a pile of New York newspapers accumulated since the campaign began, and reflect upon the revelations which they offer.

It is plain that the news columns and the editorial pages have reflected for once a genuine case of "viewing with alarm." A large proportion of the business men of New York, and of other Eastern cities as well, has been in a state of fear lest the legal safeguards that surround vested interests should be leveled, and a terrible small man of the Napoleonic type should ride into imperial power on the suffrages of a howling populace. And when a great mass of human beings collectively fears, it collectively ceases to think in terms of the rule of three. It collectively believes, it collectively creates a myth, and collectively it arrives at conclusions that will not bear examination in the light of fact or by the sense of humor. Neither education nor conscience has power to save, once the apprehension of fact and the sense of humor are impaired. It was the best men of Salem, and not the riff-raff along the docks, that went "off their heads" in the days of William Hawthorne and the Hon. George Corwin.

In the present instance a psychological mob of business men, lawyers and editors has worked itself into the conviction that Theodore Roosevelt, ambitious to be elected in 1912 to another term of power as President of the United States, is attacking the courts of law and the law itself, in a reckless appeal to popular passion. This conviction has every characteristic mark of mob belief. It is the product of fear, not of scientific induction. It is held with a fervor inversely proportioned to the stock of actual information possessed by its devotees. It may be true or not true as a report of objective fact, but not one of its frightened and embittered proclaimers actually knows whether it is true or not. He is only "sure" that it is, like some chattering heathen who has seen a ghost.

When, therefore, some cold-blooded skeptic begins to analyze the whole affair, without prejudice or terror, he is bound to raise questions that, one of these days, will make some of the participants in the panic feel in a small way a good deal as Judge Samuel Sewall felt in a big way when, in his latter years, he stood up in meeting once a year to do penance before man and God for his preposterous judgments in the witchcraft trials. Some of these questions occur to us to raise now, by way of preparing the minds of estimable persons for the conviction of sin and foolishness that they are surely to endure by and by.

For example, altho so good and sane a man as Judge Samuel Sewall was could make such frightful blunders on the bench as he himself in after life acknowledged that he had made, are the judges of the present day so much more wise, so much more sane, so much more righteous, that judicial blundering is no longer possible? If not, then has the time come when an American citizen is barred from saying that he thinks they have blundered, even to the extent of saying it in impolite language, with a few unnecessary expletives thrown in? Again, when the Supreme Court of the United States handed down the Dred Scott decision, did all the people in this country who denounced it, in terms compared with which Mr. Roosevelt's language is an afternoon tea decoction, thereby make themselves assailants of society and destroyers of respect for law? Once more, is the institution superior to the sovereign that creates it? Is the law more sacred than the law-making and law-abiding people that make it and enforce it?

These are simple questions, to be sure, and the man obsessed with fear may sniff at them, but, like the elementary and inconvenient question that children ask about things which their elders tell them not to meddle with, they go to the root of the matter. The issue is not whether the sort of criticism which Mr. Roosevelt indulges in is in good taste, or is just, or is calculated to increase the respect of mankind for Mr. Roosevelt's integrity and acumen. It is the question, as everybody acknowledges, whether Mr. Roosevelt's remarks, intonations and gesticulations are dangerous. They are said to be dangerous because they incite the people against the law, against the courts as institutions, and against the judges as men.

Let it be granted that they do. What then? Precisely what is the danger? Is it that the decisions of the courts have been so erroneous or so unrighteous that the courts are vulnerable? Is it that so large a part of the American people is susceptible to demagogic appeal that the nation is imperiled whenever a strenuous personality turns demagog? Is it that the entire people, including the sober with the thoughtless, will probably curtail the powers of the courts and upset the Constitution, if their attention to the facts is once effectively secured? Which of these possibilities is the terrifying thing that has so gripped the American business man for the last two months?

We hold no brief for Mr. Roosevelt, and do not propose to apologize for his language or his manners. But these seem to us trivial things in comparison with the mental prostration of a great and influential class of American citizens thoroly frightened lest a vigorous denunciation and remorseless examination of the trend of court decisions and the prejudices of judges should disintegrate that form of political society known as the United States of America.

A Bit of Medievalism

Both sad and amusing is the spectacle of a Presbyterian Synod in California, which has voted by a substantial majority that it has not learned anything during the past generation. As a solemn affirmation of a moribund traditionalism it is merely amusing. As an attempt to oust Prof. T. F. Day from the chair of Old Testament Literature in San Francisco Theological Seminary it is sad enough.

For some years past a group of biblical literalists has kept the synods of Washington and California stirred up with charges of heresy against the able incumbent of the Old Testament chair. At the instance of the two synods the directors of the seminary submitted to Professor Day fourteen questions. His answers were given in printed form with references to standard theological authorities. These answers were taken up by the Presbyterian Synod which convened at Fresno in October, each question and answer being voted upon separately.

It doubtless will surprise Presbyterians as much as other denominations to learn that the synod affirmed against Professor Day the following tenets: That Moses wrote the Pentateuch, not merely as to a possible nucleus, but *in toto;* that the Genesis account of the creation of the world, of man and of his fall is "historically true"; that all the miraculous features of Israel's exodus, notwithstanding conflicting Biblical reports about them, were actual historical occurrences; that "the Levitical Law, as recorded in the book of Leviticus, was given by the Lord to Israel during the sojourn in the wilderness"; that "the so-called Messianic predictions in the Old Testament, beginning wtih Genesis and closing with Malachi," are specific predictions of Jesus Christ; that the book of Isaiah is the work of one writer; and that the book of Daniel is "veritable history" written as "veritable prophecy" before the events came to pass. The synod split almost evenly on the question whether the Jonah story is to be taken as literal history. The view that it may be taken as a parable won by a narrow margin of one vote.

It seems almost incredible that a rearguard of such obscurantists should still be found among an educated ministry. The leader of the heresymongers referred to Driver, Dillmann and Cornill as "foreign anti-Biblical" (sic) authorities, on the same footing with "Gibbon, Voltaire and Hume." In vain a professor in the University of California pleaded that the position taken by the synod would make it much more difficult to deal with the five hundred or more

Presbyterian students in that institution. Nothing could stop the plunge over the Gadarene declivity.

Precisely such medievalism as this is what makes the problem of religious education so difficult. When large numbers of clergymen are still entirely ignorant of the established results of modern Biblical scholarship, what can be expected of the Sunday school teacher? How can young people who attend the high school and the college be expected to preserve their reverence for the Church where it is represented by men whose geology and anthropology have not outgrown the literalized poetry of a Hebrew folk-tale? As for the authorship of the Pentateuch, even the average well-informed layman knows that it is the product of many hands and many centuries. Does this synod suppose that the testimony of incontrovertible facts can be reversed by a show of hands?

There are many kinds of degrees of conservatism and some of them serve the useful purpose of compelling new theories to justify themselves adequately by facts. But this is the kind that brings obloquy upon religion because it ignores the obvious, and falls below the common enlightenment of our time. The fact is that such defenders of Christianity are the real heretics. No more damaging heresy could be propagated than that which supposes that religion and the Bible can be saved in the esteem of men by stifling inquiry and ignoring the reverent and fearless Biblical scholarship of our time. We hope the ninety or more men of this synod who stood for progress and light against a medieval majority will soon receive needed accessions to their ranks.

The Railroad Freight Rate Cases

On the first day of the present month the presentation of evidence before the Interstate Commerce Commission, relating to the proposed general increase of railroad freight rates, was finished. Arguments in this case, of greater importance than any other which the commission has been required to consider, will be made in December. On the 5th inst. the commission announced its decision concerning a rate increase made in August, 1908, by the railroads which carry goods between what are called Ohio and Mississippi River points and the States along the South Atlantic seaboard. This increase was approved, the national commission disagreeing with the State commissions of Georgia and Alabama. But it was not approved by all of the commissioners. Two of them dissented. For some time it has been known that there is a division of the board with respect to the rate question. It was shown in this case, and probably it will appear in the more important case soon to be decided.

While the result in the Southeastern case does not necessarily foreshadow the action which the commission will take with respect to the general increase which was prevented by the Government's unexpected appeal to the courts, it should be noted that the majority opinion says that the increase in the Southeast was based upon the increased cost of material and labor. In the main case now pending, the railroads defend their proposed increase of rates by pointing to a higher cost of maintenance and operation, due to an increase of wages and the rising prices of supplies. And in this instance, the upward movement of wages was a general one. known to the public, and taking place only a short time before the attempt to make the freight rates higher.

At the recent hearings the shippers who oppose any increase of rates argued that the railroads were already receiving a liberal return upon the capital actually invested. They also sought to show, in the cross-examination of railroad officers, that the companies, or some of them, are suffering from overcapitalization. The opinion in the Southeastern case is interesting because of its relation to these points. It says:

> "We are unable to hold that an advance is unreasonable because some part of the benefit therefrom will accrue to a carrier that 'during the period of the last ten years has regularly paid interest on its total bonded debt,' and in addition thereto has recently paid dividends upon its stock. Congress has not seen fit to give the commission supervision of the stock and bond issues of the various corporations engaging in interstate commerce, nor has any physical valuation of railroad property been authorized by Federal authority."

These words probably indicate that in the main case the arguments of shippers concerning overcapitalization and the return upon the actual investment will not have much weight with a majority of the commission. A study of such parts of the Southeastern opinion as have been published by the press, together with a consideration of reports and tendencies, seems to warrant a prediction that a part, at least, and perhaps the whole, of the proposed general increase of freight charges will be granted by a majority vote.

It will be remembered that the railroad wage increases of the present year in the East were, as a rule, measured by the increase granted by arbitrators in the case of the Baltimore & Ohio Company, and that conciliation under the Erdman act caused a resort to arbitration for a settlement of the controversy between that company and its employees. After a report, with a schedule of the higher wages, had been made by the Baltimore & Ohio arbitrators, the New York Central and other companies accepted it as a standard, and a very large part of the general increase of wages, amounting, as some asserted, to $75,000,000 a year, was ordered in accordance with it.

Intervention for conciliation in the case of an interstate railway company, as authorized by the Erdman act, is made by the chairman (Mr. Knapp) of the Interstate Commerce Commission and the Commissioner of Labor, Mr. Neill. These Federal officers induced the Baltimore & Ohio and its employees to accept arbitration. The result of that arbitration was an increase of wages averaging about 7 per cent., and this award was accepted as a measure of the wage increase afterward granted by a majority of the Eastern roads. Having raised wages, they attempted to raise freight rates.

Of course, the increase of wages was not made by Chairman Knapp and Labor Commissioner Neill. We do not know whether it had their approval. Still, under the law, they caused the arbitration which required the payment of the higher wages, and, in a certain sense, neither the Interstate Commerce Commission nor the Government of which it is a part is wholly free from a kind of responsibility for the increase. For this reason it may be that the chairman and a majority of the commission are inclined to give much weight to the railroad companies' plea that because of the increased cost of their labor they ought to be allowed to ask higher prices for carrying freight. It seems to us that members of the commission should have not even the most indirect official connection with the settlement of wage disputes which may affect carrying charges with respect to which the commission is to sit in judgment.

President Schurman on New Nationalism

One of those men who have a serious attack of the political mob madness is President Schurman, of Cornell University. In an address just before election he said that "Theodore Roosevelt's New Nationalism is the most dangerous program any political leader has laid before the American public since the Civil War." It means, he says, "Cæsarism in government and bankruptcy in business." It demands "an omnipotent, arbitrary and meddlesome executive," and "Congress and the courts are to be subordinated to the President," to a "Cæsarian President." This is a misrepresentation approaching the limit of pure lunacy. New Nationalism was defined by Mr. Roosevelt in his Osawatomie speech, and we may recall the seventeen planks in its platform. They are: 1, Publicity of corporate affairs; 2, prohibition of the use of corporate funds for political purposes; 3, Government supervision of the capitalization of corporations doing interstate business; 4, limited franchises, with compensation to the public; 5, the same supervision over corporations dealing in the necessities of life, such as coal and meat, as over public service corporations; 6, directors of corporations held personally responsible; 7, combinations in industry controlled by the Federal bureau; 8, an expert tariff commission; 9, a graduated income and inheritance tax; 10, a scientific revision of our financial system; 11, a sufficient army and navy; 12, conservation of natural resources; 13, extension of work of Department of Agriculture; 14, regulation of the terms and conditions of labor; 15,

suppression of mob violence; 16, national and State efficiency, so that there shall be no borderland between Federal rights and State rights; 17, direct primary, with corrupt practices act and recall. Now we should like to have President Schurman, or any other man, show us how any one or all of these principles of policy if adopted would involve "Cæsarism" or "bankruptcy." They are every one reasonable, and we are coming to them. Let the reader go over them and say which one is dangerous.

National Education

President James, of the University of Illinois, in an address before the Minnesota Teachers' Association last week, argued strongly that the education of the people should be made a national and not a local or State function. He startled his hearers by declaring that in no other great civilized nation is there so large a population in such educational degradation as the American negro, and so deprived of educational opportunities. In no other civilized nation are there, he adds, so many worthy members of the community in such a state of ignorance, and provided with such meager educational advantages as are the "poor whites" of the mountains and the "crackers." In no other civilized country, he says, are the teachers in the rural districts and in many towns so unskilled and incompetent, and in no other civilized country does the nation concern itself so little with the educational interests of the people as a whole. The nation spends money, he tells us, like water for the army and navy, for rivers and harbors, and irrigation, but almost nothing for education, the chief of all objects. President James would have the Federal treasury take the burden of education from the States, and reach every child with elementary education, including elementary technical training for vocation, with secondary training for all children who are fitted for it; and then give all the youth in the country who desire it the chance to train themselves scientifically for their future vocations. This is the French system and has its advantages and its defects. It assures universal education in time, but all of one pattern, under one centralized control. In two-thirds of the States the present system is working well, and allows the study of comparative methods. In the backward States the progress is not slow, and it would take time to develop the new system. We would have the nation help the backward States temporarily, but we much doubt whether Massachusetts or New York or Minnesota would consent to turn over their school systems, which they are so proud of, to a Department of Education in Washington.

Peabody and Vanderbilt

A good example for many other funds is the action of the trustees of the Peabody Educational Fund in closing up their business by distribution of its principal, the larger part of it being transferred to Peabody Normal College, at Nashville, Tenn. In all, principal and interest, about $5,000,000 has been given to promote Southern education, mainly for white youth, and chiefly to develop the public school system. It is in order to provide a normal college of the first rank which will educate teachers for white public schools, that the chief gift is bestowed on an incorporated college at Nashville for all the States, and not merely for Tennessee, after the style of Northern normal colleges supported by the States. In connection with the Peabody Normal College there has arisen an extraordinary conflict with the Southern Methodist Church, which, however, mainly affects Vanderbilt University, also in Nashville. The two institutions are to be closely related, their campuses close together, so that, altho under separate boards of trustees, Peabody Normal College will practically serve as a department of the university. To facilitate this purpose an exchange of land between the two institutions has been made, but the Southern Methodist Church, which is in conflict with Vanderbilt University, has taken legal steps to annul the bargain. This is only a part of the dispute, for the General Conference of the Church claims to own and control the university, and has elected four trustees, whom the trustees refuse to accept. Several bishops

are on the board, and all claim the right to be members, but Bishop Hendrix, who sides with the trustees, has resigned, as compelled by his relation to his Church. There will be a big legal conflict over the university which is not likely to be for the benefit of the Church, while the liberty and growth and influence of the university are seriously involved. The story is complicated and deserves fuller report.

Broader Sentiment in the South

As an evidence of the broadening of public sentiment in the South on the race question we are glad to note that the Evangelical Ministers' Association, of Atlanta, Ga., holds a meeting once in a while in which the colored as well as the white are invited to participate. Possibly this grew out of the symposium conducted some time ago by the Atlanta *Constitution,* in which the white ministers and churches were urged to do more toward the solution of this practical question. The subject of the October meeting was what the white ministers could do to help the colored people, and Rev. H. H. Proctor, the head of the colored institutional church, and who has been a pastor in Atlanta for sixteen years, was asked to lead in the discussion. His address, which approached the situation tactfully and yet dealt with it frankly, pointed out a number of ways in which the white ministers could help, ranging from that of special mention in public and private prayer to better public school facilities and a more humane penal system in Georgia. At the close of the address, one of the leading white ministers said he thought the time had come for some white minister to show the martyr spirit on this question. It was voted that the address be published in pamphlet form, sent to each minister in the city, and be made the basis for discussion in the next monthly meeting.

"Puttering"

Luther Burbank says that he employs about twenty men on his horticultural experiment station, and he has made the discovery that he cannot employ men who are drinkers or smokers in budding and other delicate work. They can do the coarser work, but this they call "puttering," and they cannot concentrate their nerve force to it. Even those who smoke one cigar a day cannot be trusted to do the most delicate work steadily. As the result of investigations on the danger to young people of the use of tobacco the Japanese Government has prohibited smoking to all young persons under the age of twenty. Such facts as these will make ammunition for the Anti-Cigaret League. We wish it a million signatures from boys to its antivenenean pledge to abstain utterly from alcoholic drinks and tobacco. At the head of the list of its Advisory Council we find such good names as President David Starr Jordan and Judge Benjamin B. Lindsey.

The New Oath

That we may not be suspected of having unfairly represented the nature of the stringent oath which the Pope requires to be taken yearly by every professor in ecclesiastical seminaries, by clerics on their promotion, and by a multitude of other clerics, we give the statement of it taken from the Roman correspondent of the London *Tablet,* the leading Catholic journal published in the English language:

"All the errors of Modernism in theology, in history, and in philosophy are summed up and formally rejected in this comprehensive oath. Specially to be noted is the attitude required of those who follow the so-called 'historical method' of theology: they must repudiate the error which asserts that the faith propounded by the Church may be in conflict with history; and that Catholic dogmas, in the sense in which they are now understood, cannot be harmonized with the true 'origins' of the Christian religion: they must also strongly condemn the assumption of a dual and possibly contradictory character by any Christian man, viz., that of the historian or critic and of the believer. The history of dogmas is a valuable study, but there is strong reason to think that at Rome the guides of the faithful consider its limits are being enlarged with too little regard for right and truth. The whole document shows plainly that the Roman authorities have reliable knowledge of the existence in various quarters of secret, if not open, disregard for the Papal pronouncements and regulations contained in 'Pascendi' and 'Lamentabile.'"

It shows also that the means taken to repress Modernism are very drastic and

are meant to hit every offender in the eye. The following story, for which we will not vouch, is going the rounds in Paris. It will be remembered that Mgr. Duchesne is now member of the French Academy and director of the French School of Archeology at Rome. It is said that in calling on a brother Academician, an ultramontane reactionary, the talk turned on the Pope. When asked what His Holiness was doing Duchesne replied that he was engaged on a new encyclical. "What will it be called?" he was asked. *"Digitus in oculo,"* was Duchesne's answer. That pleases those who think that for seven years the papal finger has been stuck in too many eyes.

There is a man from India living in this country whose business it is to work for the independence of India from the rule of Great Britain. That is all right if we could trust his statements of fact, He has been admitted into American journals and into some very respectable English magazines for which he writes what he thinks will be admissible. He also has written a succession of articles to the *Hindustan Review* from this country. the evident object is to show how morally and socially inferior the Western civilization of the United States is to that of native India. We give as an example the first lines of his article in the September number:

"The American tract is the foulest cesspool in existence on the face of the globe. It vitiates the American body politic in a multiplicity of subtle ways, rendering the community so cancerous that its very entity totters on the verge of a painful, shameful dissolution."

And nine pages of this sort of rhetoric. A previous article in the same style abused American women.

Frederic R. Coudert is one of the most distinguished lawyers of the City of New York; and this is what he said at a public meeting last week:

"Criticism of courts and judges is proper and constructive and has nothing in common with the mere demagogic denunciation of decisions which seem inimical to the popular passion or fancy of the moment. The condition of our law in New York is primarily due to the incompetency, inexperience and weakness of our judges. Its cause is not far to seek. Positions on the Supreme Court bench are within the gifts of the boss, who bestows them partly in return for faithful political services, partly in return for enormous contributions. I do not know that justice is bought and sold but I do know that judgeships are."

It is of the courts of this city that Mr. Coudert was speaking, and speaking so severely. We agree that courts and judges, of whatever degree, are not to be held immune from intelligent criticism. If there is virtue in criticizing the courts of this city it is not profane to criticize even the United States Supreme Court. Fortunately criticism is seldom needed.

It will be very interesting to observe what will be the effect of the annexation of Korea by Japan on the Christian missions in that country. The people had been going over to Christianity by the tens of thousands, and it was the design to work to secure a million new adherents this year. But doubtless many who professed Christianity did so for political reasons, because they got the idea it would help Korea against Japan. We have feared that annexation would be followed by a falling away, and such may be the case. A Japanese paper publishes a telegram from Chemulpo that "the Christians in Korea continue to fall away, in spite of the severe attempts of the missionaries to thwart their defection. It seems to have grown to be quite a fashion there, and even in the district of Chemulpo, the port of Seoul, a falling off of 40 per cent. in the number of adherents is noted."

Federal Judge Edward E. Cushman, of Alaska, made a political speech for the Republican party in Tacoma, Wash., and the Democratic Congressional Committee very properly sent a telegram of protest to President Taft. It is an understood obligation of judges, who serve the whole people impartially, that they must not meddle actively in politics. A man who accepts such a position understands that he gives up thereby some of his natural rights as a citizen. It is so with postmasters and other Federal officials. It is "pernicious activity" if they take a prominent part in politics.

The same principle is generally recognized in religious matters. The secretary of a missionary society will avoid takng part in any heated discussions in his denomination, altho there are exceptions, as the American Board learned some years ago.

Simplified spelling has its advocates all over the world. Having referred a few months ago to the simplification of the spelling of the Spanish language, a correspondent writes us from Benguela, in Portuguese West Africa, asking us not to forget that there is a strong movement in Portugal, "chiefly on the part of Republicans," in the direction of simpler spelling. Our correspondent says:

> During the time that I have known the language, since 1885, a great and very marked change has occurred in the spelling thereof.

We trust that twenty-five years will do as much for the English language; but the Republicans of Portugal have other business just now.

It is reported that at an annual institute of Pennsylvania teachers last week twelve hundred of them agreed to join the American Federation of Labor. That gives pause. These teachers are State officials, paid out of public, not private funds. Then men that carry the mails can join a union and strike. If teachers in a union not getting their demands should strike, or the postmen should strike, it would be a strike not against a person or a corporation, but against the people, which is a serious matter. In France and other European countries it is settled that State employees must not form such a union or strike.

It is neither national nor international politics, but simple humanity, that was the occasion and substance of the resolution past by the Episcopal General Convention in Cincinnati condemning severely the continued persecution of the Jews in Russia. They declared the condition intolerable by which a Christian nation maltreats the race to which our Lord belonged, and they "protest against the unfair and inhuman treatment of Jews." To that every American Christian and even atheist, if such there be, would agree. It was the inhuman law of Russia which made it impossible for our American Ambassador to Turkey to make his desired visit to St. Petersburg. He is a Jew.

Early last week the policemen in New York were ordered off of all the express wagons which they were protecting and were bidden to keep order on the streets. A committee of the strikers visited Mayor Gaynor and thus threatened him:

> "Unless you order every policeman off the seats of the express wagons by tomorrow morning we will tie up nearly every vehicle in town. This will include the wagons of the Street Cleaning Department and, in fact, all the wagons employed for the city, garbage wagons and all, as well as those employed by private concerns. Only the drivers in the fire and police departments will remain on their seats in the entire city."

The Mayor rules the city, but these strikers seem to think that they rule the Mayor.

The Grandfather clause in the Oklahoma constitution has been declared constitutional by the Federal Circuit Court sitting in Guthrie, and this disfranchised 30,000 negroes in last Tuesday's election. The purpose of the clause is perfectly plain, to disfranchise negroes, but they are not mentioned, and judges are very apt to stick to the letter and not consider the real burden and weight of a law. The officials have been refusing to register negroes who can read, and the clash is serious.

We much regret that Prof. W. E. B. DuBois has resigned his position as Professor of Economics and History at Atlanta University to become Director for the National Association for the Advancement of Colored People, with office in this city. This will be a great loss to Atlanta University, and it remains to be learned whether his service for so worthy a society will balance the loss of influence in Atlanta. Hardly any colored man has given more honor to the two races which he represents.

Insurance

Winter Hazards in Flues and Pipes

The Insurance Department of West Virginia calls attention to the fact that the time is almost here when the stove is to be put up for the winter or some other heating arrangements installed. This is an important matter and should have the personal attention of every property owner, not only in West Virginia, but in every other State in the Union. The West Virginia records show that about $180,000 worth of property has been destroyed during the past twelve months by fires the immediate origin of which has been traced to the defective arrangement of flues and pipes. The equipment might easily have been made safe in most if not all cases at a comparatively small cost. Carelessness in this matter of heating equipment has grown into a distinct hazard. It would seem needless for the Insurance Commissioner of such a State as West Virginia to be reduced to the necessity of warning householders not to place a stovepipe thru the roof or frame partitions. It ought to be patent to everybody that such an arrangement is unsafe, but as he puts such a warning into words, it must be that it is needed. Four hundred and ninety dollars per day is too much money to burn up in a State the size of West Virginia. It is too much money to burn up in any State, and especially now that we are confronted by the crying need of the conservation of our national resources, of which we have been far too prodigal. And all because too many of us put off from day to day the fixing of our defective flues. Do this before you put up your stoves this fall or your home may be on the list of burned houses next year. Because your flues have stood the test for years it is no sign they will last forever. They were safe last year, but are they safe today? is the question to be answered. Do not take a dangerous risk because it happens to be some trouble to ascertain the facts. Look after your flues and stovepipes carefully and you may be very much surprised to note the unsuspectedly hazardous condition of them. The following figures, taken from the West Virginia records, show some very interesting facts about the causes of the heavy fire losses in that State, and what is true of West Virginia is also very largely true of other States. The information, therefore, if carefully studied, should enable us to eliminate from our property some of the most serious fire hazards:

172	unknown origin	$410,984
8	hot journals in factory	286,870
499	dwellings	185,408
74	incendiary origin	135,202
125	defective flues	149,289
42	careless handling of matches	92,091
11	children playing with matches	7,770
10	children playing with fire	7,665
17	careless smoking	70,885
8	gasoline explosion	68,019
11	defective wiring	27,930
24	gas plumbing	25,443
10	rubber gas hose connections	11,535
19	defective stove pipe	7,360
22	defective placing of stove	21,900

Walter P. Bliss, chairman of the executive board, and Edwin G. Merrill, President of the Union Trust Company of New York, have been chosen trustees for the United States of the Atlas Assurance Company, Limited, of London, which was founded in 1808. The other trustees are R. J. Cross, of New York, and Senator John Kean, of New Jersey.

The Travelers' Insurance Company of Hartford, Conn., in its *Agents' Record,* prints a list of thirty-four persons who, during 1909, took out life policies in the "Travelers," paid but one premium and then died. The company received from these thirty-four persons a total of $6,126.51, and paid to their respective beneficiaries $158,268. There is a deal of wisdom in insuring before the time, as post morten insurance is not accepted by any insurance company.

Financial

Menace of Commercial War

It would be very unfortunate if the conduct of Germany, with respect to the potash contracts, should require the imposition of our maximum tariff duties upon all goods imported from that country. A commercial war would not only cause great industrial loss and vexation, but would also dangerously embitter international relations. We have been paying about $8,000,000 a year for German potash, which is used mainly in fertilizers for cotton, tobacco and grain. After the dissolution, in June last, of the German Potash Syndicate, or Trust, Americans made contracts (generally for seven years) on favorable terms. Then the Syndicate was formed again, and an effort to kill those contracts was made. By a new law (May, 1910) the output of the mines was so limited, with heavy penalties for excess, that the contract prices would be increased by about 70 per cent. The price of potash delivered at our ports has already risen from about $21 to $34 a ton. The American contractors have offered to bear one-half of the additional cost imposed by the new law and official regulations. This would increase their contract expenditures by $2,000,000 a year for seven years. But the offer has been rejected and almost ignored.

Perhaps the German Government remembers that after it had forwarded to Washington, at our Government's request, certain information concerning costs of production, for use in our revision of the tariff, the information was at first concealed by the Senate committee, and that when at last it had been drawn out by the insurgents, Germany was attacked by Republican Senators, who asserted that she was guilty of unwarrantable interference in our domestic affairs. Germany has reason for resenting that, but the objectionable conduct was not that of our Government.

A commercial war between two enlightened nations trading so largely with each other should be avoided, if possible. Such a war may grow to be nearly as injurious as a war with armies and navies. The civilized world is striving to prevent this kind of war by arbitration. Why should not our Government suggest arbitration for the settlement of this potash controversy?

Loans to Brokers

What is sometimes called the overcertification of checks by banks for the accommodation of Stock Exchange brokers in New York does not appear to be the overcertification which is forbidden by law. The practice was the subject of testimony last week in cases relating to the Hocking Pool failures. The checks which are certified are drawn against loans from the banks, and these loans are equivalent to deposits of money. It is the practice of making these loans which may reasonably excite criticism, for it frequently occurs that the collateral for security is not in hand. The understanding is, and sometimes it is exprest in a written agreement, that the collateral shall be placed with the bank before the close of banking hours. Confidence plays a large part in these exceptional credit transactions, and undoubtedly there are instances of a customer's failure to deposit security and of a bank's failure to make prompt demand for it. The practice is attended by risk and danger at times, but it is regarded by bankers as one that is required by the intense activity of business on the Stock Exchange.

....A. Barton Hepburn, president of the Chase National Bank, has been elected by unanimous vote president of the New York Chamber of Commerce, as successor to the late J. Edward Simmons.

....Currency associations of banks, under the provisions of the new currency law, have been organized in Washington, New York, Boston, Philadelphia, New Orleans (for Louisiana), Atlanta (for Georgia), Chicago, St. Paul with Minneapolis, and St. Louis.

The Independent

VOL. LXIX NEW YORK, THURSDAY, NOVEMBER 17, 1910 No. 3233

Survey of the World

The Democratic Victory

The Democratic party won a notable victory at the polls on the 8th inst., gaining a large majority in the House of Representatives, with at least seven seats in the Senate, and electing Governors in several States which for years past the Republicans have controlled. In the present House the Republican majority is about 40. In the next House the Democratic majority will be in the neighborhood of 60. Probably it will exceed that number. It is expected that Champ Clark, of Missouri, will be elected Speaker. As a rule, the so-called insurgent Republicans held their own, but one of them, Mr. Haughen, in Iowa, has a plurality of only 144. Many Republicans who supported the recent revision of the tariff were defeated, and others were re-elected by largely reduced majorities. Because the margin is small in many cases, the exact number of those elected was not known at the end of last week. But, as has been said, the Democratic majority will probably exceed 60. In the Milwaukee (Wis.) district, Victor L. Berger, a prominent Socialist, was elected. A Socialist was elected to the Legislature in Pennsylvania, and the Socialist vote thruout the country was about twice as large as it was two years ago. In New York City it rose from 34,000 to 65,000; in Connecticut it exceeded 10,000. There was a notable increase in California, San Francisco showing 9,500, against 2,000 four years ago, and Los Angeles about 10,000, against 3,000 at the last preceding election. The present Republican majority in the national Senate will be reduced to 12, and it may be less. Republicans who will be displaced by Democrats are Mr. Depew, of New York; Mr. Beveridge, of Indiana; Mr. Hale, of Maine; Mr. Warner, of Missouri; Mr. Kean, of New Jersey; Mr. Scott, of West Virginia, and Mr. Burkett, of Nebraska. There may be additional changes. Possibly the situation will permit control by a combination of Democrats and insurgent Republicans, altho it is not expected that such an alliance with respect to the tariff can be made. In the House, Mr. Clark, the leading candidate for Speaker, and Mr. Underwood, who is in line for promotion to the chairmanship of the Ways and Means Committee, have publicly given notice that they will stand for a tariff for revenue only. As a rule, the insurgent Republicans are protectionists. The re-election of Governor Harmon in Ohio by a largely increased majority, and the election of Dr. Wilson in New Jersey, Mr. Dix in New York, Mr. Foss in Massachusetts and Judge Baldwin in Connecticut have been the subject of much comment to the effect that the Democratic party has brought forward strong men and that good material for the party's Presidential nomination will not be lacking. In the State of Washington the proposed woman suffrage amendment was adopted by a vote of about 2 to 1. In Arizona's constitutional convention, a similar proposition has been rejected by a vote of 28 to 15. In the coming Colorado Legislature four women will be members. The sex is represented there now by only one. In Wisconsin, Mrs. Archibald was elected treasurer of Ashland County. She is an expert accountant and the widow of a former treasurer. In Texas, Mrs. B. Trevathan was elected county clerk of Angelina County. She was an independent candidate against a

Democrat of the other sex. Nearly half of the men who voted for Senator Lorimer were re-elected to the Legislature in Illinois; forty-six were not renominated. It is noticeable that among the members re-elected are Lee O'Neil Brown, who, if the confessions of certain members were true, paid large sums for votes in favor of Lorimer; Robert E. Wilson, also involved in the same charges, and Senator Broderick, who is under indictment. Among the national Senators whose fate is in doubt is Mr. Carter, of Montana. The successor of Senator Beveridge will be John W. Kern. There is a Republican majority of 27 in the Massachusetts Legislature, but the re-election of Senator Lodge is not yet assured, altho it is not expected that the Republicans who oppose him can be induced to vote with the minority for a Democrat.

Results in the States

John A. Dix was elected Governor of New York by a plurality of about 65,000. The present Legislature has a Republican majority of 59; in the new one, which will elect Senator Depew's successor, there will be a Democratic majority of 29. Many Republicans voted against Mr. Stimson, the head of their ticket; many did not go to the polls. There are indications that their course was due to the prominence of Mr. Roosevelt in the campaign. In New Jersey, Dr. Woodrow Wilson, recently president of Princeton University, has a majority (for Governor) of about 45,000. The Legislature, which is Democratic, will elect Senator John Kean's successor. The leading candidates are ex-Senator James Smith, Jr., and James E. Martine. Judge Simeon E. Baldwin was elected Governor of Connecticut by 3,600. Republican candidates for the other places on the ticket were successful. It is asserted that Judge Baldwin was assisted by Mr. Roosevelt's attack upon him. He intends to sue the ex-President. In a lecture at the Yale Law School last week he said: "A certain ex-President knows less law than you or I do. I am going to teach him some." It is understood that the suit will be brought in New York. One Republican Congressman was lost, and the majorities of others were greatly reduced. The New Haven district, Republican for many years, goes to the Democrats by 3,000. Governor Judson Harmon's majority (19,000 two years ago) in Ohio exceeds 60,000. Mr. Bryan's hostility did not harm him. The Democrats captured eight Congressional districts held by Republicans. They will elect Senator Dick's successor. John R. McLean is a prominent candidate. In Indiana, where a new Legislature having a Democratic majority of 38 will elect John W. Kern to serve in Senator Beveridge's place, the Democrats carried twelve of the thirteen Congressional districts. Mr. Crumpacker will be the State's only Republican in the House. The plurality of Eugene N. Foss, for Governor of Massachusetts, is 33,000, but a Republican Lieutenant-Governor was elected by 6,000. Mr. Foss (recently elected to Congress in the Taunton district) made his campaign almost exclusively on the tariff revision and the cost of living. At last accounts the only competitor of Senator Lodge for election to the Senate was Congressman McCall. The Democrats gained 51 seats in the Legislature. West Virginia, with a Legislature Democratic by 2 to 1, will send a Democrat to Washington in place of Senator Scott. Mr. Bass, the progressive Republican candidate for Governor of New Hampshire, was elected. In Rhode Island, Governor Pothier gets another term, but his plurality has been cut down to 900. Judge Colt, of the Federal Court, may be brought forward to succeed Senator Aldrich, who retires voluntarily. In Missouri, where a Democrat will be chosen for the seat now held by Senator Warner, a prohibition amendment was lost by 200,000 votes. John K. Tener, Republican, carried Pennsylvania by only 34,000 plurality over W. H. Berry, nominated by the Keystone party, which is made up of Republicans and Democrats not in harmony with their party leaders and methods. In Tennessee, Mr. Hooper, candidate of the Republicans and of Independent Democrats who rebelled against Patterson rule (on account of the Governor's action in the Carmack murder case), was elected Governor by 13,000, defeating Senator Robert L. Taylor. It is said

that there will be an attempt to deprive Caleb Powers, of Kentucky, of the seat in Congress to which he was elected, on the ground that a pardon did not remove the disqualifications due to his indictment and prosecution in connection with the murder of Goebel. In Nebraska, Chester H. Aldrich, Republican, was elected Governor, defeating James C. Dahlman, whom Mr. Bryan opposed, but the new Senator (in place of Mr. Burkett) will be G. M. Hitchcock, a Democrat, who was chosen or named in the Oregon way. At first it was thought that a Republican Legislature would be required to elect him, but a Democratic majority of 14 has since been disclosed. Senator La Follette will be re-elected in Wisconsin. The plurality of Mr. Berger, Socialist, in the Milwaukee Congress district, is 288. His party won the county officers there by about 5,000 and will send thirteen men to the Legislature. In Montana, Senator Carter relies for re-election upon a legislative majority of only 3 or 4. Wyoming will re-elect Senator Clark. While Washington accepted woman suffrage, South Dakota rejected it. In Oklahoma there was some disorder, owing to the controversy over the voting of negroes. It is said that precincts in which negroes voted will be thrown out, and that the question will be brought before the new Democratic House in connection with contests. Elections in the Southern States were uneventful, as a rule. In North Carolina the Democrats regained the three Congress districts which are now represented by Republicans.

The Window Glass Trust Surrenders

At the beginning of the trial, in Pittsburg, on the 11th, of the officers of the Imperial Glass Company (commonly called the Window Glass Trust) for violation of the Sherman act, the defendants pleaded guilty, and their counsel said the combination had been dissolved. This assertion was confirmed by the District Attorney, who added that each of the seventy-three glass factories would hereafter do an independent business. Judge Young imposed a fine of $2,500 upon the company and fines of $500 upon President M. L. Case and each of the other fourteen defendants (officers or directors), saying that he had taken into account the assistance they had given to the prosecution and also the fact that the combination had been dissolved. The indicted company (incorporated two years ago in West Virginia) was a central selling agency, which fixt prices. It controlled the output of hand-made window glass and had raised prices about 60 per cent.——The Standard Oil Company of Indiana is on trial at Jackson, Tenn., for rebating. The indictments, if sustained, involve a maximum of fines exceeding $30,000,000. ——Before the Supreme Court in Washington, last week, arguments were made in the case of the Government's appeal from the dismissal, in New York, of indictments against Gustav E. Kissel and Thomas B. Harned, in connection with the Sugar Trust's capture of the Pennsylvania Sugar Refining Company. The Government holds that the offenses were of a continuous character, and that for this reason the statute of limitations should not protect the defendants.

Anti-American Riots in Mexico

Antonio Rodriguez, who said he was a Mexican citizen, rode up to the dwelling house on the Henderson ranch in Del Rio, Tex., on the 2d, and asked Mrs. Lemuel Henderson for food. She was sitting on the veranda. Not liking her reply, he wantonly shot her to death, by the side of her two little children. He was promptly captured and placed in the jail at Rock Springs. On the 3d, the ranchmen of the vicinity broke into the jail, took him out and burned him at the stake. When the news reached the capital of Mexico, several newspapers published inflammatory articles, and on the night of the 8th there were riotous demonstrations against Americans. A mob of medical students and others assaulted Americans in the streets and broke the windows of American shops. Again, on the night of the 9th, other windows were broken, and an American flag was pulled down, trampled upon and torn to pieces. A car carrying American children to school was stoned. A son of the Amer-

ican Ambassador was assaulted. The Ambassador (Mr. Wilson) protested, saying that the police were not trying to protect him and other Americans. It is said that at that time General Landa, Governor of the Federal District, publicly approved the conduct of the students. Two days later his attitude was changed. The police were not wholly idle, for on the 9th they killed two Mexican students and one spectator. In Washington, the Mexican Ambassador was protesting to our Government against the burning of Rodriguez and asking for reparation. Our Government urged the Governor of Texas to make a thoro inquiry. In the Mexican capital the riots were not renewed on the 10th. Mounted police patrolled the streets, carrying drawn swords. There were 217 rioters in jail, and the proposed bull fights of the coming Sunday had been prohibited. Foreign Minister Creel called upon Ambassador Wilson, expressing his regret and promising that the offending newspapers should be suppressed. But on the night of the 10th, in Guadalajara, mobs were in the streets crying "Death to the Americans!" They broke the windows of American banks and stores and burned an American flag. The same night a mob stormed the office of the American consul in Ciudad Porfirio Diaz, across the river from Eagle Pass, Tex., wrecked the furniture and destroyed the records. And in Guadalajara, on the night of the 11th, Carlos B. Carothers, an American, while defending his home against a mob, shot and killed a Mexican boy. Having surrendered to the authorities, he was lodged in jail. In both these towns the police and soldiers were doing at least a part of their duty. Many rioters were arrested. At many points along the Rio Grande there were collisions between Mexicans and Americans. Mr. Wilson telegraphed on the 11th that the Mexican Government was using its best efforts to preserve order and protect Americans. Secretary Knox said:

"The manifestation of resentment toward Americans reported from Mexico is the cause of deep regret to this Government and equally so, I am sure, to the American people. At no time have the Governments and people of the two countries sustained toward each other closer and more cordial relations, predicated upon common purposes and sympathies, than now. It is most unfortunate that the brutal crime in our country of which a Mexican was the victim should be made the excuse for a demonstration of hostility toward Americans in Mexico. It is a satisfaction to believe that such demonstrations find little sympathy in the body of Mexican people and none in the Mexican Government. I am sure the Mexican Government will be swift to put down all hostile demonstrations against Americans in Mexico and to punish those engaged in them, as this Government will be prompt to press for the punishment of persons guilty of crimes against citizens of Mexico residing in this country."

Mexico has sent a commission to Texas, to investigate concerning the lynching of Rodriguez, and the Governor of Texas has asked the local authorities to assist the visitors.——It was asserted at the beginning of the present week, apparently on good authority, that Rodriguez was not a Mexican citizen, but was a native of New Mexico and had voted there.

Labor Controversies

The strike of the drivers of express companies' wagons in New York, Brooklyn and Jersey City, which has been marked by much violence, was settled last Saturday afternoon by the acceptance of terms offered by the companies, and it was understood that the men should return to work on Monday. The companies agreed that there should be no discrimination against returning strikers because of their connection with a union, reserving, however, the right to reject men who had been guilty of violence; also that demands relating to hours and wages should be taken up with committees of the employees for consideration and adjustment. A settlement was delayed for a time by the rejection of the terms in Jersey City, but the strikers there finally joined those in New York, and the strike was officially declared off. The strikers had at first insisted upon recognition of the union, but the interposition of Mayor Gaynor caused withdrawal of this demand. Effective work to promote a settlement was done by the Merchants' Association, thru its president, Henry R. Towne. The strike of nearly 2,000 taxicab chauffeurs for higher wages and a "closed shop" was still in progress at the beginning of the present week.——

Negotiations which began nearly two months ago between the organized locomotive engineers of sixty-one railroads in the West, relating to wages, terminated in Chicago on the 7th. The men reduced their demand for an increase to 17 per cent., the companies offered 10 per cent., and no agreement could be reached. A strike vote is now to be taken, and the result will be known by December 10. The difference of 7 per cent. amounts to $2,800,000 a year. The union leaders say they expect a unanimous vote in favor of a strike. It is asserted by representatives of the companies that their offer of arbitration was rejected.

The Islands

Dean C. Worcester, Secretary of the Interior, the Attorney-General, and several other officers of the Philippine Government are on their way to this country, bringing more than a ton of official records, in order that they may testify in the investigation ordered by Congress concerning the sale or leasing of the friars' lands. Mr. Dickinson, the national Secretary of War, who has recently spent five weeks in the Philippines, will make a special report on this subject. It is asserted that he will exonerate Secretary Worcester and Executive Secretary Carpenter in the matter of the charges made by Congressman Martin, saying that Mr. Worcester's nephew obtained lands lawfully; that Mr. Worcester has no interest in them, and that Secretary Carpenter's acquisition of lands had the written approval of Governor-General Forbes.——A bill introduced in the Philippine Assembly demands the removal of Secretary Worcester, alleging that in a recent speech he insulted the Filipinos. Petitions from the provinces support the bill, and the native press denounces the Secretary with great bitterness.——Insular Auditor W. N. Clarke has been suspended because of the charge that he refused to give information concerning reports of corruption in connection with the purchase of supplies at Baguio, the winter capital.——At the elections in Porto Rico, last week, the Unionists won every seat in the House, but the Republicans were successful in several cities. They elected Roberto H. Todd mayor of San Juan. The new Resident Commissioner at Washington (succeeding Señor Larrinaga) is Luis Muñoz Rivera.——At the opening of the session of Congress in Cuba, President Gomez asked for a general revision of the tariff, with a view to the better protection of Cuban manufactures of paper, shoes, glass and textiles. He pointed out that exports in the first half of 1910 showed an increase of $20,000,000. The national lottery has yielded more than $4,000,000 of revenue, altho the preliminary estimate was only $2,000,000. He asked for the erection of a new Palace of Justice and the establishment of public libraries in all the principal cities.——The Cuban Senate has rejected the House bill for a Monte Carlo at Buena Vista, a suburb of Havana. Certain Americans have invested $250,000 there, intending to spend $2,000,000 more in a public resort for bull fighting, racing and gambling. The House bill gave them the desired concessions for thirty years.——Testimony relating to the attempted assassination of General Guerra, commander of the Cuban army, has brought to light a plot for the assassination, about a year ago, of Vice-President Zayas, General Guerra, Frank Steinhardt (formerly American Consul-General) and Señor San Miguel, editor of *La Lucha*. The testimony (given by Steinhardt and others) has been taken in secret, but the substance of it has been published by the press. An impression prevails that it implicates General Monteagudo, commander of the Rural Guard.

Central and South America

Bankers and merchants in Uruguay have sent to the President a committee, urging him to check the revolutionary movement by striving to conciliate the insurgents. It is said that they will not yield unless the candidacy of Batale y Ordonez (for President) is withdrawn.——In the convention recently signed at Managua by Special Commissioner Thomas C. Dawson (representing the United States), and officers of the Nicaraguan Government, providing that Estrada shall be President for two years, Mr. Dawson, it is understood, promised that his influence should be exerted to

procure in this country for Nicaragua a loan, to be guaranteed by 50 per cent. of the customs receipts, and to be used in funding the present debt, building railroads and establishing the gold standard. ——President Taft sailed for the Panama Isthmus from Charleston on the 10th, on board the cruiser "Tennessee," which was convoyed by the cruiser "Montana." The United States Chargé d'Affaires at Panama sent to the Government of the Republic last week the following message:

"I am in receipt of special instructions from my Government authorizing me to emphatically deny that the President or the Government of the United States entertains any such intentions against the Republic of Panama as have gained currency. My Government earnestly desires that no credence should be given at any time to the malicious mendacity of yellow journals."

The President expects to return on the 22d.——It was reported last week that the political foes of President Davila, of Honduras, were in league with Valladares, the rebellious Governor of Amapala, and that a general uprising was at hand. But Valladares is losing his power. At the end of the week he sent 100 soldiers to the mainland, to repel Davila's forces. Seventy promptly deserted, and the remainder surrendered. Marines were landed at Amapala on the 10th from American and other warships, but their services were not needed.

The Failure of the Constitutional Conference

All last week's predictions about the success of the conference on constitutional questions and speculations about its far-reaching schemes for British federation were suddenly dissipated by the news that the conference had failed. Premier Asquith made the announcement in the following words:

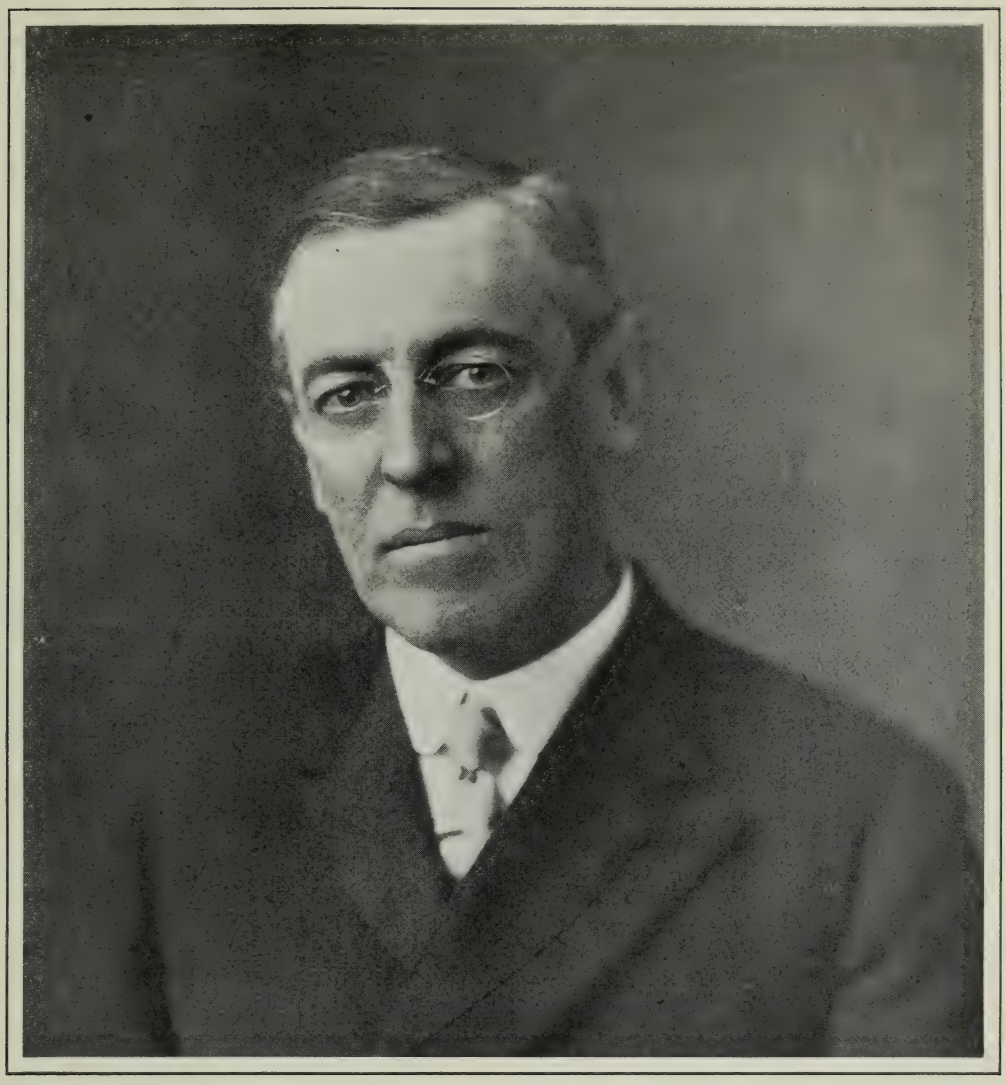
"The conference has ended without arriving at an agreement. It is the opinion of all the members that the conditions under which the proceedings were held preclude disclosures in regard to the course of the negotiations or the causes leading to their termination."

A further surprise was caused by a statement authorized by ex-Premier Balfour that neither imperial federation, home rule, devolution nor the dissolution of Parliament formed any part of the deliberations of the conference. It is presumed that this is to be understood as referring to the formal deliberations of the conference on the questions that were officially before them, because it is well known that the questions of federation have been actively discussed by the leaders of both parties. The conference was composed of four members of the Government and four members of the Opposition, and twenty-one meetings were held. It can only be surmised what caused the break up of the conference after it was supposed to have come to an agreement. The general supposition, however, is that when Mr. Balfour came to consult with the leading members of his party he found them unwilling to support him in such a compromise as he was willing to make. The Conservatives are as strongly opposed to any weakening of the power of the House of Lords as the Unionists are to home rule. But the somewhat favorable consideration recently given in the *Times* and other Unionist organs to propositions of a general federation granting a measure of home rule to England, Scotland and Wales, as well as Ireland, portending apparently a change of basis on this question, will somewhat hamper the Unionists if they are obliged to make a fight on this issue in an immediate campaign. It seems likely that the Liberals will take advantage of the present favorable opportunity to force another election, perhaps in December or January. In this case they would undoubtedly be reinstated in power and probably with a largely increased majority. The by-elections of late have shown a gain in Liberal strength. The revival of business has lessened the demand for a tariff. The budget legislation, which was the chief issue of the former campaign, is working well, as even its opponents are obliged now to admit. The Laborites are not in favor of a new election because the party is not in a condition to stand the expense of another campaign, in which it would probably gain little and might lose much. The Liberals, however, may decide to let well enough alone. There is no danger of their being turned out of office even by the Irish votes, because in case they went against the Government a sufficient number of Unionist votes would doubt-

less be given to support it. The Unionists are now making the most of the Irish scare. "Mr. Redmond with $200,000 in hand returns to this country for the work of tearing down the British constitution with American money." The wildly enthusiastic welcome given to Mr. Redmond and Mr. O'Connor on their arrival in Ireland, and their confident predictions of immediate political triumph, put another weapon into the hands of the Unionists.

Briand Supported

When M. Briand came before the Chamber of Deputies with his new Cabinet and his new policy he found a majority in his favor, altho he was bitterly attacked from both the right and left wings. The Catholics resented the appointment of M. Lafferre as Minister of Labor because he is a prominent Free Mason and had defended the system of secret reports of local lodges on the clerical tendencies of army officers, the revelation of which caused the overthrow of the Government in 1904. On the other hand, M. Jaures, the Socialist leader, charged the Premier with attempting to use the military power of the Government for the purpose of destroying the rights of labor and breaking up trades unionism. In outlining his policy before the Chamber, M. Briand, contrary to his usual custom, read his address from manuscript. Perhaps the outbreak caused by the uncautious words that he uttered in the heat of the recent debate warned him to write out his speech in advance. M. Briand insisted that the question of whether employees of public services, such as railroads, telegraphs and post offices, could leave their work suddenly and in a body must be settled freely, clearly and unequivocally. The lines of communication were, he said, part of the national defense, and as such must be protected from interruption. The Government could not allow its agents, whose special position gives them special conditions, to paralyze commerce and endanger the life of the nation. The Government, he said, was not opposing trades unionism, but was seeking to improve the welfare of the working classes, and will propose the appointment of prominent boards of conciliation and arbitration. At the conclusion of the debate M. Briand's Government received a vote of confidence of 296 to 209.



South African Parliament

The first Parliament of United South Africa was opened at Cape Town at noon on November 4. It had been the intention of Edward VII to send his son, then Prince of Wales, to represent the Crown on this occasion, but the accession of the latter prevented his leaving England, so the Duke of Connaught went in his stead. He arrived with the Duchess on the "Balmoral Castle" escorted by the cruiser "Defence" October 31 and was received with loyal addresses of welcome from the chief municipalities, the churches, the Indian and colored communities, and various public bodies of Cape Colony. The spectacular feature of the reception and opening was a pageant giving scenes in the history of South Africa from the landing of Diaz to the Great Trek, with allegorical figures representing the vanquishing of savagery by civilization and the industries of the country, miners bearing gold and diamonds, shepherds with fleeces and farmers with fruit and ostrich plumes. A new wing in the Cape Parliament House had been fitted up for the Assembly, in much the same form as the House of Commons, with parallel benches for the opposing parties, but with a more liberal supply of cross benches and the addition of desks. Here the Senate and House met in joint session. After short prayers in English and Dutch the Duke read an address, opening Parliament in the King's name, and a telegram just received from George V. Governor General Herbert Gladstone then read the Speech from the Throne, briefly foreshadowing the policy of the government just installed. The readjustment of customs and the introduction of uniformity into the regulations of railways, posts, telegraphs, auditing, immigration, etc. The problem of defense would receive immediate attention and a national university would be planned.——General Botha will act as first Premier of the new nation and Dr. Jameson will lead the opposition. The Nationalist or Boer party have 67 seats in the Assembly and the

Unionists or British party 37, besides which there are 4 Labor members and 13 Independents. It had been hoped that the spirit of friendliness and agreement that prevailed during the constitutional convention would be extended to the first Parliament and that the first ministry would be composed of the best men of both parties, but it was found impossible to arrange such a compromise, so the campaign was fought with heated partisanship. General Botha was defeated in one of the districts of Pretoria, his capital, and had to get another seat. The representation as arranged by the constitutional convention is roughly proportional to the white population, but with modifications in favor of the weaker colonies. The number of representatives is as follows: Cape Colony, 51; Natal, 17; Orange Free State, 17; Transvaal, 36. If it had been strictly proportional to the population it would have been: Cape Colony, 58; Natal, 12; Orange Free State, 14; Transvaal, 37.

Foreign Notes

Count Tolstoy disappeared from his home at Yasnaya Poliana, Russia, on November 10, without letting any of his family know of his purpose or where he had gone. It was found a few days later that he had taken refuge in the Szamorodinski Monastery, where he had retired to spend his final days in peace and solitude. He left a note to his wife saying that his body was wearied of its eighty-two years upon the earth and that his life was made miserable by the perpetual visits of reporters and moving picture men. The luxury and excitement of his home at Yasnaya Poliana were as poison to his soul and he pleaded to be left alone. His departure caused great grief to the Countess Tolstoy and she hurried to his retreat to try and persuade him to return.——The coal fields of South Wales are disturbed by a riotous strike which is unauthorized and uncontrolled by the labor leaders. The strike began in a dispute over wages in the Ely pit and in a few days 30,000 men were out. The employment of non-union men exasperated the strikers and attacks were made upon the mines. At the Glamorgan pit, near Tonypandy, the manager of the mines, with a small force of enginers and stokers, supplemented by clerks, endeavored to keep the pumps going to prevent the flooding of the mines, and for seventy hours they were besieged by an army of strikers who were with great difficulty kept off by the local police. Four hundred and seventy men from the London police force were sent to the disturbed district and troops were held in readiness at Cardiff. The force, however, was not sufficient to prevent rioting at Tonypandy, where over one hundred stores and houses were wrecked, some of them being looted and fired. More than one hundred persons on both sides have been wounded in the numerous fights between the police and rioters. In the three pits which were seized by the strikers the horses below were suffocated thru the stopping of the ventilating machinery. The president and secretary of the South Wales Miners' Federation, both members of Parliament, appealed to the miners not to injure their cause by such a disorderly and unwarranted strike, but they were not listened to.——According to the official estimates the revolution in Portugal cost the lives of 61 persons, and 417 others were wounded. The new divorce law promulgated by a decree of the Provisional Government of Portugal is more radical than any such legislation elsewhere. Divorce is granted on account of adultery, ten years' desertion, insanity if pronounced incurable after three years, imprisonment for a long term, or by mutual consent. The custody of the children is given to the applicant for divorce or to the nearest relative, but they must be maintained by the divorced parties. Divorce by mutual consent will only be granted after two years of married life, both parties must be over twenty-five years of age, and the decree will not be made absolute until the application of the parties after one year's trial.——The Seine has risen to a dangerous hight and flooded the Metropolitan subway station and the customs offices near the Louvre. The water has risen to the waist of the soldiers on the Alma Bridge, which served the people of Paris as a nilometer. Many people in the lower part of the city have been driven from their homes, but it is not expected that the inundation will be as severe as that of last spring.

WOODROW WILSON.

New Democratic Governors

[In last week's election public attention was especially directed to the contests in Ohio, Massachusetts, Connecticut, New York and New Jersey, on account of the prominence of the Democratic candidates for Governor and the probability that one of them, if elected, would be the Democratic nominee for President in 1912. We are glad, therefore, to present short sketches this week of John A. Dix, Woodrow Wilson, Simeon E. Baldwin and Eugene N. Foss. We printed in our issue of September 29 an admirable and full sketch of Judson Harmon by Mr. Harry B. Mackoy.—EDITOR.]

Woodrow Wilson

By FABIAN FRANKLIN,
Associate Editor of the New York *Evening Post.*

The nomination of Woodrow Wilson for Governor of New Jersey at once attracted the attention of the country; the remarkable character he gave to his campaign caused it to be one of the chief subjects of interest thruout the nation; the extraordinary victory with which it terminated has made him, at a stroke, one of the small group of figures of real importance in our political life.

Of the three phenomena—the nomina-

tion of a college president for Governor by New Jersey politicians, the campaign that followed, and the sweeping of the State by a majority which only a few weeks ago would have seemed incredible —each of them sufficiently unusual, the campaign was by far the most unusual. Indeed, in our day it must be pronounced unique. Both in what they contained and in what they omitted, Mr. Wilson's speeches were as different as possible from the prevailing type of political appeals. Invective, abuse, epithet, the iteration of hackneyed catchwords and the holding forth of impossible promises—all these have been conspicuous by their absence; and, on the other hand, the calm but resolute statement and discussion of broad principles of political action, which in the usual campaign speech rarely finds place at all, has been in Wilson's speeches the staple of the whole. So much has this been the case that there might have been danger of the impression of a certain want of aggressiveness but for two things. One of these was the unqualified and militant assertion of his understanding that his election to the Governorship would mean also the acceptance of him by the Democratic party of New Jersey as its leader in the fullest sense of the word; the other was the sharp definition of his position on every point raised in the series of nineteen questions put to him by a Republican leader. The man that answered those nineteen questions as Wilson did was manifestly a fighter as well as a thinker.

But qualities however high and unusual in a man's speeches and writings are not of themselves sufficient outfit for a leader. The question of personality is essential. Fortunately, in Woodrow Wilson's case, altho he has only just entered upon the life of active politics, there is no room for doubt as to his possession of personal qualities quite as striking and unusual as those manifested in his political utterances. Two illustrations, having reference to phases of life as wide apart as possible, may serve to indicate his range. At the celebration of the quarter centenary of Johns Hopkins University, at which an illuminated address bearing the signatures of the alumni was presented to President Gilman, Woodrow Wilson was selected to make the presentation speech; and the dignity and grace with which he performed that function made it by far the most impressive and distinguished feature of an occasion that was in all ways full of impressiveness and distinction. And the same man, talking at Jersey City to his first campaign audience, captured teamsters and longshoremen by his frank simplicity and genial humor. Lecturing on such a subject as Edmund Burke, he is an illuminating expositor and a moving orator; presiding at an alumni dinner, he is a master of wit and repartee and a repository of humorous stories. That his personality manifests itself in equally striking ways in the field of action is shown in the history of his presidency at Princeton. He has shown initiative in the creation of the preceptorship system, firmness in establishing new standards of study and discipline, courage in championing unpopular opinions, and the ability to win over to his support men who at first were arrayed against him. He has been too pronounced in his views, and too determined upon carrying them out, to be without enemies; but he has held his own at Princeton, and thruout the college world of America has been recognized as a potent force.

That his triumphant campaign in New Jersey, combined with his altogether exceptional equipment as a lifelong student of political problems, makes Woodrow Wilson one of the leading possibilities for the Democratic Presidential nomination in 1912 goes without saying. But it would be a mistake to regard his possibility of profound influence upon the future of the Democratic party as measured by the chances of his nomination for the Presidency. That party has been floundering for years in the slough of despond. It has sometimes almost seemed as tho its choice of policy were limited to two alternatives—either following in the wake of a plausible dispenser of crude novelties or fleeing for refuge to the safe harbor of a stupid conservatism. It has stood in mortal need of leadership sufficiently intelligent, sufficiently disinterested and sufficiently courageous to meet new needs and new difficulties in a spirit of sober responsi-

bility; neither attracted by every *ignis fatuus* that seems to light a new road to the millennium nor content to reject every proposed departure from old ways by a mere reassertion of outworn shibboleths. To the creation of a new position for the party by the gradual formation of a program progressive in its specific details, but conservative in its respect for the traditional spirit of our Federal republic, no man is better equipped to contribute than Woodrow Wilson. Unconnected with the party ances in public and in its councils, such as has rarely presented itself in our political history.

NEW YORK CITY.

John A. Dix

By HENRY GEORGE, JR.

[Mr. George has just been elected to Congress from New York City on the Democratic ticket. He is the famous son of his famous father and is an experienced writer and campaigner in all good political and social reform movements.—EDITOR.]

In the moment of triumph, when the cheering friends were gathered about

JOHN A. DIX.

quarrels of the past; a Southerner by birth and breeding, and yet identified in the most notable way with the best life of the North; a scholar, but a man in genuine touch with the people; too deep a student of law and politics and history to deal lightly with the heritage of the past and too earnestly interested in the problems of the time to ignore the demands of the present and the future—before such a man, in the situation in which he now finds himself, there lies a possibility of influence on his party, thru his acts as Governor and thru his utter-

him at his home at Thomson, and hailing him as Governor-elect of the State of New York, John A. Dix sent a message to the people at large. The core words of that message were: "As Governor, I shall adhere to the strict performance of the pledges of the party's platform."

This is what a man in such a situation usually says. Elated by the honor and excitement of the moment, by the red fire, the crash of music and the roar of voices proclaiming him victor, he impulsively vows to carry out personal and

party promises made during the campaign.

But what usually follows? What action comes when the other and far different environments supervene—when the red fire and bands and cheering friends are gone; and in their place are, for the most part, the self-seeking, the oily, the treacherous and the agents of buttressed privilege? Conscious of many political pitfalls, the newly elected man fears more. He becomes cautious; generally overcautious. He shrinks from many steps, lest he fall into a gulf. He does little or nothing, and hides his real thoughts in genial speech about nothings; or else he becomes reserved and cold and difficult of access. And thus the golden opportunity for action, given him by the people, is irrevocably lost to him.

The poignant question now is: Is John A. Dix this sort of a man? Will his conduct in the Governor's chair bear testimony to political cynicism that "platforms are made to get in on," but not to stand upon when in?

A great many people in this State will be utterly mistaken in the nature and moral fiber of the man if this should come to be truthfully said of Governor Dix. Some men are not campaigners. The Father of the Republic was not. Thomas Jefferson, pre-eminent in a council, was to the end of his days unable to make a ringing public speech. And so from the early days of the nation down to today, men of strength and force have dominated our politics for good, and for evil, too, without exterior sign of such influence.

John A. Dix is new as a campaigner; but the question now is, not whether he made thrilling speeches during the recent canvass, but whether he meant just what he said when he promised, if elected, to stand upon the Democratic platform; and will he have the strength to keep his word, let come what may? If he shall keep his word and do his part, no matter what the Legislature may do or fail to do, then the people will trust and reward him with their confidence; but if he shall not, then they will turn from him with that sickness of heart born of a long line of those who, in critical times, have been tried and found wanting.

But in this case there are reasons for great hope, not only in the new Governor's character, but in certain conspicuous events having to do with the making of the platform.

This platform, upon which he has since his election pledged himself to stand, was not the usual string of platitudes, pulled out of some one's pocket and offered by a platform committee as the result of its cogitations—the old phrases that "point with pride" and "view with alarm." It grew out of deliberative conferences held a considerable time before the convention—conferences held for the sole purpose of ascertaining the trend of public thought and will, and for the purpose of formulating such thought and will into words for adoption by the Democratic convention in such form as the convention might please to use.

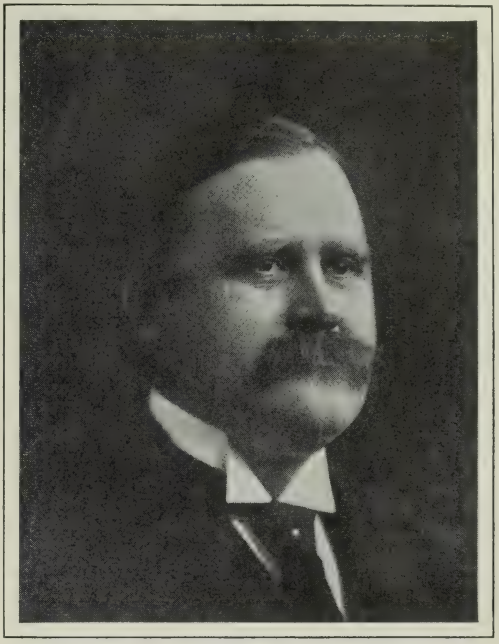
The first of these platform conferences was held in Albany. The idea of such a conference originated, I believe, with Mr. Thomas M. Osborne, of Auburn. At any rate, he was the main pusher of it. He talked with Mr. Dix about it, and Mr. Dix, as chairman of the Democratic State Committee, most heartily approved of it. He at once appointed a committee to represent the State Committee in the conference—a proceeding so unusual in practical politics as to seem in itself revolutionary. This committee had that man of spotless character and brilliant intellectual attainments, Mr. Edward M. Shepard, at its head. Mr. Thomas M. Osborne, president of the Democratic League of New York State—unselfish, strong and able—headed a committee from that body, and Mr. A. J. Elias, of Buffalo, chairman of the previously held convention of the Progressive Democracy of New York State—steadfast in radicalism—headed a committee of that radical wing of the general party.

The conference was full and free, and Mr. Shepard drafted a tentative platform from the result, which platform, subjected to the criticism of other and less formal conferences, was ultimately delivered to the platform committee of

the Democratic convention at Rochester, and by it, after being redressed in some particulars and greatly extended in others, was offered to the convention and adopted.

So that John A. Dix had a large hand in the construction of the platform upon which he declares that as Governor he will stand—a large hand, ranging over several months before he was even mentioned as a candidate for Governor.

And this is to be noted as most significant in the passage of that platform by the Rochester convention, that aside from the applause its fine rhetoric elicited and the party feeling the denunciation of the man with the club—Roosevelt—drew forth—the two passages that awakened most applause from delegates and spectators alike were the national question—the denunciation of the high tariff—and the State question—State-wide and direct primaries. The demonstration thruout the convention was so great when the latter plank was read that the chairman of the platform committee read it a second time, at which there was a fresh demonstration of approval, marking that plank of direct primaries, or, as it is otherwise called, direct nominations, as the chief one upon which Governor Dix must take his stand if he shall be true to his pledges.



The Democratic party of this State now has a great opportunity to keep faith with the people and to have, in consequence, a long lease of official life. The man upon whom the responsibility for action rests is the incoming Governor. Will he accept and be true to his responsibilities? I believe he will.

NEW YORK CITY.

Eugene Noble Foss

By GEORGE PERRY MORRIS,
Associate Editor of the Boston *Herald*.

Eugene Noble Foss, Governor-elect of Massachusetts, is a "Green Mountain Boy," who, like Ethan Allen of old, has captured a Ticonderoga of which Henry Cabot Lodge has long been king. On the paternal side he is descended from settlers at Plymouth in 1620; hence his social status, from the Boston standpoint, is above reproach. Up to last year he was a Republican insurgent, urging on the party leaders in the State the need of a broader trade policy toward Canada and a freer expression within the party on the opinion of the rank and file. But he "kicked in vain against the pricks" and was snubbed for his pains, and, there being a limit to his patience, he finally left the party of his sires and announced his conversion to the Democratic faith. For tactical reasons the Democratic party managers named him as their candidate for Lieutenant-Governor in the next gubernatorial election, and he went down to defeat with the head of the ticket, enduring during the campaign that measure of

EUGENE N. FOSS.

partisan abuse which always is meted out to a man who forsakes his party. His chance of really testing the measure of Republican insurgency in the State came shortly after this, when, on the death of Mr. Lovering, the Fourteenth Congressional District was called upon to choose a short term successor. Tho resident in the Tenth District, Mr. Foss stood as the Democratic candidate, and a Republican majority of 8,000 in the previous election was converted into a Democratic victory and majority of 12,000. Republican dissensions contributed somewhat to this significant record; but nevertheless it stood out as a remarkable indication of

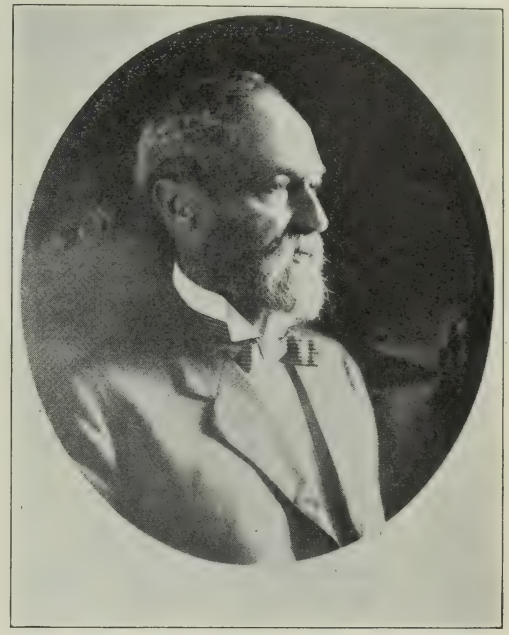
the man's vote-getting power, and also as showing the latent revolt among workers in the manufacturing towns of the district and among the dwellers in rural regions, a revolt only checked, so far as the district was concerned, by the fact that the Republican candidate just elected to take Mr. Foss's place is a "progressive" and committed to downward tariff revision. This victory in the Fourteenth District, coming about the same time as the election of Mr. Havens, of Rochester, N. Y., with its similar lesson of "insurgency," made Mr. Foss, to a degree, a national figure, and a man whose future career was to be watched.

But he had no desire for a Congressional career, and had his eyes set on honors nearer home, and hence set about winning the Democratic nomination for Governor. This he secured only after a bitter strife in the State convention which resulted in a drawn battle, his final selection being based on a postal poll of the delegates, and under conditions that, in a year less given to seismic overturnings, might have brought about defeat. For the defeated candidates—Messrs. Vahey and Hamlin—had prior claims to the honor, and stronger claims on certain elements of the voters. Once named, however unconventionally, Mr. Foss took the stump and emphasized the demand for a broader attitude of New England toward Canadian trade; the necessity of legislation that would reduce the "cost of living" to consumers; and the necessity of a new deal on Beacon Hill. And he made it his particular business to bring to the attention of voters the record of Massachusetts's representatives in Congress, chiefly that of Senator Lodge in his votes on the schedules of the present tariff law. In turn, he had to undergo attack for his multi-partisan record, and his alleged alliance with elements of the Democratic party in Boston, the increased ascendancy of which in Boston's government is much feared by civic reformers. It will be at precisely this point that Mr. Foss will be most closely watched by the forces in the State which, while favorable to the national "insurgent" Republican movement, are also hostile to "bossism" in municipal affairs. He also has a difficult path to tread, because, while a large employer of labor and identified with the "capitalist" class as an investor and as a director of large corporations, he also is pledged to sign labor legislation which Governor Draper has vetoed, and he was elected on a platform quite radical in its planks.

Like Mr. Draper, whom he has defeated, Mr. Foss will come to the office of Governor with large business experience, in this resembling more Mr. Douglas, the last Democratic Governor of the State, than William E. Russell, the first Democrat to challenge the unbroken Republican domination following the Civil War. After an education in the public schools and two years in the University of Vermont, Mr. Foss found his way into business, serving his apprenticeship as a traveling salesman in the West. In 1882 he came under the notice of Mr. B. F. Sturtevant, a flourishing manufacturer of machinery in Hyde Park, one of the suburbs of Boston, and began a career in that establishment which in due time found him at its head. He disclosed qualities of aggression and shrewdness in developing the business which were unusual, and which have made him a very wealthy man and a large holder of property, real and personal, and an outstanding figure in development of New England as a manufacturing region. While he has large interests in enterprises that are national, his chief claims to the respect of New Englanders have been his consistent advocacy of New England's enduring opportunities as a manufacturing center for the nation, if only it can have access to raw materials and broader markets, and the practical faith he has shown in this claim thru organization and promotion of industries on a large scale. And this he has done when strongly tempted to transport his investments to regions nearer the base of supplies. He has been identified for many years with the demand for reciprocity with Canada and with Europe; and as a delegate from the Reciprocity League he has visited both Canada and Europe, to confer there with men similarly minded.

A Baptist in his ecclesiastical affiliations, he has been a generous donor to the educational and philanthropic institutions of that denomination, and a director of the same. His career illus-

trates in a striking way the real significance of the saying that "America spells opportunity," and that "It is a long lane that has no turning." He lacks those qualities of intellectual discipline, derived from pursuit of the legal calling, which have made Governor Hughes conspicuous, and that will characterize, no doubt, the record of Governor-elect Baldwin, of Connecticut. Neither has he the breadth of view, constructive statesmanship and rare gifts of eloquence which make Woodrow Wilson's election in New Jersey so notable an event. On the other hand, he has a practical knowledge of conditions in commerce and industry which should make him well fitted to deal with the large problems of promoting the commerce and industry of New England, which naturally center in Boston for solution, and that are being faced in a new spirit and broad-minded way by the Chamber of Commerce of that city and the many Massachusetts commissions now engaged in careful study of problems of transportation, creation of an adequate dock system, and popular control of corporations. If he takes the people's point of view in dealing with these matters as strongly as he has their viewpoint in attacking the extreme protection policy of the Republican party, he can make a notable record.



BOSTON, MASS.

Simeon E. Baldwin

By HENRY WADE ROGERS, LL.D.,
Dean of the Yale Law School.

The election of Simeon E, Baldwin to be Governor of Connecticut is one of the gratifying results of the recent election. It is the answer which that State makes to Theodore Roosevelt, a man who once commanded the respect of his political opponents, but who does so no longer. The State of Connecticut does not take Mr. Roosevelt at his own estimation. It did not take at all kindly his uncalled-for insult to a man who, in personal character and in intellect, is his superior. It is matter for profound regret, shared by thoughtful Americans of all parties, that a man who has filled the highest of all offices should descend to the depths which he reached in the recent campaign. The election returns make it very plain how mistaken he was when, adopting the language of the prize ring, he permitted himself to say, "I've got 'em beaten to a frazzle and knocked clean thru the ropes. I hit that Connecticut judge right between the eyes." It is true that some one went thru the ropes. Theodore Roosevelt now understands pretty well who it was that went thru, and that his name was not Baldwin. At least he understands the matter if he has himself recovered from the daze.

The State of Connecticut is usually found supporting the Republican party. But the State voted for Tilden in 1876

SIMEON E. BALDWIN.

and Cleveland carried it three times. It occasionally elects a Democratic Governor. The last Democrat elected to that office prior to the election of Baldwin this year was in 1892, when Luzon B. Morris carried the State by a plurality of 6,151. The Democrats can carry the State when they can command the independent vote. The nomination of Baldwin attracted that vote, and he appears to have obtained a plurality of some 3,600 over his Republican opponent. The Socialist candidate, Mr. Hunter, received 10,707 votes. The Socialist vote was age of Judge Baldwin, winning fame as

larger than usual and drew more largely from the Democratic than the Republican party.

The election of Baldwin in Connecticut means much for the State and for the Democratic party. It was a great personal triumph, for he was the only man on the ticket who was elected, and his colleagues were defeated by from 6,000 to 7,000 votes. It appears to have been a Baldwin rather than a Democratic victory. But it makes him the leader of his party in the State, and that means much at a time when the Democratic party in the nation is undergoing the process of reorganization. The nomination of Baldwin in Connecticut was as ideal as the nomination of Woodrow Wilson in New Jersey. They are much the same type of men in their high standards and in their political thinking. The nomination of these two men put new heart and courage in the better class of Democrats, not only in their respective States but in the country. The election of Wilson makes him a possible candidate before the National Democratic Convention in 1912. The election of Baldwin does not give him the same prominence as a candidate for the Presidency. He is an older man than Wilson, and he does not come from as important a State. But he is a man who in character and in ability is quite equal to a discharge of the duties of President of the United States.

No man in the entire State is more respected than Simeon E. Baldwin. No one in either party questions his great ability or his absolute integrity. He represents the best traditions of New England in intellect, in learning, and in character. He has been Chief Justice of the State, retiring this year at the age of seventy under a provision in the Constitution which provides that no judge shall be capable of holding his office after he shall arrive at that age. The great Chief Justice Marshall presided in the Supreme Court of the United States until he was eighty, and the next greatest of the Chief Justices, Taney, continued in office until he was eighty-seven. Gladstone was eighty-four when he retired from public life. And John Quincy Adams made the best part of his reputation when he was in the House of Representatives, at the age of Judge Baldwin, winning fame as the Old Man Eloquent. Judge Baldwin is still well preserved physically and mentally. He has made a remarkable campaign in this State and apparently has come out of it as strong as when he went in.

He has always been very systematic in his habits and is a great believer in the necessity of taking regular exercise. A few years ago he seemed to be devoted to the bicycle, but has always been very fond of walking. To this must be attributed at least in part the splendid physical and mental condition which he enjoys.

No man is more democratic than the newly elected Governor of Connecticut. His tastes are simple, and while his means are amply sufficient, nothing is ever done for display.

In his church relations he is a devout member of the Congregational Church, and on Sunday is always found in his pew, an attentive listener. For years he has been prominent in the councils of New England Congregationalism.

Judge Baldwin has long been professor of constitutional law in the Yale Law School, and is still continuing his labors in that capacity.

He has not only been president of the American Bar Association, but he is the only living American who has been president of the International Law Association. His scholarship has not been confined to jurisprudence, for he has been president of the American Historical Society and of the American Social Science Association.

Judge Baldwin was born in New Haven and educated at Yale, but received his degree of Doctor of Laws from Harvard University. He is descended from one of the original New Haven colonists. His father, Roger Sherman Baldwin, was Governor of Connecticut in 1844-46, and later represented the State in the Senate of the United States.

The election of Simeon E. Baldwin to the office of Governor of Connecticut is due to the confidence which the people of the State have in the man. It insures the State an honest, able and economical administration so far as such a result can be influenced by the Executive under the Connecticut Constitution.

New Haven, Conn.

Great American Universities

BY DAVID STARR JORDAN, LL.D.

President of Leland Stanford Jr. University.

THE American university, unlike the universities of all other parts of the world, is a "going concern." It has no definitely-established form. It is not controlled by any outside influence. It exists for its own sake and the sake of its work. As a "going concern," it is under the influence of personality. It takes its color from its leaders. It is subject to the play of personality, for good or for ill, and whatever its defects or its virtues today, it is sure to show them in a different form tomorrow. Its statistics are out of date as soon as published. Its history is a continuous record of the reactions of personality against environment, and again of the reactions of environment as influenced by personality. In its normal development, its president or chief of teachers must give its trend and color, for with him, or with some one, must rest its initiative. A "going concern" must move in some direction. The resultant of a board of trustees does not move. There is no forward movement in a governmental bureau.

The American university is the product of a young, resourceful and optimistic community. It is not an institution, but an organism, and as with all organisms the one can never be like any other, nor like itself in another period of its development. Dr. Slosson has spent a week in each of a selected fourteen of our larger schools called "universities."* He has appeared on the campus as a friendly critic, distrustful of those matters to which we "point with pride," appreciative of charms of tradition or of situation, peering into dark places, but not too intently, tugging playfully at the toes of the skeleton in the closet, but never bringing it shamelessly into the light of day, and, in general, helping us to take stock by seeing ourselves thru the eyes of an alert, democratic lover of realities, who has himself passed successfully thru the academic mills of Kansas and of Chicago.

"Taking stock" is always one of the duties of a "going concern," and just now, when our universities are at their best, most free, most serviceable and most effective, we find most material for criticism in their methods and results. This is well, even tho the criticism be a bit out of proportion. We have to magnify a microbe, in order to heal its ravages. Every personal institution has its defects, because of the fact of personality. Only a fossil or a crystal can exist without defects, and our institutions are neither fossil nor crystal.

Dr. Slosson finds that in the fourteen universities, notwithstanding their variety of form and appearance, the internal anatomy, with the internal physiology, is remarkably uniform. The question, "What college for the boy?" has not much significance, so far as the classroom is concerned. The choice should rest on other matters, on the location of the institution, its ideals, the men as teachers or as fellow students whom the boy must come up against. With universities, as with other organisms, this internal similarity is partly due to heredity, partly to environment. Certain subjects, thru tradition, are the stuff of higher education. Certain others, thru necessity, are included in it, thru the constant demand of the generations of students. The course of study is of less importance than the personality of the teacher. The required exercises are of less importance than the essence of truthfulness, the maintenance of standards in conduct and in scholarship. The university exists for a certain definite purpose—to make men and women effective members of society, respected by themselves and helpful to others. Its success should be judged by its influence in these regards. In education, all sham is poison; all pretense of doing, without doing, all affectation of being which is mere seeming, comes in the category of

*Great American Universities. *By Edwin E. Slosson, Ph.D.* New York: The Macmillan Company. $2.50.

intellectual and moral mischief. The first duty of the university, as President Hadley somewhere says, is "the maintenance of standards," the calling of things by their right names, the "knowing a good man when we see him." In the failure to live up to these elementary obligations has been the chief weakness of the American college. In its desire to be popular and populous it has allowed the "side shows to swallow up the circus." It has allowed the "tender rich" to wear the educational badges intended for the scholar and the thinker, and it has allowed short cuts to the professions, which can be reached in no such way. But with all this, the universities of America are the most helpful institutions in the world. They are, as Dr. Slosson observes, "under fire more often because they are in advance of the age than behind it," and every year "they are more efficient in their methods and more ready to meet and even to anticipate the needs of the community than ever before."

In this fact we have the cause of the most noteworthy differences noted by Dr. Slosson among the universities themselves. Each university responds to its environment, even if it dominates it. The State university must differ from the private university, because it is founded and maintained by the State. The country university, with the freedom of air and sunshine, must differ from the institution which has only the freedom of the city. The institution which depends on its tuition fees is in a position different from that in which instruction is free, and the attendance perforçe limited to those within the reach of its income. The influence of an institution may not be measured by its numbers, but it may well be measured by the number who attend it at a cost of money and effort. The thousands who come on the trolley cars as undergraduates in a city university speak less for its influence than the dozens who may cross half a continent to the college at Colorado Springs. To be more explicit, the marvelous seizure of the industries and activities of the whole State, which we see in Wisconsin, is far less easy to a State institution without the aid of the Department of Agriculture, as the University of Michigan, in one at a distance from both capital and metropolis, as in Illinois, or in one with both these handicaps, as in the State University of Indiana. A continuous session for the entire year is possible with large tuition fees, as in Chicago, while an institution with free tuition could not venture to undertake it. The State universities can maintain all kinds of side activities, for the people pay for them, which an institution with free tuition could not educationally afford. It must put its strength on the things best worth doing, and these are for the most part inside the walls. An institution like Columbia, with a "center of gravity" in the middle of Manhattan Island, with millions of young men within a hundred miles, can charge fees which would be fatal to Stanford, whose average student comes 1,050 miles, and whose educational center of gravity is found in Southern Utah. In the isolated universities of the West, as in the heart of a great city, it has been found possible to abolish the most oppressive of the parasitic "side shows." In the universities of great cities, and those of great States, for the reason of greater practical opportunities for placing doctors of philosophy, it is possible to build up graduate departments, which other institutions offering equal opportunities for instruction cannot presume to rival. On the other hand, it is possible in institutions with fewer outside distractions to "get down to business" in the matter of personal influence and personal instruction to a degree unknown in the huge undergraduate bodies of our great centers of learning.

Dr. Slosson's flash-light records of these various universities compel this series of descriptive adjectives; wise, breezy, vivid, friendly and trenchant. They are already familiar to the readers of THE INDEPENDENT, so that for the purposes of this notice a word in each case will survive. As to Harvard, standing naturally first in all regards, an institution pervaded in all departments "by a healthy pessimism," it is recognized that, at the bottom of this spirit of truthfulness, the desire to call things by their right names, the academic representative of the Puritan Conscience, which has

made, and is again making, our republic. As to the elective system of Harvard, now under criticism in various quarters, it is recognized that the fault, such as it is, is not in the system, but in the presence of men so frivolous or so weak as to abuse it. The essential view of our institutions is the granting of academic degrees and academic privileges to those who from the first intend to abuse them. The most needed reform is not the curtailment of freedom of election, but the abolition of academic coach and groom and all the other devices for obtaining academic recognition for the "tender rich," and the tough rich, with whom the former are continuously associated. Let the university winnow out those who have no business there, and we shall not complain of the abuses of the elective system. Such abuses would be just as great under any other system, for there is no device which will give to idle men mental power or culture.

In any event, the alternative is not to return to the fixed courses of hand-me-down culture which prevailed until thirty years ago. The great accession of power and usefulness to our universities came with the abolition of prescribed courses. What is needed is not a program prearranged to fit nobody, but such advice as will help the earnest student to avoid wasting his time. But even this is not vitally essential. It is a fine discipline for a young man to pick his way among fruitful subjects and inspiring teachers, with the certainty that in any event he cannot go far wrong. If our universities were to go back to the courses of thirty years ago, their attendance would fall back in the same measure. The young men who know what they want will not go where something else is offered them.

The recent changes in Harvard have been in the wise direction of better council and friendly interest. The attitude of the Harvard alumni seems to be one of thoro approval, coupled with the remark, "I am glad that I graduated under the old regime."

As a foil to the radicalism of Harvard, her "healthy pessimism" and her freedom from the dead hand of old traditions, comes the conservatism of Yale, her robust, democratic optimism, and her belief that the only argument needed in behalf of any custom is this: This is the way we do it at Yale. It may be that this system is more effective in making men than in making scholars, but either form of manufacture is a most worthy industry. But it is not clear that Yale can ever grow into a university, however successful a university may be superimposed upon it. "The finest thing about Yale is its student body," and "this educational machinery that we talk about so much is, after all, of minor importance. The product of the mill depends mostly on what kind of grain is poured into the hopper."

Perhaps better than most universities Yale corresponds to our traditional ideal of Alma Mater. Some one once asked a graduate of the University of Prague if he loved the university. "Love it? No, I hate it." Why? Because it is a state institution. The German universities are institutions like the post office or the Hauptbahnhof, without personal or friendly relations to the student, except such as arise from the personality of individual professors. Goethe once called Jena a "liebes närrisches nest" (dear foolish nest), and this is the nearest approach to the idea of Alma Mater I find in a German university. But Jena was small and isolated, in situation more like an American college than a municipal university, and the affection indicated by Goethe was conditioned on the folly induced by neglect. Love for the college arose in the halls of Oxford and Cambridge, and the same spirit grows spontaneously in the colleges of America. To win a football game "for God, for country and for Yale" is a bit illogical, but we shall not criticise too closely the big wholesome democratic boys who accomplish this feat. It is said that at Yale all men are alike and that all honors and prizes go to the man who is most alike.

Our author is especially interested in Princeton, because it is in the mutation period. All of the universities are in the transition period, but Princeton has taken new forms and seems to belong to three species at once. Whether the removal of President Wilson to the sphere of statesmanship will allow Princeton to slip back into atavism, we cannot say yet, but at any rate "an ideal of education" is there,

and it is working itself out. The traditions of Princeton are classical, and for that reason its science work has a zest and freshness which it does not have where science has its way without question. The old proverb of the stolen apples explains this. The new Princeton will have more of science, but its keynote is more intellectual supervision. The preceptorial system is not very different from the assistant professor system of the Western universities, and it is subject to the same defects and limitations. Preceptors starve sometimes on $2,000 a year. Sometimes they dry up prematurely, and if they are forceful and fruitful, they are called somewhere to a higher station. Calling them preceptors does not make them teachers, and in time they will go up or down.

The friendly isolation of Princeton is a factor in its success. More good men go over 500 miles to Princeton than to the swollen undergraduate department of Columbia. Fit buildings are also a great help to the real work of universities. "Scientific men in other institutions, who are housed like hermit crabs in shells which do not fit them, will appreciate the advantages of having an architect who considers the purposes of his edifice."

Stanford University, on a great farm, with beautiful buildings, under a perfect climate, with applied science as its *raison d'être,* and the elective system as a matter of course, is at once most like Princeton and most unlike. With free tuition, coeducation and attendance restricted to those who hope to get an education and show some promise of succeeding, the student body is as unique as its rows of palms, its thickets of roses and its forests of eucalyptus. The most important educational device in aid of the elective system, the major professor advisor adjustment, characteristic of Stanford, Dr. Slosson has passed by lightly, in his view of the picturesque elements of university life, and he closes with a touching appreciation of the sad and loyal self-devotion, thru years of litigation, loss and struggle on the part of the noble woman who has made this university possible and whose efforts have saved its vast endowment to the final purposes of sound learning and rational education.

The University of California, with its wide-reaching activities, is permeated with sunny optimism, the only state of mind possible in its joyous environment. For we of Califorunia love our State because she first loved us, and we love her with a warm enthusiasm which folks who live in gray lands can hardly understand.

In its industrial aspects no university better illustrates Mr. Alfred Mosely's remark, "What strikes me most is that your workshops (in America) are filled with college-bred men. At home, a 'varsity man is graduated into frock coat and gloves. Here he is educated into overalls. The keynote of American education is training for efficiency."

The University of Michigan was the first to realize that the university of the people should devote itself to the actual needs of the actual people who gave it its support. The first, the largest and the most democratic of our State institutions, it has in a sense created the State of Michigan, and it has stood as the model which all similar institutions have more or less definitely followed.

Still farther in the same directions the great University of Wisconsin has been able to go, thru the local advantages of a site at the capital city, of a powerful and progressive Department of Agriculture, which has enhanced the financial prosperity of every farmer in the State; of a president who realized in full the possibilities of the situation, and of a faculty able and willing to take in hand every activity of whatever kind Wisconsin has to offer. "The headquarters of the university is at the city of Madison, and the campus has an area of about 56,000 miles." The University of Wisconsin is typical of the State university of the future. Already it ventures to challenge comparison with the University of Berlin, the work of the Kingdom of Prussia, of about the same age, and with a community not much richer to draw upon. And no one can say that the republican institution suffers in this comparison. The State university can do many things which the privately endowed institution cannot attempt, for it has the State to back it, and every new expense is an argument for fresh endowment. The private institution must find its function in smaller numbers and finer work, the setting of

standards which the more popular institution could not of itself maintain.

The University of Minnesota, younger than Wisconsin, is prepared and well prepared for equally great things, and along exactly similar lines. It has the capital city, the picturesque side, the willing alumni, the results of wise administration, the hold on the farmers, and the new president who shall succeed Dr. Northrop will have the control of the future all in his own hands.

Nearly parallel with these great works of the people is the University of Illinois. It is a gigantic aggregation of great possibilities. Its State is rich and populous, but not yet licked into form. But whatever Wisconsin gives or Chicago allows will be furnished by the people of Illinois, and the university of the prairies, as time goes on, will hold its own with the best.

Cornell University holds the middle ground between the great privately endowed universities of the East and the equally great schools of the people in the West. It has a private foundation when need be, and it is a State university when the Legislature is in session at Albany. The future is assured going or coming, and its noble department of agricultural research gives redoubled assurance.

Cornell University led in the new era of university development. It inaugurated the democracy of studies. It was the first to give science, pure and applied, its equal place with all other human activities. It proclaimed the dominance of truth above opinion, and of humanity above nationality. It is the easternmost extension of the greater West, the West of the young men who have learned something since leaving their fathers' homes. The inspiration of its first president, Andrew D. White, and of his coworker, Goldwin Smith, has clung to it thru all the vicissitudes of forty years. As an old Cornell man, one of the pioners of '68, one of the founders of the journal we called the *Cornell Era*, I feel strongly with Dr. Slosson that "I do not like to have Cornell settle down. The spirit of White and Smith was one of youthful idealism and iconoclasm. The old Cornell, or rather the young Cornell, prided itself on being very different from the other Eastern universities. Now I fancy there is a desire to be as much like them as possible." And however good Eastern universities may be—the best in the world, perhaps—it is not good for Cornell to be too much like them. The *Cornell Era* was the beginning of something new.

I may be pardoned for repeating this story, which I told at Ithaca not long ago:

In the early days of Cornell, Willard Fiske published in our *Cornell Era* a comparison between the two new-founded universities at Ithaca and at Berlin. New York and Prussia are about equal in territory, in wealth and in population. The University of Berlin was full-fledged from the first, with adequate libraries, laboratories, faculties and all that makes a great university granted at once, without hesitation, without delay, without parsimony.

Cornell University was scattered in the mud of a poor hill farm on the edge of a country village, with few books, no libraries, a group of boy professors, without tradition and without achievements. Three years had then passed, three laps in the race, Cornell began far behind and was steadily losing. "Now, who," says Professor Fiske, "who bets on the Empire State?"

More laps have passed, thirty instead of three; Cornell has gained in wealth, in prestige, in influence, most of all in power of effective action. She is still far behind in the race, but not so far. Already her hold on the life of real men is as great as that of Berlin, and the only distance she is behind can be measured dollar for dollar, in the money she has to spend. Thirty years more and the great university of the greatest State of our republic will have no excuses to make to any one. The race is still on, and still forward we go. We bet on the Empire State!

The University of Pennsylvania, in a great city and largely devoted to professional education, approaches most nearly to the universities of the Old World. It does good work, in abundant measure. It lacks color and character, for it lacks room for the play of personality; or rather the color and personality are those of the different professors rather than

that of the university as a whole.

Johns Hopkins University, small and scantily endowed, stands unique as the abode of the Zeitgeist. Its "chief student activity is study." "Johns Hopkins is free from the common vices of our universities, namely, pomp, pretentiousness, frivolity, superficiality and extravagance. This is not the same as saying that it is the best of universities. The greatest men are not those who have the fewest faults, and the same rule applies to institutions." It was the first university of America. It started the tradition. It set the pace. It brought the best of Germany to our shores, and it has held it there.

The University of Chicago has been the most unique and most personal of all our institutions. With great wealth to fall back upon, and a president ambitious, energetic and unselfish above all others, with a genius—almost a mania—for constructive effort, and in the most high-spirited city on the face of the earth, the short history of Chicago has been a most instructive one. Only very new and very old traditions were considered when it was established, and no money was spared, tho the treasury be temporarily empty, to bring together the most noted or most notable men in the educational market. That some of the many new schemes did not work well is nothing. A university, like any other laboratory, is intended for experiment, and the experiments Dr. Harper did not try are mostly not worth trying. In spite of the foolish criticisms of a school endowed by Standard Oil, no institution has been more free from domination of any kind, and no professor who has had anything worth saying has ever felt the slightest hesitation in saying it. This is likewise true of all our other universities, for repression of thought has never been an American tradition.

In our greatest city, the typical city university is Columbia. As a college, it is a gigantic high school for the City of New York, and as such has no more force and color than any other high school. As a university, it is rapidly finding its place with the greatest in the world, for it has all the resources of a city of the first rank to draw upon, and this one the metropolis of the great republic. As a university, it fully justifies Dr. Slosson's remark, "The pull of the city is irresistible in educational circles, as on the country population as a whole." As an undergraduate college, this is not justified. The pull of an institution is measured by the number who leave home and home associations to come to it. Those who use the nearest trolley line do not count. Measured in this way the undergraduate attendance of Princeton or at Stanford is greater than at Columbia.

As to Columbia University, our author has no misgivings. It is already a fact accomplished among the universities of the world.

The American university, wherever situated, is a going and a growing concern. There is no limit placed on its development—no fixed mold into which it must be fitted. Its environment is more impressionable than that of the universities of Europe. The soil of freedom is the soil most favorable for the growth of universities. It is not strange that Mr. Bryce saw in the universities of America the best of all foundations for our national pride.

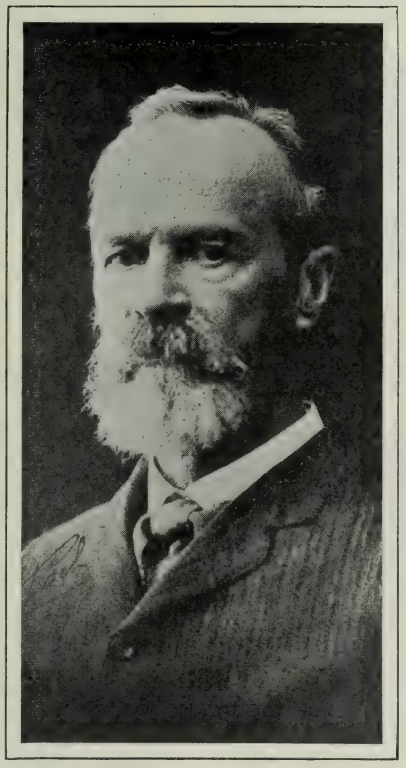
STANFORD UNIVERSITY, CAL.

Two Views

BY FRANCIS LIVINGSTON MONTGOMERY

"LOVE?—Love is," said he,
"The consuming fire
Of unfilled desire—
That is love," said he.

"Nay, love is," said she,
"The pure paradise
Of self-sacrifice—
That is love," said she.



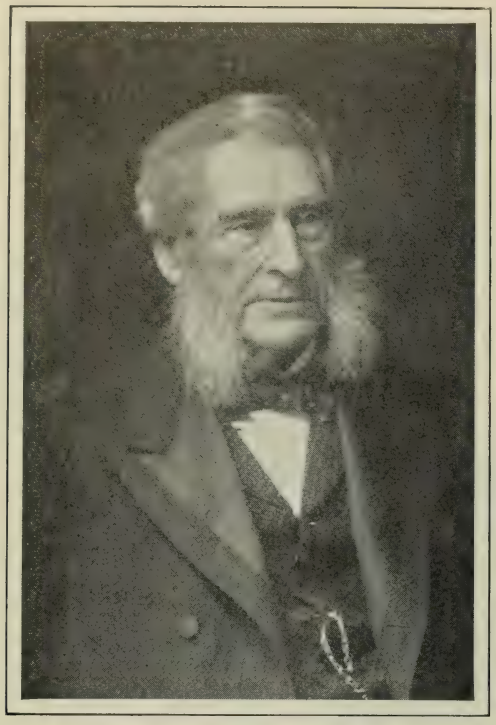
PLAINFIELD, N. J.

The American Academy

BY WILLIAM LYON PHELPS, Ph.D.

[Professor Phelps holds the Lampson chair of English Literature at Yale University and is author of many books on literary matters. He is also a member of the National Institute of Arts and Letters.—EDITOR.]

ON the 26th of October the five academies that together make up the Institute of France held at Paris their annual public session, M. Jules Massenet, president of the Academy of Beaux-Arts, being in the chair. Addresses were delivered by the distinguished dramatist, M. Henri Lavedan, representing the French Academy; by M. Charles Benoist, representing the Academy of Moral and Political Sciences; by M. Paul Girard, representing the Academy of Inscriptions and Belles-Lettres; by M. A. Laveran, representing the Academy of Sciences. The *Temps* devoted two whole pages to a verbatim report of these addresses, for the session of the Institute is justly regarded as a national event.



PROF. W. JAMES.

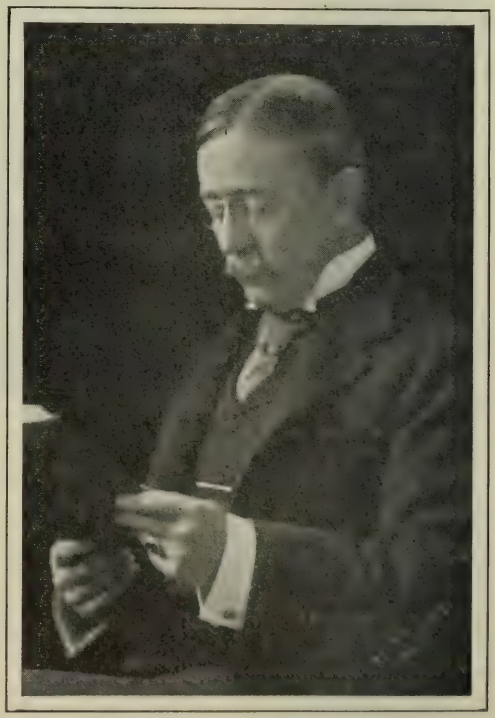
The French Academy was founded by Richelieu in 1635, and despite the rage of the late Alphonse Daudet and the scorn of the late Guy de Maupassant, it continues to exercise an influence in the elevation of public taste that is distinctly felt not only in France, but in every civilized land. A member of the French Academy is to the ordinary French citizen what the captain of a university football team is to the ordinary English or American schoolboy. An election to the French Academy is usually mentioned by every important newspaper in the world.

As everybody knows, membership in the French Academy is restricted to forty; in the American Academy there are fifty members, which, as Prof. Brander Matthews, himself a distinguished Academician, has pointed out, is not too large, when we remember the population of the United States, and the additional fact that in the American Academy recognition is given to music and the fine arts, as well as to literature.

In order to become eligible for election to the American Academy, one must first be a member of the National Institute of Arts and Letters. This society was organized at a meeting of the American Social Science Association in 1898. The qualification for membership is stated in the constitution: "It shall be notable achievement in art, music or literature." The number in the Institute is limited to two hundred and fifty, and election is invariably by ballot. In order to assure the dignity of the Academy, seven men were taken from among the members of the Institute in 1904, whose duty it was to elect others. These seven were Messrs. Howells, St. Gaudens, Stedman, La Farge, Clemens, Hay and MacDowell—an excellent choice. The number was progressively raised to fifty.

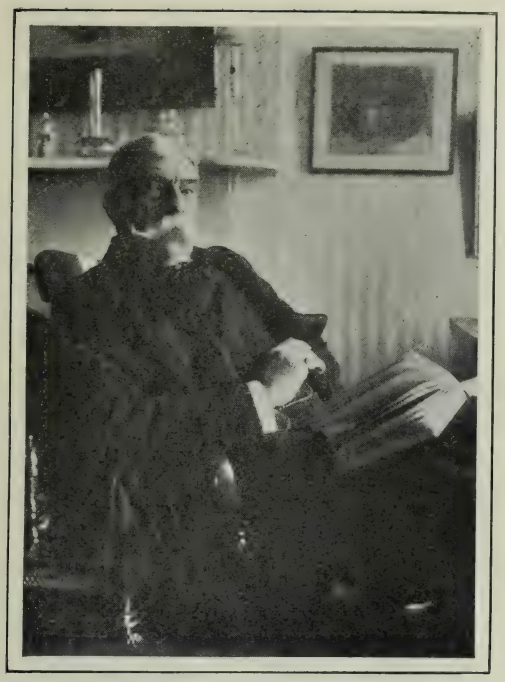
There can be no doubt that the American Academy fairly represents America's living leaders in literature, music and the fine arts; and the death roll is impressive testimony to the care with

JOHN BIGELOW.



which members of our Academy have been chosen—Aldrich, Clemens, Crawford, Gilder, Gilman, Hale, Harris, Hay, Howard, Julia Ward Howe, Jefferson, Lea, Mitchell, Moody, Norton, Schurz, Stedman, in literature; Homer, MacDowell and Ward, in art and music.

There is to be a joint meeting of the American Academy and of the National Institute at the New Theater, in New York, on December 8 and 9. On the first day William Dean Howells, the president of the Academy, will take the chair at the morning meeting, and Henry Van Dyke, president of the Institute, will preside at the afternoon session. The gold medal of the Institute, for distinction in the department of history or biography, will be formally presented at this December meeting. On the morning of December 9 there will be a commemoration meeting, "at which three papers will be read, each dealing with the life and work of five deceased Academicians in the order of their election." St. Gaudens, Stedman, Clemens, Hay and MacDowell will be the subject of an address by Brander Matthews; McKim, Norton, Ward, Aldrich and Jefferson will be discussed by W. M. Sloane; Gilder, Homer, Schurz, Harris and Hale will be commemorated by Hamilton W. Mabie.



In discussing individually the present members of the American Academy, it is safe to say that the president, William Dean Howells, is perhaps, of all living Americans, the man most clearly entitled to his seat. He is our foremost representative in creative literature, and his literary career has extended over exactly fifty years. He has received honorary degrees from Oxford, Yale, Harvard, Columbia and Adelbert. He has had more influence on the output of American fiction than any other living man, and in simplicity, dignity and beauty of character he is an almost ideal representative.

Theodore Roosevelt's publications in the fields of history, biography and outdoor life have been numerous and notable. The Academy would seem lonesome without him, as the world seemed lonesome without Daniel Webster.

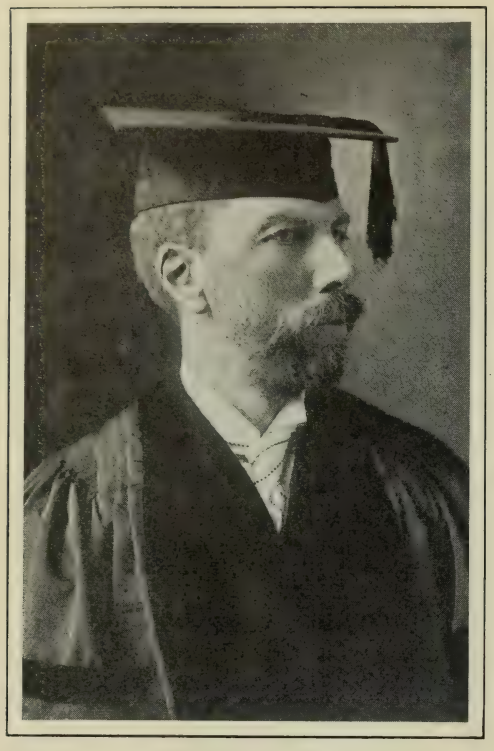
It is rather curious, in view of the

HAMILTON W. MABIE.

F. HOPKINSON SMITH.

long and intimate friendship between the two, and the constant coupling of their names in literary gossip, that in the alphabetical list of the National Institute Henry James follows William Dean Howells. Like Whistler, we can claim him only by birth and (partly) by education; his home and his heart are in England. But his novels interpret American life and character, and he is a world figure.

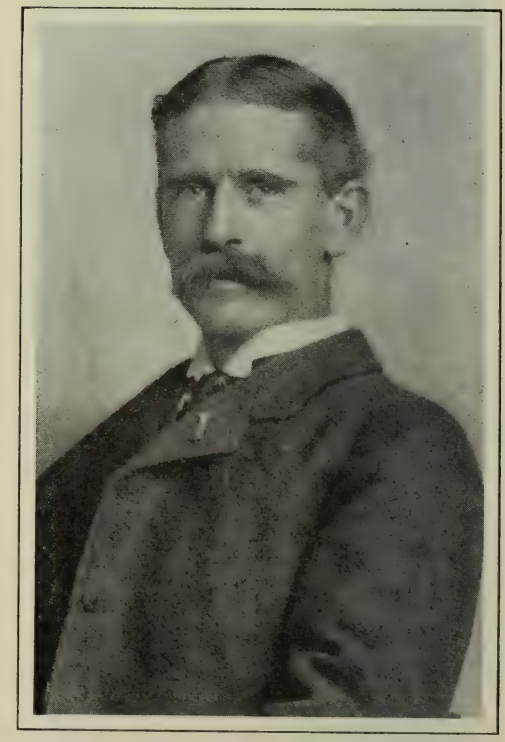
Prose fiction is also represented by Mr. George W. Cable, Mr. Thomas Nelson Page, Mr. F. Hopkinson Smith, and Dr. Henry Van Dyke, tho the last two gentlemen are deservedly eminent in other fields as well. No one could possibly object to the inclusion of these four names, altho there are other American novelists that seem worthy of admission. Perhaps these will become Academicians at some future date. I refer particularly to Owen Wister, Booth Tarkington and Robert Herrick, which does not by any means exhaust the list of eligibles.



Among men of literary eminence rather than high-class creative power are found John Bigelow, one of the most respected and beloved of all living Americans. He will be ninety-three years old this month, and his great heart is aglow with unquenchable enthusiasm. His discovery and publication of the original manuscript of Benjamin Franklin's autobiography constitute an achievement that will make his name ever remembered. His "Retrospections of an Active Life" is autobiography, history and literature combined.

Henry M. Alden, Robert Underwood Johnson and Hamilton Wright Mabie have all achieved distinction in first-class editorial work, covering many years of service. Each of the three is also an original writer in the respective fields of religion, poetry and criticism. They have invariably followed high ideals and have done a large share of the world's work. One of the best literary editors of the country has not yet been elected to the Institute, tho his product is beginning to attract wide attention. This is the Irishman, Francis Hackett, who in an astonishingly short time has made the "Literary Supplement" of the Chicago *Evening Post* by far the best purely literary weekly in the United States.

Among scholars we find, as we ought to find, the names of Arthur T. Hadley, Woodrow Wilson, Thomas R. Louns-



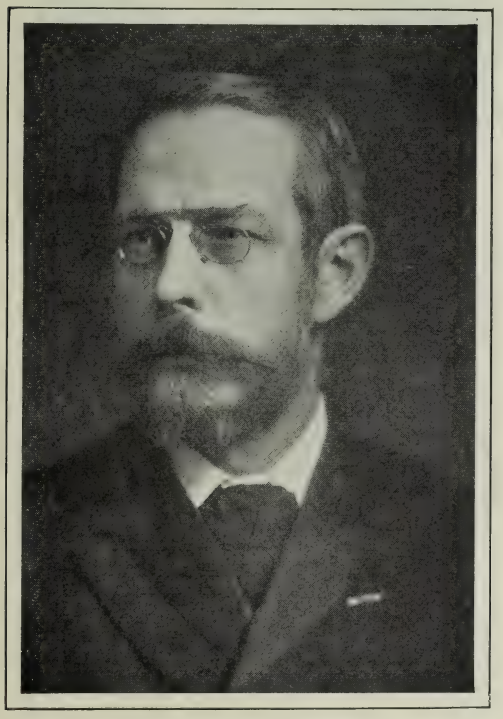
THOMAS NELSON PAGE.

ARTHUR T. HADLEY.

bury, Horace Howard Furness, Basil Gildersleeve, Bliss Perry, and last, but not least, Andrew Dickson White. President Hadley's publications in economics are recognized as standard works, and he is an authority on railway transportation; Dr. Wilson is known everywhere as a writer of political history; Professor Lounsbury is one of the best scholars in English literature that Yale has ever produced, and his writings have a singular charm of style; Dr. Furness has brought glory to American scholarship by making the best edition of Shakespeare that the world has ever seen, and is thus one of the most useful men to other students that has ever lived; Professor Gildersleeve is the leader of classical scholarship in America, to whom all specialists pay deserved homage; Professor Perry has taught English literature at three great American colleges, has edited the *Atlantic Monthly*, and has produced important books; Dr. White's services to his country need no enumeration here.

Among professional historians of high eminence there are in the Academy Henry Adams, whose history of Jefferson's and Madison's administrations is almost a model work; Henry Cabot Lodge, United States Senator, who is an authority on the colonial history of America, and who has also written valuable biographies; Admiral Mahan, who is perhaps the leading authority in the world on naval history; James Ford Rhodes, whose "History of the United

HENRY VAN DYKE.



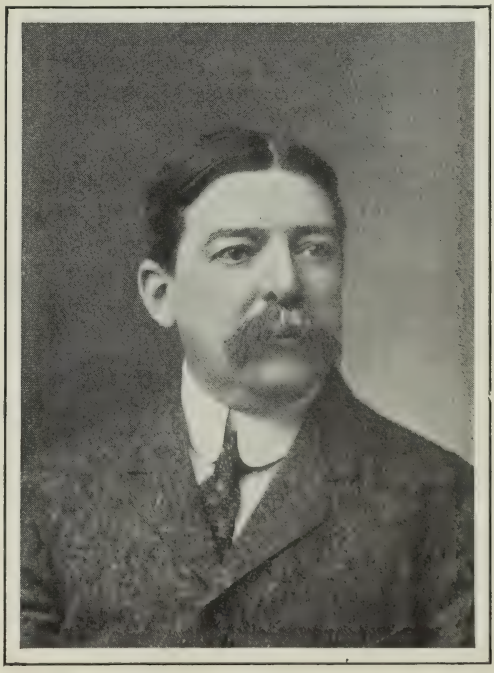
States" is remarkably free from political or personal bias, who has been honored by many university degrees, and who received in 1901 the Loubat Prize from the Berlin Academy of Science; and Prof. W. M. Sloane, of Columbia, a distinguished scholar in French history.

Among publicists of great authority and versatility the Academy has recognized Charles Francis Adams and Thomas Wentworth Higginson, who have been influential writers and leaders of public sentiment for many years.

Professional literary critics are represented by W. C. Brownell and Brander

Matthews. Mr. Brownell has been for two decades the literary adviser of the publishing house of the Scribners, and has written during this period formal critical essays of distinction. Prof. Brander Matthews is one of the ablest critics in America, and has a style all his own, full of vivacity and vigor. He has had an immense influence in America in raising the standard of the drama, and toward the elevation of this art he has perhaps done more real service than any other living American.

Two naturalists are in the Academy, John Muir and John Burroughs, who might be said to represent the West and the East. Mr. Muir is a geologist and an explorer. Mr. Burroughs is a naturalist and a true literary artist. He is a

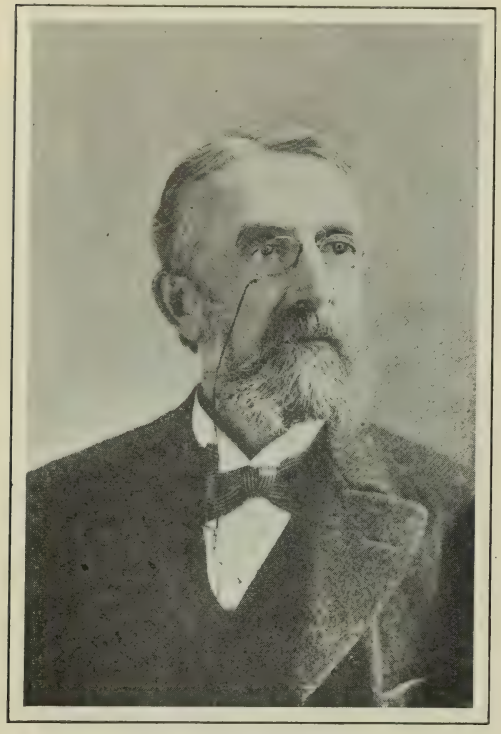


BRANDER MATTHEWS.

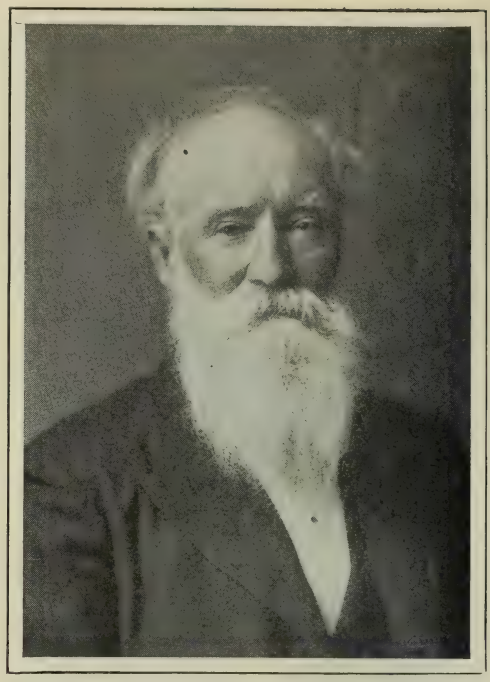
favorite in many thousands of American homes.

The list of Academicians in the Department of Literature—and I am not competent to speak of the men in the Department of Art and in the Department of Music—is worthily completed by the name of one who in these strenuous Philistine days is an admirable type of the genuine, leisurely, high-minded man of letters, George E. Woodberry. Mr. Woodberry is a distinguished poet, critic and biographer; a man of sound culture, wide knowledge and fastidious taste, just the kind of person that every American community needs.

It is, of course, absolutely impossible for any man or any body of men to draw up a list of Academicians that shall satisfy everybody. The very nature of the accomplishments that cause eligibility make an All-American team of literary athletes impossible to choose with confidence. But as one peruses the membership roll of the National Institute out of which the Academy is drawn, it is far easier to pick names that ought to be in the Academy than it is to pick names in the Academy that ought not to be there. The choices seem to have been made with absolute fairness and impartiality, and the Academy admirably represents the best America can show. Some places are vacant that must shortly be filled, and among many worthy candidates, two members of the Institute stand out most clearly in my own mind. These are Augustus Thomas, whose play, "The Witching Hour," has made



Copyright 1908, by J. E. Purdy, Boston



GEORGE WOODBERRY.

him America's foremost living dramatist, and James Whitcomb Riley, who I think has been for years and is today America's greatest living poet.

The National Institute and the American Academy have done no one any harm, nor have they exerted influence in any but the right direction. They have sprung from an honest attempt to elevate in public estimation true ideals in literature, art and music, ideals that are needed in America more than in any other civilized nation. The success of the Academy during the few years of its existence has been so gratifying that it seems probable that in the near future an election to the Fifty will be ranked among the great prizes of American life. A very large number of people regard it so already.

NEW HAVEN, CONN.

On the North-Bound Train

BY IVAN SWIFT

WINTER wakes and the snow falls deep;
On thru the drifts the drivers creep
Bearing a burden of human freight,
Brutish force and a primal hate.

Sinew and blood and the untaught brain
Crowd in the coach of the north-bound train.
Pipe and pack and the amber flask
Cheer the way to the winter's task.

Beat by the craft of unused hands,
They go to war with the timber lands.
The town-fear fades and the languid eye
Lights with the oaths of "Do or die."

Leather and felt and the bear-skin coat,
Grime and grit and the open throat
Curse the cost of the world they've known,
Lift their burden and seek their own.

The badger, the wolf and swagger bear
Are hunted here and hunted there,
And live with their gods, as best they can,
Than trust to the hearts of their fellowman.

Gurgle, steam! and stagger, train!
Worse is the curse of scar and pain
That wait in the wilds for men of toil
The world sends out to wrest its spoil.

HARBOR SPRINGS, MICH.

Talk Not of Age

BY ALFRED AUSTIN

POET-LAUREATE OF ENGLAND.

Talk not of age; the waning years
  Leave one more wise as they depart,
And with them mingle smiles and tears,
  If one but young remains at heart.
The seasons come, the seasons go,
  But with revolving days return,
Till Winter's evanescent snow
  Melts in the laughing, leaping burn.

And when the cuckoo calls again,
  The sap of April floods one's veins;
And as he flies from glen to glen,
  Rejoicing in Spring's sunlit rains,
I feel as young as even he,
  Seeking him near, afar, above,
Echoing his name, in playful glee
  Of faithless undomestic love.

Nor when deep Summer silence rests
  On windless thicket, sheltered lawn,
From thoughtful hearts and pious breasts
  Is Nature's sympathy withdrawn.
The faithful cushat faintly heard,
  Repeats the simple note of home,
Teaching the lesson, wisest bird,
  How blest are those not prone to roam.

ASHFORD, KENT, ENGLAND.

Some Notable Books of the Year

AT this season of the year, when book buying and book making is most active, we are accustomed to give some general surveys of the book mart. On October 6 we published a classified list of forthcoming books. On December 8 we will publish special articles on the illustrated and gift books of the holiday season, and on the juvenile literature of the year. In the present issue we call attention to a number of recent publications in certain fields of literature. Some of the more important are, however, not here included, because they have already been reviewed or will be in future issues. In most cases the brief appraisement here given will be sufficient for the reader to determine what books will be of interest to him, but some of those mentioned here will be later reviewed at more length in THE INDEPENDENT. In this connection we may remind our readers that they can order any books thru THE INDEPENDENT, either in renewing subscriptions or at any other time.

Fiction

The fall publishing season is already sufficiently far advanced for us to take stock of what has been accomplished in the department of fiction, and of the prevailing tendency of the new output, if any can be discerned. That prize of the business and the art, sought for and hoped for with ever-renewed zeal and hope by authors, publishers and the public alike, the "best seller," has not yet made its appearance. It has, indeed, become such an uncertain quantity in the last few years that even the boldest of young and inexperienced reviewers have ceased from predicting the fortunes of likely stories the moment they fall from the presses. Prophecy of that kind has grown infinitely more hazardous than it was in the days, still so recent, when a publishing season could be easily tagged with a *genre* ticket—that of historical romance, for instance, or of the "problem" novel, of political corruption or frenzied finance. No such decided trend is discernible in the fiction of this season.

Our novelists, and those of England as well, are evidently feeling their way to a new fashion, a new subject to interest the public and exploit for its entertainment and enlightenment, and their own fame and profit. Meanwhile they write as they list, falling back upon the fundamental ingredients of their art, love and adventure, without ulterior motive of propaganda or discussion of questions and conditions of the day. It may not come amiss to comment here upon the disappointment which the flying machine has proved to be as a new inspiration in the realm of the fiction of derring-do. The few early essays in this field have fallen flat, and the subject has been relegated to the province of juvenile literature, for the present at least.

One thing can be said for this season's fiction, and we say it with pleasure: it is more normal than it has been for some time past. The few new "daring" novels have fallen flat. The public has evidently grown tired of the woman of "temperament" and her fictional doings. She has ceased to be a novelty, a fashion, she has become a tradition, a convention almost, and in art traditions and conventions always fall sooner or later. The public is the real leader of secession, in fiction, if not in music and painting.

PERIWINKLE.
From Payson's "Periwinkle."
(Sturgis & Walton.)

Classification of the novels here under consideration being out of the question, we start at random, with Mr. E. Philip Oppenheim's *The Lost Ambassador*.[1] We do not stop to inquire into the measure of his art, any more than we inquire into that of Alexandre Dumas, we only realize that here is a benefactor of tired men and women seeking relaxation. He is an entertainer pure and simple, so delightful a companion, that even a surfeited professional reviewer welcomes a new book of his with the confident expectation of pleasure. We do not care whether the underworld into which he leads us bears any relation to reality or not, he captures our attention in the first chapter, and thenceforth we are his until the end is reached. We are in a world of his own, and he makes us interested onlookers at its romantic and adventurous doings. His plot must not be revealed lest we rob a prospective reader of a delightful evening under the lamp. Suffice it to say that the maître d'hotel who plays so large a part in these doings is a happy invention. Mrs. Katherine Cecil Thurston has not succeeded in her attempt to use the masquerader motive a second time in *Max*.[2] The story, with its Russian heroine, its Irish hero, and its Parisian Bohemian setting, would be entertaining enough were it not for the transparency and the improbability of its mystification. No reader can fail to look thru the disguise of the chief personage in these doings; it is, moreover, betrayed to him by the author with such frankness that one is forced to the conclusion that it is her intention to take the public into her confidence from the very first. The only result is that the outcome of it all is not in doubt for a single moment.

The quality of Mr. George Barr McCutcheon's work varies but little. He has an established *clientèle* and he understands its preferences. In *The Rose and the Ring*[3] he takes us under the canvas of a traveling circus in the days before the railroad robbed the life of much of its hardship and not a little of its romance, in the early seventies of the last century. The fictional artists of the sawdust, like those of the boards, are lovable folks, that is a tradition as old as Dickens, wherefore it may be assumed to be true. Mr. McCutcheon mingles the adventures of his unjustly proscribed hero, who finds sanctuary among the clowns and the *equestriennes*, with pictures of their daily life and doings that have the

[3] THE ROSE IN THE RING. *By George Barr McCutcheon. Illustrations by A. I. Keller.* New York: Dodd, Mead & Co. 12mo. $1.50.

charm of days gone by and are evidently based on thorough investigation. The title sufficiently suggests where the hero found his love. Of course, the obligatory villains are not lacking. A strolling player and a "show boat" on the Mississippi are more than incidents in Mr. Randall Parrish's *Dan MacGrath,*[4] which does briefly for the river and its life what has been done far more elaborately by other writers. Apart from its setting, the tale is remarkably old fashioned, being concerned with the misadventures of a lost child and its ultimate restitution to its people after much villainy. The new story of another American best-seller, Meredith Nicholson's *The Siege of the Seven Suitors,*[5] starts off delightfully with an ingeniously invented situation, but after a while its interest becomes of a desultory nature. It is comedy, but it is not comedy of the quality which one has a right to expect from so clever a writer handling such good material. Mr. Nicholson, in his anonymous "Confessions of a Best Seller," published last year in the *Atlantic,* promises to reform and write better even tho less popular books. A historical romance, Mr. A. T. Quiller-Couch's *Lady Good-for-Nothing,*[6] and a historical novel, Baroness Orczy's *Petticoat Rule,*[7] naturally fall together as the only representatives of the historical *genre* here. Mr. Quiller-Couch gives us a vivid and strong variation of the old, old King Cophetua and the beggar maid motif, laying its scene, first of all, in the New England of the early eighteenth century, and afterward in Portugal, the historic earthquake of Lisbon falling within its scope, as well as the harshness of Puritan rule and the loose morals of the British aristocracy of those days. Like all its author's work, this is a serious performance, of unexceptionable literary quality. The unavoidable juxtaposition with it of Baroness Orczy's attempt at a combination of romance and history accentuates the shortcomings of *Petticoat Rule,* its weakness as a chronicle of the times and its superficiality as a picture of some of its leading characters. The plot is concerned with the intrigues at the court of Louis XV for the cause of the Young Pretender. The book is meaningless and not even interesting, except in a fluffily feminine way.

Room may be made here for a quartet of volumes of short stories. Mrs. Wharton's *Tales of Men and Ghosts*[8] are of strangely unequal merit, the most ingenious of them, in the invention of its plot and the closeness of its relation to the possibilities of real life, being the first, "The Bolted Door," a gruesome fancy woven of crime and a denial of proffered atonement, prompted by weariness of life, because both law and medicine consider the confession a proof of insanity. There is a cramping influence discernible in these pages. It is easy to say the conventional, slightly condescending thing about the work of Mr. Richard Harding Davis, the easier because one knows that it does his popularity no harm. The truth is that he has earned that popularity and continues to earn it, for he is a born story-teller and a skilled artist. He was both already in the days of his immaturity and its ideal, Van Bibber; he is both still and much more besides, in his years of maturity, having seen much of the world and of men. There is still a little of the *poseur* about his work, of the worldly-wise, world-weary, oldish-young attaché of legation, for instance, entertaining a club room full of listeners, but even though one suspects that he is drawing the long bow of experience, making surface look like depth, one reflects at the same time that much, at least, of the strange tales he tells from afar and near may be as true as it is plausible, and that, at any rate, he is a capital raconteur. "A Question of Latitude," moreover, is really big with significance, as telling as Kipling's dividing line between East and West. The first duty of an author is to convince his reader for the time being, and that Mr. Davis does again in *Once Upon a Time.*[9] Sir Gilbert Parker's

[4] DAN MACGRATH. *By Randall Parrish. Illustrated by John W. Norton.* Chicago: A. C. McClurg & Co. 12mo. $1.50.

[9] ONCE UPON A TIME. *By Richard Harding Davis.* Illustrated. New York: Charles Scribner's Sons. 12mo. $1.50.

stories of British dominion in Australasia, *Cumner's Son*,[10] are, on the other hand, disappointingly conventional, chiefly, perhaps, be it said in all fairness, because neither the life nor the inhabitants of that distant island world, whites and natives, have already been made known to us by many other writers. The four stories gathered together in Dr. S. Weir Mitchell's *The Guillotine Club*[11] are of the thinnest texture. The title-story is the best of them, with a well invented plot, which is, however, turned into farce instead of tragedy, that being, of course, the author's right if he so chooses, tho it appears a waste of good material that might well be turned to more effective purpose. And in the last story Dr. Mitchell turns a scientist's speculative eye upon the problem of ghosts—*revenants*, to use the admirably significant French word.

Mr. E. V. Lucas has found the secret of the leisurely, confidential mid-Victorian manner without its extreme length. Without its complexities of plot also, but these we willingly forego, so long as we can listen to his humorous, tolerant, shrewd comments on human nature, and on the life, manners and morals of contemporary England, as seen from the comparative standpoint of a quarter of a century ago. It is him we seek in his stories, and him we find in his latest one, *Mr. Ingleside*,[12] as we found him in its predecessor, "Over Bemerton's." And when that has been said, no further praise is needed by those who found much humor and no less vanity of judgment in his earlier book. Maarten Maartens draws in *Harmen Pols*[13] a picture of the Calvinism of the Dutch peasantry, which *pace* the publishers' assertion on the slip-cover, does not sustain a comparison with "The Scarlet Letter." It is a well written story, however, gripping in its suspense and in its climax, in its linking of the circumstances of the outer, material life to that of the soul.

The wisdom of the choice of *The Green Patch*[14] as the title for Baroness von Hutten's new novel is more than questionable, for it is not until the very end is reached that its meaning is made clear to the reader. For the rest, this is a most satisfactory tale, cleverly planned and cleverly handled, whose heroine is of the family of "Pam," yet in no way suggests an attempt on the author's part to make old and successful material do service once more. Perhaps it might have been just as well if the episode that centers in the green patch itself had been omitted. It seems a pity that the author considered this experience, stopped in its beginnings by a wise husband, necessary for her heroine's ultimate well-being. In *The Mistress of Shenstone*[15] Mrs. Florence L. Barclay puts her readers face to face with an extraordinary situation, which is too integral a part of her story to be revealed here. It is a legitimate subject to be dealt with in a novel, to which, moreover, her originality of treatment gives additional interest. This new author—the present one is, if we mistake not, her second book—is likely to find a faithful and steadily increasing circle of feminine readers if she continues as she has begun. A promising minor novelist who is strong on sentiment. The fascination of a woman in the full maturity of her beauty and social talents for a boy at the beginning of life is dealt with by Miss Marie Van Vorst in *First Love*.[16] The woman is an American, wherefore character and common sense and a realization of the true values of life, win the day over "temperament." There are moments of emotion, of course, but the tale does not leave a bad taste behind. It is addressed to mature men and women, not to girls, tho impulsive, susceptible youths may learn a lesson from it. The forgotten idylls of the Kailyard receive a shrewd, if belated blow, in Amelia E. Barr's *A Reconstructed Marriage*,[17] which draws an unpleasant picture of the manners as well as the character traits of the

[14] THE GREEN PATCH. *By Baroness von Hutten.* New York: F. A. Stokes Co. 12mo. $1.50.

[15] THE MISTRESS OF SHENSTONE. *By Florence L. Barclay.* New York: G. P. Putnam's Sons. 12mo. $1.50.

[16] FIRST LOVE. *By Marie Van Vorst. Illustrations by F. Graham Cootes.* Indianapolis: Bobbs-Merrill Company. 12mo. $1.50.

[17] A RECONSTRUCTED MARRIAGE. *By Amelia E. Barr. Frontispiece by Z. P. Nikolaki.* New York: Dodd, Mead & Co. 12mo. $1.50.

Scotch of the middle class, especially the women. The poor English bride suffers intolerable things at the hands of her overbearing, jealous mother-in-law, who refuses to abdicate her authority in her son's house, and as for that son himself, he is in his own way as unpleasantly "Scotch." The bride has to resort to desperate measures before the marriage is "reconstructed." It is an unpleasant tale, upon whose realism one would like to have an expert opinion, Mr. Lang's, for instance, beneath whose omnivorous eyes it may well happen to come.

The Canadian Northwest has found an able chronicler in Mr. Harold Bindloss, who turns in *Masters of the Wheatlands*[18] from the frontiersmen, the miners and railroad builders and lumbermen to the agriculturists. Native Canadian and English immigrants are mingled in this story, as in all his other ones, and there is abundant love interest, but its greater merit lies in its picture of the primitive life and hard conditions of the settlers, and of the qualities of mind and body which are required if success is to be wrung from the virgin soil. Mr. Bindloss's province in fiction is a continuation of the field in our own literature which was closed by the effacement of the last frontier. He is a satisfactory chronicler, a contemporary historical novelist in the wider sense of the word, who, while not among its masters, has many solid merits of his own, not the least of which is that he always tells a readable story.

The fiction of the underworld, begun with a serious sociological purpose, is turned into uproarious farce by Mr. George Randolph Chester in *Young Wallingford*.[19] The book is amusing for a while, then rather wearies one with its piling of instance upon instance of the ingenuity of its picaresque hero in swindling, not the innocent people, but smug fellow-swindlers, most of them men of standing and outward responsibility. Young Wallingford—the name is an alias—is the product of a country town, and his first exploits after he leaves it and comes to New York consist of proving to the Broadway gang of confidence men, swindlers and race track touts that they are "dead ones," "easy marks." We quote from his own lingo and that of the foiled and despoiled swindlers. In his straining after humorous effects, Mr. Chester strains the probabilities as well. A little of this queer, nonmoral product goes a long way at a single sitting.

As usual Mr. Henry James's new volume of short stories has to do with *The Finer Grain*.[20] Whether good or bad, Mr. James only deals with the very mustard seed qualities of humanity, with the wood of us subject to the highest ornamental polish, never with mudsill and ship-timber men and women. He has the feminine use of a masculine mind which is queer and distracting to normal readers. Only a woman, for example, would represent the hero in the story as talking in a "quaver" which "resembled his drawing slowly, carefully, timidly, some barbed dart out of his flesh." Amelie Rives could not have put it more quiveringly than that—and only a man could track one of Mr. James's heroines into that realm of attenuated thought and emotion far enough to lead the same man in the story to say: "Where, in the name of all that's damnable, of all that's grotesquely delusive, are we?" The truth is, Mr. James should be compelled by law to review his own stories. He is not the only one who understands it, but he is the only one who has a sufficiently ghostly use of language to describe exactly how grotesquely delusive it is at times. He writes chiefly for that surrendered leisure class who have nothing to do but fill themselves mentally and emotionally.

On the other hand, Jack London writes always of the coarser grain. The scenes of his last story[21] are laid in the Klondike. And the hero of it has the nature of a gambler, prize fighter and wrestler harmonized with the courage of an adventurer who finds his way in the world of big financial achievements. Some men progress by natural revulsions from their own appetites and experiences both men-

[18] MASTERS OF THE WHEATLANDS. *By Harold Bindloss.* Illustrated. New York: F. A. Stokes Co. 12mo. $1.50.

[20] THE FINER GRAIN. *By Henry James.* New York: Charles Scribner's Sons. $1.25.

[21] BURNING DAYLIGHT. *By Jack London.* New York: Macmillan. $1.50.

tally and morally. This novel indicates such a revulsion on the part of the author. It appears to be written to prove that the savage, long-haired man invites the gentle apron strings of a good woman, and fears, as an experienced jungle beast fears a trap, the claws of the other kind of woman. He resists the natural female mate of his own type. We all remember when Mr. London was an ardent advocate in fiction of this very mate, what he called the "flame woman." So it would be interesting to know how he came by this later revelation of the nature of his own sex, of the man who, whatever he is or has been, winds up by wanting just the good women. This is progress for Mr. London. In the course of time we may expect him to write a story with a proper moral man for a hero. He is on the right tack at last, and if he grows in grace may yet become the author of a great piece of fiction.

For the refreshment and momentary domestication of those world folk who are involved so darkly in the hurry and worry of our times, we recommend Alice Brown's last novel.[22] It takes the reader indoors as if he were a confused wayfarer, lights the fire, and seats him comfortably in a quaint family group of gentle hearts. The atmosphere of the book is that of a home next to the garden gate of the old fashioned Heaven. Nothing is said of a pietistic nature, but you have the angels for neighbors in the whimsical love and sweetness of the characters in the story.

The further we are removed from the virility of old fashioned affections and virtues, the more we like to have them dramatized in fiction. The function of romance is to cast a glow over what we have been. It is the way memory embalms what we used to be. This is why Mr. Munn's story of a good old man,[23] a good young man, and a good girl will be enjoyed by the average reader as he would enjoy the "songs that mother used to sing." The effort to bring goodness in these characters up to the present time is a sort of failure. But the book is entertaining, not because it is true now or ever will be again. Your good book is apt to lead backward instead of forward anyhow. It is too often composed of the scriptures of memory rather than of life.

If our taste in fiction does not improve, at least it changes. Twenty years ago we were quite "wild" over the "Quick or the Dead?" Now Amelie Rives writes another story[24] quite as foolishly amorous, and her elderly readers will find it absurd. This story will prove interesting only to childish old ladies, and to those poor young things, village girls, serving maids and shop girls, who must have all their romances too much gilded because of the sordid reality of their own lives.

The stories in Hamlin Garland's *Other Main Traveled Roads*[25] were written some years ago, before he had entered the "shadow world" of seance fiction, when he still knew how to interpret into his men the stubborn virility of the West and into his women the drab stoicism which made them the martyrs of that section. To the reader who has viewed the West as an Eldorado these stories will be disillusioning. The author has stripped it of its glamor, showed that the bondage of unceasing toil is the character of its realism. However, if the reader still clings to the glamor after the austerity of Mr. Garland's stories, let him read Katherine Holland Brown's novel,[26] which restores it. This is a wittily told story of a progressive love-feast, with the scenes laid on a Western ranch, and a red-haired Eastern girl for the heroine. This book belongs to that class of fiction which will have an appeal until skyscrapers and conventionalized people crowd buoyant romance out of its stamping ground in the West.

The soul "panting with a desire for liberty" has starred for some years past in fiction. *The Bird in the Box* symbolizes[27] that excited spiritual thing in the heroine, who is in the anomalous position of being quite devoted to her husband and of loving another man at the same time. The author pretends to observe the proprieties, but the reader

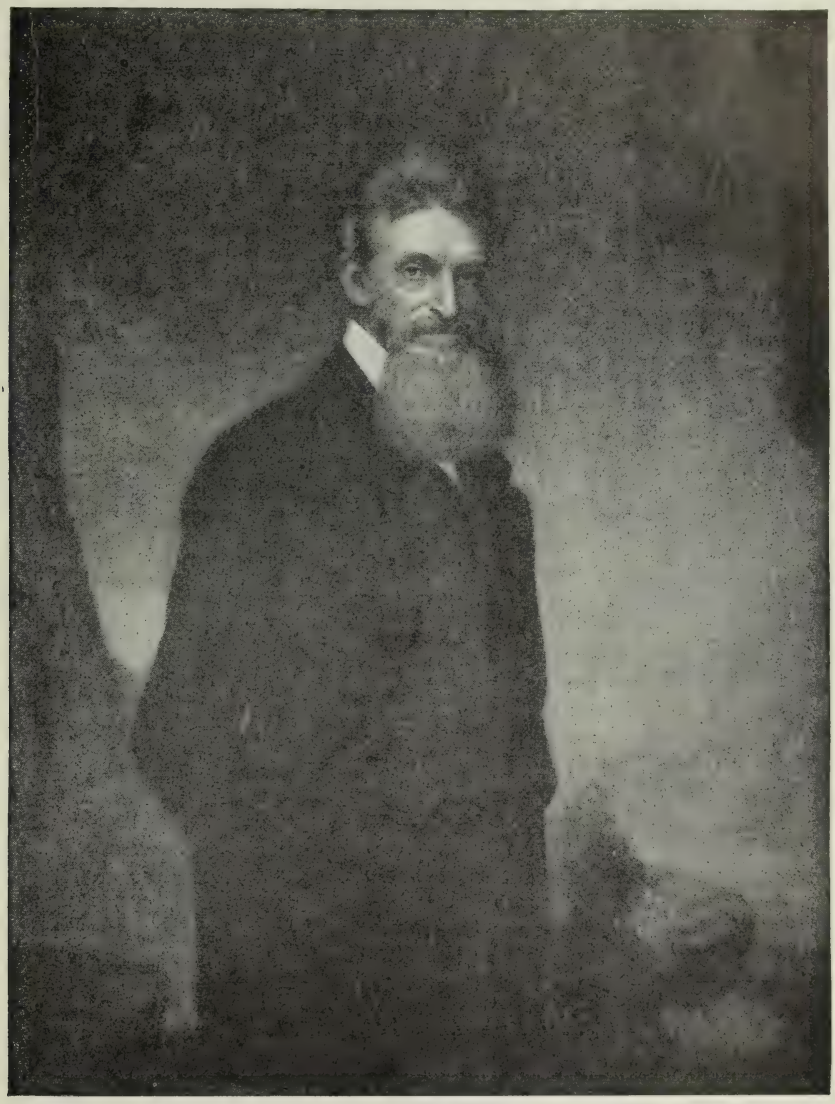
[23] THE CASTLE BUILDERS. *By Charles Clark Munn.* Boston: Lothrop, Lee, Shepard & Co. $1.50.

[24] PAN'S MOUNTAIN. *By Amelie Rives.* New York: Harper Bros. $1.50.

[25] OTHER MAIN TRAVELED ROADS. *By Hamlin Garland.* New York: Harper Bros. $1.50.



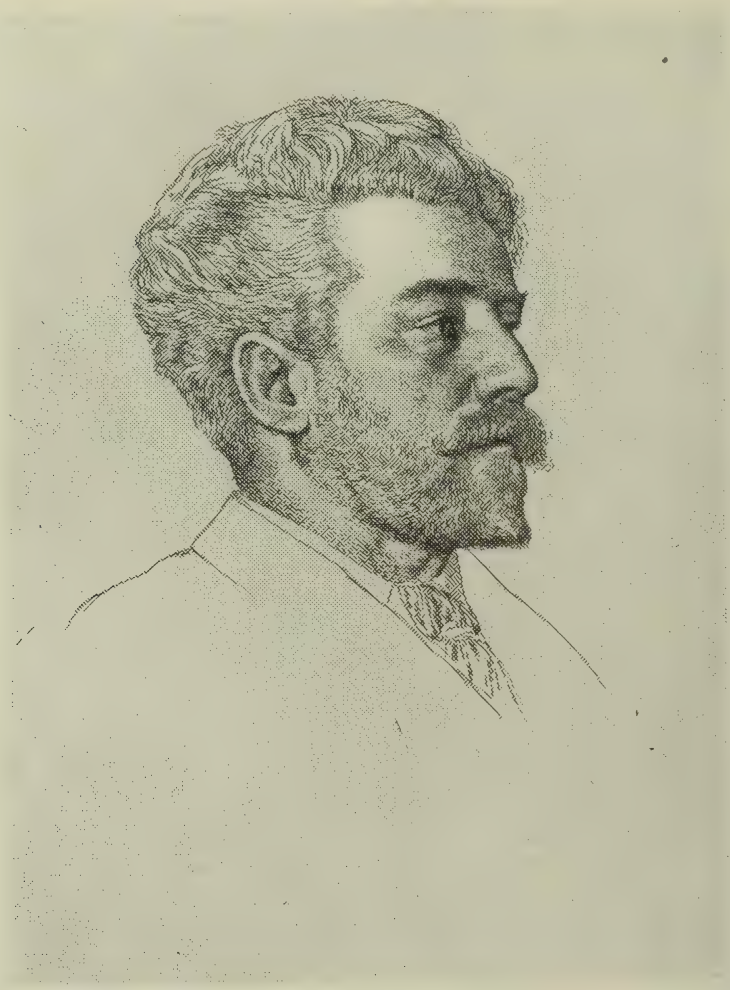
[26] WHITE ROSES. *By Katherine Holland Brown.* New York: Duffield & Co. $1.20.

[27] THE BIRD IN THE BOX. *By Mary Mears.* New York: Frederick A. Stokes & Co. $1.20.

knows that the bird gets out of the box. That is the trouble about your modern panting lady soul in fiction. It rarely pants for liberty, even the worse kind of liberty, without getting it.

Periwinkle[28] is like a fancifully staged play. Remove the scenery and the drama drags. With the sea gone out of this story Periwinkle and her friends are commonplace. But the sea is there and with it the girl in the surfman's oilskins draws our sympathy and admiration.

Southern novelists, as a rule, have a greater passion for writing than they have genius for it. And those not Southern never get the sense of the South. Mr. Warrington Dawson[29] is an illustration of this latter class, in spite of the fact that Mr. Roosevelt says he "writes with power and interest of vital matters." He may write with power and interest, but he does not write with the right intelligence. Mr. Roosevelt can do everything, but he cannot know every-



JOHN BROWN.

thing. And it is so long since he was a Southerner—not since he was a phenomenally innocent babe in arms—that he does not know how far Mr. Dawson misses it in his interpretations of the South. This last story, purporting to be "of the New South," is an ineffective other novel, "The Scar," and we trust that by the time the author is ready to publish a remedy for his "scars" and "scourges" he will have learned to measure his subject in ampler terms and along more dignified lines of understanding.

WILLIAM SHARP.
After an etching by Strang, from "William Sharp: A Memoir."
(Duffield.)

effort to interpret kindly the unregenerate South at the expense of a commercially progressive and degenerate North. Mr. Dawson is like a tailor who has made a garment to order, and finding that it does not fit, attempts to squeeze the victim into it rather than make alterations. *The Scourge* is better conceived and better written than his

The Old Virginia Gentleman[80] is a volume of essays and sketches written before the war by George W. Bagby. It is edited by Thomas Nelson Page, and contains a short biographical sketch of Bagby, written by Edward S. Gregory. The book deserves a place with

[80] THE OLD VIRGINIA GENTLEMAN. *By George W. Bagby.* New York: Charles Scribner's Sons. $1.50.

the old family album in every Southern household, and will prove especially interesting to Northern readers, who have always admired Virginia gentlemen more than anybody else has in this country except the Virginians themselves.

A Georgia girl is the heroine of Will Harben's latest novel,[31] and his readers will be glad to learn that the scenes of the story are laid in a Georgia village, where the author excels in descriptions of life and in interpretations of character.

Mr. Robert Fulkerson Hoffman's new book[32] is a collection of railroad stories, and makes its chief appeal to those who understand the technical language of railroad men. The author has drawn a picture of the "lorelei" mountains of the West which frightens but irresistibly draws the ambitious engineer, a picture so thrillingly realistic that it deserves appreciation.

Skid Puffer[33] is a story of adventure and anecdote simply and vividly told. The author in his preface says that he is "a retired business man unskilled in writing." In this day of literary gymnastics he is to be congratulated upon his lack of such skill and upon his method of straightforward narrative unhindered by artificial style.

Essays and Literary Studies

Mr. Hudson Maxim's formidable volume on *The Science of Poetry and the Philosophy of Language* has already aroused a good deal of controversy.[1] It is, to say the least, an ambitious work. It attempts "to provide a practical method for literary criticism and analysis" and to formulate some fundamental rules for the standardization of poetry. How well he has succeeded in his aim is a matter that must be left for a future consideration of the book. Mr. Shuman, in his *How to Judge a Book,* attempts something of the same sort, tho in a more modest way.[2] He essays "to formulate a simple, home-made system of criticism, yet one based on the highest standards." It is a helpful, common-sense book, and one that must prove of great value in this day of unsettled standards, in aiding the average reader in judging literary merit. The chapter on "First Steps in Analysis" is particularly valuable in plainly stating the tests of excellence.

Professor Schelling discusses with scholarship and critical discernment the literature of Shakespeare's time.[3] The subject is treated in a topical rather than a biographical or chronological way; that is, he 'recognizes a succession of literary movements, developments and varieties in poetry, drama and prose," and it is under these various categories that he develops his exposition. The social background is everywhere kept in view, and the influences which the common life of the period shed upon literary production are explained. Mr. Sidney Lee, in his study of *The French Renaissance in England,*[4] reminds his readers of "the debt which English literature, thought and scholarship of the Tudor epoch owes to the French Renaissance." The influence of Montaigne upon contemporaneous English literature is especially developed. Bacon was not a "servile imitator" of the Frenchman; and yet "the finest fruit of Montaigne's effort is Bacon's "Essays." An interesting reproduction is made (for the first time, as Mr. Lee believes) of the letter of Pierre de Brach, Montaigne's intimate friend, to Anthony Bacon, announcing Montaigne's death. In a strikingly original manner Mr. Ezra Pound treats the charm of the pre-Renaissance literature of Latin Europe.[5] He has small patience with the dry-as-dust antiquarians of literature, and tho he makes no plea for superficiality, he considers that a lover of poetry may justifiably study the poetry *per se* of a period without the obligation of having to delve thru paleography, phonetics, morphology and epigraphy. The work is a charming piece of appreciative crit-

icism. Miss Clarke, in her *Ancient Myths,* discusses learnedly the Prometheus myth as treated by Shelley and other modern poets, and the Diana and Endymion myth as treated by Keats.[6] Dr. Wright thinks he has settled the authorship of *Timon of Athens,*[7] and Mr. George Arnold Smithson explains the relation of the old English Christian poems to Latin literature.[8]

Mrs. William Sharp's biography of her husband will be welcomed by all lovers of the genial critic and creator of "Fiona Macleod."[9] The strange dual personality of Sharp is not explained. "I write," says Mrs. Sharp, "not because I know a mystery and would reveal it, but because I have known a mystery and am today as a child before it, and can neither reveal nor interpret it." Sharp himself, in a posthumous letter to some friends, averred that he could not explain.

He was even a triple personality, in Mrs. Sharp's judgment. "Wilfion" she named "this inner and third self that lay behind that dual expression"; and it was this personality that "realized the imperativeness of gaining control over his two separated selves and of bringing them into some kind of conscious harmony." It is an enchanting biography. Mr. R. Ellis Roberts's account of Samuel Rogers and his circle is attractively told.[10] Clayden's two-volume work is used as the storehouse for most of the material employed; but the material is thoroly sifted and the more trifling matters are omitted. The biography of Rogers is ample, and the gossipy sketches of Byron, Sydney Smith, Fox and others are well proportioned to the central figure. Mr. Forman's *In the Footprints of Heine*[11] is the captivating account of a walking trip thru the Hartz Forest.

Shakespeare has been demolished again—this time by Sir Edwin Durning-Lawrence.[12] It is impossible not to wonder at the industry displayed in such works. It must have taken a good many months to dig out some of the curious data that go to make up the conclusion that Bacon is the author of the plays.

Mr. Howells's *Imaginary Interviews* is a collection of "Easy Chair" familiar talks on a considerable range of subjects.[13] The first is an interview with the shade of George William Curtis. The papers are all in Mr. Howells's inimitable style, even tho the substance is somewhat attenuated. Professor Jastrow discusses *The Qualities of Men* from the standpoint of a social psychologist.[14] Mr. Le Gallienne, under the

title *Attitudes and Avowals,* collects some two dozen of his previously printed essays on literature and life.[15] Mr. E. V. Lucas, in *The Second Post,* offers a supplement and companion to "The Gentlest Art," an anthology of letters published in 1907.[16] Mrs. Pennell tells charmingly of her household help and her sometime visitors, in *Our House and the People in It.*[17] Vivid and picturesque depictions of the varying moods of nature, and particularly of sky effects, are given in Anabel Loomis Todd's *A Cycle of Sunsets.*[18] Mr. Brown's *The Cap and Gown* gives, in a winning and effective way, wholesome advice to college men.[19]

Reprints of Standard Works

We have often wished that the flamboyant display of fresh and perishable magazines on our railroad news stands was supplemented by a few shelves of cheap classics. If that had been the custom in America as it is in England and Continental Europe, we should have saved many unprofitable hours and we should have been able to make a better grade in an examination on Sir John Lubbock's "Hundred Best Books," or Dr. Eliot's "Five Foot Shelf," or Colonel Roosevelt's "Pigskins." As it is, we do not travel without an "Everyman" if we can help it. The fifty new volumes of Everyman's Library[1] which Messrs. Dutton & Co. have just sent us will come in very handy for such satchel service. They are quite pocketable, and the type is large enough so they can be read on the cars, even in a Pullman berth, now they have those nice little individual incandescents. There are five hundred volumes in the library now. The recent issues include works by Spinoza, Tolstoi, Mill, Ibsen, Huxley, Plato, Ruskin, Byron, Burton and Gibbon; in fact, the most "notable books of the year" or of any year. Each volume has an introduction by some competent writer, giving a brief account of the work and its author, with a bibliography.

The seven volumes of *Stories and Tales,*[2] by Sarah Orne Jewett, are the work of a specialist. For over thirty years Miss Jewett had had the New England people under her microscope, sketching from life her inimitable miniatures. "Deephaven" bears the mark, "Copyright, 1877, by James R. Osgood & Co." But none of them is out of date or ever will be. These handy volumes have each a photogravure frontispiece.

The volumes of the centenary Dickens,[3] imported by Scribner, are large but light in weight, after the English manner of book making. The print is good and the illustrations are the grotesque originals by "Phiz." Putnam's new edition of Goldsmith[4] has the advantage of eighty photogravures from original designs by Frederick Simpson Coburn and an introductory life of Goldsmith by Dr. Horatio Sheafe Kraus, occupying about a third of the volume devoted to the poems. The Memorial Edition of Meredith,[5] now being published by Scribner, we have several times reviewed at length. Harper's Thin Paper Edition of Hardy[6] is also familiar to our readers. These small volumes in type large enough for anybody are only five-eighths of an inch thick, in cloth or leather binding. A neat, leather-bound volume containing Browning's *Pippa Passes* and *Men and Women,*[7] illustrated with ten richly colored illustrations by E. Fortesque Brickdale, is issued by Houghton, Mifflin.

The works of the *alter ego* of the late William Sharp must have a uniform edition,[8] now that interest in them has been revived, or, rather, extended, for it was never dead with some, by the disclosure of the identity of the

[15] ATTITUDES AND AVOWALS, WITH SOME RETROSPECTIVE REVIEWS. *By Richard Le Gallienne.* New York: John Lane Company. $1.50.

[1] EVERYMAN'S LIBRARY. *Edited by Ernest Rhys.* New York: E. P. Dutton & Co. 70 cents per volume, leather; 35 cents, cloth.

[2] STORIES AND TALES. *By Sarah Orne Jewett.* 7 Vols. Boston: Houghton Mifflin Company. $7.

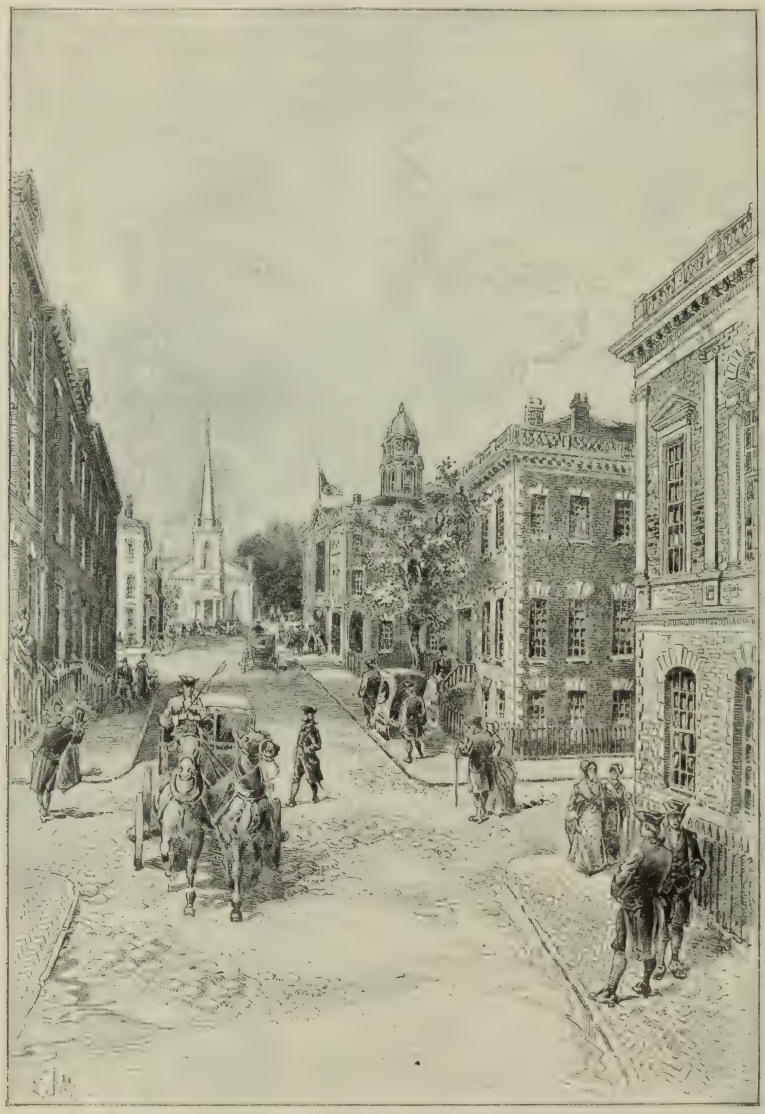
[3] THE CENTENARY EDITION OF THE WORKS OF CHARLES DICKENS. 36 Vols. New York: Charles Scribner's Sons. $36.

[4] THE WORKS OF OLIVER GOLDSMITH. *Edited by Peter Cunningham.* 10 Vols. New York: E. P. Putnam's Sons. $1.50 per Vol.

[5] THE MEMORIAL EDITION OF THE WORKS OF GEORGE MEREDITH. 27 Vols. New York: Charles Scribner's Sons. $2 per Vol.

[6] THE PAPER EDITION OF BOOKS. *By Thomas Hardy.* New York: Harper & Bros. $1.25 per Vol.

[7] PIPPA PASSES AND MEN AND WOMEN. *By Robert Browning.* Boston: Houghton Mifflin Company. $1.25.



[8] THE WRITINGS OF "FIONA MACLEOD" (WILLIAM SHARP). The Silence of Amor and Where the Forest Murmurs. New York: Duffield & Co. $1.50.

mysterious "Fiona Macleod." That an author may be his best reviewer is indicated by the very apt words which Sharp used in describing one of "her" books:

"Born out of incurable headache, 'the nostalgia for impossible things' the issues of life have been woven to a beauty for its own sake and in divers ways to reach and help or enrich other lives."

"If ever a book came out of the depth of a life it is this: and so, I suppose, it shall live, for by a mysterious law, only the works of suffering as great joy survives and that in degree to its intensity."

The immediate success of "The Old Wives' Tale" last year was creditable to the discernment of the American people, for Mr. Bennett was not so well known on this side of the Atlantic as he was in England, and, thanks to Tauchnitz, on the Continent, thru "The Grim Smile of the Five Towns" and other stories, short and long. The new edition of his earlier works now coming out[9] will be welcome,

WALL STREET IN THE SEVENTEENTH CENTURY.
From "The Intimate Life of Alexander Hamilton."
Copyright, Charles Scribner's Sons.

[9] UNIFORM EDITION OF THE NOVELS OF ARNOLD BENNETT. New York: George H. Doran Company. $1.20 each.

altho certain of them will lower rather than raise him in the esteem of American readers.

There seems to be a general consensus of opinion that Ambrose Bierce is either an immortal or a false alarm. The appearance of a sumptuous complete edition of his works[10] tells in favor of the former view, but the limitation of the edition to 250 copies would indicate that he is a prophet without honor save in his own country, California. Our own opinion on this point we reserve for an opportunity of fuller expression. Here we merely chronicle the appearance of the edition and congratulate the Neale Company on their handsome book making.

Travel and Description

Mr. Clifton Johnson gives us one of his characteristic volumes in *Highways and Byways of the Rocky Mountains.*[1] It is a chronicle of wanderings and observations which include Nebraska, Kansas and Oklahoma along with the more picturesque regions of the Rockies. He has an interesting climb on foot up Pike's Peak; he trudges about the heart of the mountain range, then sojourns in a Mormon village, and then wanders about Wyoming, Montana and the Black Hills region. In Montana he visits the Custer battle ground, which he describes in a brief account of the battle. Helen Fitzgerald Sanders, in her *Trails Through Western Woods,* mingles a study of Indian folklore with descriptions of the scenery of Western Montana.[2] The Selish tribe—the "gentle Selish," she calls them—whom Lewis and Clark discovered in the Bitter Root Valley, she describes with rare sympathy and understanding, and she pictures the beautiful regions about Lake Angus McDonald in the mood of an artist and a nature lover. "Indian Summer" and "The Track of the Avalanche" are delightful.

Mr. Arthur Walbridge North, in his record of adventures in Lower California, gives a mass of interesting information about a little-known region.[3] He is a student as well as a traveler; he observes closely, he describes carefully, and yet the charm of a personal narrative of adventures graces all that he writes. His is a wonder-book of a strange land. Mr. Charles F. Holder, in his *The Channel Islands of California,* writes a book for angler, sportsman and tourist, but which will prove fascinating reading even for the person who can never visit those isles.[4] *The Grand Canyon of Arizona—How to See It,* is Mr. George Wharton James's rewriting of his older book, *In and Around the Grand Canyon.*[5] New roads and trails, new accommodations for travelers, many changes of many kinds in the region frequented by sightseers necessitated the writing of a new book rather than the revising of an old. It is a cyclopedia of information regarding that greatest of nature's wonders, the Grand Canyon, and it is written in an entrancing style that befits its subject.

Mr. A. L. Haydon gives a picturesque account of the Canadian Northwest Mounted Police, which makes interesting and instructive reading.[6] The Riel rebellion is again told, and a brief account is given of the sojourn of Sitting Bull and his followers in Canadian territory after the Little Big Horn fight.

Norway is charmingly pictured in a gossipy travel sketch in Martha Buckingham Wood's account of her trip to *The Land of the Midnight Sun.*[7] *Persia and Its People* is the title of a thoughtful study by Ella C. Sykes.[8] The social life, the position of women, economic conditions, literature, politics, religion are all treated with understanding and in an attractive manner. *Siena and Southern*

Tuscany, the country, the towns, the works of art and the points of interest, are described by Mr. Edward Hutton.[9] It is the Via Francesca, the historic road by which "our fathers came to Rome," that the author travels. He sees "everything worth seeing," and he describes it all in graceful phrase. It is of Paris as the theater of life that Mr. Claude C Washburn writes in his *Pages From the Book of Paris.*[10] There are two classes of people who visit the French capital—those to whom "it means no more than the sum of its thousand interests, and those who feel within themselves the overpowering, constantly increasing sense of the great city's personality." In the hearts of the latter she is always writing her book. "Whatever, good or bad, has any bearing upon life is to be found somewhere in its pages, without embellishment and without euphonism." It is the spirit that the author describes, in a series of vivid pictures, what interests him and what can hardly fail to interest any cultivated reader.

There are three new London books. Mr. Richard Davey describes the Tower and relates its history.[11] It would seem that on a subject so often treated there could be little of new data brought forth; but Mr. Davey has, nevertheless, presented a number of new historic details. Aida Rodman De Milt admirably describes a score of one-day excursions taken in the region around London.[12] The illustrations, which are beautiful, are from photographs taken by the author. Charles and Marie Hemstreet, whose descriptions of New York are well known, tell of the *Nooks and Corners of Old London,*[13] a volume of fragmentary facts.

A NATIVE RESIDENCE.

[12] WAYS AND DAYS OUT OF LONDON. [Illustrated.] *By Aida Rodman De Milt.* New York: The Baker & Taylor Co. $2.50.

[13] NOOKS AND CORNERS OF OLD LONDON. *By Charles and Marie Hemstreet.* [Illustrated.] New York: James Pott & Co. $1.

filled with varied information about Egypt.[14] Everything is touched upon—the people, their customs, and manner of writing English, descriptions of scenery, history and social conditions—in the manner of a well informed traveler willing to tell all he knows. It is an entertaining book, and one which a visitor to Egypt could hardly afford to be without. Mr. Tangye's *In the Torrid Soudan* is primarily a travel book, with personal and descriptive narrative as its main character; but, in addition, it discusses the social and political conditions of the Soudan in an illuminating manner.[15]

The Island of Titicaca, with its wonderful ruins, is the subject of an exhaustive study of Dr. Adolph T. Bandelier;[16] and Dr. William Henry Furness, 3d, gives a description of the Island of Uap, in the Carolines,[17] from which the reader will learn more than he ever hoped to know about this island.

American History and Biography

If any material fact regarding the Chancellorsville campaign has escaped inclusion in Major Bigelow's volume, it would be hard to discover.[1] Everything is here, even to the pictures of the corps badges. The operations of both armies are traced in detail, and a wealth of annotation and comment explains what the text fails to clear. The responsibility for the rout of the Eleventh Corps is plainly laid upon Howard. Hooker's indecision and confusion is shown in a score of instances, and the commander's own words are quoted to illustrate his state of mind. "Doubleday," said Hooker, "I was not hurt by a shell and I was not drunk. For once I lost confidence in Hooker, and that is all there is to it." Major Bigelow considers that no greater mistake was made than Hooker's withdrawal from the south side of the Rappahannock. Had he remained in a defensive position and had Lee attacked on the morning of the 6th, Gettysburg would have been impossible and Appomattox would have come earlier than it did.

General Schaff gives a picture of the Battle of the Wilderness which is vivid and impressive.[2] It is a reminiscent account, for he was a participant in the battle, in the capacity of an assistant to the Chief of Ordnance. He gives intimate glimpses of the personalities in the contest, both the famous and the unknown, and of episodes in which they figured. His characterizations are sharp and clear, and his interpretations of events illuminating. The buoyancy of the troops on the march on that memorable May 4; their grim joy when, after three days of almost unmatched struggle, they learned that they were to go forward instead of retreating; the nervous tension that prevailed thruout the contest, and the spirit of caution that had been induced in the troops by hard battles and poor leadership—all these are pictured in a quite inimitable way. The delineations of Grant, Meade, Sheridan and Hancock are striking; and the glimpse of the usually imperturbable commander, at the end of the second day, when "he threw himself on the cot-bed, and something like stifled, subdued sobs were heard," is unforgettable.

"When Brown assailed slavery in Virginia," writes Mr. Villard in his *John Brown*,[3] "the outlook for abolition was never so hopeful. The 'irrepressible conflict' was never so irrepressible, and he who believes there would have been no forcible abolition of slavery had there been no John Brown, is singularly short-sighted." Mr. Villard's exhaustive study leaves little of material fact unmentioned, and his attitude is that of one who can revere the greatness of Brown without justifying the violence and wrong that this hero often committed. It is in prison at Charlestown that Brown rises to his greatest hight.

"Not often in history is there recorded such a rise to spiritual greatness of one whose hands were so stained with blood, whose judgment was ever so faulty, whose public career was so brief." A fuller criticism of this book must be reserved for a later time.

Colonel Crook's reminiscences of the White House, told by Margarita Spalding Gerry, are interesting and valuable.[4] He served Lincoln as a bodyguard from November, 1864, to the day of the assassination, and in one capacity or another he remained at the White House thru the administrations of Johnson, Grant, Hayes and Garfield. Many illuminative glimpses are given of the Presidents and of the social and official life of the capital.

forties to the time of the admission of Oklahoma. The various explorations and surveying expeditions, the troubles with the Indians and the movements of population are treated comprehensively and with a scholarly attention to detail. Indian troubles necessarily take a considerable share of the book. The contrasting viewpoints of frontiersmen and military on the one hand and of Eastern philanthropists on the other regarding the responsibility for Indian depredations are fairly stated, and the facts are given without bias. Yet the author holds that "war with savages is most merciful, in the long run, when it speaks the savages' own tongue with no uncertain accent," and that such an event as the Sand Creek massacre of 1864 was "the result

IN A TEXAS COUNTRY VILLAGE.
From Johnson's "Rocky Mountains." (Macmillan.)

Professor Paxson, in *The Last American Frontier*,[5] gives an admirable account of the closing up of the frontier from the

of the orderly working of causes over which individuals had little control." Incidentally he absolves the Southern Confederacy from any proved or probable responsibility for Indian uprisings during the Civil War. The history of the Union Pacific Railroad from the first

[4] THROUGH FIVE ADMINISTRATIONS. Reminiscences of Colonel William H. Crook. *Compiled and edited by Margarita Spalding Gerry.* New York: Harper & Bros. $1.80.

agitation for the road to its completion on May 10, 1869, is sketched at some length. A conscientious care for clear-

HEINE'S LODGINGS AT GOTTINGEN.
From Forman's "In the Footprints of Heine." (Houghton-Mifflin.)

ness of statement and for accuracy of detail is evident thruout the work. The references to Marcus Whitman, however (pp. 77 and 80), are hardly fair; the various slighting references to Custer are unjust and against the best modern judgment, and the statement (p. 362) regarding Comanche, the cavalry horse that survived the Little Big Horn battle, is incorrect. Comanche was not Custer's "battle-horse," but the property of Capt. M. W. Keogh, and was ridden by Keogh in the battle. An excellent bibliography of sources closes the volume.

The historic Antietam and the country thru which it flows are attractively presented in a sumptuous volume by Helen Ashe Hays.[6] The history and traditions of the region are briefly sketched, and all the points of interest are described. The mouth of the stream was the scene in 1736 of a great combat between the Delawares and the Catawbas, and in 1755 Braddock's column forded the creek

[6] THE ANTIETAM AND ITS BRIDGES. *By Helen Ashe Hays.* [Illustrated.] New York: G. P. Putnam's Sons. $3.50.

twice. Tho its fame rests upon the great battle of September 16-17, 1862, only a meager glimpse of that contest is given. The bridges described and pictured are old stone bridges, more or less of a single type. The illustrations are exceptionally fine.

The new *Life of Hamilton*,[8] by his grandson, is not concerned so much with his political career as with his personality. New manuscript sources are utilized to give a vivid picture of New York society. We must reserve criticism of the work until we have space to do it justice, but we reproduce herewith one of its twenty-five illustrations.

[8] THE INTIMATE LIFE OF ALEXANDER HAMILTON. *By Dr. Allan McLane Hamilton.* New York: Charles Scribner's Sons. $3.50.

Mr. MacChesney[9] has done a valuable service in collecting and publishing the more important speeches delivered at the Lincoln centenary last year in some seventeen American cities and in Manchester, England; Berlin, Paris and Rome. The flood of Lincoln oratory was rather more than the editor bargained for; he acknowledges that there are still in his library hundreds of unused speeches. But the principal addresses were examined, and the ones published are believed by, him to be thoroly representative of the celebration. To any collection of Lincolniana the book will be a valuable addition.

[9] ABRAHAM LINCOLN: THE TRIBUTE OF A CENTURY. *Edited by Nathan William MacChesney.* Illustrated. Chicago: A. C. McClurg & Co. $2.75.

Present Day Book Reviewing

BY HELEN E. HAINES

[The author of the following article was formerly managing editor of *The Library Journal*, and has had fifteen years' experience in editorial and literary work.—EDITOR.]

SETTING aside special technological and professional classes of book reviewing, there remains the vast mass of current general literary criticism, to which readers, book buyers, and all concerned with the life of the world must turn for record and appraisal of the world-wide flood of books. It is an interesting question how far this mass of material is to be regarded as an aid to the general reader and the librarian in estimating the character and value of a given book; and to judge fairly it is necessary first to consider how present day book reviewing is produced, its characteristics and its shortcomings.

"Notices," it may be remarked, is the proper journalistic designation. The critic is not asked to review a book, but to "do a notice"—and the term is a fair indication of the way in which the literary criticsm of today differs from that of fifty or thirty years ago. In this country, at least, the review in its former sense hardly exists, save as it now and then finds expression in a magazine essay. In its place we have the "notice," ranging from three lines to three columns; from the productions of the literary aunt or niece of the country editor, who runs the book review department of the agricultural weekly, to the compact and well-expresst summary of the trained journalist who has not yet become an overdriven hack. The notice is the result of the immense overproduction of books, and its influence, conscious or unconscious, is to strengthen the force that produces it.

No reviewer or body of reviewers can keep up to date with the never-ceasing flood of new books and at the same time pronounce sound and careful judgment upon each wave or ripple in that flood. But to keep up to date is regarded as a first essential, and so we have the "notice"—superficial, trite, vaguely approving, a passive encouragement rather than a warning or an appraisal. Here is the great obstacle to the truly critical review. An editor may, as he would be glad to do, apportion books among different reviewers regarded as authorities on special subjects; but the conditions of jour-

nalism are against this method. Notices must be prompt—"two weeks late is out of date"; to the scholar seven months are as seven days. Notices must be interesting; if a book is scored, the scoring must entertain as well as condemn; the scholar is learned, but learning is often ponderous. And so we have the reviewer with a facile pen and the vocabulary of the trade, who knows his editor's hobbies, who considers the general make-up of his paper, the time of going to press, the number of books to be turned off, and who limits his "copy" to the exact number of "sticks" that will be required. Frequently he has a good equipment of knowledge and sincere literary feeling, and if custom has not staled his spirit his work is proportionately good. Of course, it is superficial, for he turns with equal calm from a treatise on Assyro-Babylonian culture, as evidenced by recent archeological researches, to a volume on the Habits of Wildfowl, an Encyclopedia of Etiquet, or Stephen Phillips's latest tragedy. A recent review page of one of the larger dailies contained notices of one book each on French history, American history, Colonial furniture, and Italian sculpture, twelve novels and three books of verse. In still another the reviewer disposed, at one fell swoop, of one book on music, one on law, one on Biblical history, one on spiritualism, one on whist, two volumes of poetry, one nonsense book and six novels. And in every case the notice was a distinctly creditable and intelligent example of the general review—tho hardly to be recommended as a reliable aid in book selection.

A large proportion of general reviews may be roughly grouped into three classes. There is the short "publishers' notice," where the bored or desperate reviewer has fallen victim to the insidious notice slip sent out with the review copy of the book or printed upon its protecting paper cover. This is the puff direct, ingeniously conceived and compactly exprest. It tells us that the author is a second cousin of the Shah of Persia, or the discoverer of the long-thought-to-be-extinct Dodo; that his book is a striking venture in a new field (this is a favorite phrase), and rises to hights of passionate power that recall Meredith at his best. The reviewer who has succumbed to its lure is saved the trouble of reading the book or of coining phrases—but he has become merely an instrument for the vending of merchandise.

Then there is the notice that may be called "the unfolding of the tale." It deals almost wholly with fiction, and presents remorselessly the skeleton that the novelist has sought to endue with flesh and life. It has no critical value. If a story is good it spoils it by laying bare its outline and denouement; if a story is bad it utters no judgment and makes evident no faults. It is generally the work of a 'prentice hand, or the production of a general utility writer hopelessly out of his place.

Last of the three comes the review that is practically an essay upon the general subject treated in the book reviewed. Say it is a life of Paul Jones. The reviewer happens to be interested in Paul Jones and the book has deepened that interest. Therefore he produces a discursive and interesting little article upon Paul Jones, condensing, paraphrasing and bringing in ample quotations and anecdotes. The result is an attractive newspaper "story" for his Sunday or Saturday afternoon supplement, but it tells the reader nothing that is most important for him to know as an aid in book selection—the authorities upon which the book is based, whether its tone is fair-minded or biased, whether it is original or a compilation (a fact not to be determined by a mere reading of the preface), or its merits as to index, notes, printing and workmanship.

One element has hardly been noted that is of great importance in its influence upon even the capable and clear-headed reviewer. That is the influence of "boom"—the effect of the immense commercial machinery for the selling of books. Aside from the publications that are recognized publishers' organs, it may be doubted if the actual advertising space taken by a publisher has any special influence upon the notices of that publisher's books. The influence is a more subtle and pervasive one—it is the creation of the belief that everybody believes that a given book is amusing, or striking, or absorbing. It is quite true that it is only necessary to repeat "I am a Buffalo"

loud enough and long enough, and a great many people will believe you. To the reviewer there come the literary exchanges, the press notices, and notes about authors kindly supplied by obliging publishers, and it is not to be wondered at if to a degree his work is colored by their influence. Certain phrases or characterizations come to be applied almost mechanically to certain books. Thus the galvanized chronicle of impossible puppets in an imaginary realm is labeled as "a dashing romance of Zendaesque charm," not because it really made any particular impression of the sort, but because "romance of Zendaesque charm" is the formula that goes with any tale of imaginary kingdoms, just as "masterly study of rural character" is the Mary Wilkins Freeman formula, and "accustomed grace and versatility" is the Andrew Lang formula.

To be of real service in book selection a review should first of all give information on three points—what the author has set out to say; what he has said; and how he has said it. It should note intelligently the equipment of the book, illustrations, maps, indexing, typography and mechanical execution; and it should pass judgment on defects and qualities from the true critical standpoint—that of instructive but fair comparison with what is permanent in literature.

To produce such work the average reviewer needs more thoro knowledge of the canons and methods of criticism—and good critical writing is an act that demands hard study. He needs more catholic literary knowledge and sympathy, for, as Mazzini said, "Nothing is more contemptible than a literary clique," and the tendency of his work will be to keep him in the groove of the present literary fashion. And with these he needs less impulse and better taste—a quicker sense of vulgarity of thought and crudity of treatment, qualities of character or feeling rather than of training. When we have these, we shall have the current book review as it ought to be, an aid in book selection, and, much more than that, an aid to better standards of literary taste and judgment.

PASADENA, CAL.

The Princess's Ballade

BY JOYCE KILMER

NEVER a horn sounds in Sherwood tonight,
Friar Tuck's drinking Olympian ale,
Little John's wandered away from our sight,
Robin Hood's bow hangs unused on its nail.
Even the moon has grown weary and pale
Sick for the glint of Maid Marian's hair,
Yet, there is one joy in mountain and dale,
Fairies abound all the time, everywhere!

Saints have attacked them with sacredest might,
They could not shatter their gossamer mail.
Steam-driven engines can never affright
Fairies who dance in their spark-sprinkled trail.
Still for a warning the sad Banshees wail.
Still are the Leprechauns ready to bear
Purses of gold to their captors for bail.
Fairies abound all the time, everywhere!

Oberon, King of the realms of delight,
May your domain over us never fail.
Mab, as a rainbow-hued butterfly bright,
Yours is the glory that age cannot stale.
When we are planted down under the shale,
Fairy-folk, drop a few daffodils there,
Comfort our souls in the Stygian vale;
Fairies abound all the time everywhere!

L'ENVOI

White Flower Princess, though sophisters rail
Let us be glad in the faith that we share;
None shall the Good People safely assail,
Fairies abound all the time, everywhere!

NEW YORK CITY.

The Independent

Entered at New York Post Office as Second Class Matter
Publisher, Clarence W. Bowen
130 Fulton Street - - - New York

A WEEKLY MAGAZINE. FOUNDED IN 1848.

One Year, $3.00. Single Copies, 10 Cents.

Single copies over six months old 25 cents. Postage to any foreign country in the Universal Postal Union, $1.75 a year extra; to Canada, $1.00 extra. Subscriptions will be received for other periodicals, and clubbing rates will be granted as low as offered by any responsible agency.

Order for the change of an address should be received two weeks before change is to take effect. The old as well as the new address should be given.

For the convenience of our subscribers we will send on receipt of publisher's price any book reviewed or advertised in our columns.

Volumes of The Independent are completed at the end of December and June, and a full index is furnished free on application. Neat binders holding in book form thirteen current issues will be furnished for 45 cents.

If the numbers comprising any semi-annual volume are returned to us prepaid in good condition with $1.50 we will bind the volume in handsome and substantial half buckram and deliver it free anywhere in the United States.

We are always glad to receive articles for examination, but writers desiring the return of their manuscripts, if not accepted, should send a stamped and addressed envelope. We cannot, however, even so, hold ourselves responsible for their return. Authors should preserve a copy.

Advertising rates will be furnished on application.

The Recent Elections

By the admission of some of those who made it, the old tariff was too high at the beginning of its term. They had planned for reduction by reciprocity which was afterward withheld. Before his election Mr. Taft said the rates were "generally excessive," and that "revision in accordance with the pledge of the platform" would be "a substantial revision downward." In a public address after his election he said:

"Unless we act in accordance with our promise, or if we only keep the word of promise to the ear and break it to the hope, we shall be made accountable to the American people and shall suffer such consequences as failure to keep faith has always been visited with."

The promise was broken, and the political consequences were shown at the recent elections, for the main and controlling national issue was the Republican party's sham revision of the tariff and its alleged relation to the high cost of living. In the House of Representatives a Republican majority of more than forty must give way to a Democratic majority of sixty. The party's majority in the Senate has been reduced by about one-half. Great States which have been in the Republican column have elected Democratic Governors and legislatures, and the Governors are men admirably qualified to lead their party. These losses, together with the party's inability to carry forward in the near future its program of progressive legislation, are a heavy price to pay for the blunder of 1909, but a party that breaks its promise to the American people must expect to suffer for it.

We have said that the revision of 1909 was the main issue. That revision was connected in the minds of many with the current high prices. As to this they were misled by Democratic candidates and campaign orators, and some of the candidates have profited by this misrepresentation. We are unable to see that the revision of last year increased the cost of living. Mr. Dix, who is to be Governor of New York, asserted in his letter of acceptance that the revision "increased the duties on all the necessaries of life." A comparison of the rates of the new tariff with those of the old one would have convinced him that his assertion was not true. Others told the same story, and it came to be believed by many thousands of voters. They had no exact or technical knowledge of tariff laws, and the severe criticism of the Republican tariff makers by able and honest men of their own party—by such men as the late Senator Dolliver and Senator Cummins—had prepared them to accept such charges as true beyond a shadow of doubt. On the other hand, the standpat Republicans, in public addresses and in party platforms, were going as far wrong in the other direction, asserting even that the average reduction of duties had been 11 per cent. This seemed incredible, and it merely sharpened the resentment of those who already knew, as they thought, that the party had attacked their pockets in the interest of those who profited by special privilege. At the same time these defenders of the revision assured the public that the high prices were due to "world-wide causes," but failed to explain what these causes were.

While the Republican reverses thruout the greater part of the nation were due chiefly to this tariff issue, there were other causes, some of them local, others not confined to one or two States. We

shall not consider all of these, but as an example may point to the recent disclosures of legislative corruption in New York during a long period of Republican majority rule. In that State many voters of independent tendencies were thinking that public interests called for a change of control.

Aside from the tariff question, however, the conduct of Mr. Roosevelt probably exerted a greater influence than any of the issues, local or partly national, that can be named. While the defeat of the party in the Congressional elections and in several States was, in our judgment, determined before his return to this country, it was accentuated by the course which he pursued. In overcoming the petty bosses of his party in New York at the Saratoga convention he accomplished something and deserved to be commended for it. But his actions and utterances afterward were disappointing and ill-advised. We have not in mind especially his "new nationalism." We by no means express disapproval of much of that. Still, we think it is true that it was distasteful to many good men in his party and that it excited opposition which was manifested at the polls. What we have in mind is his attitude toward the tariff and the character of his public addresses during the latter part of the campaign.

Feeling that the Republican tariff blunder, with its alleged relation to the cost of living, was the dominant issue, a great many men were surprised to see him persistently avoiding it in his direct utterances, while his enthusiastic advocacy of certain candidates warranted a belief that he was on both sides of the fence at the same time. He was partly responsible for the Saratoga stand-pat platform, the tariff plank of which might have been written by Senator Aldrich. Going to Indiana, he warmly supported Senator Beveridge, an insurgent who voted against the revision, saying that the Senator was far in advance of his party. Returning to Boston, he not less warmly supported Senator Lodge, who had been associated with Mr. Aldrich in making the new tariff. Persistently avoiding a direct and frank expression of opinion concerning the new rates and schedules, he asked his audiences to be content with his disapproval of methods of legislative procedure in tariff revision work, and with his approval of a tariff board which had then done nothing, so far as the public knew, and whose labors might never come to anything. This was quite unsatisfactory to a great many, both in the East and in the West, who had been accustomed to respect and admire him.

As the campaign proceeded, his addresses, notably in New York, exhibited a disregard for the dignity which should characterize the political conduct of an ex-President. We refer to his personal attacks upon such candidates as Judge Baldwin and Governor Harmon, and to many passages in his later addresses which were not above the level of the most contentious political wrangler. All this did not help his party, nor did it help him, and we are sorry for it. His partisan foes point out that almost every candidate whose interests he sought to promote has been decisively whipped. They suggest the inference that his support defeated them. This is not true. But in some instances probably it did them no good and may have done them some harm. This effect was due to his inconsistencies and the manner of his assistance. His enemies were also persistently promoting a belief that he was plotting to displace the President and gain the nomination in 1912. As we have said before, we did not then, nor do we now, believe that he had any such purpose. But for a time his course tended to warrant suspicion in the minds of hasty and careless observers.

We regret that Mr. Roosevelt's prestige has been somewhat impaired. It is his own fault. If after the Saratoga convention he had been content with two or three public addresses of an elevated character, with possibly as many letters to the public, the dignity pertaining to his position could easily have been preserved. Before the beginning of the campaign we suggested more than once that, having ably filled the highest national office in the world, to rise higher he must turn from the national to the international field, and that he should be made chairman of the Peace Commission, the appointment of which has been authorized by Congress. It was reported

that this high office was to be offered to him, and it seemed to us that he ought to accept it. There is a very perceptible difference between such an office and its duties and high responsibilities, for an ex-President of the United States, and the rôle of a hard-hitting and somewhat reckless political orator in a campaign like the one which preceded the recent elections.

The Fifth Star in the Woman's Flag

We are not altogether pleased with the results of the election, but we can take unalloyed satisfaction in the action of the men of Washington in giving their women an equal share in the privileges and responsibilities of the ballot. In comparison with this triumph the adverse vote on the same proposition in the neighboring State of Oregon is of little significance and no importance. Possibly the women of Oregon have made a political mistake in bringing the question up for a vote quite so often in recent years. It may be that it is not wise to have a suffrage bill introduced into the Legislature of every State at every session, even when there is no hope of its passing.

But tho it may be thought impolitic thus always to keep the question before the house, the opponents of the suffrage cannot apply to such tactics their favorite epithet "unwomanly." And these efforts must eventually be crowned with success, as they have been in Washington, for the denial of the vote to half the population on the ground of sex is such a manifest absurdity, such a conspicuous anachronism, that no State can hope for permanent political peace until the illogicality is removed.

The illogicality appears most obvious of course by direct contrast. That is one reason why woman suffrage spreads from one State to its nearest neighbors. This is no sporadic freak in legislation, no ephemeral impulse, no untried experiment. For over forty years Wyoming has had a regime of equality. From Wyoming it spread to its border States, on two sides; first to Utah, next to Colorado, then to Idaho, and now it is adopted by Washington, adjoining Idaho on the west. The cause makes friends as it goes, for example is better than argument. The objections that are raised in advance to woman suffrage on theoretical grounds, and that are sometimes difficult to refute on these grounds, vanish entirely when brought face to face with practical experience extending over a generation.

The experiment is being tried now on a sufficiently large scale to make the results of value. The population of the five suffrage States is about three million and their combined area is greater than that of all the Atlantic States, from Maine to Florida. It is not surprising that the movement originated on the crest of the continent, for mountain peoples are by nature democratic and liberty loving. But freedom from its mountain hight will flow down into the lowlands, at first toward the west, but later, we believe, to the east, even to the coast.

There are only two influences which seem to us capable of checking the movement: a general reaction against democracy and a determination to keep women ignorant and dependent. Since equal suffrage is a corollary of the principle of individual representation, a loss of faith in democracy inevitably weakens the suffrage cause. Then, too, if women are denied the opportunity to prove themselves intelligent and capable by keeping them out of the best universities and the higher grades of employment, it may be plausibly argued that they are lacking in the capacity for education and the management of affairs. Both these reactionary influences are undeniably at work, tho how strong they will prove to be remains to be seen. Every Western State, however poor and sparsely populated, offers a free college education to all of its women. Not all of the Eastern States do that, and in some of them —New Jersey and Connecticut, for example—no woman can get a college education at any cost. Not infrequently, too, efforts are made to curtail unwarrantably women's occupational opportunities, and the sacred name of motherhood is sometimes invoked to disguise masculine greed and desire for monopoly.

But we believe that American women as a whole have been granted so many educational and vocational opportunities, and have on the whole made such good use of them, that no reactionary movement can gain sufficient headway to prevent their progress toward complete equality. To insure that liberties once gained shall not be taken away, the possession of the ballot is necessary.

The Deeper Political Changes

INTERESTING as are the obvious results of the election, they are neither so interesting nor so important as deeper changes which our political evolution is bringing about. Of these such occurrences as the election of Woodrow Wilson, the university president, to a governorship; of Henry George, the Single Taxer, and Victor Berger, the Socialist, to Congress; the granting of the suffrage to women in Washington, and the Statewide town meeting in Oregon, are but symptoms.

The people are taking their politics with a new zest, and it is zest of a new quality. The new element is gray matter. The new force is the influence of that part of the population to which the socialistic writers of the Old World a good while ago gave the tersely descriptive name "the intellectuals." The man with knowledge and ideas and not ashamed of being known as one interested in economic and political theories has come to the front.

That there may be no misunderstanding, however, as to just what this new political force amounts to, let us explicitly recognize the fact that it was not the only force concerned in the great overturning of November 8. No political campaign is ever waged without engendering and exploiting the mob-mindedness upon which we commented a week ago in our remarks about the law and its makers. The defeat of the Republican party all along the line was perhaps primarily attributable to a great volume of hostile emotion: a compound of fear, anger, disgust, vindictiveness and disappointment. Cannonism and the Payne-Aldrich tariff disgusted and angered. The Taft administration has disappointed. The utterances and campaign tactics of Mr. Roosevelt angered and terrorized an easily irritated and easily frightened part of the population, large in numbers, which prides itself on despising theorists and a habit of arriving at practical judgments by intuition. These forces operated in the present instance much as they have operated on previous occasions; in 1876, in 1884, in 1892.

But these forces by themselves are incapable of producing such results as these which are now the most interesting features of the political situation. Nothing quite like them has been seen in this country hitherto.

Our politics hitherto has shown an almost contemptuous distrust of intellectual leadership. There has been little chance for a political career in America for men like Gladstone, Balfour and John Morley in England. It is by no means certain that there is a career for such men here now, but in the election of Wilson and George, we have at least an expression of willingness to see what such men can do and will look like in public life.

The experiment, it is true, cannot be entirely satisfactory so long as we adhere to the absurd restriction which makes it impossible for a candidate for Congress to receive suffrages outside the limits of the district of his legal residence. In England, when a party meets with disaster, its really strong men can continue their parliamentary career by again standing for election in other constituencies than those in which they have been defeated. Here the defeat of a strong and useful man, such, for example, as Mr. Herbert Parsons has been in the House of Representatives, too often means his retirement from public life. Politics as a career thereby becomes an extra-hazardous occupation.

Again, the new political results are products of a rapidly deepening interest in questions of public policy. The habit of independent voting has become established in this country. Party solidarity and party success are no longer the fetishes they once were. Civil service reform has enormously diminished the bulk and the value of political loot. The citizens, therefore, can now think of other things, and the struggle for ex-

istence has compelled all sorts and conditions of men to think soberly about the relation of legislation to their own success or failure in life. Beyond any doubt the American people have been moving faster than their accredited leaders have toward conclusions on great issues of economy, law and government. The people have more faith in ideas, in scientific principles, in the value of expert knowledge than the professional politicians have.

Even more significant than any of the foregoing aspects of the election results is perhaps the variety discoverable among them. More than one new experiment seems to be under way. This is something that cannot happen when political decisions are subject to any great constraining influence, acting uniformly upon the people. When, for example, a nation is waging war, or is threatened with foreign complications, it does not go lightly into the business of experimenting with new men and new measures. Only in times of security, of relative prosperity, and of confidence, is it possible to enjoy that highest of intellectual pursuits, the trying out of new suggestions and inventions. In such time people do not feel the need of any one great leader. If Mr. Roosevelt has believed in himself, as a Man of Destiny, as his enemies charge, he has shown an astounding ignorance of elementary sociology. There can be no man of destiny except in days of peril.

A Mexican Boycott

It is not surprising that all Mexico is angry with the United States. The United States ought to be angry with itself and utterly ashamed of itself. Whether the man whom the Texans caught and burned alive at the stake was a native of this country or a Mexican citizen we do not know, or whether he had been guilty of a crime that deserved hanging by law, we do not know nor care for the present; but we do know that it was as a supposed Mexican that he was thus brutally and fiendishly murdered by Texan savages, and that the people of Mexico believed him to be one of their citizens. It is enough to know that as a so-called Mexican he was burnt to death. It is right that all Mexico should arise in righteous wrath, and we make no complaint that they talk of reprisal by boycott, and that they rise in a mob and insult the official representatives of our country residing among them. The Mexican Government gives our Ambassador and our consuls protection, which is much to its credit.

In this international matter there are two things to be considered: the crime which has so provoked our neighbor, and the duty of our Government toward the protection of citizens of other countries living among us. And first the lynching atrocity.

Do our people remember that portions of our country are barbarous and the people barbarians? In wide sections such is the barbarism, the lawlessness, that men go armed as they do in Morocco or Afghanistan? Murders are committed and the murderers are not disturbed; they go free. A gentleman recently visiting El Paso, Tex., was told: "We don't hang murderers here; we hang only horse thieves." In large sections it is a small village that does not have among its "best citizens" at least two who have killed their man. The other day the papers reported a man in Kentucky who had just killed his fourth man. The white man who kills another is noticed, and is safe; while when a colored man kills another colored man it is not noticed, and he also is safe. What mean the feuds we hear of that continue year after year with records of repeated killings, except that there is no law and that the people take the law in their own hands; and that is what constitutes barbarism. That such a condition can exist is a national humiliation before the world. That such savages should live among us as those who burnt this Mexican, or who have burnt to death in other States negroes charged with crime, is a shocking travesty on our boasted Christian civilization. It is not civilization, it is barbarism. It is not Christian, it is devilish.

It has its large part in the arrogant conceit which is cultivated by those in such sections who think themselves so much superior to those of other races, African or Mexican, on whom they look down as inferior and possessed of no

rights but the right to be abused and insulted. Why are sixty thousand Americans in Mexico so universally unpopular? It is because so many of them treat those among whom they live with rude discourtesy. They think the Mexican is a door-mat to be trodden on. Mexicans are human; if treated with rudeness they will answer with hatred, and when anything like this awful case occurs, what can we expect but to suffer as we deserve to suffer?

The other question to be considered is, How shall we protect citizens of other countries whose lives are in danger in these barbarous sections? This much is certain, the States cannot protect them, nor can such a State punish those who kill them. The public sentiment goes so far with the lynchers that a jury could not be found to convict them if by any possibility indicted. We have had several such cases in which no punishment was inflicted, because nobody would indict and convict. In this case everybody thereabout knows who brought the wood, bound the victim to the stake, kindled the fire, and waited to enjoy the victim's screams, watched him burn to ashes, and then carried away the bones for souvenirs. That is the way it is done, but the coroner's verdict says that he was killed by unknown parties, and nobody tries to find out. That is the way of barbarism. The State does nothing, for it does not want to do anything. But the nation could do something. It is under international obligation to protect, or at least to avenge, citizens of other countries. Italy demands it of us; so does China, and so does Mexico. It is a disgrace for us to say, as we have said in the past, "We have a constitutional system under which we are forbidden to do an international duty; but we will pay ransom money for the offense." That is what we have done in the past, the more shame to us. Congress should give the President authority to inflict summary punishment on those who injure or kill the citizen of another country. If Texas wants the liberty to lynch her own white horse-thieves, or her own black murderers or rapists, then we suppose Texas can do as she pleases, and suffer the contempt of the country for her barbarism; but to kill the citizen of another country may mean international reprisal or war even, and it is the duty of the national Government to intervene vigorously and trenchantly, and punish without mercy. And that would be the best mercy for all.

With the sense of shame which covers us we have no heart to find fault with Mexico for any insult to our flag or its representatives. What is that offense to the crime which has polluted the soil of Texas and provoked righteous indignation?

The Conference a Failure

THE conference between the leaders of the two great antagonistic parties in Great Britain, which sought a "gentleman's agreement," courteous, kindly and mutually concessive, for the reorganization of the British Constitution, has disappointed the people by coming to an end without an agreement. But it has not been without result. It has proved that the eight leading men of the two parties could compromise their differences, even if they could not carry their followers. Their tentative agreement will have great weight when the whole subject is referred again to the Parliament and to the people.

We have not, as we write, any definite official report, but what is common belief must be substantially true. Mr. Balfour was not willing to make definite agreement without consulting other leaders of the Conservative, or Unionist party; and when he reported to them this tentative agreement they demurred, and he had to report that they would not consent, and so the conference was dissolved. Things are as they were before it was entered upon, except that the leaders now understand each other, and a final and peaceable agreement is much more hopeful in the end. The unreasonable passion has been eliminated, and the public knows pretty well how much each side was willing to yield for the sake of peace. The consultation of Mr. Balfour with his followers will make it impossible to keep any secrets. In the clubs they will be talked over and percolate into the newspapers.

It is generally understood, as we said

last week, that a federal government for Great Britain was agreed to, with one central Parliament and four subordinate parliaments, corresponding very much to the supreme and lower parliaments in the self-governing colonies and to our Congress and State Legislatures. That ought to satisfy Ireland, and she could get no more. They are wild fanatics who imagine that Ireland wishes to be, or would be allowed to be, an independent nation. The real and sane Irish leaders know better. They will be satisfied to be part of the British nation, to help rule in the Imperial Parliament with England, Scotland and Wales, and to have as much local self-government, and no more, as is given to the three other sections. This conference, very momentous even tho at present a failure, will help the cause which Ireland has at heart, and help the rest of Great Britain, by giving it the same self-rule.

But this is not what annulled the work of the conference. It was the question of the House of Lords. Mr. Balfour, not yet one of its members—he is sure to be when he wants it—gave his assent to a reformation of the House of Lords, reducing its numbers and its power of veto. In order to accomplish this peacefully he had to learn whether the Lords would accept it. He accordingly consulted a certain number of them, but they selfishly and foolishly refused. That is what broke up the conference. He could not carry his own men. They would not compromise as the Liberals would. They have had a way of late of biting off their own noses. Their wiser leaders, like Lord Rosebery, warned them that in refusing to accept the Budget they were endangering their own authority, but they were headstrong and dared to fight the British people. They thus raised a storm which they cannot allay. Here once more they flout their leaders, and now they must stand the consequences. If they sow the wind they must reap the whirlwind. Parliament meets immediately, and the Commons is in no mood for impertinent obstruction. Very likely —we do not yet know—Mr. Asquith will have the King dissolve Parliament and order a new election, and that election will not help the Conservatives nor benefit the House of Lords. It will be a hot session when Parliament meets, and a hotter one if the whole question is referred to a new Parliament. But all augurs well for the British people and for a better constitution in which a few hundred men, wise men and fools, boys of twenty-one and derelicts of senility, will no longer have the power, because they are their fathers' sons, to nullify the intelligent moral force and will of the great British nation.

The Socialist Gains

The Socialists claim that they have polled a vote of 730,000 at last week's elections. This is an unprecedented showing for them. It is an increase of 300,000 over the vote of 1908, which was 423,877. The increase was uniform thruout the country and not confined to a few sections where there might have been special local dissatisfaction. The party has sent Victor Berger, of Milwaukee, to the House of Representatives—the first Socialist to occupy a seat in Congress. As Mr. Berger is able, frank and popular, and withal a consummate political tactician, he is probably the best man that the party could have sent. Milwaukee also continues to hold the Socialist faith, for she elected twelve Socialist Assemblymen and two Socialist Senators to the Legislature at Madison. Altho Massachusetts, Rhode Island, New York and New Jersey did not poll the vote expected, California, Illinois, Iowa, Kansas, Ohio, Pennsylvania and Wisconsin polled some 50,000 votes apiece. This steady growth of Socialism is due to the highly compact and efficient organization of the Socialist party and to the truths and partial truths in the socialistic philosophy. The party is composed for the most part of men decidedly above the average intelligence, and all are welded into a band of "Comrades" who carry on the propaganda seven days in the week. There are thousands of Socialists scattered thruout the country who after the day's work devote all their evenings to curb speaking, party organization, distributing Socialist literature, attending public meetings to heckle the speakers etc. They claim that they captured Milwaukee a year ago almost entirely by distributing thousands upon thousands of leaflets to the voters. This very week they are starting in again for the campaigns of 1911 and 1912. They work

while the other parties sleep. The Bee is their emblem, not the Donkey, Elephant or Water Wagon. As our readers know, we do not accept the socialistic philosophy. For one thing Socialism assigns the evils of our present day society too exclusively to unrestricted competition, instead of monopoly. Were monopoly abolished competition would be almost wholly good. Still, we do not take fright at this rise of Socialism, because we recognize that much of the Socialist program is as desirable as it is inevitable.

Book Reviewing

The article on another page of this issue admirably states the dilemma which confronts the magazine attempting to criticise all of the new books. As our readers know THE INDEPENDENT is one of the few periodicals which have stuck to the old-fashioned theory that reviews should be critical and expert. We pay the same space rates for book reviews as for other articles, and if we published the names of the reviewers they would make as good a showing as the names of contributors on our cover. It frequently happens that every review in the literary department, long and short, is written by a different person, the most competent we can find in the United States for that particular book. But this system has the inevitable disadvantages that we have to omit altogether many worthy books, and that we are sometimes later than our contemporaries in expressing our opinion. The number of books appearing in the United States is double what it was ten years ago, so we shall have to increase the proportion of books that are briefly appraised at the time when they are received, but our readers may be assured that we will keep up the long and critical reviews as formerly.

The Attractiveness of Football

President Eliot talked, but President Butler acted. Intercollegiate football was abolished at Columbia. The heathen raged, but the president stood firm. If the students really wanted to play, however, he saw no objection to their playing among themselves. That was the unkindest cut of all, for it was a sure way to test whether football was a game for gentlemen or a spectacle for the display of muddied heroes before a grand stand of rooters. Last week it was announced that the series of six football games between the four classes at Columbia would be abandoned because not one of the classes could succeed in getting the minimum of fifteen candidates to come out for daily practice—the condition under which the series was permitted. It cannot be said that there are not enough students at Columbia from which to draw football material, for Columbia has now surpassed all American universities in the number of students, despite this mollycoddle policy of the president.

An International Question

No sooner is election over than the country is again plunged into excitement over the rival claims of our exchange professors in Berlin to imperial patronage. There are two parties to the controversy. One side claims that the fact that the Kaiser talked fifteen minutes with Professor Smith and one minute with Professor Münsterberg indicates that he thinks fifteen times as much of the former. The other party argues that the brevity of the colloquy was compensated for by its intimate and friendly tenor, and claims that the Kaiser clapped his hands more times when Professor Münsterberg was speaking. The question is so difficult that we hesitate to advise our readers what action they should take in the matter.

Recognition of the Portuguese Republic

On Tuesday of last week the representatives of the affiliated Catholic societies presented to President Taft what we may call a protest against the recognition of the Portuguese republic. In France this might have been expected, for the prevailing sentiment in the Church has been against the republic and in favor of the monarchy or the empire. But the United States is a republic, and we might be expected to sympathize with a young republic that had got rid of its throne, even as the daughter empire of Brazil got rid of its throne, and was warmly

welcomed by the United States. We cannot believe that the reason for this present lack of sympathy, and this protest to the President, is any lack of loyalty to republicanism or any hankering after a king, but is probably because the new republic has decreed the separation of Church and State and has expelled the orders. But those orders had no legal authority, no right of law to exist, and we see thus far no evidence that the parish churches and worship are to be interfered with. There has been some violence, as there always is in a revolution, for you can't make an omelet without smashing eggs, but there has been surprisingly little of it, very few killed, not a priest or nun. We must believe that our American protesters believe in the separation of Church and State in this country, and why not in Portugal? Evidently they do not understand the conditions in Portugal, and the relief which the new order will give to the Church, as it has done in France, and will give in Spain under the new law of church incorporation. They have been misled by hasty advice.

Tolstoy's Escapade

Tolstoy must be excused for doing a very wrong and foolish act. He is an old man, in his eighty-third year, at an age when the brain does not always work quite normally, and one may innocently do things which show a loss of real responsibility. He has run away from home, endangered his wife's life by his escapade, forgotten her in considering his duty to himself and very likely his God; but conscience may go quite awry when the intelligence gets twisted. What is conscience but the resultant of moral sense and intelligence. Given moral sense plus common sense and all goes right; but given moral sense with ignorance or prejudice or superstition or a softened brain, and one may commit murder or suicide to the glory of God. Tolstoy very likely has gone to a monastery to escape the world and live in the presence of God, away from the temptations and luxuries of the world, but Tolstoy, if he is soundly sane, ought not to have considered his own soul but the soul of his wife, who was tempted in her anxiety and grief to drown herself. He did not think of that. We would rather have heard of his death than that he was not willing to stand in his lot till the end should come.

A correspondent does not like it because he was charged $2.50 by an express company for a parcel received from Winnipeg, Canada, when the charge on the same parcel, by the same company, prepaid at Winnipeg, was $1.28. Equally he cannot understand it why he was charged by the express company twice as much, nearly, for charges on two trunks from Hartford to Cambridge, as for the same trunks from Cambridge to Hartford. Who can understand or explain the doings of the express companies? And who has the right to complain so long as the lawgivers we choose will not give us the parcels post?

One of the advantages of the Hague court is that it protects a small and weak nation against the extortion of a strong nation. The last case is of interest, that presented by the United States of the claim of the Orinoco Shipping Company against Venezuela for $1,401,559, all of which was disallowed by the court except $46,867, with interest and fees. This illustrates how designing men try to rob a weak country if they think that they can get the backing of a powerful nation.

To the excellent article in this week's INDEPENDENT, by Professor Phelps, on the American Academy, we add one comment, namely, that the list of names given by him includes but one woman, Julia Ward Howe, and she is no longer living. It would be strange if at least five names of women authors or artists could not be chosen that would deserve recognition among the fifty.

Mr. Bryan hastens to tell the next Democratic lower house of Congress what will be its first duty, namely, to present an amendment to the Constitution providing for the election of Senators by the people. That is not bad.

FINANCIAL

Stocks After Election

MANY persons directly interested in trading on the Stock Exchange had predicted that the election of a Democratic Governor in New York and of a Democratic majority in the National House would warrant and cause an advance of prices. These predictions have not been fulfilled. On Wednesday, the day following the election, prices sharply declined, and, with heavy selling, the decline continued during the greater part of Thursday. Afterward there was a partial recovery, due largely to the covering of short sales. For the week, the total was 3,020,600 shares, against 2,519,600 for the week preceding. About two-thirds of the business was in Steel, Reading and Union Pacific. Extreme declines ranged from 4 to 6 points thruout the active list, but at the close on Saturday a part (generally about one-third) of the loss had been recovered, net declines for several active securities being as follows: Steel, 3½; Reading, 4¼; St. Paul, 3⅞; American Smelting, 3⅝; Amalgamated Copper, 3¼; Northern Pacific, 4⅛; Union Pacific, 1½; New York Central, 2⅞.

The Year's Large Crops

LAST week's final report of the Government on the corn crop shows that this year's yield is 3,121,381,000 bushels, or 75,000,000 bushels more than the quantity indicated a month ago. This crop exceeds last year's by about 350,000,000 bushels and is larger by 190,000,000 than the greatest ever harvested in previous years. In quality the grain is nearly three points above the ten-years' average. All the official reports on the leading crops have now been made, and the estimates of production may be seen below:

Crops.	1910.	1909.
Corn, bushels	3,121,381,000	2,772,376,000
Wheat, bushels	691,769,000	737,189,000
Oats, bushels	1,096,396,000	1,007,353,000
Barley, bushels	158,138,000	170,284,000
Rye, bushels	32,088,000	32,239,000
Buckwheat, bushels	17,084,000	17,438,000
Flaxseed, bushels	15,050,000	25,856,000
Potatoes, bushels	328,787,000	376,537,000
Hay, tons	60,116,000	64,938,000
Tobacco, pounds	967,150,000	949,357,000

Early in the season, the shortage in wheat (which proved finally to be only 45,000,000 bushels) was discouraging, and it tended to mislead the public as to the condition and promise of other growing crops. It now appears that the aggregate yield of the leading crops exceeds that of last year by about 7½ per cent. In an interesting review of crop conditions the Department of Agriculture says:

"The harvests of 1910 have been practically completed, with results exceeding the expectations during the growing period. Preliminary estimates have been made of the production of most of the important crops, from which it appears that the aggregate production of crops in 1910 is approximately 7.6 per cent. greater than the crops of 1909—and about 9.1 per cent greater than the average annual production of the preceding five years.

"The production of other crops in 1910, expressed in percentage of the average production in recent years (not compared with full crop) is estimated as follows: Peaches, 113.1; hops, 106.9; broom corn, 105.4; cranberries, 105.4; sweet potatoes, 104.9; sorghum, 104.6; asparagus, 102.5; peanuts, 102.5; cabbages, 100.2; lima beans, 100; kaffir corn, 99.1; pears, 98.9; beans (dry), 98.8; cantaloupes, 97.3; watermelons, 97; onions, 96.5; hemp, 95.5; tomatoes, 93.7; clover seed, 93.6; strawberries, 91.5; grapes, 88.2; apples, 85.8; millet seed, 85.7; raspberries, 78; blackberries, 76.6.

"The condition of other crops, compared with average conditions at or near time of gathering was as follows: Sugar cane, 104.1; rice, 102.3; sugar beets, 100.9; lemons, 99.3; cotton, 98.9; oranges, 95.5."

....More than $10,000,000 worth of gold has been received at the United States assay office in Seattle since January 1, and $9,400,000 of it came from Alaska.

....The large system of urban and interurban electric railways centering in Los Angeles has been acquired by the Southern Pacific Railroad Company, the transaction involving about $100,000,000.

....October's pig iron output was 2,087,385 tons, or about 30,000 tons larger than September's. But September was a shorter month. The Steel Corporation's unfilled orders on hand October 31 were only 2,871,949 tons, apparently the lowest quantity on record. Chairman Gary says, however, that the basis has been changed, and that if the old basis had been used the quantity would be larger by about 700,000 tons.

The Independent

VOL. LXIX NEW YORK, THURSDAY, NOVEMBER 24, 1910 No. 3234

Survey of the World

Political Topics

A final statement concerning the election of Representatives has not been completed, but the Democratic majority will be about 60. Mr. Carter, of Montana, has lost his seat in the Senate, the Legislature of the State having a Democratic majority of 2. The Republicans therefore lose nine seats in all, and their majority will be reduced from 26 to 8. Senator Clay, of Georgia, died on the 13th. He had been in the Senate since 1896. The Governor of Georgia has appointed ex-Governor Terrell in his place, to serve until the meeting of the Legislature in June. In the place of the late Senator Dolliver, of Iowa, Governor Carroll has appointed Lafayette Young, an opponent of Senator Cummins in the past. Senator Lodge may fail to be re-elected in Massachusetts, owing to the opposition of a considerable number of Republicans in the Legislature. It is reported that he will be appointed to a prominent diplomatic office. In Rhode Island, the Republican State Committee, by a vote of 23 to 12, has recommended the election of Henry F. Lippitt to succeed Senator Aldrich. The candidate of the minority of the committee is Federal Judge Colt. The leading candidate in New York for the Senate is Edward M. Shepard.——Governor Harmon's majority in Ohio is about 100,000. In Delaware many charges of corruption have been published. It is alleged that large sums of money were used in buying votes in order that a Legislature that would re-elect Senator Du Pont might be elected.——Mr. Roosevelt has declined to be interviewed about the elections. He has published the following:

"On every hand, personally and by correspondence, I have been asked to make a statement regarding the election. So far as I am concerned I have nothing whatever to add to or to take away from the declaration of principles which I have made in the Osawatomie speech and elsewhere East and West during the past three months. The fight for progressive popular government has merely begun, and will certainly go on to a triumphant conclusion in spite of initial checks and irrespective of the personal success or failure of individual leaders."

On the 18th he was warmly received in Washington, where he delivered a lecture concerning his hunting trip in Africa. Senator Scott, of West Virginia, whose place is to be filled by a Democrat, explains the Republican losses as follows:

"Of course I am sorry the Democrats won, but we could do nothing with Theodore Roosevelt on the stump. Every time he spoke he cost the Republican party thousands of votes. The people are tired of him, and he should be convinced of it by the result of the elections. His undignified activity beat us all over the country."

——Since the re-election of Robert E. Wilson to the Illinois Legislature he has been indicted a second time for his conduct in connection with the election of Senator Lorimer.——In New York, the proposed amendment authorizing a bond issue of $2,500,000 for the development of Palisades Park, was approved. For this park Mrs. E. H. Harriman has given 10,000 acres on the west side of the Hudson, with $1,000,000, and other persons have promised to give $1,625,000. The great park will lie between the Palisades and Newburg.——Among the published reports of candidates' expenditures are those which show that Governor-elect Foss, of Massachusetts, spent $37,000, and that the payments made by Mr. Stimson, who was defeated in New York, amounted to $1,292.——The Home Market Club, at a lively annual meeting in Boston, rejected by a vote of

40 to 8 resolutions proposed by Speaker Walker, of the Massachusetts House, supporting Mr. Taft's present attitude toward tariff revision, and approving investigation by the tariff board, to be followed by corrections. It adopted resolutions calling for a large measure of protection and saying that "all talk or thought of further revision should be held in abeyance" until the completion of the board's inquiries.——Interviews with prominent Democratic Congressmen indicate that they are inclined to take a conservative course with respect to the tariff. Mr. Clark, of Missouri, who will probably be elected Speaker next year, declines to commit himself concerning the proposed changes in the rules. It is predicted, however, that in the coming session the Democrats and Republican insurgents will endeavor to deprive the Speaker of his power to appoint the committees.

The President's Visit to Panama

President Taft arrived at Colon on the 14th, and with little delay proceeded to the home of Colonel Goethals, at Culebra. On the following day he gave nearly nine hours to the work of inspection. He was told by Colonel Goethals that the canal would be finished by December 1, 1913, altho the date of the official opening should be January 1, 1915, because one year would be needed for getting the great waterway in good working order. During the year 1914 ships may be permitted to pass thru, but at their own risk. Colonel Goethals assured the President that the canal would be finished for a sum not exceeding the accepted or authorized estimate of $375,000,000. It will be necessary to decide within a short time what the charges for passage shall be. At a dinner given in his honor on the 16th by President Arosemena and attended by two hundred diplomats, officers and merchants, the President made an address. By treaty, he said, the United States had been made the guarantor of the integrity of the republic and in a sense the guardian of her people:

"Our responsibility, therefore, for your Government requires us closely to observe the course of conduct by those selected as the officials of your Government after they are selected, and to insist that they be selected according to law. All this makes us especially interested in what is done by your Government, but this relation neither calls for nor permits annexation. We are here to construct, maintain, operate and defend the world canal which runs through the heart of your country, and you have given us the necessary sovereignty and jurisdiction over that part of your country occupied by the canal to enable us to do this effectively. We do not wish any further responsibility in respect to your Government than is necessary in the carrying out of our purpose to construct and maintain this canal. We have no desire to add to the territory under our jurisdiction, except as the operation of the canal may require it.

"We have guaranteed your integrity as a republic, and for us to annex territory would be to violate that guarantee, and nothing would justify it on our part so long as Panama performed her part under the treaty. I wish to make this statement as emphatic as possible, because irresponsible persons, without the slightest foundation in fact, have started a rumor that my visit to the isthmus is for the purpose of promoting annexation, when nothing could be further from the truth. Panama cannot be too prosperous, too healthy, too strong a Government for the United States, and I know I speak the unanimous voice of the people of the United States when I say that they would be most reluctant to have to take over the responsibilities beyond the Canal Zone, and would feel utterly dishonored in so doing unless there were some conduct on the part of the Panaman people which left them no other possible course I am glad to say that there is not the slightest indication or probability that the Panaman people will ever pursue a policy which would require such a change in the present most satisfactory relations between the two republics."

During his visit he heard the application of certain employees for higher wages, and he promised to make known his decision upon his return to the United States. Some of the applicants could not wait, and on the 17th one hundred boilermakers gave notice that they would quit work. It is expected that the American machinists and blacksmiths will follow this example. The commission says that the standard rate paid to these men, 65 cents an hour, is higher than the rate in the States, and that in addition they get free quarters, fuel, light and medical attendance, while the cost of food is made low for them. They asked for an addition of 10 cents an hour and an annual vacation of six weeks, with full pay. Mr. Taft sailed for Cuba on the 17th. In a published statement he said that since his fourth visit, twenty-two months ago, remarkable progress had been made. Work was being done on

every foot of the line under an organization that operated as economically and effectively as if it were a machine. The judgment of Congress in adopting the lock type had been confirmed:

"The extent to which the Gatun Dam and the locks have been completed has removed from every impartial observer the slightest doubt of the wisdom of the decision made and the feasibility of the plan adopted. This conclusion is further confirmed and clinched by the difficulty occasioned by slides in Culebra Cut, which for a canal of an 85-foot level necessitated only an additional excavation that could readily be taken care of. Any attempt, however, to sink a canal in Culebra to a depth eighty feet below the present proposed level would lengthen the time of construction, weary the patience of the Americans, make the cost almost prohibitory and leave it an exceedingly doubtful question whether, with the difficulty presented by the Chagres River, such a canal would be possible at all. The Gatun Dam lock, with the lake already eighteen feet and slowly rising to a level of eighty-five feet, which will constitute the key to the whole plan of the canal, is so far advanced that, taken with Culebra Cut and the locks on the Pacific side, a definite picture is given of what the canal is to be, which inspires one with eagerness for its completion. The landslides in Culebra can be easily removed, the further excavation and the widening of the slope where they occur merely adding something to the amount of excavation previously calculated upon, and to the cost, but the percentage of both time and cost will be very small and not enough to increase the estimates for the completed canal."

On his way home Mr. Taft stopped for four hours at Guantanamo and inspected the naval station there.

Trust Cases in the Courts

The Government has lost its rebate suit against the Standard Oil Company of Indiana. There were originally 1,524 indictment counts, involving a possible maximum fine of $30,480,000. Judge John E. McCall, of the Federal Circuit Court, before whom the case was tried, in Jackson, Tenn., ruled on the 15th that each settlement with the railroad company, and not each individual shipment of oil, constituted an offense. As there had been only forty-six (bi-monthly) settlements, this ruling reduced the number of counts to forty-six, involving a possible maximum fine of $920,000. On the 17th, he instructed the jury to return a verdict of not guilty. He held that the freight rate paid, 13 cents "from Whiting to Grand Junction and points beyond," had been filed with the Interstate Commerce Commission and was the legal rate for shipments to places "beyond" Grand Junction. In conclusion, having spoken of the right of the great and the small to an equal footing before the courts, he said:

"When the courts swing away from this rule, and those convicted of crime are convicted by other means, the justice of our boasted jurisprudence will soon become a hollow mockery and the judgment of our courts will be held in derision and contempt."

From the verdict the Government cannot appeal.——Noticing that the Imperial Glass Company, or Window Glass Trust, had informed its employees that a very large reduction of wages would now be made, owing to the recent conviction and dissolution of the unlawful combination, Attorney General Wickersham published last week a statement. Having pointed out that the company, a selling and price fixing agency, had controlled 97 per cent. of the output of hand-blown window glass; had in nine months increased prices by 70 per cent.; had procured leases of fifteen factories merely to keep them idle; had made in a few months profits equal to four times its capital, and, despite the protests of the District Attorney, had been punished only by a fine of $2,500, with $500 for each one of fifteen individual defendants, he remarked that the directors' minutes showed the adoption of one resolution increasing wages by 12½ per cent.:

"Whether this was carried out or not did not appear, but at all events, as the combination had earned about 400 per cent. profit on its capital stock during the year of its existence, an increase of 12½ per cent. in wages can hardly be regarded as so entirely dependent upon the continued existence of the combination as to justify a reduction of 30 per cent. in wages upon the dissolution of the combination.

"If the rumored action should prove to be substantiated by fact, it would indicate mistaken leniency on the part of the Court in imposing sentence, which it is hoped would not be followed on any other similar occasion."

The company replied that a wage reduction of 55 per cent. was now required, and that notice to this effect had been given to the employees. Before the combination was formed, it continued, glass had been selling below cost. The company had increased wages by 15 per cent. and then again by 30 per cent. All but six of the factories were now closed, and

they could be operated only by a return to the original wages scale.——Asserting that the Sugar Trust had for years been stealing water from the public supply, New York City prepared to shut off the Trust's water unless a claim for $525,000 should be paid. The Trust applied for an injunction. Ex-Judge Morgan J. O'Brien, as referee, now recommends that an injunction be denied. He says:

"It is fully established that the plaintiff did take water both unlawfully and fraudulently. The plaintiff asks the court to prevent the city from enforcing payment by cutting off the water supply. It is well settled that one who comes into a court of equity to ask relief must do so with clean hands, or otherwise he will be denied relief. As it has been shown that the plaintiff does not meet that condition, it cannot be given relief merely because the amount demanded is in excess of that properly due."

It is asserted by the city that a much larger claim could be justly made, if the statute of limitations did not forbid. A small part of the Trust's water came thru a known and metered pipe, the bulk of it thru several unmetered pipes whose existence was for a long time unknown to the authorities.——It is said that the Government will bring suit this week for dissolution of the Sugar Trust.

More Customs Frauds

The Government asserts that prominent firms of importers in New York have for several years been defrauding the Treasury by undervaluation, and that the duties thus lost amount to several millions. Last week, a civil suit against Joseph Brooke & Co., to recover $200,000, was begun, and Isaac and Manning Phillips, partners in a firm which has been importing silks and velvets, were arrested. Brooke & Co. import woolens and worsteds. The accused partners in that firm are now in England, the main office of the concern being in Bradford. They own a mill in Massachusetts. The Phillips firm has been importing from France. The business of several other importers has been the subject of investigation, and additional arrests are expected. It is alleged that the frauds were committed by means of false consular invoices. The District-Attorney says that the sums to be recovered exceed the amount paid to the Government by the Sugar Trust, and that many manufacturers of woolens in England are involved.

The Situation in Mexico

Up to the end of last week there had been no further anti-American demonstrations of a serious character in Mexico, but the Mexican Government's action against anti-Diaz revolutionists had been marked by much bloodshed and loss of life. The Mexican officer investigating the lynching of Rodriguez reported that resident Mexicans had taken part in the lynching and had publicly exprest their approval of it. He exprest the opinion that Rodriguez was either an insane man or a fugitive from justice. Before his death Rodriguez confest that he had recently murdered and robbed two Mexicans. Some excitement was caused by a lynching party's search, in Oklahoma, for a Mexican named Opel who, on the 12th, shot and killed the Police Chief of Anadarko. Governor Haskell was urged by Secretary Knox to prevent a lynching. At last accounts Opel had not been caught. He shot Chief Temple while resisting arrest after a brawl in a saloon. Early in the week there were reports that several hundred Mexicans were about to invade Texas. Preparations to receive them were made by 2,000 ranchmen and cowboys, but there was no invasion. President Diaz continued to ask for reparation in the case of Rodriguez. Governor Campbell asserted that he was striving to detect the lynchers, but there were no arrests. ——Public attention was diverted from the Rodriguez controversy, on the 18th, by an attack upon revolutionists in Puebla and the disclosure of a widespread revolutionary conspiracy in Mexico. There were indications that the anti-American riots in the capital and elsewhere had been promoted by the revolutionist leader, Francisco Madero, and his associates, who hoped thus to embitter relations between Mexico and the United States. Madero was in San Antonio (Texas) an exile. Mexican secret service men were watching him there and were on duty along the border. A large number of rifles were found and taken in San Antonio, on the 17th, and

on the same day several thousand were captured in Puebla and other cities. Hundreds of men were arrested. The Government knew that the 20th was to be the date for an uprising in ten States. On the 18th the police sought to break up a revolutionary meeting in Puebla. A woman shot and killed the Chief of Police. In the fighting that followed more than 100 persons, many of them women, were killed. Women and men shot the police from house windows. Bombs from windows caused many deaths. The revolutionists' arms were captured. On the following day Madero secretly left San Antonio. Many Mexicans living in this country took arms and crossed the boundary. It was expected that revolutionary attacks upon several Mexican towns would soon be made.

The Islands

The Young Men's Christian Association in Honolulu has rejected the application of Japanese Vice Consul Mori for membership, holding that Japanese should not be admitted because of social incompatibility, which would impair the association's usefulness. It offers to assist in forming a Japanese branch of the organization.——At Manila, the Philippine Commission and the Assembly are still at variance over the election of delegates to Washington. The Assembly elected Manuel Quezon, but refused to confirm the Commission's election of Bonito Legarde. All the Commission's bills have been tabled. One-third of the session is gone and nothing has been done. Intervention from Washington may be required.——The Filipinos are greatly interested in the report that Senator Rayner will visit the islands to procure information to be used in a campaign for Philippine independence. In his honor the Assembly will probably prepare a series of receptions.——In Cuba, the disclosures following the attempt to assassinate General Guerra continue to excite comment. It is said to be known that one of his assailants is a high officer of the Rural Guard, and that another took refuge in the barracks where General Monteagudo has his headquarters. The charges made by ex-Consul Steinhardt and Vice-President Zayas, as to the plot for their assassination, were sent by the judge who heard them to the Supreme Court. They affected General Monteagudo, commander of the Rural Guard. Dispatches say that the Supreme Court declined to consider them, holding that it had no jurisdiction, and that five members of the court refused to hear the testimony, on the ground that they were friends of Monteagudo.

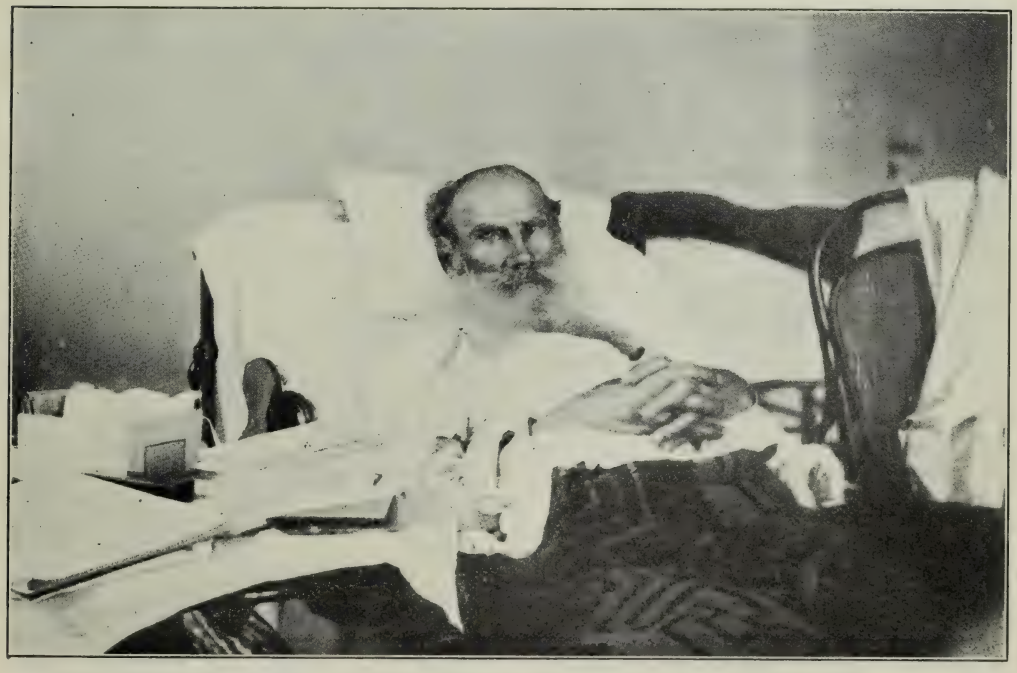
Central and South America

A demonstration, hostile to the United States, at Leon, Nicaragua, on the 13th, and again on the 14th, was suppressed by troops. The dispatches said that more than forty persons were killed, but the Government asserts that only three lost their lives. The demonstration was a protest against the recent agreement with the United States, providing that Estrada should be President for two years, by those who desire a popular election. Estrada has expelled four men who own or edit newspapers which favored the movement. Many others have been placed in prison.——Valladares, the rebellious Governor of Amapala (Honduras), has surrendered to President Davila, and has been obliged to ask the United States gunboat "Yorktown," a part of what he calls "the Yankee pig navy," to defend him against the assaults of his own people. Manuel Bonilla and Lee Christmas, his American lieutenant, who were expelled from Guatemala, are now in New Orleans. It is said that they are plotting a new revolution.——All the revolutionists in Uruguay have surrendered unconditionally, relying upon the magnanimity of the Government.

Immediate Election in England

Following the break-up of the constitutional conference, both parties made swift movements to gain the offensive in the impending campaign. The Liberals wished to force an election promptly on a clear issue of an unreformed and obstructionist House of Lords, but the Unionists endeavored to forestall them by declaring their willingness to accept a reasonable plan of reform not involving the destruction of the power of the second chamber. Lord Lansdowne, the

Unionist leader in the House of Lords, gained the first point by moving that the Government be invited to submit, without delay, its veto proposals for consideration and discussion by Parliament. Lord Rosebery followed this up by the introduction of his plan for the reorganization of the upper House. When he proposed it last year it met with no favor and received no serious consideration. Now, however, the resolutions embodying the main features of the plan were adopted without opposition. According to this the whole body of the hereditary peers shall not be entitled to seats in Parliament, but only a certain number of representatives elected from among themselves and by nomination by the Crown. To these representative peers would be added certain prominent officials during their term of office and others chosen from outside, the whole body to be called the Lords of Parliament. Lord Rosebery said he believed that on these principles it would be possible to reform the upper chamber to a large extent, solve the constitutional problem and maintain the ancient Constitution of the country without the convulsion incident to a general election. In case of a disagreement between the two houses as newly constituted the dispute should be settled by joint conference, or, in the event of the failure of the conference, by referendum. There should be no question, he thought, as to the choice of the country between a reformed House of Lords and the intolerable tyranny of a single chamber. In closing Lord Rosebery said: "The time is short, my lords. You may have no opportunity after to-night to discuss any resolutions affecting this House." Mr. Balfour, leader of the Opposition in the House of Commons, in his speech before the Conference of Conservative Associations at Nottingham, virtually accepted the Rosebery scheme. He said that the Unionists would come before the country with a constructive program of domestic ond imperial policy, including tariff reform, but not such as would increase the burdens of the wage-earning classes. Premier Asquith promptly accepted the challenge of the Opposition. He announced that the Government would at once introduce resolutions limiting the veto power of the House of Lords, and if this measure was rejected by the House of Lords Parliament would be disolved November 28. The non-contentious clauses of the budget bill would also be rushed thru next week. The most important of the new provisions of the bill would be that extending the old age pensions to paupers. This would involve an additional appropriation of $2,500,000 a year. If the Government remained in power next year he would bring in a bill for the payment of members of Parliament. ——The suffragets, infuriated at seeing Parliament about to dissolve without an opportunity to vote on the enfranchisement bill to which a majority of the members are committed, have reverted to their militant tactics. An army of a thousand women, led by Mrs. Pankhurst, marched to the Houses of Parliament during the session at which the Premier outlined his policy and endeavored to force an entrance. They were divided into companies which relieved each other in charges upon the cordon of police. They were repulsed repeatedly, but finally Mrs. Pankhurst and two other leaders were admitted to the lobby of the House of Commons, where they were told by Mr. Asquith's secretary that no suffrage bill would be presented at the present session. Mr. Asquith passed thru the lobby while the women were talking with his secretary but they did not recognize him. The police arrested 116 women who were released on bail, and when they appeared in court next morning were discharged. Very much to their disappointment the Government has decided not to make martyrs of them.



The Death of Tolstoy

Count Leo Tolstoy died at the flag station of Astopova at 6 o'clock on Sunday morning, November 20. Six doctors were in attendance, including the foremost heart specialists from Moscow, but they could do nothing for him except to relieve the attacks of heart failure which followed one another with increasing frequency and violence. Their attendance seemed to annoy Tolstoy, whose sole desire was to retire from the world to some unknown place where he could die in peace and quiet. The night before his death he was seized with a

cardiac attack when only his eldest daughter, Tatiana, was present at his bedside. He gripped her hand and gasped, "Now comes death. That is all." Tatiana was unable to free her hand from his convulsive grasp, but called the physician who injected camphor and revived the patient. Tolstoy sat up and seeing the little room filled with physicians, attendants, family and friends, he said:

"There are millions of people in this world and many of them are suffering. Why then are you all around the bed of one sick man?"

After his death the body was clothed in the mujik garb that he has worn in recent years and the cottage thrown open to the villagers, school children and peasants, some of whom had walked long distances. His wife, Countess Sophia Tolstoy, rousing herself from the despair and grief into which his departure had thrown her, had come at once by special train to Astopova, but was not admitted to his bedside until he became unconscious, for fear of exciting the patient. On the side track of the little station were also the cars of the physicians and reporters. The one-story log-house of the station master was the only refuge available when the physician who accompanied Tolstoy in his flight from home insisted upon his stopping there on account of the severe attack of bronchitis and inflammation of the lungs which had seized him on his journey to the Caucasus. According to Prince Obedenski, Tolstoy's departure from his home was instigated by the legend of Alexander the First, which says that that sovereign did not die when he was supposed to, but lived many years later as a hermit in Siberia under the name of Kusmitch. The interest taken by Tolstoy in this legend is shown by the article which we are publishing this week. It has transpired, moreover, that Tolstoy has been much disturbed in recent months by the quarrel between the Countess and his friend and disciple, Count Tchertkoff, over his literary remains. Tolstoy had given his journal, antobiography and an unpublished work, "Hadji Murat," to Tchertkoff, in order that he might give them out for publication without copyright or remuneration of any kind, in accordance with Tolstoy's principles. Tchertkoff had con-

TOLSTOY ON HIS SICKBED AT YASNAYA POLYANA.

veyed the manuscripts to England, in order to get them out of the reach of Countess Tolstoy, who insisted that they should be copyrighted for the benefit of the family. Three months ago the Countess Tolstoy refused to permit Tchertkoff to visit Yasnaya Polyana, but Tolstoy insisted upon visiting him on his estate three miles away. Premier Stolypin urged the Holy Synod to remove from Tolstoy the ban of excommunication before his death, but neither his influence nor that of the Procurator was sufficient to induce the Synod to rescind its action so long as Tolstoy showed no indication of a change of attitude toward the Church. Accordingly, no prayers were permitted to be offered in the churches for Tolstoy's recovery, altho in St. Petersburg a priest was found who was willing to offer prayers "For a nobleman named Leo," and the service was attended by members of the Duma and other friends of Tolstoy.

The Constitutional Movement in China

The late Empress Dowager was the greatest woman ruler the world has known. Whether greatest in ability and force of character cannot be told until more of the inner history of modern China is known to the Western world, but at any rate she was greatest in the extent of her power and the momentous changes effected by it. One of the acts of her later and more progressive days, when she wielded the Vermillion Pencil in the interest of liberalism, was the issuance of an edict making China a representative government. It was a mighty revolution in Chinese affairs, albeit substantiated in the edict by quotations from the classics proving that rulers ought to listen to the voice of their people. This edict was signed September 20, 1906. The date of the first parliament was set ten years in the future to allow preparation and practice in self-government. To the outside world this period seemed all too short for such a radical transformation of so large a body. But to Young China, inflamed with the idea of free institutions, it seemed too long. They resolved to hasten the day of their participation in the government. They have succeeded. The brief history of their efforts and triumph shows how strong is the constitutional movement in China. The provincial assemblies, called to elect delegates to the national assembly, petitioned the throne in January to shorten the preliminary period. The petition was denied by the Regent. In June it was renewed and again denied. On October 3 the first preliminary national assembly met in Pekin with no pomp and little ceremony. The hall assigned to it in the Law School was too small to hold all the delegates. The public and press were excluded. The diplomatic corps was not invited to the opening session. But if the Government intended to minimize the importance of the body by such tactics it was not successful. The Assembly showed itself as conscious of its real power and importance as the French Third Estate in 1789. The hotheads demanded that parliament be called immediately or even that this preliminary assembly declare itself such and assume administrative as well as advisory functions. But the consensus of opinion was an appeal to the Grand Council for a parliament within three years. Only one delegate held out for the program of the edict and he was shouted down. The Regent, Prince Chun, still held out against the movement and issued an imperial edict ordering the provincial members to return to their homes. The edict was disobeyed and denounced in the assembly. Some of the delegates cut off a finger joint and wrote their petitions for a parliament in their own blood. The assembly went in a body to the Regent's palace gate and announced their intention of staying there all night or until he should receive them. The police could not drive them away. The commandant of the Pekin *gendarmerie* came to beg them to go away and finally Prince Su, summoned by the Regent, promised to present their memorial in person next morning. In the session of October 31 Prince Yu Lang, a member of the Grand Council, declared that the entire nation from the highest to the lowest was agreed upon the early establishment of parliament, and on November 4 the imperial edict was issued calling the first Chinese parliament three years hence. When the announcement was made the people of Pekin decorated their houses with flags and lanterns.

Alexander I.

BY COUNT LEO TOLSTOY

[This is the legend of Emperor Alexander I, who for many years after he was supposed to have died lived the life of a hermit in Siberia under the name of Kuzmitch. Count Tolstoy was always deeply interested in this legend, and, according to Prince Obolensky, a relative of Count Tolstoy, this legend may have had an effect on the great writer's latest experiences. Count Tolstoy wrote the following legend and planned to elaborate it, for he regarded it as "a powerful drama, remarkable for its depth, its striking, powerful national truth." The two letters that follow the article on Alexander I are from Count Tolstoy to his wife and her answer, written at the time when Tolstoy resolved to change his mode of life in accordance with his ideals. They show the relations and the differences between the Count and the Countess, which gradually led to the latest tragedy in Tolstoy's life. The translations, which are published for the first time, are by Herman Bernstein.—EDITOR.]

DO you know what interested me particularly in a certain French critic's book about my work? His very keen observation as to the cause of my mode of thinking. He finds that if I were not a Russian, I should never have come to the religion by which I now live. How profoundly true that is! It is not the feeling of national pride (which, thank God! is foreign to me), but my observation of life and mankind that leads me to say boldly that Christianity, in its pure and clear form, is most closely related to the Russian soul. And the fact that Christianity was born elsewhere and that it grew up elsewhere, does not prove anything against that fact. Rivers, starting in the mountains, do not remain there, but flow down in noisy torrents. And only in the deep and broad valleys are rivers, lakes and seas formed of these torrents. And I think that the Russian soul, like a huge cavity in the ground, has absorbed the flow of Christianity—and now there is before us a great blue sea, with cheerful reflections of the sky.

I remember that I experienced this feeling when I ceased to be a Nihilist and was drawn to the people. I walked as a man who goes into the sea and who feels that he will soon take a dip himself and swim away. How wonderful I felt when I myself dipped and went head foremost into this great, engrossing element. I saw another world before me, a great world of people who lived, not merely in word, but also in deed, in immediate proximity to God, regarding themselves as his workers, cheerfully doing all that he bade them do. Therein lies the great difference between Russia and other peoples. That is why the passion of gain and greed is foreign to the Russian soul, which leans more toward self-denial and peace.

Alexander I. was in this respect the purest embodiment of the Russian soul. Ah, what a legend I know about him. One of these days, I shall elaborate this subject. It is a wonderful drama, remarkable for its depth, for its striking, powerful, national truth!

This is the legend:

The horrors which were perpetrated in the Engineer Castle during his childhood weighed heavily upon Alexander's soul, and he found no rest anywhere. Neither the glitter of the throne nor the external pleasures of the court had any attraction for his soul. His religious inclinations led him to take on a definite view of life, picturing to him a different future and a different calling. He firmly resolved to abdicate, and announced his resolution to Nicholas and his wife. Then he settled down in Taganrog and lived a private life.

Strolling around on the outskirts of the city, Alexander was fond of chatting with the plain people, and every time he spoke to them, his heart was filled with burning envy at the life of these people who knew so clearly the aim of their own lives and who so firmly believed in Him who had given this life unto them.

"When, when," Alexander would often cry to himself, "when shall I lead such a life?"

It would seem that it was easy to put on plain clothing and begin to do God's plain work together with the people. But Alexander felt that to reach that shore, somehow or other, he must first cross a

great, wide river, a river of experience. And he awaited that time, with alarm and supplication.

One day, he was walking along on the outskirts of the city and he noticed a crowd swarming about a square, which seemed filled with soldiery. Soldiers formed two long rows along the street and stood erect, without their guns, but with short sticks in their hands.

Then he saw how they brought forth a middle-aged soldier, tied his outstretched hands to the butt end of a gun and tearing off his shirt, led him between the rows of soldiers. The drums beat while the terrible punishment was being executed.

Alexander looked into the face of the pale soldier and he was struck by the resemblance to himself. The face of the soldier was exactly like Alexander's face.

Through inquiries he learned that the unfortunate man was almost through the twenty-fifth year of his service in the army, when a letter came to him from his village, telling him that his father was dying, and he had asked for a leave of absence in order to see his father once more. The leave of absence was not granted. Then he ran away. He was caught and court-martialed. But he ran away again and was again caught. And now, he had been sentenced to 8,000 lashes, which meant certain death.

Alexander heard the dull blows fall. They were at first mingled with the moans of the unfortunate man. Then moans subsided and instead of his spine, there was a piece of torn, blood-covered flesh.

Alexander was seized with horror.

"My God!" he thought. "My God! He wanted to see his father, to kiss him for the last time, to hear his last word—and for this he is tortured in my name! And I—I—what have I done?"

And the terrible scenes in the Engineer Castle arose before his eyes.

"Father!" he moaned, and in a hoarse voice began to sob like a child.

But many others in the crowd were sobbing and no one noticed him. No one knew who he was.

Suddenly the beating of the drum ceased and the dull blows of the sticks stopped. The unfortunate soldier lay on the ground unconscious. He was put upon a stretcher and carried to the hospital. A gray, kind-faced physician who was on duty gave instructions to his assistants as to what to do with him.

"Will he survive, doctor?" asked Alexander, when he remained alone with him, and he introduced himself.

The doctor, turning pale, was frightened to death.

"Your—Your Majesty—" he began.

Alexander calmed him kindly and asked him to be frank. Then the doctor said:

"He will die today. He received 4,000 blows and his spine is broken in two places. His death is imminent."

"In that case," said Alexander, with great emotion, "I have a request to make, my last request, doctor. But before I make it, you must swear that the secret will die with you."

"I swear! I swear! By my love for you, great Emperor!"

"I believe you," said Alexander, simply, taking a gilt key from his pocket. "This is the key of my room. Order the soldier removed there. I will take off my clothes and you put them on the soldier. And I will remain here on the cot, in place of the soldier."

Next day the whole world learned of the death of the Emperor and his closed coffin was taken to St. Petersburg.

Alexander's wounds healed up within two weeks, and he was driven again thru the rows of soldiers to get the rest of the 8,000 lashes.

He got four thousand lashes, and by a miracle survived them. The soldiers must have pitied the once-punished man. According to the law of the time he was sent to Siberia, as an exile deprived of all rights.

The tall, stately soldier, "Michael Silin," was taken to a distant Siberian village, where he was to live under the surveillance of the police.

There he lived for a long time, learned farming, helped the peasants, taught the children and cured the sick.

One day, two exiles were brought to that village and one of them was an old man who had served at court. The old man became very sick. People put him on a cart and carried him over to old Michael, who was praying.

Alexander glanced at him and imme-

diately recognized his old servant who had worked in his garden. The gardener also recognized him. Overcome with joy and happiness, he rose to his feet and was about to kiss Alexander's hand. But Alexander pushed him aside kindly and ordered every one out of the room.

"Will you keep the secret to yourself?" he asked the sick, old man.

"I will tell the whole world what my eyes have seen and my hands have felt."

And overcome with emotion, the old man fell to the ground in a faint. The people lifted him into the cart and took him home. When he came to himself, he told them what he knew and the entire village rushed to Alexander's abode.

But he could not be found, he was never seen there any more.

After that, it was said, a tall, stately old man wandered for a long time over Siberia, and he met his last hour somewhere in the Ural Mountains, near the boundary of Europe. . . .

What a great moment that end must have been! What a noble liberation of the soul!

The Tolstoy Letters

[In 1884, when Count Tolstoy decided to commence leading the simple life, in accordance with his ideals, renouncing all his luxuries and comforts, he informed the Countess of his intentions in a long letter The Countess was away from Yasnaya Polyana at the time. In concluding Count Tolstoy wrote the following.—EDITOR.]

"Don't be angry, my darling, but I cannot attach any importance to these monetary calculations. All this is not an event, such as illness, for instance, or marriage, birth, death, or acquired knowledge, a good or bad act, good or bad habits; it is only the arrangement of our affairs, which we have established in a certain way, and which we can change in a hundred different ways. I know that to you it is often and to the children always unendurably tedious to listen to what I say about this (it seems so familiar to you), but I cannot help repeating that the happiness and the misfortune of all of us cannot be affected by a hair's breadth by what we gain or lose, but only by what we are. If you leave a million to Kostenka, will he be happier? That life should not seem commonplace and trivial, it is necessary to look at it more broadly, and farther ahead. What your life and mine will be with our joys and sorrows, such will be the life of our children, and therefore it is important for us to help them secure that which gave us happiness, to help them free themselves from that which brought us misfortune, and neither languages, nor diplomas, nor the world, and still less money, have influenced our happiness or our misfortune. Therefore the question of how much we may lose cannot interest me; if we were to attach importance to it, it might obstruct that which is really important."

To this letter the Countess replied:

"Yesterday I received your first letter; it made me sad. I see that you remained in Yasnaya not for the spiritual work which I consider higher than anything in life, but for the purpose of playing a Robinson Crusoe. You dismissed Andrian, who was eager to stay till the end of the month; you dismissed the cook, who does not like to get his wages for nothing, and from morning till night you want to do physical work which even in ordinary life is done by young fellows and women. It would be more useful and better that you live with the children. You will say, of course, that such a life is in accordance with your convictions and that it is best for you; in that case it is different, and I can only say: 'Enjoy yourself!' and I can only feel sorry that such mental powers are wasted on woodchopping, on making samovars and mending shoes, which is all very beautiful as a rest or change of work, but not as a special occupation. Well, enough about this. If I had not written, I should have felt grieved, but now that feeling has passed; it seems laughable to me, and I am calmed by the phrase: 'Let the child play with whatever it pleases, if it only does not cry.'"

That same day, realizing that she would cause Count Tolstoy pain by her letter, she hastened to write him another one, in which she said:

"I have suddenly understood you clearly and there is a sudden rush of tenderness for you in my heart. There is something so wise, kind, naive and insistent in you, and everything is illuminated to you alone by a peculiar light of tender care for all and by the ability to look straight into the souls of people."

A New Thanksgiving

BY SARAH PIATT

For war, plague, pestilence, flood, famine, fire,
For Christ discrowned, for false gods set on high;
For fools, whose hands must have their hearts' desire,
We thank Thee—in the darkness—and so die.

For shipwreck: Oh, the sob of strangling seas!—
No matter. For the snake that charms the dove;
And (is it not the bitterest of all these?)
We thank Thee—in our blind faith—even for Love.

For breaking hearts; for all that breaks the heart;
For Death, the one thing after all the rest,
We thank Thee, O our Father! Thou who art,
And wast, and shalt be—knowing these are best.

North Bend, Ohio.

The Democratic Successes

BY SIMEON E. BALDWIN

Governor-Elect of Connecticut.

THE recent Democratic successes cannot be attributed to local causes. They are too universal. State issues had little weight. There was a general conviction thruout the whole country that things had not been going exactly right, and that the Republican party was somehow answerable for it.

A general popular conviction is apt to be well founded. In my opinion, this one was.

Things had not been going exactly right.

The cost of living had gone soaring up.

American politics had become infected by corruption and fallen too much into subjection to parasites, to whom place-hunting was the main business of life.

The managers of the Republican party were largely answerable for these evils.

If they had not winked at corruption, it was generally believed that they had. They had certainly made opportunities for it.

While there were many causes contributing to the advance in the cost of living, the main cause was an ultra-protective tariff, as constituted by the Dingley bill and reconstituted by the Payne-Aldrich bill.

The Republican party had pledged itself to shape customs duties with the primary purpose of protecting American labor. They were to be high enough to enable our manufacturers to compete on fair terms with foreign manufacturers who had paid far lower wages to their employees. In fact, the Republicans in Congress made them so high as in many cases to include much more than the wages cost and to secure also much more than a reasonable profit. The first result was to preclude all foreign competition as to many articles. The second result was to fatten the trusts, at the expense of the people.

When foreign competition in any article is prohibited by law, and, were it not for the law, would exist and be considerable, domestic competition soon ceases. It is seldom, and never for long, that any combination of capital or of corporations can successfully monopolize the trade in

any article in the markets of the world. However repressive the laws of any particular state may be, the world-market is too vast for such a domination. But once exclude foreign competition in the markets of any country, and combinations of capital can easily be formed, and, under modern economical conditions, inevitably will be formed, which will stifle domestic competition.

Domestic competition had been thus stifled, as a consequence of the tariff legislation of the Republican party, in many directions. The result was that it cost us more to buy our food and clothes, more for house rent, and more, if we owned our own houses, to build them.

All this came about when the spirit of the times in the United States was moving toward more and more freedom in personal expenditure.

The average working man of today lays up less than the average working man of fifty years ago did.

His lodge, his fraternal benefit association, some one of the many agencies to furnish him with support when disabled or infirm, and to provide for his family upon his death, have taken away one of the great motives for saving. Dr. Johnson once said that if, by pinching one's self, one could save only twenty pounds a year, the best thing was to stop pinching. The end did not justify the means. This is the ordinary rule of life in a large and increasing number of American homes. Hence, having become accustomed to a freer expenditure than that of former generations, it has been more distasteful to retrench and economize when prices were rising faster than wages. Pinching one's self to become a capitalist is not an agreeable process. Pinching one's self at the call of necessity, merely to make both ends meet, is still less agreeable.

All these things roused the more thoughtful men in the Republican party and exasperated the whole Democratic party.

Why, when the Republican platform had promised relief, did the Republican tariff deny it? Many even of the Republican leaders admitted, and all the Democratic leaders insisted, that the tariff did deny it.

A breach of faith on the part of a political party in a matter directly and vitally affecting the people at large is seldom forgiven. Particularly is this true when honorable men in that party are found who actively charge it with so breaking faith.

"A house divided against itself cannot stand." The Good Book always speaks true. The Republican house was divided against itself. It therefore fell.

What next?

The Democratic House of Representatives must do what the Republicans promised and did not perform.

It must revise the tariff in the interests of the common people, rather than of certain interests calling for special favor.

It must move slowly, but surely. Vested interests, built upon the faith of a tariff policy which has lasted for half a century, must be treated with great consideration. There must be no sudden revolution in the course of trade. Reductions must be partial and gradual.

No special knowledge of a tariff commission of experts is necessary, in every instance, to justify a reduction. There are some duties so high as to be obviously unfair to the people. When, to take only one case, American watches are sold by American manufacturers in Europe for much less than they sell them at here—so much less that an enterprising New York jeweler has bought them abroad by the gross, brought them back to their native land, and put them on the American market at a price below that charged by American retailers, obtaining them from American wholesalers or the manufacturers—it is evident enough that the tariff on watches is too high.

A reasonable deduction from excessive duties, and a reasonable extension of the free list, if proposed by a Democratic House of Representatives, would, I believe, be concurred in by the Senate and approved by the President. The latter is known to be of opinion that the work of tariff revision was but poorly done by Mr. Payne and Mr. Aldrich. The people having come to the same conclusion, it seems to me probable that a majority of the Senate will be found ready to grant what the people have so loudly demanded.

New Haven, Conn.

Mexico—A Nation with a Unique Problem

BY CHESTER T. CROWELL

[Mr. Crowell, before he accepted a recent call to work on the staff of the San Antonio *Express* in Texas, was employed for two years on the Mexican *Herald* in Mexico City. He was one of the American journalists on the "Editorial Train" who spent three weeks in Mexico last September as guests of the Mexican Government. Our managing editor, Mr. Holt, was also of the party, and the following article admirably supplements his in our issue of October 13.—EDITOR.]

IN the working out of her governmental problem Mexico finds herself, by reason of her unique history, without precedents or parallels. Between the Rio Grande on the north and the Guatemalan border on the south there lies a territory of 767,323 square miles, with a population now estimated at about 18,000,000. With the exception of Brazil, which has about the same population, no other Latin-American country even approximates this population. Mexico includes within her borders some of the richest agricultural and mineral land upon the face of the earth. The people who reside there are an amalgamation of the various Indian tribes which Cortez found and the Spaniards who came with Cortez or followed in his wake. The governments set up by these Indians were absolute monarchies. Spain at the time of the conquest was an absolute monarchy. Cortez landed in 1519 and from that day hence the Spaniards were masters of some part of Mexico. The independence of Mexico was proclaimed September 15, 1810. Thus for several centuries Mexico felt the heavy hand of Spanish rulers. During their dominion the Spaniards managed to extract from Mexico enough gold to debauch their own country and send it on the way to decay. The entire purpose of that rule seems to have been to obtain wealth from Mexico for Spain or Spaniards. As a result Mexico became a nation of downtrodden, ignorant workmen and arrogant wealth.

In spite of all this however, such was the inherent quality of the people that they were able, after all those depressing generations, to rise and with mighty blows batter down the dominion of Spain. Even more remarkable, they turned to the north and borrowed from the United States a democratic constitution and laws. Now, there was nothing in this mixture of Spanish and Indian absolutism to suggest a democratic form of government, and it has caused trouble ever since. Moreover, while the ideal of a democratic government had been borrowed from the great Anglo-Saxon race, the intimate knowledge of conduct of government officials, probably the most corrupt who ever ruled, had been thoroly impressed by generations of Spanish rule. In the other Latin-American countries where foreign influence has been strong there are real republics. Where there has been no foreign influence, the form of government has been not only a sham but inefficient, and progress has been infinitesimal. But Mexico, with a minimum of foreign influence, with the almost insuperable difficulty of a lack of the instinct for democratic government, has struggled manfully to that end for 100 years, during which time it has made a record for material progress that stands probably unparalleled in the world today. Many of the conditions there are bad, but to judge Mexico by the highest standards of the most advanced countries of the twentieth century is about as just as to insert the telegraph into some record of the Middle Ages and draw forth from it a daily news report. Even some of the wild tribes of Indians are not yet entirely conquered.

Mexico, however, has been most fortunate in her critics and most unfortunate in her foreign friends. Her critics have usually been so malicious and unjust that even when they were sufficiently well informed to tell the truth, which is rare, they have printed only half the picture. Her friends have for

the most part written eulogy so tainted with adulation as to be almost worthless to the person seeking information.

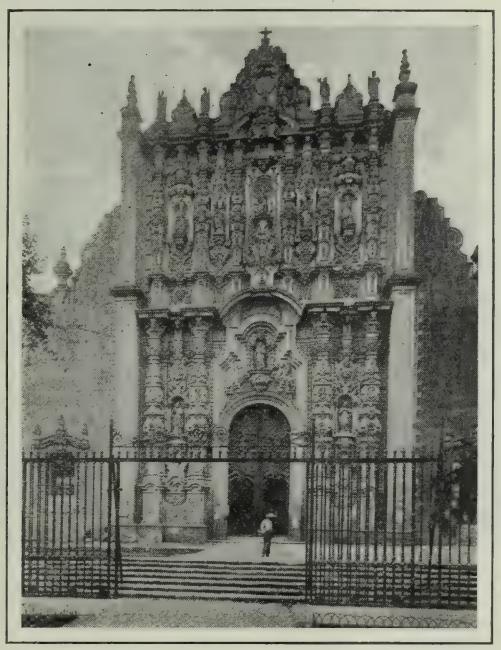
The early history of the country is the history of Spanish misrule. The early history of the republic is a history of turbulence and revolution. In judging of the Mexican people, however, the proposition that one cannot judge a nation applies. The people of Mexico are as varied as in any other large country. There are many different tribes of Indians, with many different characteristics. The best of all the Indians, however, are those of Oaxaca. Oaxaca produced Porfirio Diaz and the immortal Juarez. Even now the Indians of Oaxaca are remarkable for their intelligence. In the mining camps of that state they make blue prints, handle delicate machines and do other high-class work. Reverting, however, to these revolutions—their history would lead the student to believe the Mexicans utterly incapable of government. There are most distressing records of attempts to get hold of the government machinery for profit. They were marked by demonstrations of dishonesty and lack of honor at every turn. They were reflected in part by the history of the present State of Texas. President Santa Anna, from whom the republic of Texas wrenched freedom, was at first ardently supported by Texans, both morally and on the field of battle. But he proved false to his promises and Texas, disgusted with the continually unstable government, fought a successful revolution.

POST OFFICE, CITY OF MEXICO.

In the midst of these revolutions came the French intervention, which was one of the best things which ever occurred to Mexico. It brought the discordant factions together and showed that there really was a national spirit and love of country. That unity has been strong ever since. Americans do not seem to realize it. They often, by way of courtesy, refer to a Mexican as a "Spaniard," as tho he were ashamed of his nation-

ality. Mexicans are now and have been for a century intensely patriotic. As one critic has said, "They fought like demons for their country and then didn't know what to do with it when they had it."

Out of the war of the French intervention General Porfirio Diaz emerged a hero. His accomplishments during that war were nothing less than marvelous. With half-armed, ill-clad, poorly organized men, accustomed to defeat every time they faced the famous French veterans, he won victory after victory. Not only did he win on the field, but he could organize the government of a province after winning it, and restore order and business. As a young man he seems to have been somewhat of an idealist, more confident of the ability of his country than the country deserved. He declined the portfolio of War and Marine to remain in the field, and later, when elected President under a constitution which did not permit a President to succeed himself, he willingly gave up the Presidency, only to plunge the country into more plots and revolutions. Finally he returned to the Presidency, changed the constitution to permit the President to succeed himself, and has held that office thirty years.



The rest of the history of Mexico is the history of what Porfirio Diaz has done. That history is characterized by a friend of the writer, a man who has lived in Mexico a quarter of a century and knows General Diaz intimately, as the "thirty years' war between General Diaz and General Apathy."

Mexicans, like most Latins, are not interested in governmental affairs. They have not the ability which characterizes the Anglo-Saxons and Celts for sitting up nights to discuss governmental policies. When a group of Mexicans gather on the street, in a café or in a parlor, they discuss the theater, opera and gossip. This is not said in deprecation, because certainly there lives no more lovable people in the world. Neither have they the commercial instinct. Daughters of wealthy men in Mexico marry poor men without considering themselves martyrs to love. When a rich Mexican loses his money he does not lose his friends. But the effect of this upon the nation at large must be considered. It seems in all times to have been necessary for a republic to be a commercial nation desiring wealth. Moreover, there has been all the while an under-stratum of ignorance, incapable of understanding. A few years ago a regular American campaign was held in the State of Morelos, when the gubernatorial election was pending. A friend of the writer who was there as a correspondent said on his return that a Mexican of the lower class plucked him by the sleeve during one of the speeches and asked: "Oye señor, que color es democracia?" ("Listen, sir, what color is democracy?") Just as a matter of interest, the writer himself, while recently in the City of Mexico, asked a waiter in a restaurant, who said in answer to a question that he had lived in the City of Mexico twelve years, the name of the mayor of the city. He promptly replied, "Porfirio Diaz." "No, he is the President," objected the questioner. "Oh," answered the waiter, "that's right. I'll find out for you." He asked another waiter, and returning said, "Guillermo Landa y Escandon." Guillermo Landa y Escandon is governor of the federal district. Almost the same performance resulted when the second waiter in another café was questioned. The name of the mayor of the City of Mexico is Fernando Pimentel y Fagoaga.

Reverting to the lack of interest in financial affairs, it may be remarked that President Diaz well understands the need of commercial development. He himself has said that "No republic can hope for peace without prosperity or the hope of obtaining it in the near future." To that end and with that idea in mind he has struggled. Only the foreign observer can know what he has accomplished. Mexico doesn't know. Mexico underestimates itself today, proud as it is, for there is a certain strain of pessimism running thru the Latin. What President Diaz has done for the material advancement of his nation could fill volumes. But he is not a very popular man. He has succeeded in sandwiching in between that great body of poor men and the small body of rich men a balancing strength of middle class which is today the hope of the nation, and which

was never growing more rapidly and more surely than at this moment.

But, before discussing what President Diaz has done for the material advancement of the nation and establishment of an intelligent, well-to-do middle class, it is well to view the man Porfirio Diaz. The view of him taken by the outside world is rather amusing. To some he is a czar and tyrant, ever giving out orders for the execution of undesirables. To others, he is some godlike representative of destiny to make world history. As a matter of fact, he is a very human man, full of kindly humor, master of the epigram, and frequently fairly splitting his sides with laughter at funny things which happen about him. His humor bubbles forth as soon as he is among friends, and some of his jokes are classics. One in particular must be recalled. When Secretary Elihu Root and family paid an official visit to Mexico, there was given a dinner on the lawn of Chapultepec Castle, the President's summer home. The evening was damp. It was summer and the rainy season was on. Mrs. Root asked to have something under her feet, so that she should not catch cold. President Diaz sat next to her, so he ordered something brought to put under her feet. A few yards away the servants were breaking up cases of champagne. One of them brought the side of a box and put it under Mrs. Root's feet. President Diaz, with true Latin courtesy, was busy looking under the table superintending the job. He noticed the words on the side of the box, pointed to them and laughed most heartily. The words were "Extra Dry." He once had a Cabinet minister named Pacheco who lacked an arm and a leg. President Diaz used to say he was half a man, but worth a man and a half. Once he had occasion to try to learn the names of some Mexicans who were precipitating trouble with Guatemala by cutting timber on the other side of the border. He called to him one Santiago Carter and asked him to tell the men's names. Carter had nothing to do with the timber cutting, but was there on business. He evaded the questions. Finally President Diaz looked him steadily in the eye and said: "You know those men, but they are your friends and you won't give them away. For that you are my friend." It is such actions as these which enabled him to turn the highway robbers of Mexico into federal police and clear the cross country roads of bandits. He is a psychologist par excellence. It is no wonder those nearest to him love him and those who do business with him have absolute faith in him. In his home life he is exemplary, his habits are most moderate, and his manner of life healthy and simple.

THE EASTERN SIDE OF THE CATHEDRAL IN THE CITY OF MEXICO, SHOWING THE STONE CARVINGS.

He once called to him Frederick R. Guernsey, editor of the *Mexican Herald*, and asked him to say frankly what the people say about him. Mr. Guernsey answered that the people say President Diaz is fond of power and not fond of money. "I am fond of power," said President Diaz, "but I use it for the people."

President Diaz can account for his fortune of probably between $1,000,000 and $2,000,000 by profitable investment in lands and the saving of his salary. Not even the hint of scandal has ever attached itself to his name in connection with any financial dealing. His

humor and charity and simplicity are all the more remarkable because it has been the custom for rulers of Latin-American countries to amass wealth, be arrogant and dissipated. Mexico has suffered from this with the other Latin-American countries. President Diaz has been betrayed many times and picked false friends many times. His experiences as Chief Executive have been enough to discourage many men. Many a trusted appointee fell into the practice of grafting. In his own country his reputation has suffered most from the peculiar manner of the Latin in judging a public official. He is either worshiped or utterly condemned. Only this sane, healthy middle class for which he is accountable weighs calmly his faults with his virtues and draws a conclusion.

BURROS BRINGING PRODUCTS TO MARKET.

Now for what he has done. Liberal mining laws have brought in billions of foreign capital, principally from the United States and England. Railroad concessions have opened fertile but isolated parts of the country. Laws have been made to encourage immigration. Especially has the law permitting the entrance of machinery without duty helped. For many industries special exemption from taxes for a term of years is granted. In conjunction with S. Pearson & Son the Government built the Tehauntepec National Railway as a model steel highway. Across the Isthmus of Tehuantepec about 1,000,000 tons of freight are handled annually by this railroad, most of it American goods going from New York to San Francisco, or sugar going from the Hawaiian Islands to New York. Great port works have been built at Salina Cruz and Puerto Mexico, the terminals of this railroad. The port of Veracruz has been extensively improved. The port of Tampico has been improved at an enormous cost. In northern Mexico millions have been spent in irrigation projects. In the port works of Salina Cruz and Puerto Mexico alone about 40,000,000 pesos have been spent. Public highways which are marvels have been constructed thru the mountains for enormous distances. The states have erected sanitary market houses. Public schools by the hundreds have been opened. Cities are lighted and have paved streets. Mexico is now about to have an excellent university. It will be opened soon in the City of Mexico. Geodetic surveys have been made. Maps

have been drawn. A weather bureau service is given. The archeological wonders of Mexico are being collected. It must be remembered that the Indians of Mexico are not warlike nomads. Many of them had civilization. Indeed, the history of Mexico is traced back to about the beginning of the Christian era thru Indian records. Boys and girls who show remarkable artistic or musical ability are sent abroad by the Government to be educated. Night schools have been opened for the laborers. In his message to the Mexican Congress when that body opened its sessions September 16, 1910, President Diaz makes the following statement with reference to public instruction in the federal district and the territories, these alone being under the jurisdiction of the Federal Government:

"There are at present, in the Federal District and Territories, subject to the jurisdiction of the Department of Public Instruction and the Fine Arts, 641 primary schools, of which 52 are superior primary, 534 elementary primary and 55 night schools. The total enrollment, according to the latest reports available, is 83,824 pupils.

"In addition, there are six kindergartens, with 1,269 pupils, also under the jurisdiction of the Departmnet of Public Instruction.

"The number of masters imparting the rudiments of education in the above-named establishments is 2,371, not including the several head masters."

Recently the Government assumed control of the national railways by a clever financial arrangement. It has been freely predicted that this deal would bankrupt the Government. As a matter of fact, the railroads, as shown by the statements regularly issued in Spanish and English, are making money. They will pay interest on the bonds easily. Moreover if they did not, the interest amounts to only about $2,000,000 gold annually, and the Government has a surplus amply able to meet that obligation. Shortly after taking over the railroads the Government issued orders to replace American railroad men with Mexicans as far as possible. When that order was carried into effect Americans freely predicted the whole system would be wrecked. It is still running. Many Americans remain, it is true. Nearly all

A CROWD IN THE CITY OF MEXICO.

of them can speak Spanish and probably a majority of them have lived in Mexico more than ten years. Few will return to the United States. In all the other great industries which have been built up Mexicans have found lucrative positions and have been steadily trained for good positions. In the City of Mexico, where a Canadian company owns the street car system, Mexicans operate the cars and build some of them. In the offices of the City of Mexico one will find scores of Mexican girls, dressed like American girls, taking dictation in English and Spanish. This is a recent idea. Until even ten years ago a Mexican woman in business felt herself entirely out of place.

MEXICAN RURALES ON PARADE.

This encouragement of foreign capital has resulted in the great Guanajuato Power and Development Company, an American corporation, which brings electricity across four States from its waterfalls and furnishes light to twenty-eight Mexican cities and towns, besides furnishing power to many mines.

The Mexican Light and Power Company, which furnishes light and power to the City of Mexico, is building dams at Necaxa which compare in size with the Panama Canal's great Gatun dam. Operations of this kind, together with port works, agriculture, mining and railroad building, have increased the demand for labor until a common workman in Mexico now receives from one to two pesos a day. That is small enough from the American standpoint, but it must be remembered that these workmen are of a poor quality and had formerly worked for 50 cents, Mexican money, a day. That is the equivalent of 25 cents, American money. A peso is worth 50 cents, American money. These men have simple desires and for them that is high pay. But it is going higher, because Mexican workmen are capable of development. Their standard of life rises with their wages.

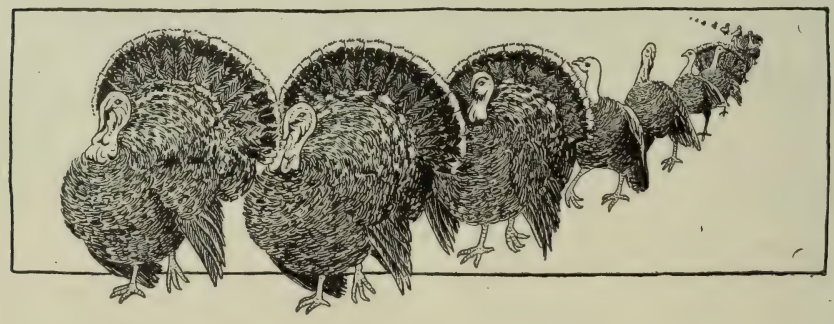
State governments have been likewise active. In much of the work done by the States there has been a considerable amount of graft. This is not unnatural. Probably some of the State governments did not understand the underlying purpose of this work at all and looked upon

these great improvement projects as the best means for obtaining graft. Be that as it may, whenever these things are done it results in helping the common laborer and creating a demand for high-class workmen. This it has done in Mexico, the graft notwithstanding. The people have gradually come to be better pleased with their better lot in life, and, consquently, less turbulent.

Along with this there have been some abuses. Contract labor has resulted in much harm. Some workmen have been pressed into service at low wages in the tobacco fields and on the great rubber plantations, where they were ill-treated. A land law which was not understood by the people resulted in many lawful owners being dispossessed and their lands being taken by shrewder persons. The purpose of this land law seems to have been excellent—to fix the means for obtaining title and to make titles uniform and secure. In the working out there was some confusion.

In the meantime the lot of the disturber or revolutionist has been the wall and firing squad. As to the justice of all of these instances so few men are informed, and they so incompletely, that it is hard to judge. There is no doubt, however, that many of these incipient revolutions would have been quelled similarly elsewhere. One in particular was rather typical. It occurred in a little town on the Isthmus of Tehuantepec a few years ago. The "presidente" of a village and some of his friends, mostly officials, were holding a little celebration, included in which was a banquet. At the close of the banquet they hailed the "presidente" as "Presidente" of the republic. The party was shot. Another rather typical incident is told by an American mining man on the Isthmus of Tehuantepec. He furnished to the "presidente" of a village a flag for a flag-raising. The "presidente" suggested that they might conveniently set up a republic at that time. These things usually occur, however, in the more isolated districts, such as the Isthmus of Tehuantepec.

Among the more ignorant the special favors to foreigners for the purpose of encouraging the investment of capital are sometimes amusingly misunderstood. For instance, it was rumored among a few of the lower class, after the meeting of Presidents Diaz and Taft at El Paso, that President Diaz had sold Mexico to the Americans. The price and details were given. But the better informed, who are now very numerous, understand. In recent years the sending of thousands of Mexican boys and girls to American schools is helping to establish a better understanding of democratic government and democratic ideals.



No discussion of Mexico ever ends without the question being asked, "After Diaz, what?" Ramon Corral is Vice-President of Mexico, and under the constitution would succeed to the Presidency. Some are of the opinion that Mr. Corral is not an able man. Others assert that he is. In all probability Mexico has rather underestimated him. But he is not popular. Enrique C. Creel is one of the ablest men in Mexico and has made an excellent record in the State of Chihuahua, in Northern Mexico, where he was Governor many years. He has been American Ambassador and is now Secretary of Foreign Relations. Many persons regard it as significant that he was called to Mexico to take a Cabinet position. He is growing in popularity in spite of his American name. Jose Yves Limantour, a Mexican of French extraction, is one of the ablest men of the country. He is a financier whom few men of any country equal. He is a most democratic person, rides on the street cars carrying a little bundle home, and is having his children educated in the United States. But he is not popular. The financial interests of Mexico would like very much to see him President. General Bernardo Reyes, former Governor of the State of Nuevo Leon, of which Monterey is the capital, is an able and popular man. His name was offered as a candidate for the Vice-Presidency before the last election. He seems to have been unfortunate in gathering a rather turbulent following. He was sent to Europe to study military tactics. Francisco Madero, who was a candidate against President Diaz in the last election, is an excellent man and an able man, filled with American ideals. His campaign seems also to have been unfortunate. An American friend of the

writer who has lived in Mexico twelve years remarked to the writer when he was in Mexico recently with the party of American and Canadian newspaper and magazine men who were guests of the National Centennial Commission: "Madero is a fine man, but I said to myself when his campaign opened, 'If that gang gets into power it's me for the States.'" One of the difficulties in the way of even intelligent opposition to the Government is that it draws support from poor sources.

As a matter of fact no one knows who will be President of Mexico when Diaz dies. There is no lack of good, even excellent material. The whole matter lies in making a choice. No disturbance will ensue. Already the industrial powers of the nation are strong enough to prevent that, and the middle classes do not want disturbance. The decision will be made without much disturbance in all probability. And in the meantime there is a possibility that General President Diaz has the entire plan primed already, tho those closest to Government affairs do not think so.

The standard of citizenship is rising very rapidly now. Mexico is a nation of commercial and industrial activity. Its cities have paved streets, fine buildings, good water, good railroad service and progressive officials. President Diaz, tho eighty-one years of age, is not showing signs of weakness. If he lives five or six more years the question may solve itself. At any rate, the events of contemporary history in that country are all tending to make Mexico a great, democratic commonwealth, amply capable of intelligent self-government. That country offers to the consideration of the world about the most wonderful page of history in the progress of mankind.

San Antonio, Texas.

Thanksgiving in Florida

BY E. P. POWELL

Author of "The Country Home," Etc.

I HAD just come from the political battleground, where leaders forgot themselves and told only the meanest things of their opponents, forgetting the good—a despicable affair. There was war of the elements beside, and Nature refused to try to please. But on my Southern veranda I sat on election morning, while the young folk came bringing in arms full of gorgeous wild flowers, until they ceased to be flowers and became weeds. Mocking birds dropped down, not singing much, but pertly picking up what I tossed to them of my Northern apples. Curiously, the hens and even the horses of Florida do not care for apples—indeed will not eat them until very hungry.

Again on my veranda I sat in the afternoon, just before sunset. There is something about this Southern sun that is wonderfully communicative. It seems to be intelligently co-operating with us. I watched it sinking, as if by its own

weight, down behind the pines, on the further side of the lake. The sky had not a cloud fleck from horizon to horizon. It was not soft, nor was it blue—just colorless and clear. The lake was unstirred, except by some noiseless ducks that made wakes thru the shadows and sunshine on the other side. The shadows made a quiet and sharp-cut horizon right thru the lake, much clearer than that in the sky. I heard the whistle of Felix, who was painting the new cottage, and meadow larks were clipping the air with their conversational notes. It was peace.

Yet I longed to hear election returns. We are pugnacious animals, and never more so than when exercising the highest social functions. The sun threw orange hues high up thru the sky, and then dipped down out of sight. The whole world became orange-hued. I would have understood it better could I have been sure my neighbor Davenport, up at Clinton, was elected. Well, there was this advantage about it, that I did not know how badly he was defeated indeed, did not know very much about our Northern battle until five days had lapsed.

On Saturday we got the returns, and meanwhile the sunshine and the atmosphere of the pines had cleared our systems of campaign rant and moral disease, and we had got to looking up and saying, "God is in the heavens; all is well." It is curious that we may live thru a dozen election hurricanes and always have the same symptoms. In Washington's time there was a host that believed he was a tyrant; a whole army of voters dreaded Lincoln; others were sure that Grant would declare himself dictator. Teddy got off easy.

On election morning we put our boat in the lake for a ride, but we found that it needed calking and soaking; and so the boys went out for a swim. I suppose that Orange County never yet saw a flake of snow, so you need not imagine that the lake ever gets very chilling. It was, however, bracing enough to make the boys run out with snapping eyes and shouts of delight. I shall not try the experiment myself, at least not until my alligator has come up out of the mud, and Florida has made me about ten years younger.

However, you must not think that there is no winter in this part of the world. The deciduous trees are not so very long after their Northern kin in getting tired and going to sleep. The leaves drop early in November, but the pine needles drop earlier in the year. New growth is restless in starting, and sometimes gets on the way a little too soon, and is caught by the fingers of a Northern blizzard—pushed down thru Georgia. In our gardens we must throw compost or straw over the potatoes and beans at least two or three times during the winter. Nature is having as much of a rest as she can afford, and altho we make gardens at all times, and our roses are blossoming in January, there is always a lot of brown about, and even the green foliage has a shy look about it—it is not as arrogant and determined as in spring.

The Government has just sent me a thousand bass to plant in my lake, and for two years we must look at and enjoy the sunsets over the water, and the boat rides, forgetting the absorption and estivation of going fishing. I am not quite sure that I am reasonable in this, but while I hate hunting I tolerate fishing. It is difficult for a fish to wake up much sentiment in our minds, and they are so cold-blooded that we try to think it no harm if we get a little fun while catching a mess for breakfast.

I do not know anything among our wild fowl more beautiful than Bob White and his family. A little later in the season his cheering call will be the first sound in the morning, and occasionally even now he slips out, very quietly, behind the barn, to eat with the hens. For the most part, at present, however, he is hid in the wild grasses, as inaccessible to the vagrant human as he can make himself. He understands very well indeed what months he can become the prey of sportsmen, and he knows right well when the law protects him. Tourists come here occasionally to make themselves happy by his misery. The utter detestability of a vulgar humanity of this sort gets out of the reach of my vocabulary. I deliberately hate a man

whose life is on this murderous level. Do you think I can go fishing again?

White egrets this morning were sailing back and forth over my lake, stopping at reedy margins to do a bit of fishing. I think the wild ducks who chase each other with quacking of laughter, and all sorts of fox and geese games, are even more beautiful than the herons. I have never seen the herons exploit themselves in play, but they are wonderfully welcome as white and blue spots, either sailing about the margin of the lake or possibly building a nest in my plum trees. Their voices are unpleasant. Bob White, on the contrary, and the mourning dove, and the grebe, have tones that express a wide range of emotion.

Bayheads are curious places, being swales that carry sluggish brooks thru the pine woods and down into the lakes. You should at least spend one day in one of these Florida bayheads. It is semi-tropical life at its best. When you enter it by the lake you will find a wide expanse of level alluvial, part of it needing drainage, but crowded with grasses as high as your head. We do not feel quite sure what may be hidden in these dense and moist tufts, so we wear leggins. Farther in the sloping banks creep away in all sorts of lines, and give us little valleys, full of every imaginable berry. Huckleberries abound, in different sorts, and something very much like them that the people call gallberries, which I advise you to let alone. The ferneries are wonderful, some of them spreading like carpets, and others sending great fronds clear over your heads.

Now and then the whole affair widens out into great garden plots, and if you care to do it, here is your place to grow potatoes and cabbages and all the Northern vegetables. Put your house up there on the hill slope, where you can look over the lake at the sunrise or the sunset, plant one of these bayhead gardens, with a higher slope for your sweet potatoes and your melons; and then as many orange and grape fruit and loquat trees, with mulberries and pears and plums over the knolls and around your house. Here in these bayheads the robins and the bluebirds collect in February by the tens of thousands for their Northern voyage. Their voices blend almost into a roar, altho at the outer circle we distinguish individuals. There are evidently commanders in the crowd. They are arranging for their flight northward, which begins about the 20th of the month; inside two days, or rather two nights, all are gone, and the silence is heavy.

John Muir somewhere expresses his gratitude that men cannot civilize the sky and the sea. He says that any fool can cut down a tree, but he cannot get at the clouds. They are always naturally wild and untamable. I never saw such a vocabulary of clouds as there is in Florida, so wonderfully colored; only they very rarely mean water. Man can learn his measure and limitations when he looks up at these rolling masses, or up at the stars at night. The night sky so folds us in here, laying the fringes of its mantle all around us in piney woods, that there seems to be a perpetual benison over us. You have heard of the hurricanes, that brush so roughly the margins of the State; but roar as they will along the coast, or break across the tip of the peninsula into the Gulf, they never touch us here. It does not take much of hills and forests to turn the elemental furies aside.

Notwithstanding my deep sympathy with John Muir, I catch myself longing for the refinements of the older States, those that we began to accumulate about fifty years ago. The railroad whistle is near enough, and we have just got in the telephone, only the wires are hitched from pine to pine. As for electric lighting, we have an engine under way, with dynamo, to light our house and cottages; only I should like to hear a town clock in the middle of the night. I am glad, however, that I can go off anywhere into the woods and get whole armfuls of wild flowers inside half an hour, can hear all sorts of wild notes, and once in a while meet an alligator going cross land to some other lake. We always turn out for each other politely, altho I think I give him the larger share of the road. I shall go on building fences, to get rid of range cattle, altho I can sympathise with the Cracker who tells me that "folks are getting too near and numerous"; while old Aunt Mary, with decision, says, "I likes elbow room, suh —plenty of elbow room."

Wild flowers are always in evidence, and lots of them. When we get here about November 1 the dominant sorts are wonderfully like those in the North, wild asters and goldenrods; altho these are shaded deeper in their blues and not so deep in the yellows. A bunch of goldenrod should be called silverrod, while the asters are as blue as blue can be. A little later white violets carpet all open places with little white interrogation points, for this the violet always is, an inquirer. Later still there opens, on the end of a fifteen-inch stalk, an intensely blue violet, swaying about as it rises from an insignificant bunch of homely leaves. It is certainly the worst proportioned plant in existence, but the flower is very attractive, and to get a good bunch of them sets me on an eager ramble.

I do not know anything so innocently combined as an orange orchard with a carpet of phlox. This is our cultivated Drummond phlox gone wild, and there is quite enough about an orange tree of the thorny and savage to classify it also among the wild things. Calling on my old friend, John Thompson, the other day, who has his neat cottage out of sight of all neighbors—himself a solitary—I saw him approaching thru his grove of grapefruit, his arms full of huge samples, eight inches in diameter, while every step went down into a carpet of phlox—scarlet, white, mauve, maroon, crimson, striped—all shades. If you love color here it was. The trees were swinging with golden balls, the sky was blue as only Florida can make it, and the ground was carpeted with this exquisite Drummond phlox.

A coniferous forest constitutes the perfection of parks, needles giving the tread a soft spring and a brown color, while here and there big bunches of gray moss have dropped from the trees by their own weight. Sometimes a storm pulls off both branches and moss and throws them down in great gray trusses. Cows like it, and hens are specially fond of the younger twigs and the flowers, for in season it is covered with a tiny but very beautiful blossom. Where trees stand too close together they grow up slim and topheavy, and sway very threateningly in the least wind. At eighty feet, when the tops are well loaded with moss, they sometimes get too heavy for the grip of the roots. Generally, however, it is a glorious cathedral that we find, with a quaint music playing among the spires.

An overplus of life is everywhere. Rabbits and ground squirrels we do not care to preserve, but for the most part we are not at all out of harmony with the purpose, half revealed and half concealed, in the bushes and tufts of grass. It is not true that wild animals and birds are trustful; as a rule they are very wary. If you wish to know anything about the life of the woods you must go quietly, and slip into the spaces without disturbance. There are thousands of eyes on you almost everywhere, and there are surely thousands of ears listening. At anything unusual they become silent and secretive.

Somehow one never gets enough of beautiful *life;* yet what a vital world it is—one form passing into another incessantly. What our mission seems to be is to suppress the baneful and selfish and parasitic; only how can we do this if our own lives are also selfish? The mosses that make tresses on the tall pines suck the life out of young water oaks, and we have to pull it from our peaches and plums. That does not mean that it has no valuable purpose in Nature, for we feed it to our domesticated animals.

Flying squirrels are almost to be counted among our domestic creatures, for they nest in almost every cranny of our roofs, and at night come in at open windows to examine the contents of our rooms. I told Harry to clean them out, but when we had pulled a wad of pine needles and other soft stuff from a retreat, we found it full of tender, helpless babes, and we shoved it carefully back again. The mother somewhat savagely stood near until we had recovered our Christianity. One fox squirrel of enormous proportions visits our trees. I wish he could be induced to stay.

A few nights ago I heard one of my neighbors, a woman who with her mother raises chickens for market, and I found that a 'possum was in one of her coops, having already killed a half dozen chicks. She should have caught hold of the fellow, when he would have coiled up

as if dead. I did not blame her, for a 'possum is really as mean and cruel-looking a beast as you ever saw. His hair is bristles, and his eyes like a sodden old corner groggery toper. His tail is a huge rat-tailed file, and, whatever kindness you show him, he sees in you only an enemy—showing his teeth and snarling on to the end. I have no sympathy for this night-prowling, marauding, unshapely relic of old-time life. There is nothing in our later evolved wild life anything like as mean. Even a skunk is beautiful, if let alone. Only weasels I place with the 'possums for thoro wickedness—but they are shapely, and they are witty beyond measure.

I have never seen a red squirrel in Florida, and I do not know as they are in the State. I hope not, for birds hate them and fear them, but pretty they are beyond nearly all the rodents. They defy extermination, and multiply in our Northern homes, in spite of leagued birds and men. Water rats are curious creatures, constructing nests of grass in the reeds around our lakes, and not in any danger of race suicide. When our collies get tired of rabbit trails they rout these nests of any lingering occupants.

Lizards are peculiarly attractive to me, both for their exquisite colors and for their confidential behavior. One must make the most of their proffered alliance. I find that in some way they get very freely into my library, and slipping between the papers devour the silver fish, that would otherwise be very destructive. The other day I came upon a genuine bumblebee. He was collecting from a coreopsis. I never before knew how much I loved these big, round, busy buzzers. I have a corner of bull thistles left for their special advantage. There is surely room enough for a few of these huge plants in this great State. Golden-rods in Florida have the same habit as in New England of gathering insects of all sorts. These hover over the yellow masses, and bump against each other in the sunshine. Bees make poor honey of the nectar, but they make up in quantity.

I find that many of the negroes are born naturalists, and there is considerable Seminole blood in the Florida black folk to account for this. They are really a part of Nature, and like to live scattered about the woods rather than in "quarters." I find tidy huts anywhere under the pines, run all over with Cherokee roses, and surrounded by roods of runaway phlox laughing in the grasses. No sheared lawn could possibly compare with it. When we go North we just turn the keys in our doors and gates, and start without a fear of molestation. The negroes are not thieves, unless in the way of picking up something left in their paths. During the five years that we have gone back and forth we have not lost an item, only that our neighbors use up what fruit they find going to waste. We are out of reach of police and officials of all sorts.

I suppose we ought to be satisfied that there is no gold in this section, and so no gold hunters to turn everything upside down. It is bad enough for the wastrels of the North to come once a year, running about with gun and rod after what they call "sport." They go open-mouthed, but not open-eyed, and really see very little of the State. They are too noisy, and as a consequence everything takes to cover. My friend Wood was different, for he and his wife went quietly about with opera glass, and a tender sympathy for life, and so every night went home full of new joy. They bagged more of Florida without a gun than others with a brace of dogs and shotguns over both shoulders.

We do not need that President or Governor shall bid us be thankful. Out of the reach of blizzards, yet not too far hid from social life, we let the winters slide by, and do not envy either the zero weather of the North or the tornados of the coast. About Thanksgiving Day the oranges are sufficiently colored to call out the pickers. It is a scene from fairyland, but it is wonderfully real. White men work down here nowadays, and labor is no longer despised. Northern boys hire out to help the packers and so pay their expenses for the winter. Now and then one of them buys a grove. We are steadily filling up with the best blood of the North. Life is as ideal as it ought to be in a world of work.

SORRENTO, FLA.

Archeological Research in Greece

BY EDITH HALL, Ph.D.

[Miss Hall teaches Greek Archeology at Mt. Holyoke College. She is a graduate of Smith, Bryn Mawr, and the American Classical School of Athens, Greece, and has spent much time in archeological field work in Crete and Greece.—EDITOR.]

THE soil of Greece is still yielding treasure to the archeologists No statues of the time of Phidias, it is true, nor hoards of gold like that found by Schliemann have been lately brought to light, but important results are never-

FIG. 1.—A BURIAL JAR IN ITS ORIGINAL POSITION.

theless being obtained. In fact, the newer school of archeology, interested as it is in ethnological and chronological problems, digs for science not for spoils, and is not unconsoled if, when the dig is over, there is little else to show besides baskets of broken potsherds. Mr. David Hogarth in his latest book is somewhat scornful of such plodding scholars and says that in the long run archeologists find what they set out to find. To a certain degree he is right; in Schliemann's case "faith made blessed" and in reading the description of the Knossos Palace one feels that many of its wonders are due to Dr. Evans' imaginative insight into the past. But the strongest faith and the keenest imagination will not conjure great works of art from the ground and the archeologist of today is not free to turn to fresh fields because the site he has begun has not yielded brilliant finds. He must stay to study, photograph, describe, and publish every vestige of ancient civilization which has appeared in the soil. More-

over, the great harvest of works of Greek art is in; only the aftermath remains, so that the chance of finding beautiful statues or painted vases is greatly diminished. And lastly, many excavators are today engaged in clearing prehistoric sites where, of course, a different class of objects is found. For all these reasons the layman who would follow the course of modern archeological research must not expect to read often of new Greek marbles; he must have patience to follow close arguments based upon small bits of pottery or bronze.

FIG. 2.—BONES AS THEY APPEARED WHEN BURIAL JAR WAS OPENED.

With this change in the character of the finds has come a change of method. Dr. Evans more than any one else has shown what slow and careful digging with the abundant use of the note-book and sieve can accomplish. It is illuminating to compare the methods employed by him at Knossos with those employed thirty years ago by Schliemann at Troy. Both were digging prehistoric sites: Schliemann, impelled by a feverish desire to find treasure, sent his men burrowing into the mound at Hissarlik and throwing out the earth behind them like so many woodchucks. At Knossos the earth is peeled off stratum by stratum. Every scrap of pottery is labeled and put away for future reference; the sieve is constantly in use, saving now fragments of painted plaster which in the older days would never have been distinguished from the earth in which they lay, now clay sealings with a bit of precious tho undecipherable writing, now an Egyptian cartouche which affords a basis for comparative chronology. In fact, so far has archeological method progressed in the last twenty years that scholars now find it worth while to resume excavations at sites dug before. Dr. Dörpfeld has redug Troy; the late Adolf Furtwängler excavated again the temenos of the Aphaia Temple on Aigina; Dr. Brückner has resumed work in the Dipylon cemetery at Athens; the German Institute has been

digging again at Tiryns. In the last three instances the purpose was to study the earlier strata, for it has only been lately understood how pavements and walls could be built one above another in successive ages of civilization. But it is significant that at Tiryns this year there came to light quantities of fragments of painted plaster decoration, the largest find of fresco fragments yet made in Greece proper. It is almost certain that many such bits went into the dump-heaps of the earlier excavations of this palace.

In archeology as in other fields the new scientific spirit is interested in origins. Who lived in Greece before the Greeks? and where did they come from? have for some time been burning questions, but now it is not the people of the iron age alone nor yet of the bronze age but one quite distinct from that traced in southern Greece. His investigations have been lately supplemented by those of other Greeks and more especially by those of two young English scholars, Messrs. Wace and Thompson of the British School at Athens. It seems that the whole of Thessaly from Larissa to Lamia was occupied by this early civilization. As many as seventy mounds have been discovered. They contain few walls but much pottery, and many flints and terra-cotta figurines (Fig. 3). Several stages of this civilization can be traced by the pottery, the first of which are neolithic, the last bronze-age. But neolithic in Thessaly does not mean neolithic in the Ægean, for the use of stone implements lasted much later in the north. It is estimated that these Thessalian sites were occupied

Fig. 3.—CLAY FIGURINES PROBABLY FROM HOUSE SHRINES.

who are the center of interest, but also those of the neolithic age.

Seven years ago the Greek scholar M. Tsountas began explorations in Thessaly to see if there, as at Mycenæ and Crete, there was a brilliant bronze-age culture. He found a highly developed civilization from about 2500, 2000 or 1800 B. C. Toward the end of this period Ægean influence may be detected; several sites were then abandoned as if a conquest at the hands of hostile people had taken place. In general the record read in these mounds tells of steady degenera-

tion, both the terra-cotta figurines and the pottery being better at first than at last. The Thessalian civilization is not so uniform as that in the Ægean, showing, the English excavators think, that the mountain ranges of Thessaly were effective barriers, whereas, in the Ægean, the sea served as a highway. The most important result of these explorations in Thessaly is the complete separation they imply between the early cultures of northern and of southern Greece. For the Homeric question this of course has

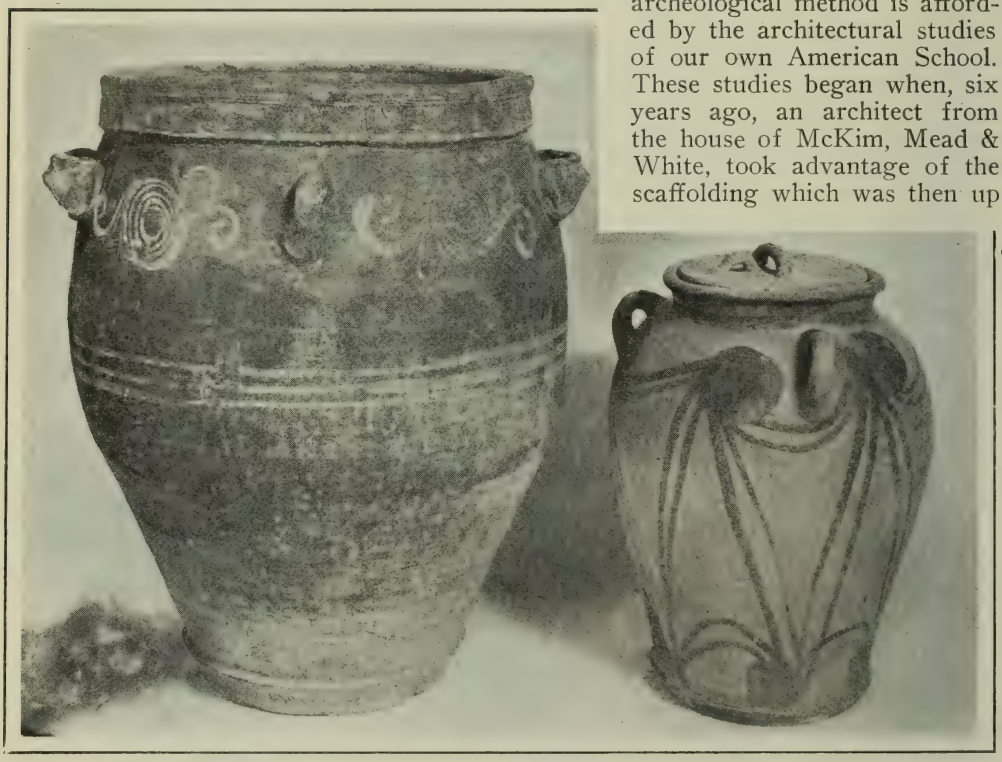


Fig. 4.—TWO BURIAL JARS FROM A CEMETERY IN EASTERN CRETE.
The left of an adult, right of a child.

value, as well as for that other important problem of the relation of the prehistoric peoples of Greece to those of central Europe.

In addition to these investigations in Thessaly the British School at Athens has this year finished its excavation of the shrine of Artemis Orthia in Sparta, which has been its chief piece of work during the last four years. A network of walls has here been laid bare consisting of altar foundations of various periods, temple and temenos walls, the walls of a Roman amphitheater and a fragment of the Sparta town wall. All of these have been untangled by the care and skill of Mr. R. M. Dawkins, director of the British School. The small finds which were discovered adjacent to these walls were chiefly lead and ivory figurines and pottery. The latter include many specimens of a ware commonly called Cyrenaic but now claimed by the British excavators as Laconian.

Another good example of perfected archeological method is afforded by the architectural studies of our own American School. These studies began when, six years ago, an architect from the house of McKim, Mead & White, took advantage of the scaffolding which was then up on the Erectheum to make a careful study of the stones of this temple, both those *in situ* and those scattered over the Acropolis. This architect, Mr. G. P. Stevens, showed how by a careful study of the cuttings of the stones, of their dowel-, pry- and clamp-holes, the exact position of every stone could be determined. He proved, for example, that there had been windows in the east wall of the Erectheum. This same kind of work is now being carried on by an-

other architect, Mr. Dinsmore, on the Propylaia, and I am told that the results he has obtained are going to add much to our knowledge of this building. The same architect has also made a study of the Treasury of the Knidians at Delphi, about which French and German scholars have been lately wrangling. It seems that the French in restoring this treasury (there are restorations of it both at Delphi and in the Louvre) put together parts of two or more buildings. The mistake was discovered by a German scholar who based his conclusions on a study both of the architectural ornament of the building and of its sculpture, but he was uncertain whether parts of two or three buildings had been thus confused. Now Mr. Dinsmore, by a study of the blocks of stone shows that there were two treasuries combined by the French, the proportions of both of which he is prepared to give.

The director of our school, Mr. B. H. Hill, has also been engaged in architectural researches, his special subject of study being the earlier Parthenon, which was sacked by the Persians in 480. He has shown that Dr. Dörpfeld's reconstruction of this building was wrong, especially as regards the three steps of the crepidoma. The right steps have been found by Mr. Hill, some of them still *in situ* underneath the marble steps on the south side of the present Parthenon, others scattered about on the Acropolis. Moreover Mr. Hill has shown that there were two more courses in the crepidoma than Dr. Dörpfeld had thought, and that, accordingly, the stylobate was smaller with sixteen columns one way and six the other as against nineteen columns one way and eight the other as had been previously thought.

The success of these brilliant architectural studies atones for the slow procedure of the American excavations at Corinth, which, for lack of funds, are dragging along at a rate far from creditable. In view of this state of affairs it is pleasant to learn that Princeton University has secured ample funds for the excavation of Sardis, where work was begun this year. It is to be hoped that as good results may be obtained here as at the other great sites of Asia Minor.

This year, as hitherto since 1900, the island of Crete has been a center of archeological activity. At the great excavations of Knossos which now cover more than five acres and include the large palace, the little palace, a villa and a cemetery, the most important result obtained was the discovery of more rectangular chamber tombs, one of which showed new architectural features. The Italian mission kept at work on a town-site near Agia Triada altho house after house was discovered and cleared only to prove absolutely devoid of contents.

In eastern Crete, Mr. R. B. Seager and the present writer carried on excavations both at a small cemetery adjacent to the town of Gournia, and at a town-site, three hours to the west of Gournia.

The town-site proved to be of remarkable interest. The burials which were first uncovered were of very early date (c. 2500 B. C.) from the period known as Early Minoan II. The bodies had been laid in the earth together with clay vases and some few gold ornaments like those found at Mochlos and described two years ago in THE INDEPENDENT. Along the margins of this early deposit there came to light fragments of large jars and later unbroken specimens of the same. Before the excavation was over one hundred and fifty had been uncovered, most of which were unpainted, altho a few were decorated with very graceful patterns. All were upside down, braced into position by large stones and set on a layer of beach pebbles. They were inserted at irregular intervals and at varying depths, so that it is certain that no part of them showed above the surface of the earth. At first we thought that they must be secondary burials, that is that the bodies had first been laid in the ground that they might be cleared of flesh and that the bones had afterward been buried in these jars. It was soon seen, however, that many of the bones, like those of the five fingers and the ribs, were all in their original position. To make doubly sure that primary burials were possible in jars of this size, we experimented with one of our workmen and found that when his knees were drawn up to his chin it was perfectly

easy to get one of these jars over his head. These were the first adult burials in *pithoi* that have been found on bronze-age sites and also the first burials to be found from this particular period of the early Ægean civilization. We know now how bronze-age Cretans buried their dead in all the nine stages of their culture, from 3000 to 1000 B. C. None of the various burials which have been found—whether in pit graves, chamber tombs, shaft graves, bee-hive tombs or jars—show any clear traces of cremation, and therefore any connection with the funeral pyres of Homer.

The town-site which was excavated after work at the cemetery had been completed proved to date from the end of the bronze-age or the beginning of the iron-age with traces of a still earlier culture in its lower strata. Bronze and iron were here found in equal abundance. Some of the terra-cotta figurines were interesting as showing how crude were the attempts in this period to reproduce the human face.

Mt. Holyoke, Mass.

The Treasury's Tribute of a Million a Year to Organized Labor

BY WILLIAM E. BRIGHAM

Washington Correspondent of the Boston Transcript.

If the United States Government were as free as a private establishment to institute reforms in its various departments, to hire and discharge at will, to introduce labor-saving machinery, to adopt improved methods, and, in a word, to avail itself of the economies which private business concerns adopt with such readiness, millions of dollars a year could be saved over the present cost of administration. Not only, however, is the Government not a private employer, with its main concern a balance sheet showing profit or loss, but Government service is hedged in with traditions and practices limiting to an almost incredible extent the initiative of the higher officials who are responsible for the operations of the departments.

The civil service laws have thrown over most Government employees the wide blanket of protection against loss of position thru any cause but death or illness. Political influence, often ingeniously maintained intact whatever changes may take place in White House or Congress, stands ready to resist innovations which threaten beneficiaries with loss of position or demotion. The theory that the Government is morally bound to keep on its payroll clerks whom age has incapacitated, instead of filling their places with younger and more capable persons, is practically recognized by the Government itself, as probably it is approved by public opinion. The absence of a civil service retirement system, due partly to the belief of many employees that some time the Government will adopt a "straight" (non-contributory) civil pension system, tends to continue conditions of inefficiency and sloth which would not be tolerated a week in any well-managed private establishment. Organized labor, too, while keeping and kept on good terms with Uncle Sam by means of diplomatic concessions, is ever suspicious of plans aiming to improve existing methods in mechanical establishments like the navy yards, the Government Printing Office and the Bureau of Engraving and Printing, and is alert to oppose them.

Despite all these handicaps to progress, the administrative departments of the Government are doing their work better, more economically and more rapidly every day. It is not credible that an administration should make its draft upon the best legal and business talent of the country practically once in four years without securing managers and superintendents—for such Cabinet officers are—of up-to-date mind and practice. Long ago, perhaps with the aboli-

tion of the spoils system, the ancient practice was reversed, and social duties became secondary to work—continuous, grueling, brain-racking, body-destroying work. From Cabinet officer to chief clerk, no man in responsible position with the United States Government has an easy position. Every step forward is beset with perplexities and hampered by discouraging traditions. Progress is made only by main force, and often with a complete sacrifice of personal popularity; often only after a fight of which the public knows little or nothing, yet which makes the victor wonder whether or not the game was worth the candle.

This possibly illuminating and perhaps needless introduction is suggested by the perplexity in which the United States Treasury Department finds itself in the midst of the most successful attempt to improve antiquated methods that has been made in that institution for many decades. Secretary Franklin MacVeagh, one of the two business men of the Taft Cabinet, and the corps of able young men with which he has surrounded himself, already have worked wonders in simplifying, systematizing and making less expensive the complicated processes of the Treasury. An estimated saving of almost $1,900,000 per annum is expected from improved business methods already authorized. The proposition to change the designs and reduce the size of United States and national bank notes would save the Government an estimated $900,000 a year more, and greatly increase the mechanical efficiency of the Bureau of Engraving and Printing. But the plans in this direction, making possible a third estimated saving of $900,000 a year, threaten to stop there, thru the silent but none the less effective operation of the traditions referred to in the opening of this article. The facts are a matter of public record, but the public, outside the labor unions, knows nothing of the actual conditions underlying this peculiar situation, and these of themselves make a story which is a little short of sensational.

Ever since the institution of the Government the paper currency of the United States has been printed upon hand presses, except for a few months about fourteen years ago. This process was necessary in the early days, before the invention of power presses that would do the work equally well, but in modern printing plants, outside the Government service, these have long been discarded for work of identical character and the rapid power press used.

Not only does the Government continue the use of a process whose retention costs $900,000 a year more than need be paid, but Congress has more or less deliberately, if unwillingly and under duress, lent itself to the scheme to perpetuate the antiquated practice. Not only has every effort to introduce improved devices been resisted by labor organizations within and without the Government employ, but the issue has been taken into politics.

The legal authority by which the use of the old hand presses is continued is of an exceedingly indirect, if not ambiguous, character. It originated, in fact, in an obscure proviso tucked away in a sundry civil bill of more than twenty years ago, and exists now in a brief proviso of the law making sundry civil appropriations dated July 1, 1898, as follows:

"Provided further, That hereafter all bonds, notes and checks shall be printed from hand roller presses."

As long ago as 1886 the Government first attempted to bring the Bureau of Engraving and Printing up to date by the use of power presses. The sundry civil act of that year was the first to permit the installation of new and improved plate printing presses, which it did in the following language applicable to the appropriation for the use of the bureau:

"Provided, That any part of this sum may be used for purchasing and operating new and improved plate printing presses."

Some presses were bought and installed and the same provision was repeated in the sundry civil act for the fiscal year ending June 30, 1888, but by that time organized labor had begun an active campaign against the proposed economy, not unlike that which the old hand shoemakers, before they had begun to take the larger view, waged against the introduction of machinery in shoe factories. A frightened and complaisant Congress came to the rescue, and the sundry civil bill of October 2, 1888—this

was preceding the Presidential election—nullified the permissive legislation, as far as it could, by providing that "there shall not be an increase of the number of steam plate printing machines in the Bureau of Engraving and Printing."

This prohibition of course effectually checked the efforts of Uncle Sam to have his paper money printed quicker and more economically; but organized labor, not content, then started a movement to repeal the law of 1887-88 permitting the introduction of power presses and to restrict the use of the machines already in operation. The sundry civil act for the fiscal year of 1889-90 limited the payment of royalty on the presses to one cent per thousand impressions and also directed that no part of the appropriation should be expended for printing United States notes of larger denominations than those that might be canceled or retired. The law again prohibited the purchase of more machines, and contained, in addition, a fatal clause refusing money for the repair or reconstruction of the power presses already installed.

Under the authority originally granted and despite the opposition described, the director had succeeded in buying and operating twenty-five power presses. As the labor organizations closed in on him with law after law, he finally discontinued the use of the machines for printing money and operated them in the printing of internal revenue stamps. The unions finally legislated the power presses out of the bureau altogether by a law approved March 3, 1889, providing that the faces of all tobacco stamps for use upon packages of two pounds and upward, and all beer. whisky, cigar, snuff, oleomargarine and special liquor tax stamps should thereafter be printed from engraved plates "upon hand roller plate printing presses."

Meantime, changes have occurred in Congress and men have come in who either stand on their own feet at home or believe in giving the Government a square deal, or both, for the sundry civil act of March 4, 1907, contained a "joker" which outwitted the enemies of the power presses and allowed at least a limited opportunity for their use. This joker was placed in the bill before it left the committee room of the House and was not noticed nor was its purpose suspected until the bill had been signed by the President. The joker read as follows:

> "And the second proviso under this head in the Sundry Civil Appropriation Act, approved March 3, 1889, is hereby repealed."

This was the proviso whereby organized labor had succeeded in prohibiting the use of power presses for printing internal revenue stamps. The director immediately bought twenty power presses, and twenty-five are now operated in that work. But the prohibition of the act of July 1, 1898, still stands, and it would be illegal for the Government to print notes, bonds or checks upon anything but hand roller presses, notwithstanding that more than $900,000 a year could be saved if power presses were used. In the face of approaching elections Congress always has been timid, and this year has not been one to encourage Congressional audacity, except upon certain "popular" issues supposedly closer to the people in the districts at home.

Another tidy item is that of checks and drafts, of which the Government printed about ten million last year for its own use, all from engraved plates and by the hand roller process. This work could be done equally well by power presses from a rubber "offset," at an estimated saving of $37,000 a year. By the old process the cost of checks, per thousand, bound, is $8.29. By the improved process it would be $2.93. Warrants now cost $9.94 a thousand and could be printed equally well for $2.34 a thousand. The hand printers turn out 800 sheets a day, and 45,000 a day could be printed by the offset process

At the close of the first session of the Sixty-first Congress, in an unwonted burst of courage, the Senate Committee on Appropriations decided to repeal the appropriation against the power printing of notes, checks and bonds. Another "joker" repealing the provision of June 4, 1897, was inserted in an obscure corner of the sundry civil bill. At the last moment, however, the committee weakened, for reasons which may be guessed, and the provision was stricken out.

Under such circumstances as these the Government has been powerless to institute the great economies involved in a change of methods at the Bureau of Engraving and Printing, amounting to between $1,500,000 and $2,000,000 a year. The plate printers are strongly organized and have a large fund of their own, with which they maintain an alert lobby, and in a contest with the Government they would expect the backing of the American Federation of Labor. They would appear to show as little foresight as the old hand shoemakers exhibited when they first opposed the introduction of machinery. In that case the growth of the business was such as not only to command the services of all trained men, at increased wages, but of thousands more.

Exactly the same condition is presented in the Bureau of Engraving and Printing, where the work accumulates so rapidly that additions to the force are being made all the time. Indeed, the business of the bureau increases at the rate of 20 per cent. a year. It is estimated that in five years, at the utmost, under normal conditions, should the new processes be instituted, all the present employees would be working again. As a matter of fact, the period of possible idleness for some would not be more than two to three years, for the bureau is taking on more and more new work every year. It has just been compelled to decline to accept a lot of engraved work in connection with the institution of the new postal savings bank system, because of lack of facilities.

The American Bank Note Company has introduced the power presses and is printing large quantities of bonds for counties, municipalities and corporations, and bonds, paper money, etc., for foreign governments. Spain, China, Japan, Mexico and Argentina successfully use the power press for their paper currency. Bureau officials say they will defy an expert to detect the difference between a hand-printed and a power-printed note.

The Treasury Department, in trying to bring about the improvements and economies noted, would not be neglectful of the personal interests of employees. Power press plate printers are paid higher wages than hand press workers, consequently the change presents some immediate advantages. Again, it is estimated that between 15 and 20 per cent. of the hand press operators suffer from rupture and other consequences of physical strain from pulling the heavy levers used in their work. The Treasury Department, under Secretary MacVeagh, has systematically adopted the policy of reinstatement in cases of discharge necessitated by the adoption of improved methods. Of 200 persons dropped by law July 1, 1910, in various branches of the department, all but about a dozen had been provided for in other bureaus and offices within two months. For the fiscal year ending June 30, 1910, there were 636 resignations, 351 removals and 73 deaths in the Treasury Department. Of the persons resigning or dropped, 287 were reinstated; 605 new appointments were made. During the present fiscal year the number of reinstatements has been much larger. In the case of the plate printers, reinstatement would be the policy pursued exclusively, of course. The personal inconvenience to be caused by the change would be only temporary at most, while the gain to the Government and the reorganized service would be permanent.

It would seem that here is presented an ideal opportunity for the labor organizations, instead of opposing progress and the Government, to co-operate with the progressive administrators of the Treasury Department, to the lasting benefit of the wage workers and of the service which employs them.

WASHINGTON, D. C.

The Shortest Ballot

BY LUCIUS F. C. GARVIN

Ex-Governor of Rhode Island.

THE movement for a short ballot is to be commended and supported. The contrast between the parliamentary ballot in Great Britain and almost any ballot in the United States is marked, and very much to our discredit.

In England two or three names for the one office of Member of Parliament appear upon the ballot, and the voter is called upon merely to indicate his choice among them. This is very simple, concentrates each voter's attention upon a single important act, and necessarily secures a member more representative of the majority of voters in each district than is possible with our ballot containing a multitude of candidates for many offices.

Compare such a parliamentary election with the Congressional election in Rhode Island, November 8, 1910. It is true that this year there was not added to the list of candidates a string of Presidential electors, as was the case in the preceding Congressional election and will occur again in 1912. But in each of the six cities of this State were to be found, as a part of the Congressional ballot, the candidates of all the parties for Governor and for the other four State offices, also for State Senator and for State Representative. This makes eight offices to be filled upon the same ballot.

Besides all this, in five of our six cities there was a second ballot, deposited at the same time, containing the names of candidates for mayor and the other general city officials, for aldermen, for the several members of the common council and members of the school committee.

Each of the two ballots might be voted in its entirety by marking a cross (x) in the circle under the symbol at the head of the party list. In this way most electors, by making a single cross mark, vote their straight party ticket, thus usually guaranteeing the election of the candidate selected by the machine of the successful party.

It is needless to say that, of two opposing candidates, the inferior frequently is elected, and that, even for so important an office as Governor or Congressman, the real preference of many voters is not exprest. This year, too, the election of Congressmen in Rhode Island was complicated by the fact that the Legislature then chosen is to elect a successor to Senator Aldrich.

The Massachusetts ballot is better than that of Rhode Island in that each elector, in order to vote a full ticket, must look his ballot entirely thru and make his selection from the names alphabetically arranged under each office. But even so, for many if not all of the offices, the average voter must guess rather than choose intelligently, thereby falling far short of the best results.

The commission form of government for cities, where not more than five offices are to be filled at one election, is eulogized as an illustration of the short ballot. Certainly, the limitation of the

duty of selection to designating a few important officials is a great improvement over the filling of a long list of offices, many of them of seeming unimportance, which usually characterizes municipal elections. However, five or even three are too many for the average voter to choose successfully at the same time.

The greater objection to the commission form of government, as now developed, is that a large minority of the electors is unrepresented upon the city legislature of five members. For, whatever administrative functions may be assigned to each commissioner, it is still true that, as a whole, they fix the rate of taxation, apportion the city's income and enact ordinances, all of them legislative functions.

The city commission, therefore, is a small body, chosen by a plurality, upon which a minority of the electorate, however large, is unrepresented.

I predict that within a few years, as soon as the political machines learn the ropes of the new system, spoilsmen will constitute the majority of the commission—and then! With all power concentrated in the hands of three men, who are serving the interests rather than the public, we may witness abuses equal to, if not exceeding, anything known in the past, either in Philadelphia, San Francisco or Pittsburg.

As reformers our aim should be, not the short ballot, but *the shortest ballot.* At no election should more than one officer be voted for by any elector. That is the situation in the parliamentary elections of Great Britain, but the choice of the voter among candidates is very restricted, with the result of a legislative body chosen by and representative of about one-half of the total number of qualified electors voting. Parliament designates the prime ministers, thus avoiding our popular election of President; but, since the choosing body is unrepresentative, the administration it names must also in some respects be unrepresentative of the will of the people.

In order to apply the shortest ballot to the election of Congressmen in the State of Massachusetts, it would only be necessary to have a general ticket for the entire State and limit each elector to a single vote. For the fourteen Congressional offices the names of double that number of candidates might appear upon the ballot, each elector to take his choice from the entire list.

Under such an election law the method of nominating candidates becomes unimportant. Primary election laws, which at best are an added and disagreeable burden imposed upon the voters, will become of no consequence and may well be repealed. Let the parties, large and small, nominate in such manner as they choose, and let individuals sign nomination papers for independent candidates when they like. By these two methods a sufficient number of capable men will find their names placed upon the ballot, and the fourteen candidates receiving the highest number of votes will be elected. In this way, instead of fourteen geographical districts being represented in Congress by the choice of the party dominant in each, the fourteen leading political opinions held by the voters of the State of Massachusetts will be represented, in most cases by the ablest exponent of the respective opinions. Instead of about half the voters of the State being unrepresented, and the other half in most cases unsatisfactorily represented, as is now the situation, nearly all of the electors will have as spokesman at Washington their first choice among all the citizens of the State.

What is here stated of Massachusetts will be true of all the other States. Then our national House of Representatives will become the one truly representative legislature of the world, capable of handling the business of the country with a facility and success as yet undreamed of anywhere. This perfectly representative body, reflecting accurately the convictions of the people as a whole, can get along very well without the Senate, which should then be abolished.

But, besides a national government, society has in the United States two other political organizations, namely, the State and the municipality. Each of these three corporate bodies should hold their elections separately. But in every election the same rule should be followed: No elector should be permitted

to vote for more than one candidate, but he should be entitled to take his choice of all the candidates in the field. Just the number of which the legislative body had best be composed is not a matter of principle, but must be determined by experience. For a city it may be five, as in the commission form of city government, or it may be nine, as fixed upon by the city of Boston; but in either event all should be elected annually upon a general ticket, and each elector restricted to voting for one candidate out of the total number upon the ballot.

Eventually an ideal election will be conducted as follows: For illustration, make the application to the State of Rhode Island. Assume that it has been agreed to abolish the House of Representatives, leaving but one body, the State Senate, to be composed, let us say, of thirty-six members.

Election day is here and all go to the polls. Each voter knows, thru previous newspaper advertisements by the State, from sample ballots freely distributed, and by means of an active campaign just closed, that for the thirty-six positions of Senator there are fifty or more candidates. At the voting booth he finds a check list containing in alphabetical order the names of the qualified electors of his district, with a blank space at the right of each name. His sole duty as an elector is to announce *vivâ voce* the name of the candidate of his choice and see it written in the place opposite his own name.

Having but one chance each year to name his chosen representative, it is very certain that each elector will make up his mind after much consideration and with due care. He will be very solicitous that his sole representative, the only one to act for him in the government of the State, shall be the candidate above all others in whom he has confidence. Some men, no doubt, will vote for a neighbor whom they know personally and have faith in, but more, surely, will select from the list the candidate, without regard to his place of residence, whom he deems the greatest and best of all. Few can be bribed by any sum to vote for other than their first choice, and a briber, if successful once, will be deserted by all honest supporters at the next election. No voter can be kept away from the polls by any device short of force. Interest in the election and in the returns will be like that manifested over a game of baseball by the enthusiastic lovers of that sport. Such an election, instead of being, as now, a fight, with its exultant winners and its downcast losers, will be a great fair, in which all will draw a rich prize.

The thirty-six candidates receiving the highest number of votes would be declared elected. Each Senator elected could, and doubtless would, be supplied with a list of the voters who named him as their choice. Not only he himself, but his fellow Senators and the public, would know the kind of citizens whom he represented, and he would be rated accordingly. It may become desirable that each Senator, instead of casting one vote only in his official capacity, shall be entitled to cast as many votes upon any proposition coming before the Senate as were counted for him at the polls.

In limiting the entire political activity of the qualified elector of a State to casting his vote for one candidate for a single office, it is contemplated that the perfectly representative Senate which results will enact all statute laws and will designate the Governor of the State. That is to say, the system which has been evolved for conducting the government in the United Kingdom will be followed. As in the case of the Prime Minister, who is designated as such by the majority of the British Parliament, the Governor so chosen would appoint the other principal State officers, such as Secretary of State, Attorney-General and General Treasurer, and these would name their subordinates, as provided by a civil service law. It is perfectly safe to assume that such a State Senate would be so able and so representative as to select officials and enact laws of a very high quality.

The above outline of a State government, if correct in theory, will in the end be applied also to the national government and to municipal government. So that, eventually, a citizen of the United States will be called upon to vote for three officials only, namely, his representatives in the State legislature, in the national legislature and in the municipal

legislature—the respective legislatures to do the rest in their several spheres.

Manifestly these elections should be separate and apart from each other. The national election, as now, might be held in November of the even years; the State elections in November of the odd numbered years; the municipal elections annually, in December or in the spring.

If under these conditions, the shortest ballot imposing so simple a duty upon each citizen, the people of the United States could not provide themselves with satisfactory government, then must it not be admitted that we are inherently incapable of governing ourselves? But since we have worried along somehow under extremely complicated and defective machinery of elections, there can be no question of success with the better system in vogue.

LONSDALE, R. I.

The Soul of Business

BY FREDERICK MOXON

Is there a "soul" in Business?
Under the din of the strife
(Cruel and keen, sordid and mean),
Lives there a spirit of life?
Are we in truth at warfare,
Answering blow with a blow?
Watchful to slay, crafty to prey,
Hot on the track of a foe?

Are these but toys for the childish—
"Honesty," "Rightfulness," "Wrong"?
"God" but a word, sneered at when heard,
Scorned by the pride of the strong?
Are these but gauds for the foolish—
"Virtue," "Integrity," "Truth"?
Fashioned in play for the sport of a day,
The harmless pretension of youth?

Answer, ye Lords of the Market,
Rulers and Princes of Trade,
Is there no part for the pitying heart
Where Fortune's high ventures are made?
Answer, ye crowds of the toilers,
Busy with type-key and pen,
Is there no hope for the mind's larger scope?
Are figures the masters of men?

While one clear voice cleaves the tumult,
Holding to Truth and to Right,
Fraud and Deceit shall go down to defeat,
In Justice alone is Man's might.
While one bold heart follows Duty,
(Tho it may Drudgery seem),
Hovering there over dull office chair
Shineth the glow and the gleam!

Yes, there is answer sufficient,
Ringing, and hopeful, and brave!
Spite of the rush of the forces that crush,
Man is not yet Mammon's slave.
Yes, there's a soul still in Business,
How splendid its triumph and worth,
When men shall arise to the hight of the prize,
The *Service* of God upon earth.

PEACE DALE, R. I.

Literature

Shall a Genius Marry?

Miss May Sinclair, in her latest novel, *The Creators,** proves at least that great people are "gey ill to live wi'," to use a phrase of the Carlyle household, or, to quote our own Mr. Dooley, "Most geniuses are unhappily married. So are their wives." They are a fatuous crowd, the Creators, who sit around and discuss their genius with hushed voices! Not even in London do we believe you could get five people who were all of the first rank and who were so self-conscious as to talk incessantly of their "gift" and its products as tho the world's welfare were at stake if one of them should stop writing long enough to be a human being and not a genius with a "gift." In Miss Sinclair's earlier novel, "The Divine Fire," the subject of genius was treated with the same high respect and amazing reverence, as tho it made its own laws, which are not for lesser men and women. Mr. Maxwell, in his powerful novel, "The Guarded Flame," described the care with which a great man who in many ways suggested Herbert Spencer was sheltered by his family circle from anything that might cause the flickering or failing of the sacred flame of his genius. The thesis of *The Creators* would seem to be that this flame must be always guarded with tenderest solicitude, lest the winds of heaven might visit it too roughly. The author seems to say that marriage is most unwise for a woman who aspires to do creative work in literature, and that a man can only do it by being a brute to his wife

THE CREATORS.

*The Creators. *By May Sinclair.* New York: The Century Co. $1.30.

or to any one whose hampering affection clings to him.

Mr. Upton Sinclair would like to have the state protect these heavenly babies, whose genius unfits them for the every-day life of other folks. He would have them taken care of financially, but Miss Sinclair has in mind a subtler guardianship, which shall shield them from all family cares or emotional interruptions. Tanqueray, the big brute hero of the novel, who is represented as the greatest novelist of his day, has allowed himself an emotional interruption of a few weeks only, when he woos and weds the sweetest of English Roses, albeit she is only a little servant girl. Their idyl is very pretty; but the husband's genius is too precious for him to waste any further time on Rose, and he treats her with a callous neglect that makes the reader long to kick him. She sits alone in London lodgings with nothing to do, and droops like a transplanted flower in the grime and smoke of a city window-sill, while her husband either ignores her existence or is unbelievably brutal in his savage replies to her timid and tentative efforts to entertain her morose spouse. The great woman genius of the book, Jane Holland, tries to live two lives: that of the novelist and that of an ordinary woman of domestic tastes. Her husband, her babies, her husband's family, are so many loving millstones about her neck. Nina, another genius, lives as a celibate, an anchorite, as the only possible propitiation of the demon which inhabits the woman who writes. She says:

"If any woman is to do anything stupendous, it means virginity."

Apparently marriage doesn't hurt a man. He doesn't have to pay—he makes his wife pay! Two of the geniuses marry each other, but we feel that it only solves their own personal problem, not that of any other unhappy creature cursed with the literary temperament. We feel that Miss Sinclair only thinly veils what she wishes to imply, that creative work requires consecration to its service, a complete absorption neglectful of every other claim, and since this is so, a woman, at least, must take the old austere vow of celibacy, poverty and obedience. If not, she becomes a physical and mental failure. She cannot serve two masters—Love and the Intellectual Life. In the man's case renunciation is not so needful, as he is likely to be more ruthless in shaking off rival claims, especially the clog of family affection.

The book is written with Miss Sinclair's usual care, and a few of the creators are people whom it is a pleasure to know. We could never do it outside of the book, for they would have nought to do with the "terrible little people," the celebrity hunters, the crowd of acquaintances that make up a social circle. We feel their charm, and their scorn, but we can't help questioning whether they do not take themselves a little too seriously. Still, if they lacked their passionate belief in themselves, they would not write at all; and the world is not quite ready to do without novels and their creators. Certainly it would be loth to give up the author of "The Divine Fire."

Mutation

Is organic evolution brought about by the gradual accumulation of slight favorable variations which individually give their possessors some small advantage in the struggle for existence, and are hence preserved by the action of natural selection? Or, on the other hand, do new forms of plant and animal life originate by an abrupt and relatively large deviation from the condition displayed by the parent variety or species? In other words, is the evolutionary pathway up which living things have traveled to be regarded as a smooth incline, of gradual and easy ascent, or as a flight of steps? Biologists today are far from being in agreement as to the correct answer to this question. Indeed, it may be said to be, in itself and in what it implies, one of the greatest of the *Streitfragen* of biology today.

While clearly recognizing the fact that the orderly progression implied in organic evolution might conceivably be *per saltum*, Darwin decided on the basis of the evidence which he had that it was probably not of this character, but that instead it was gradual and steady. So the matter practically rested until, in 1903, when the eminent Dutch botanist, Prof. Hugo DeVries, published the first volume of the original German edition

of this famous *Mutationstheorie*, now accessible in English.*

In this monumental work DeVries described, in great detail, the results of a series of experiments carried out in the Botanical Garden at Amsterdam with a plant known as Lamarck's evening primrose. The gist of these experiments was to show in a most clear and convincing fashion that from the parent form of evening primrose with which the work was begun absolutely new and perfectly distinct species were formed during the course of the experiments. These new species appeared suddenly in the pedigree cultures in the garden, and once formed maintained their identity and "bred true" thereafter like any other "good" species. The process by which these new species originated DeVries called "mutation." On the basis of these (and other) experimental facts he has developed a general theory of evolution, to the effect that this process of progressive change in the organic world takes place by mutation, that is by abrupt and considerable steps or deviations in the forward direction, rather than by the gradual accumulation of minute favorable variations thru the action of natural selection. Natural selection as a *vera causa* of evolution is not denied; it is merely relegated to the subordinate sphere of eliminating unfavorable mutations. The real basis of progressive change lies in the mutations.

The translation of this epoch-making book has been done by Professor Farmer and Mr. A. D. Darbishire, a botanist and a zoölogist respectively. That an English edition of so important a work was needed is obvious. On the whole one finds little to criticise in the translating. There are some slips in proofreading (almost inevitable in so large a work) and occasionally the critical reader will find it necessary to take down his German edition from the shelf and find out what DeVries really said or meant. But these are minor defects. They weigh as nothing in comparison with the fact that at last we have the *Mutationstheorie* available to students who cannot read German.

*THE MUTATION THEORY. Experiments and Observations on the Origin of Species in the Vegetable Kingdom. *By Hugo DeVries. Translated by Prof. J. B. Farmer and A. D. Darbishire.* Vol. I, The Origin of Species by Mutation. Chicago: Open Court Co. $4.

The Story of Spanish Painting. By Charles H. Caffin. New York: The Century Co. $1.20.

The discovery of modern Spanish art by America dates from the amazing popularity of the exhibition of the works of Sorolla y Bastida at the Hispanic Museum in New York. Following his sunny scenes, the gloom and grotesqueness of Zuloaga failed to attract the public, but a deeper interest was aroused in the art history of the country which had produced these painters. Mr. Caffin's book is well adapted to satisfy this curiosity and will be especially welcome to the tourists who are now flocking to Spain in increased numbers and need what our pedagogic friends call an "apperceptive basis" for their sightseeing. With Velasquez, Ribera and Murillo some familiarity may be assumed, but of others, for example, Zurbaran, "the most conspicuously naturalistic painter of the Spanish school," no such preliminary acquaintance can be assured in the case of the ordinary tourist.

A Student's History of American Literature. By William Edward Simonds, Ph. D. Boston: Houghton-Mifflin Co. $1.

This history of American literature by the professor of English literature in Knox College follows, according to the author, "the principles embodied in 'A Student's History of English Literature,'" published in 1902. There is, however, less reference to the historical setting; less, perhaps, than in the recent American literature by Mr. Pancoast, which is constructed on about the same scale. Professor Simonds promises to tell his story with directness and also a pleasing style and a temperate tone. Professor Simonds is an optimistic critic; he would have the teacher make no apologies for American letters, while he himself refrains from using the superlative where it does not fit. The main body of the book fills 350 pages; it is well provided with critical apparatus, including an excellent index. We like the freedom from localism manifested here. Quite naturally, Professor Simonds does not see our literature thru the New Eng-

lander's keyhole—the New Englander for whom the part of the land not under Boston's influence consists of New York and "the West." Neither does he share the New Yorker's standpoint, and regard all who are not of his own city as either Bostonians or just "off the farm." One may question, however, the utility of encyclopedic chapters like his own concluding one, entitled "Recent Years."

"THE MIRACLE OF ST. HUGO," BY ZURBARAN.
From Caffin's "Story of Spanish Painting." (The Century Co.)

Panama and the Canal Today. By Forbes Lindsay. Boston: L. C. Page & Co. $3.

We have always said that as the Canal approached completion the American people would begin to take an interest in Panama. This new book corroborates our theory, for Mr. Forbes Lindsay is a practised interpreter of the trend of popular interest. His former work on the same subject, published a few years ago, had much to say about rival plans and the technical difficulties anticipated in its construction. The present volume is fortunately able to deal more with accomplishments than anticipations, and devotes nearly half its space to the resources and opportunities of the country of Panama outside the Zone. The author has traveled thru the Chiriqui region now open to settlement and soon to be reached by a railroad, and he describes its agricultural possibilities at greater length than in his article on that country published in THE INDEPENDENT, October 21, 1909.

The Digressions of V. By Elihu Vedder. Boston: Houghton, Mifflin Co. $6.

"Written for His Own Fun and That of His Friends. Containing the quaint legends of his infancy, an account of his stay in Florence, the Garden of Lost Opportunities, return home

on the track of Columbus, his struggle in New York in war time coinciding with that of the nation, his prolonged stay in Rome, and likewise his prattlings upon art, tamperings with literature, struggles with verse, and many other things, being a portrait of himself from youth to age, with many illustrations by the author."

After the transcription of this seventeenth century book title, the reviewer has nothing left to do except to say that it is all so. Mr. Vedder's "friends" form a very much wider circle than his acquaintances, including, in fact, the thousands who hunt for the V hidden somewhere around a picture that pleases them, and feel when they find it almost as tho they had painted the picture. Probably the most familiar and best beloved of V's illustrations are those which introduced the "Rubaiyat" to American readers, and in our humble opinion old Omar has had no better dress among the many in which he has appeared. The "swirl of life" has as much fascination for him as it has for Allen Upward, but we prefer Mr. Vedder's symbolism to Mr. Upward's pseudo-science. There are 501 interesting pages in this volume, for even the appendix, giving a chronological list of the artist's works, may not be skipped, as it is annotated with humorous observations on how he sold them and what he got for them.

"THE NINTH HOUR."
From Elihu Vedder's "The Digressions of V." (Houghton-Mifflin Co.)

Literary Notes

....*In After Days,* published by Harper & Brothers, contains a number of essays on the future life, by W. D. Howells, Henry James, John Bigelow, Henry M. Alden, Guglielmo Ferrero, Julia Ward Howe, and others.

....*Mohonk Addresses,* by Edward Everett Hale and David J. Brewer, with an Introduction by Edwin D. Mead. A memorial of two great Peace Prophets, of especial interest to peace workers. (Boston: Ginn. 90 cents.)

....Paul Elder & Co., "of the Good City of San Francisco by the Golden Gate," deserve a prize for their device for making book-boosting painless. They have a right to call their new list of artistic gift books and cards *Pleasant Pages.*

....Readers interested in Korea or China should get the November number of the *National Geographic Magazine* (Washington, 25 cents), for it contains a remarkable series of 39 illustrations in color from photographs by W. W. Chapin.

....*The International* is the name of a new monthly personally conducted by B. Russell Herts, one of his new "moods," so to speak. The leading article is an argument for woman suffrage by the English dramatist and novelist John Galsworthy. The list of contributors is mostly from the New York's "younger set" and portends a lively and unconventional periodical.

....Father Tyrrell, the modernist, left at his death a manuscript nearly completed, which is now published under the title *Christianity at the Cross-roads* (New York: Longmans, Green, & Co.). It is a study of the relation of Christ to the Catholic Church and of the religion of Christ to religion in general. The volume shows that Father Tyrrell never yielded his conviction that the Catholic Church has preserved the religion of Christ more nearly than any other and that in Christianity is to be found the germ of the future universal religion.

....Munich was this year overcrowded with strangers owing chiefly to the fact that it formed the gateway to Oberammergau, but it is always a favorite resort of the American tourist on account of its art treasures. The latest of the series of "The Art Galleries of Europe," published by L. C. Page & Co., Boston, is devoted to the *Art of the Munich Galleries,* by Florence Jean Ansell and Frank Roy Fraprie ($2). The volume is not too big and heavy to be carried in the hand and will serve as a guide to the Pinakotheks and the Schack Gallery, as it discusses the most important pictures in the order in which the tourist will come upon them as he goes thru the rooms, introducing the necessary biographical data in an unobtrusive manner. There are 46 full page plates, not only suitable to recall the pictures to one who has seen them, but worth looking at by those who have not.

Pebbles

Boys can't understand why dogs are not permitted to sleep in the parlor.—*Atchison Globe.*

BACHELOR (to intimate friend)—What would you say if I should—er—tell you that—er—I am going to—er—marry a sweet little widow with six children."

Friend—I should say you were putting on heirs.—*Harvard Lampoon.*

WHEN Judge Hand in the United States Circuit Court made his recent announcement to the effect that hereafter all persons convicted of smuggling would get prison sentences as well as fines the Court's statement was sent by wireless to a liner then on its way to this port. On receipt of the message its purport was at once communicated to the passengers. There was a bargain counter rush to the purser's office to correct declarations. One individual approached the purser apparently unaware that many others had been before him on a similar errand. He asked permission to get his declaration back that he might correct statements in which he had erred inadvertenttly.

"Why, it is against the rules to do that," the purser told him, "but inasmuch as you are the seventieth person who has been to me on the same errand within an hour I'll make an exception in your case."—*New York Sun.*

ADVANCE INFORMATION.

Dr. J. M. Buckley, the well-known editor and divine, addressing a New York City Sunday-school, related an incident that greatly interested the children. He told of meeting a ragged, hungry-looking little girl in the street on a wintry day, and when he questioned her she recited a pitiful tale of a sick mother and younger brothers and sisters without food. After giving her a silver dollar, the good doctor followed at a safe distance to see what she would do with the money.

"Now, children, what do you suppose was the first thing she bought with that dollar?" said Dr. Buckley. "Hands up!"

Up went the hands, and one child after another ventured a guess, but none proved correct. Finally, a little boy, whose upraised hand alone remained, was asked for his answer to the question.

"A basket," he sang out.

"Correct," said the doctor; "there's a boy who thinks. Now, son, come up here on the platform and tell us why you think it was a basket."

After considerable coaxing the boy reached the platform, but seemed unwilling to talk. "Go on," urged the doctor; "I want these boys and girls to learn to think, too."

The boy still hesitated, and Dr. Buckley took from his pocket a silver quarter. "I'll give you this," he said, "if you'll tell us what makes you think the little girl bought a basket first."

"Be-be-cause," stammered the youngster at last, moved by the sight of the money, "I was over in Hoboken last Sunday and heard you tell the story there."—*Harper's Magazine.*

The Independent

Entered at New York Post Office as Second Class Matter
Publisher, Clarence W. Bowen
130 Fulton Street - - - New York

A WEEKLY MAGAZINE. FOUNDED IN 1848.

One Year, $3.00. Single Copies, 10 Cents.

Single copies over six months old 25 cents. Postage to any foreign country in the Universal Postal Union, $1.75 a year extra; to Canada, $1.00 extra. Subscriptions will be received for other periodicals, and clubbing rates will be granted as low as offered by any responsible agency.

Order for the change of an address should be received two weeks before change is to take effect. The old as well as the new address should be given.

For the convenience of our subscribers we will send on receipt of publisher's price any book reviewed or advertised in our columns.

Volumes of The Independent are completed at the end of December and June, and a full index is furnished free on application. Neat binders holding in book form thirteen current issues will be furnished for 45 cents.

If the numbers comprising any semi-annual volume are returned to us prepaid in good condition with $1.50 we will bind the volume in handsome and substantial half buckram and deliver it free anywhere in the United States.

We are always glad to receive articles for examination, but writers desiring the return of their manuscripts, if not accepted, should send a stamped and addressed envelope. We cannot, however, even so, hold ourselves responsible for their return. Authors should preserve a copy.

Advertising rates will be furnished on application.

Tolstoy

COUNT TOLSTOY died where he would have died, in a peasant's hut. But around that hut the world watched, knowing that its strangest and greatest literary genius was passing away.

Tolstoy possessed to the full the mystic nature that embraces great imagination and great religious fervor; which enjoys waking dreams and visions, and has not yet begun to question the spiritual. He was two kinds of a soul, one grandly creative, the other imperatively masterful to the Yes and No of Duty. Accordingly the world's greatest novelist is lost to the world in his death, and accordingly also his literary genius was at last taken prisoner by his conscience. As an artist the author of "Anna Karenina" and "War and Peace" will remain supreme not only in the galaxy of Russian novelists, Turgenief, Gogol and Dostoïevsky, but of his generation. In these his growing loyalty to the great moral purpose of the universe was present, but held in somewhat severer literary check than in his later stories. But it will be this literary period in his career that all the professional critics will hold to assure his claim for lasting fame.

And yet THE INDEPENDENT would remember that the world's greatest forces are moral, and the world's greatest teachers are those who have brought to the soul the revelation of duty and God. Such a man was Tolstoy. It is not pertinent to say that he was no philosopher, that he was inconsistent with himself, that he preached some strange doctrines that the world does not accept, that his was the song of one that hath a pleasant voice and can play well on an instrument, but whose word the statesmen and the teachers of political economy heard but would not follow. That is true; he was a simple-hearted literalist, whose charm was his simplicity, whose grandeur was in his massive sense of duty, and who imprest commonly accepted obligations by teaching and practising, persistently and without fear, obligations far beyond those which the rest of us common mortals could receive. For this reason, during these last years of his apostolate, THE INDEPENDENT has been glad to publish his occasional little encyclicals, even when they seemed to us extreme.

We do not hold—we cannot hold—that governments are in themselves oppressive when they punish even the guilty, and that the command to turn the other cheek means always and everywhere not to resist evil. But the Russian Government has been so bad, so oppressive, that Tolstoy did no wrong in condemning it beyond reason. We believe that our Lord's expressions favoring non-resistance were, like others of his statements, rhetorical and not literal, but if ever there was a time and place to take them literally it has been in Tolstoy's Russia. Oh! how he lashed the Russian Government under which he lived, and denounced war, in which he in his youth had taken part, and in which his son had won peculiar glory. It is a credit to the Russian Government that it did not imprison or banish him, but the rulers knew that he would or could raise no insurrection, and that his fame was the glory of Russia. They could and did suppress his writings, but that was all. He got few converts to his extreme views, but his principles and his example were a mighty power for the regeneration of the Empire.

But the Church was forced to give

him its condemnation. It could not do otherwise, it being such a Church as it is, and he could not speak otherwise, it being such a Church and he being such a prophet. He condemned it with all the fierceness of Elijah or Ezekiel. He knew it had lost spiritual life, that it was worldly and not Christly, and he said so, in obedience to Christ and reckless of consequences. So they forbade him the sacraments of the Church and Christian burial. But that he accepted. He is buried under a tree where the peasants he loved gather, a sort of Oak of Mamre, which henceforth will be one of the world's shrines of pilgrimage.

Thus passes away the world's greatest author and prophet and democrat. For he, born to the nobility, with their tastes and their training, was by conviction of the common people, of the poor mujiks, whose most intense desire it was to be one of them that he might lift them up; and because in him "love hath abounded more than glory abounds," because in thus descending to assume the peasant's lot he did not lessen or degrade his own nature, the world's honor will ever be given to him who sought hights of self-abnegation to which it could not follow; and Russia will, so long as Russia is, canonize him first of her saints, even after his tales of war and love shall recede from popular memory, overshadowed by the works of succeeding genius.

The Coming Session of Congress

CONGRESS will be controlled by the Republican party until the 4th of next March. Thereafter the House will have a Democratic majority of sixty, and the Senate's Republican majority will be reduced to eight. What should or can the Republican party do for the people and for itself before the time comes when it must surrender the House to its political opponents? In the final and short session of a Congress there is but little time for legislation outside of the great appropriation bills. As a rule, the preparation, discussion and passage of these bills have been substantially the entire work of such sessions. This time the mood of many Representatives will tend to prevent vigorous action. We refer to those who have been defeated at the polls. Some of them will be seeking other places in the Government service; some will be striving to promote their own interests in the professions or in business. It must be admitted that the conditions do not promise a session of notable achievement. Still, it will be possible to do something, if Representatives have a keen sense of duty and refuse to waste the first five weeks of the short term in vacation idleness.

It was very clearly shown by the elections that a majority of our people believe the tariff was badly revised. In the Sixty-second Congress the House will be controlled by the Democrats, a large majority of whom are committed to the support of a tariff for revenue only, as opposed to a tariff for protection. It has been said that the Administration is convinced that "the big things" must be laid aside at the coming session, meaning such questions as Federal incorporation of great companies, currency reform and traffic agreements for railroads. But just now there is in the political field no bigger subject for legislation than the tariff, and remedial tariff legislation is sorely needed by the people and the Republican party. No Federal incorporation bill can be passed at the coming session, no fundamental reform of the currency system can be enacted, nor can statutory authority for railway traffic agreements be obtained. But it will be possible to improve a part of the Payne-Aldrich tariff, and political expediency, as well as the public interest, demands that the party which now controls both the legislative and the executive branches of the Government shall begin this tariff work now.

There is a tariff board. The people heard a great deal about it during the recent campaign. It should report this winter concerning some schedule, or at least a part of a schedule. Washington dispatches say the President intends to ask Congress next month to make this board a permanent one and to appropriate $500,000 for it. He should first convince Congress and the public that the board has done something. We know how difficult the board's work is, and that it should be done carefully. We believe the members of the board are

competent. But the time is at hand when some proof of their industry and sincerity should be given to the public. We understand that they are nearly ready to report concerning paper and pulp, and that they have made considerable progress in their inquiry about the duties of the wool and woolens schedule. If they can show what the Republican platform requires in the pulp and paper schedule, they should do it before January 1. But a report as to the difference in production costs for the wool and woolens schedule would be more timely, more useful, and more favorably received.

It will not be easy, at best, to procure the desired appropriation for this board, and a grant of permanency, even from a Republican Congress. Stand-pat Republicans do not like the board project. There has been proof enough of this. Democrats—they have some power now—say the board is merely a political machine, set up to fool the people. A really good report on some schedule, for example, the one which contains the duties on wool and woolens, and which Mr. Taft has sharply attacked, is needed for the preservation of the board. A vigorous and just report on this subject the Democratic majority could not afford to oppose, and revision of the schedule in general accord with its statement of facts would be a beginning in the work of tariff reform. Incidentally, it would also forestall the tariff work of the coming Democratic House. It should be noted that many Democrats since the election have exprest opinions favorable to revision by separate schedules, and that the leaders of their party are inclined to be cautious and conservative in their treatment of the tariff question. They know that many who voted for Democratic candidates on the 8th inst. had not always been Democrats, but wanted to give the Democratic party an opportunity to correct Republican errors in a conservative and reasonable way.

This coming short session should pass the President's conservation bills. They ought not to excite prolonged discussion, and they are of much importance. But in reforming the tariff a start should be made. We hope the report is not true that the board must wait or work a year before it can report on the wool and woolen duties. If this session shall not do any tariff work whatever, the prospect for remedial tariff legislation before the Presidential election will not be a bright one. Appropriations for the tariff board may be withheld. In the new Congress the Democratic House will propose a revenue tariff (with incidental protection), and the Republican insurgents in the Senate, holding the balance of power there, will not accept it. They are protectionists, insisting upon such protection as the party platform requires, but opposing the kind of protection that was given when that platform's promise was broken.

The Crop of Scientists

SINCE the statisticians of the United States Department of Agriculture confine their crop reports to such humble fields as cereals and live stock, we should be quite without any numerical data on the more important question of the production of men of genius were it not that Professor Cattell, of Columbia, takes it upon himself to issue an occasional crop report on this subject. *Science* for November 4 and 11 contains the latest; decidedly interesting, even startling in some respects. It seems that the crop is short, the market unsettled and the distribution uneven. The South suffers most. There is still a dearth in the production of eminent men of science in that region, whether due to drought, hookworm, poor seed, neglect of cultivation, or other causes, Professor Cattell does not venture to say, but he notes with regret that almost all the product, scanty tho it be, is shipped North instead of being kept for home consumption. This, however, is not surprising. Wheat was shipped from Russia and potatoes from Ireland during their greatest famine. The western half of the continent is about holding its own, or, more literally, replacing its own.

In Massachusetts, Connecticut, Illinois and Wisconsin, however, the importations greatly exceed the exportations of scientific genius, owing to the shrewdness of certain syndicates located at Cambridge, New Haven, Urbana and Madison, which have of late largely in-

creased their holdings in this line, and show a disposition to corner the market. The interstate commerce and anti-trust laws may, as usual, be invoked and extended to prevent this attempted monopoly in minds, and they may, as usual, prove ineffectual. The Government itself has suffered in the depletion of its scientific departments by the manipulations of the "Big Four," and some of the rival concerns in the same line of business, particularly those with headquarters at Morningside Heights and Berkeley, have lost ground. Professor Cattell ascribes the decline of these two corporations to the arbitrary control of their presidents, and advises as a remedy a more active participation of the stockholders in the management of affairs.

These conclusions are reached from a comparison of the list prepared by Professor Cattell in 1903 of the thousand American men of science who had distinguished themselves primarily as investigators, with a similar list of one thousand prepared in 1910. Over two hundred new names appear on the second list that were not on the first. The names which they have displaced are those who have died, gone abroad or failed, in the opinion of their compeers, to maintain their relative standing in competition with the younger men who are coming on. The institutions which have more than ten of these thousand eminent men are the following:

THE NUMBER OF DISTINGUISHED SCIENTIFIC MEN, AND GAIN OR LOSS SINCE 1903:

	No.	Gain or loss.
Harvard	79.5	+13.0
Chicago	47.5	+ 8.5
Columbia	48.0	—12.0
Yale	38.0	+11.5
Cornell	35.0	+ 1.5
Johns Hopkins	33.5	+ 3.0
Wisconsin	30.0	+12.0
Dept. Agric.	28.0	— 4.0
Geol. Surv.	25.5	— 6.5
Mass. Inst.	25.0	+ 5.5
Michigan	23.5	+ 3.5
Stanford	21.0	+ 5.0
Carnegie Inst.	19.0	+12.0
California	18.5	— 8.5
Pennsylvania	18.0	+ 1.0
Illinois	17.0	+11.0
Princeton	16.5	+ 2.0
Smithsonian	16.0	— 6.0
Bur. of Standards	12.0	+ 4.0
Missouri	11.0	+ 2.0
Minnesota	10.0	0

The appearance of the fraction .5 does not indicate that Zeus has punished humanity by a second bisection, as feared by Plato, but merely that some men divide their time between two institutions or departments. If relative eminence is taken into account, if, as Professor Cattell assumes, a man in the first twenty-five is worth four times as much as one in the lowest four hundred of the thousand, the difference between these institutions is greatly increased, but their rank is not materially altered from that given here. It may be observed that the figures in general confirm the statements made in the articles on "Great American Universities" published in THE INDEPENDENT last year as to the relative standing of these institutions, altho the author of the articles had to use guesswork instead of statistics.

Since the various departments of a university are of unequal strength it is more important for the student, who is deciding upon a place for his advanced work, to know in which particular fields they are strongest. In the twelve sciences, which Professor Cattell considers, the leading educational institutions in the order of their rank are the following:

MATHEMATICS: Chicago, Harvard, Columbia, Yale, Illinois.
PHYSICS: Harvard, Princeton, Hopkins, Chicago, Columbia, Mass. Tech.
CHEMISTRY: Mass. Tech., Yale, Harvard, Hopkins, Cornell, Columbia, Illinois, Wisconsin, Chicago.
ASTRONOMY: Chicago, California, Harvard.
GEOLOGY: Yale, Harvard, Chicago, Wisconsin.
BOTANY: Harvard, Chicago, Cornell.
ZOOLOGY: Harvard, Columbia, Chicago, Cornell, Yale.
PHYSIOLOGY: Harvard, Yale, Hopkins, Chicago.
ANATOMY: Hopkins, Harvard, Michigan.
PATHOLOGY: Harvard, Hopkins, Chicago, Columbia, Michigan.
ANTHROPOLOGY: Columbia, Harvard, California.
PSYCHOLOGY: Columbia, Harvard, Clark, Cornell, Chicago.

The British Crisis

ONCE more it is necessary to discuss the political situation in Great Britain, for events are moving rapidly, and there is the most dramatic national movement now attracting the attention of the world and affecting the rights of the people.

It is already little less than a revolution that we have seen take place in Parliament during the past week. What the House of Lords scornfully refused to consider a few months ago the same House of Lords has accepted in principle, namely, that hereditary privilege should not give a life position in one of the ruling houses of Parliament. What Lord Rosebery proposed earlier in the summer to unwilling ears the House of Lords, at his motion, has accepted. They agree that no man shall be a member because his father was a member, and that no one shall be a member for life. In a sort of terror, in fear lest they should lose more, they agree that only a certain number shall have the honor, selected by themselves, and only for the Parliament for which they are chosen; and that to them are to be added a goodly number of others, chosen or appointed for merit. So they hastened to approve the resolution, without debate, for Lord Rosebery told them that if they put it off a day it might be too late.

Too late it is, for altho the text of the bill for the reform of the House of Lords presented by Mr. Asquith to the Commons has not been cabled to this country—an extraordinary omission—we yet know that, whatever are its provisions for the reconstruction of the House of Lords, it must also provide that the Commons shall in the end be supreme, and that, during the life of the Parliament, that is, without appeal to the country. What is there called the Second House shall be really second and inferior, because it does not represent the people. It can amend and delay for a time, but not indefinitely and finally, as it has done when a Liberal Government has been in power.

The present week is then one of great significance in British history. The House of Lords will not accept the Government's bill, and that means the dissolution of Parliament on Friday and a fresh appeal to the country, with a new election next week, so rapidly can they do things in the tight little island. Very short and very hot will be the struggle, and the chances favor the Liberals. Curious it is that America comes in as a factor, and most absurdly. Mr. Redmond's visit to this country and to Canada netted him about $150,000 with which to pay the expenses of the Irish campaign and support the Irish members chosen who have no means to support themselves while in attendance at Westminster. It is an insignificant sum, but Mr. Balfour and his followers are proclaiming to the English electors that American money is being brought over to subvert the British Constitution, contributed by the foes of Great Britain. This is ridiculous, but it will take, altho Canada gave the money as well as the United States, and the Irish party, which will benefit by the money, does not want to break away from Great Britain, but is satisfied to ask for a local parliament to care for local interests, no more than it desires for the three sections of the larger island.

While the abolition of the veto power of the House of Lords will be the main question before the country, the whole Liberal program will be up for approval. It includes local self-government for Ireland, and we observe that Mr. Redmond is perfectly satisfied with what Mr. Asquith will present. It will also ensure the passage, notwithstanding the Lords, of an education bill that will not give the Church of England control of the schools; and we may be sure that separation of Church and State will follow in Wales, and not long after in Scotland. These reforms, and others, have been delayed by the veto of the Second House, and that power will be taken away, if the Liberals control the next Parliament, with the help of the Irish contingent and the more radical Laborites.

Thus far the Crown has been successfully kept out of the conflict. When Mr. Asquith was asked in Parliament the result of his interview with King George he properly refused to answer. The intervention of the Crown might endanger its permanence. No one knows whether the King has been asked or has consented to swamp the House of Lords with a herd of Liberal peers, should it refuse to obey the voice of the people. It is not to be desired. It is better the Lords yield. It is little more than farcical for a party that has no love for lords to create a hundred of them all at once. We trust it may be saved the necessity of that mortification and scandal.

Sbaretti and the Red Hat

It is now more than a quarter of a century since Mgr. Sbaretti landed upon our shore and took up the work of Auditor to the newly established Apostolic Delegation at Washington. His first chief—Cardinal Satolli—may have had a hand in his being named Bishop of Havana, in succession to the last Spanish bishop, who had resigned shortly after the war with Spain. Or perhaps he was the choice of the special Delegate to Cuba, Archbishop Chappelle, of New Orleans. Consecrated in Washington by his second chief—Cardinal Martinelli—Sbaretti proceeded to Havana. The question of Church property was to the fore. He labored to have it bought by the United States, acting for Cuba. The price fixed upon, we believe, was $2,500,000, upon which, so the rumor ran in the inner circles, Bishop Sbaretti was to have a commission of 1 per cent., *i. e.,* $25,000. The sale fell thru, and some years later the Church readily accepted about half the above amount. That abortive sale was the chief item in the bishop's career in the Spanish Main. In Havana he was a trifle too early; in Canada a bit too late. For he was soon transferred from Havana and named first Delegate Apostolic to Canada. *Pronoveatur ut amoveatur* is the axiom of canon law. On reaching Ottawa, Sbaretti found that the great question—that of the schools—which agitated our northern neighbor, had been settled. In that discussion he was to win no glory or to suffer any blame. In Manitoba the civil authorities refused to support Catholic schools and strongly upheld the Province's public schools. It seems that this refusal was made at the request of Catholic settlers, because the religious orders sent into the Northwest their least desirable teachers. On one side stood the hierarchy of Canada, with about one notable exception—Walsh, of Toronto—and on the other the state officials. Rome was appealed to, and Leo XIII sent Mgr. del Val as his special representative, who, curious to relate, stood in with the Government and the lone archbishop against the bishops of Canada. It is an old story in Church affairs—Rome loves a divided hierarchy. The public schools in Protestant Canada, in del Val's eyes, cannot be monsters, as are the neutral schools of France or Belgium, and *escuela moderna* of Francisco Ferrer.

Then along comes the Delegate Apostolic, Mgr. Sbaretti, who could only carry out the program as already agreed upon. Today his long exile is ended and he returns to Rome. But what a contrast to the home going of Satolli and Martinelli, both of whom returned with the red hat. Ominous is it, specially so soon after Vannutelli's triumphal entry into Montreal.

In Rome Sbaretti will fill an office—Secretaryship of the Congregation of Religious Orders—vacated under orders by Abbot Janssens, president of St. Anselm's College, on the Aventine, and member of the Biblical Commission. His offense was a letter of thanks to Colonel Roosevelt for the former President's kindness to the Benedictines. This letter was sent after the latter's tiff with the Vatican. It seemed incredible that an abbot living in Rome and enjoying its favor would write letters of thanks to anybody who had just snubbed the Pope. That is neither clerical manners nor religious ways.

Such is the fall of Sbaretti. A great deal more is under the surface than appears. The American episcopate had no great love for either Satolli or Martinelli, yet the two got red hats. Are the Canadian episcopate more powerful or Sbaretti less influential on the Tiber? They now say the red hat will go to Archbishop O'Connell, of Boston.

Airships Anticipated

The paradoxical author of "Inventions" asserts that fiction, far from trailing after fact, is plagiarized by life. The real Becky Sharps followed and did not precede "Vanity Fair." There is much to be said for this view. Only the other day we heard a story out of real experience that matches "The Brushwood Boy" in every important detail. And Mr. Walter Wellman, who recently attempted to cross the Atlantic in a misnamed "dirigible," reminded us by his experiment of nothing more than Edgar

Allan Poe's balloon hoax, that was first published in the New York *Sun* of some sixty or seventy years since, and then was lately reprinted there in its entirety, cuts and all. Poe's three English aviators were, however, more successful, in spite of the earlier date, than were their actual imitators.

This flying is no novelty, leaving books aside. It is only that we are attaining a more tangible success in a field of experimentation that has long been cultivated. The French balloonists of the eighteenth century were as daring as their twentieth century descendants. Leonardo da Vinci projected flying machines, and even essayed flight. One of the exterior *bas reliefs* of Giotto's Campanile at Florence represents a flying man, tho the creature's head is like a camel's, even to the bit, and his naked body shows scales. This conception was, of course, purely imaginative; but Leonardo's attempts were as purely scientific.

Success in flights on a scale even grander than that achieved at Belmont Park is forecasted by the poets of more lands than one. In Byron's "Don Juan" one reads, with slanting allusions to Genesis and Sir Isaac Newton, "Man fell with apples and with apples rose." Follows this prophecy:

"For ever since immortal man hath glow'd
With all kinds of mechanics, and full soon
Steam engines will conduct him to the moon."

Erasmus Darwin, as well as Byron, looked forward to steam's accomplishing what has so far been reserved for gasoline:

"Soon shall thy arm, unconquered steam, afar
Drag the slow barge, or drive the rapid car;
Or on wide waving wings expanded bear
The flying chariot thru the field of air."

The earlier parts of the prophecy were long since made good in accomplishment. Today the "flying chariot" is as much a reality as the benzine buggy or the "rapid car." But how much have we really gained by our progress? Goethe, in reading Homer, declared:

"I feel as if I were in an airship, raised far above all earthly things, poised in the intermediate space between heaven and earth, where gods flit to and fro."

Goethe was every whit as well off as d'Annunzio himself—and was saved the risk of life and limb, into the bargain.

Principles and Men

In the late election it is conservative, stand-pat Republicanism that was beaten by Democracy more progressive and radical than was the most advanced Republicanism. Where progressive Republicanism was in control it was successful at the polls, as in the Western States, Wisconsin, Kansas, Washington and California. Where in the East the old stand-pat machine was in control it was beaten, as in Maine, Massachusetts, New Jersey and Ohio. In Indiana it is true that Beveridge, who is somewhat progressive, was shelved, but there the liquor question came in. In New York the old machine fought the progressive wing, and were so much in evidence that the people rejected the party notwithstanding a good candidate and the help of Mr. Roosevelt. The Republicans were beaten by 60,000 majority, and it is a wonder that it was not 150,000. It might have been but for the energetic action of the men who tried to put the party on a progressive basis. Of course, the wisdom of the Democrats in putting up new and able men of the highest character in some States as standard-bearers, was an important factor. It is a practice to be followed wisely by all parties. Character counts with the people as well as platform, and ought to.

A Bundle of Protests

The bundle of protests which the American Federation of Catholic Societies gathered up at their annual meeting in New Orleans last week was not quite as sweet as Solomon's "bundle of myrrh." It protests against the new republic of Portugal, of which its members know much less than Cardinal Netto, Patriarch of Lisbon, who has recognized the republic. Its action is a rebuke to him, for the resolutions thank the State Department at Washington for delaying to do what the Cardinal at Lisbon has done, and really what the Vatican has done in continuing negotiations over the Concordat. The concluding resolution said:

"We protest against propagandas which embitter the workingman, preach a gospel of class hatred, of confiscation of private property, make marriage a mockery, deny paternal rights and responsibility and proclaim State control and even ownership of the child."

It is not over-clear where these propagandas are. As to the "working man" and the "gospel of class hatred," probably 90 per cent. of the members of the Federation are workingmen, of whom two-thirds are Catholics; and of these last fully 90 per cent. are trade unionists, and this protest would seem largely directed against the members themselves and their violent strikes, and against Socialists generally. As to the making of "marriage a mockery," we know of no propaganda of that sort visible without either a microscope or a distorting lens. Nor is there any propaganda to "deny paternal rights," or maternal, or to "proclaim State control and even ownership of the child," that is, if it means anything more than we all believe when we draft grown men for a war, or require that every child shall be educated. All Catholic institutions for children accept State aid with the supervision and State control that go with it, including the commitment of the children. We are interested to read the names of the ten men elected as officials of the Federation. Of these, three, Feeney, Wallace and Kelley, and perhaps Redwillow, seem to be English or Irish, while the rest are German or Italian. Now we know that the Irish were the dominant influence in the American Church, but this looks to the increase of other nationalities, if we can judge from such names as Matro, Schulte, Kuhns, Wessling and Hekenkamp.

More Postal Reforms

When we consider how far Great Britain and the continent of Europe are ahead of the United States in postal matters we may imagine that they have reached the end of reforms, but that is not the case. Mr. Henniker Heaton, the former British Postmaster General, has given twenty-five years to pushing reforms, and he counts up nigh to a hundred reforms he has seen in that time, but he has sixty-two more on his projected list which he hopes to see achieved before he dies. At the head of them is a penny letter rate for all the world. Already half the letters sent abroad from England go at that rate, so that the addition is not large. Now a letter goes from London to the Cape of Good Hope for a penny (2 cents), but it costs 5 cents to send it from London to Paris. Among his other desired reforms is telegrams for Europe and all the Empire at a penny a word; reduced telephone rates to the Continent; cheap agricultural parcels post, with rapid collection; and the destruction of letters containing lottery tickets and other immoral literature, as in this country. The reader will see how easily Great Britain has adopted the telegraph and the telephone as part of the post office system. In this country the companies which exploit these conveniences would object as vigorously as do the express companies to the extension of the parcels post, and as yet no Postmaster General would venture to suggest for the advantage of the people what the effete monarchies of Europe can give them.

Booker Washington in North Carolina

For several years it has been the custom of Dr. Booker T. Washington, in company with prominent and representative colored men from different parts of the United States, to make an educational tour thru various Southern States. Last fall he made a tour thru the State of Tennessee. He has recently completed a tour thru the State of North Carolina. In each case the visit to the State is made under the auspices of the State Negro Business League. In connection with the recent tour of North Carolina, Dr. Washington spoke on an average of five or six times a day either at railroad stations or in halls, churches or theaters. In every case the meetings were attended by not only a crowd of colored people, but by many white men and women of the best class. In many cases the audiences were about equally divided as between white and black. Dr. Washington in these meetings spoke directly to the colored people concerning their duty in regard to improving themselves, and he also spoke frankly to the white people regarding their duty in uplifting, protecting and encouraging the colored people. As a result of the good these meetings are doing, we publish below a letter recently received from the superintendent of public schools, a white man,

in one of the cities in North Carolina the party visited while traveling thru that State:

I write to express my personal appreciation of your visit and its effects here in our town. You had a good audience representing all classes of our white and colored population. Numbers of the best white people in town have told me that your address was the very best ever made here. Many of them say you must come back. Some want to get a warehouse so that everybody can hear you. The negro school here is stronger in the affections of the colored people; the white people are prouder of it, than before you came. I was delighted that we had a school building in which you could speak. The negro school will get better each year. It is not doing near all it ought to do, but we are moving forward. There will be slight opposition from now on. I am more than ever convinced that white people will believe in and stand for the education of the negro children, if the matter is put to them in the right shape. Our negro school has more colored than white opposition. In fact, the last white man in town who counts *one* was converted by you! I rejoice over this sinner's making his peace with me!

The colored people in many other Southern States are anxious to have Dr. Washington tour their States, and plans are being matured with this in view.

A Church in Chains

It is reported that the Vatican will find itself able to renew negotiations with Spain for the amendment of the concordat. This is not good news for Spain or for the Church. The desirable thing is that there be no concordat, and no agreement or relation of the government with any church. Pure, utter, complete separation is far better for both, such as we have. It is where there is no concordat that relations are the happiest. Cardinal Vannutelli has gone back to Rome and reported enthusiastically as to the attitude of the Church in Canada and the United States. But in neither country is there any concordat. Why should the Church be so anxious to have its curse? A concordat ties the Church to the State, chains it to it, allows the State to choose the bishops of the Church; and when the State is tyrannical the Church chained to it gets all the blame and hatred, as is the case now in Spain and Portugal. The people do not hate the Catholic Church in this country; even Protestants respect it. We make no complaint of the coming of friars and nuns expelled from France, Spain and Portugal. Argentina and Brazil, where the Church is established, send word to Portugal that the escaping religious congregations are not wanted there, because they would stir up hostility; it is not so here. If anybody objects it is the bishops themselves, who say they have as many as there is room for, and they prefer parish priests and a limited number of well-trained teaching and nursing sisters. If the Pope would only come here our bishops could give him light.

Miss Petre's Case

It was a Jesuit priest, Father Tyrrell, who refused to give his assent to the papal declaration against Modernism, because he did not believe it just, and was therefore excommunicated. Now a second public refusal appears, this time from a Catholic woman. Miss Petre was a friend of Father Tyrrell and edited his posthumous volume. For this offense she was ordered by her bishop to give her submission to the encyclical *"Pascendi"* and the *"Lamentabili"* on penalty of being refused the sacraments. She is a member of a distinguished Catholic family. She writes an "open letter" to her fellow Catholics in which she protests against being singled out in this way and required to make this condemnation of Modernism. She declares it to be tyrannical, and she refuses to yield her intelligence and conscience to the will of her ecclesiastical superiors, and she says that there are many Catholics, even bishops, who greatly regret the publication of these encyclicals. Her protest has called out much discussion in England. The *Times* gives it a long leader, and it is the chief subject for the Catholic journals. Of course, they defend the Church. They have no choice, for they hold that all Catholics are under bonds to believe absolutely whatever the Vatican may require. *The Tablet* says:

"The Holy See has a perfect right to claim an assent to its judgments not only in those things which are directly of Faith, but to those things which are of necessity involved in and required by the holding and defense of the Faith. Of that necessity the Church authority and not the individual is the judge."

That is stiff doctrine. It leaves nothing

to individual judgment. The Holy See cannot err. Anything which it proclaims we must believe and ask no questions. Infallibility covers everything. No wonder Miss Petre is offended and appeals, but appeals in vain. She is deprived of the sacraments and must wait in patience till the Vatican storm is overblown. And so must many others.

Democratic Negro Vote

A correspondent of *The New York Age*, a leading negro journal, says there are at least 30,000 colored men in North Carolina who are eligible to register and vote, and who would be allowed, so far as he can learn, to vote. But there, as in other Southern States, the greater part of the intelligent and property-holding colored people who do not vote disfranchise themselves, because they do not pay their poll tax. The correspondent, who, we presume, had accompanied Dr. Washington in his tour over the State, did not find a single case in which an intelligent and substantial colored man was prevented from registering and voting. It may be different, he says, in some other sections not visited. The negroes divide their vote, as do white citizens, and in the late campaign the colored vote was sought after by both Republicans and Democrats. The lesson is, that negroes should pay their poll taxes and register and vote; and this is a principal task to which those who seek the uplift of the race should devote themselves. The dividing of the vote is a good thing. A multitude of negroes in the North at the last election helped to swell the Democratic majority.

Objection has been made to a statement in an article on conditions in Spain, by Kellogg Durland, in our issue of November 3, in which he speaks of "the frequent betrayal of the confessional by priests," and cites a case, given by Rafael Shaw, in which a man was hanged for murder on the basis of a confession made to a priest and repeated to the authorities. We have looked up this case in Rafael Shaw's "Spain from Within," and we find that he does not vouch for the truth of such charges, but simply states that "the people are convinced that the confessional is habitually abused"; and he mentions cases reported to him by men and women, this one among them, not that he knows them to be true, but that such is the popular belief, which may be based more or less on popular prejudice. He says:

> "I offer no opinion as to the truth or falsehood of these stories, most of which have been told by women."

We regret that the statement was unguardedly admitted into our columns. We have never made such a charge, which would be odious to all Catholics.

In an address at Washington last week President Schurman, of Cornell University, strongly objected to the proposed charter for the Rockefeller Foundation, on the ground that its purposes were so broad that they might include anything whatever which the trustees might think for the benefit of mankind: it might propagate Buddhism, or the principles of the Republican or Democratic party. To be sure, he said, such follies are unlikely, and so long as Mr. Rockefeller was in control there would be no danger, but there is no knowing what other trustees might do a hundred years hence. He fears self-perpetuating trustees, and would have Government officials appointed, such as members of the Supreme Court and of Congress. We have no great fear of self-perpetuating trustees so long as Congress could dissolve the charter.

That was a stirring ending of Yale's football season last Saturday. Here was the blue eleven tied by Vanderbilt and shamefully beaten by West Point and Brown in the mid-season, finally pulling itself together, finding its old time form, and then defeating the strong Princeton team 5 to 3 and holding to a tie its ancient rival Harvard, which was considered to have one of the strongest elevens ever representing the crimson. Tho football is to be condemned as a sport, and as a fixt part of the curriculum of a great university, yet as a mimic war it has its decided merits. It not only stirs the blood and heartens the courage, but when a weaker team, as Yale's, turns de-

feat into victory despite fearful odds, we have an exhibition of pluck and spirit that we are always ready to admire.

The total population of the seven States—Vermont, Massachusetts, Rhode Island, Delaware, Michigan, Missouri and New Mexico—is 10,898,272, which is an increase in ten years of 14.9 per cent. This makes it doubtful if the total population of the country will be over 88,000,000, which does not allow a large margin for the natural increase by births when we deduct the immigrants for those seven States, who added 7,000,000 to their population. Too large a proportion of our people marry late, or do not marry at all, and the children are hardly more in number than those in France. And yet children are the greatest wealth. Florida, attractive as it is to Northern settlers, has gained but 4.2 per cent. of population in ten years. The natural increase ought to be more than that.

Few people know what is the enormous superior potency of negro blood. The scale of gradation in the French West Indies is thus given. It begins with the white and the negro, producing the mulatto, half black; next, white and mulatto, the quadroon, one-quarter black; then white and quadroon, the octoroon, one-eighth black; then white and octoroon, quinteroon, one-sixteenth black; then white and quinteroon, griffado, one thirty-second black; then white and griffado, mustafee, one sixty-fourth black; then white and mustafee, mustee, one one hundred and twenty-eighth black; and finally white and mustee, one two hundredth and fifty-sixth black, sang d'or, which is, at last, no black at all, but pure white.

The re-elected Governor of Rhode Island, Aram J. Pothier, is another standing proof that bigots cannot shut a man out of high public office. He is not only a Catholic, but a practising Catholic faithfully devoted to his religion. He attended the great Eucharistic Congress in Montreal and marched in the procession. We can trust such a man far better than one of those spineless creatures who call themselves of a faith but give no evidence of it till their funeral.

In his Thanksgiving article this week Mr. Powell compares the cruelty and morality of hunting quails with that of angling for fish. He is not quite sure why he should detest the hunter while he angles for the bass. A Cape Cod native put it thus. He had been complaining of the Boston sportsmen who came to shoot birds, and was asked how he could blame them when he was guilty of fishing. His answer was: "The fish have their option; the birds don't have no option."

It is a rumor—we hope more than a rumor—that Austria and Italy are considering the proposition to neutralize the Adriatic Sea. It is to be wished they might, just as the North Sea is neutralized. And then, why not neutralize the Mediterranean and the Atlantic and Pacific. That is what we are moving toward.

Professor Gildersleeve, who is offended when his name is printed *Gilderstene,* and who is very careful not to print Böckh for Boeckh, writes in his *American Journal of Philology* a page of agreeable apology for allowing his printer to drop the final emphatic *f* in the name of Wilamowitz-Moellendorff.

The postmaster at Lisbon is either a republican with a sense of humor or a bureaucrat without any. Mail addressed to King Manuel is coming back, stamped "Return to sender" on the front and "Gone without leaving his address" on the back.

For the first time in the history of St. Louis a negro was elected to office. He is constable, and was elected in an Irish Democratic district, and against an Irishman of their own professed faith who is described as "a notorious thug and ruffian."

The old question, "What shall we do with our ex-Presidents?" is interesting the public as much as ever, but we do not see any symposia devoted to its discussion as formerly.

Insurance

The Value of the Interview

THE interview is practically the first step looking toward interesting a man in life insurance. If the agent never obtains an interview, generally speaking, he never secures even a prospect. The interview has, therefore, a great value to every agent. The interview must, however, not be limited to asking a man if he wishes life insurance, and if he says "No," taking the "No" for an answer. That sort of an interview has no possible value to any one. It is, in point of fact, an economic waste, as it takes time even to do such a foolish thing, and there is no benefit to grow out of it. The interview, to have value, must be planned as carefully as a military campaign. Every man, according to a veteran salesman who was reminiscent this last summer, has his weak point, and it is the business of a salesman or a solicitor to find that weak point, and when found to utilize it. Interviews, as John I. D. Bristol, of New York, has well said, are the agent's premium getters. Out of them grow the agent's commissions. Some insurance underwriters, by advanced methods, are able to average over $90 per interview for six months at a time. Others range between $60 and $70. Such values for interviews signify a very snug income if multiplied by enough of them. If an agent works ten hours per day on interviews, at even one-half such averages, his outlook is by no means hopeless. One man who kept a rigid account of his calls, out of which grew interviews, found that each one he made averaged him $5 during the year. Many physicians make calls at $2 each and enjoy good incomes at such a rate. If a life insurance agent wants to do business he must go after it, and interviews are the road to business. All things must be made to work together for the sake of the interview, and the agent must see to it that the end of his interviews are marked by signed applications. Life insurance is a splendid investment and an anchor to windward that comes in very handy to a man's family in case he dies, but it is very hard to make people understand that it is so. The best things on earth only too frequently go begging because people fail to realize the beneficence of them. Eternal salvation, for example, is the mightiest and greatest proposition we have offered to us here below, but our churches are far too seldom overcrowded unless something sensational is going on in them, and it costs millions of dollars to pay ministers and missionaries to try to persuade people to embrace it. Perhaps the reader can now see something of the value of a first-class interview and how far-reaching it may be both here and hereafter.

COMMISSIONER WALDO'S report on the fire loss of New York shows that the city has the largest fire-fighting force under one head in the world. Doubtless there may be some "weak-lunged cigaret smokers" among its 4,350 officers and men, but if so the percentage is not large enough to seriously interfere with the force's collective efficiency. Our firemen constitute a civic organization that makes for a defense against fire and its ravages which it would be difficult to match anywhere in efficiency, in personnel and in public esteem. The total fire loss in New York of $7,431,635 for 1909, while less by $1,829,443 than was the case during the year preceding, is still far too large, and not only insurance underwriters, but property owners also may well view such losses with alarm not unmixed with apprehension. Resolutions to be more careful will go well with the present tendency toward conservation.

ALTHOUGH it is probable that King Manuel has never seen a certain well known advertisement, his flight to the Rock of Gibraltar may fairly be described as prudential.—Louisville *Times*.

Financial

Securities and the Situation

In the stock market, last week, there was a slight advance for many securities in which transactions were small, and a gain of about 4 points for the three leaders in speculation, Steel, Reading and Union Pacific. The week's business was 2,453,600 shares (against 3,020,600 for the week preceding), and it is to be noticed that very nearly two-thirds of it, or 1,629,600 shares, was credited to trading in these three stocks, Steel being at the front with a total of 708,500. The public has not been informed as to any special reasons for the great activity in these stocks, or for the advance of prices, and an impression prevails that the movement is due to the manipulation of professional speculators. The condition of the steel industry does not encourage purchases for a rise. So far as that industry is concerned, much depends upon railroad companies' orders for rails. It is practically admitted that these orders will be carefully restricted until the freight rate question shall have been settled, and a decision in the rate case may not be reached until March. Contracts since January 1 have been for about 1,300,000 tons, against 3,200,000 in the entire year of 1909, and the reported tonnage of the Steel Corporation's unfilled orders on hand is very low.

Financiers who are directly and continuously interested in the stock market have in mind the forthcoming decision of the Supreme Court in the great Trust cases, the approaching decision of the Interstate Commerce Commission concerning the proposed increase of railroad freight rates, the prospect with respect to tariff revision, and the possibility of currency reform. We understand it is not expected now at Washington that fundamental currency reform will be attempted in the near future. As to the tariff, fifteen months will elapse before the Democratic House will be in session (unless an extra session should be called) and the Democratic leaders are inclined to a conservative course. It is not probable that any report from the tariff board will be sent to Congress this winter. Some reduction in the cost of food may affect the popular demand for lower duties on the necessaries of life. There are some indications that a part of the proposed increase of freight rates will be allowed by a majority vote. As to the Trust decision, predictions are lacking. Aside from the consideration of these questions, the general market must feel the sustaining influence of the bountiful crops recently harvested.

Railroad Earnings

Railroad gross earnings for the first six months of the present year showed a monthly increase over last year's averaging about 14½ per cent., but the increase has since declined to 4 per cent. in September and less than 2 per cent. in October. Net earnings, which showed increases of 12½ per cent. in January and 16 per cent. in February, have declined relatively, and were less in July, August and September than in the corresponding months last year. For the nine months ending with September, however, the increase of gross earnings, about $204,000,000, was 11 per cent. This gain was accompanied (in the nine months) by an increase of net earnings amounting to only $20,000,000, or a little less than 3½ per cent.

....“That the time is coming,” says the writer of a financial review in the Chicago *Tribune*, “when New York will be merely Chicago's port of entry seems assured.”

....The output of gasoline in this country was just twice as great last year as in 1903. It amounted to 9,600,000 barrels, and a conservative estimate places its first-hand value at $48,000,000.

....From a report issued by the British Minister at Dresden on the finances of Saxony, it appears that the State railways and forests are the most profitable revenue-producing properties of the State. The largest revenue last year, amounting to $41,500,000, came from the railways, with an expenditure of $31,500,000, while the forests yielded $3,700,000, against an expenditure of $1,650,000.

The Independent

VOL. LXIX NEW YORK, THURSDAY, DECEMBER 1, 1910 No. 3235

Survey of the World

Political Topics

A list prepared at the Capitol, in Washington, shows that the Democratic plurality in the new House will be 64. It is expected that the result of a contest in one of the districts will make it 65. There will be 227 Democrats, 163 Republicans, and 1 Socialist. Of the entire number of 391, 128 will be newcomers, only 8 of whom have ever been in Congress. It is now reported that Governor Harmon's plurality in Ohio is 104,000. Dr. Wilson's, in New Jersey, is 49,360, and his majority over the other four candidates is 34,302. In Oregon an amendment adopted by the narrow margin of 1,665 votes in a total of 86,000 permits each county to regulate taxation within its boundaries as it may see fit. This is regarded as an entering wedge for the single tax. But the single tax, for the State, was rejected two years ago by a considerable majority. The statewide prohibition amendment was defeated, also the woman suffrage amendment, by a vote of 58,000 to 36,000.——The Rev. Dr. Waldron, president of the National Independent Political League, in a statement published at Washington, says that 30,000 of the 45,000 negro voters in New York supported Mr. Dix, the Democratic candidate; that 55,000 of the 75,000 in Ohio voted for Governor Harmon, and that Democratic candidates received at least half of the negro votes in other Northern States.——In a published statement Speaker Cannon says he thinks a majority of the people made a mistake in giving the Democrats control of the House. He continues:

"The Republican party has nothing to apologize for, touching its policies and the legislation enacted in pursuance thereof. The American people were never more prosperous than they are today. We are favored with the best crops thruout the country we have had for years, and while the price of cereals is decreasing the size of the crop, I believe, will bring the farmer as much as he would have received for a smaller crop at a larger price. It is a saying that 'corn is meat,' and the decrease in the price of breadstuffs will benefit the customers of the farmer without materially affecting his income. At the same time the wages of labor were never higher than they are today. Our imports and exports in the aggregate will exceed those of any other year in the history of the country. While the exports of breadstuffs have decreased, the exports of manufactured and other products have increased.

"Sixteen years is a long time for one party to remain in power in the House of Representatives. Probably half the present voting population of the United States has no recollection of the time when the Republican party came into power in the House in 1894, nor of living under any other policies than those of the Republican party. Our political opponents, having a very large majority in the House in the Sixty-second Congress, will have full responsibility. With that responsibility it remains to be seen what they will do. I should be glad if they find themselves able to redeem their promises in the campaign—to reduce the cost of living and increase the price of labor."

In conclusion, having spoken of the brevity of the approaching session and the duty of Congress to make now a new apportionment (under the census of 1910) he remarks that it has been his experience "that when a party has been defeated at the polls it has been unable to enact much partisan legislation at the ensuing short session."——An impression prevails at Washington that the President will appoint Justice Hughes Chief Justice of the Supreme Court. In Montana, friends of Senator Carter say he has been invited to take the seat vacated by the retirement of Justice Moody.——The Democratic leaders have decided to celebrate their victory by a grand banquet in

Baltimore on January 17.——Some have thought that the President would send to Congress this winter a report of the tariff board concerning the duties on paper, wool and woolen goods. It is said, however, that he was informed on the 26th by Chairman Emery that several months more would be required for the collection of the needed data. It is expected that agents of the board will visit Australia and Argentina to ascertain the cost of producing wool in those countries.——Postmaster-General Hitchcock will recommend in his report that authority be given for a parcels post in connection with the rural delivery, with the limit of eleven pounds; also, that Congress provide for an inquiry with a view to an extension and development of this service.——Governor-elect Tener, of Pennsylvania, has procured the arrest, for criminal libel, of the Rev. William L. Barrett, pastor of the First Presbyterian Church in Blairsville, Pa., for saying in a sermon, which was published with his approval, that a prominent clergyman had seen Mr. Tener disabled by intoxication.——At a hearing last week before the Congress committee that is considering Senator Gore's charges, Richard C. Adams, hereditary chief of the Delaware tribe of Indians, testified that he held contracts with the Delawares covering the payment of $20,000,000 of claims; that his fees were to be from 10 to 25 per cent., and that all the contracts (fee provisions included) had been approved by the Government. As the claims will eventually be paid, his compensation will be somewhere between $2,000,000 and $5,000,000. He is a lawyer and for many years has spent much of his time in Washington.——On the 28th the Government brought suit, in New York, for dissolution of the American Sugar Refining Company, or Sugar Trust, alleging violation of the Sherman Act.

Candidates for the Senate

Governor-elect Foss, of Massachusetts, has published a statement demanding "that Henry Cabot Lodge surrender his seat in the United States Senate by withdrawing from his contest for re-election." He continues:

"The issue on which the fight was made, and on which I was elected, were honest tariff revision downward, lower duties on the necessaries of life, free raw materials, an untaxed food supply, reciprocity with Canada and more democracy in our form of Government. We all know where Senator Lodge stands on these issues, and where he has stood all these years. To re-elect him would be a step backward, and Massachusetts has never learned to walk backward. I shall never sign his credentials except at the end of a campaign which will make the last one look like an afternoon tea party. He must surrender or fight. He must defend his position before the people. The people of Massachusetts will not permit him longer to manipulate the Legislature. I am ready and if he does not retire, will be on the stump in every section of the State, and we will find out where the people stand."

Senator Lodge has made no response. Early in the present week Mr. Foss began a series of speeches against the Senator.——In New Jersey, ex-Senator James Smith, Jr., a prominent candidate for the seat to be vacated by Senator Kean, has given notice that he intends to sue for libel Mayor-elect Gregory, of East Orange, who, in a published letter has severely criticised him for his action in the Senate with respect to the Wilson tariff bill.

Cases of Corruption and Bribery

As the result of an investigation made by Special Deputy Attorney General Arthur C. Train in the New York City Borough of Queens (on Long Island) sixty-nine indictments were returned last week by a grand jury. Among the accused men are Municipal Judge John M. Cragen, indicted for grand larceny and forgery, and P. M. Coco, the architect of a new court house upon which $1,000,000 was expended. Others are subordinate officers of the borough government, inspectors, contractors, etc. Mr. Train says:

"The evidence that I have examined thus far discloses that various officials of the Borough of Queens have administered their offices rather for the purpose of repaying political debts and enriching the pockets of favored individuals than in the interest of the taxpayers. The public funds have been wasted and in some cases deliberately stolen; public property has been turned over to the use of private individuals; employes of the city have been employed on private work, and where public work has been done by contractors there has often been no inspection by the city whatsoever. Bills presented for such work have been certified without proper examination or investigation and the borough has been mulcted by contractors and others having personal or political influence.

"Dead men and dead horses, or non-existent men and horses, have had place on the city payrolls and some one has collected the money for their imaginary services. This has been possible only with the connivance of certain officials. Private sewers have been built by city employees under orders of city officials for churches whose membership contain large numbers of voters. Persons drawing pay as court attendants have proven to be, in fact, retired conductors or employed elsewhere and receiving money from both the city and private corporations without rendering any service to the city whatsoever. Money deposited by private persons to reimburse the city for the cost of inspection of private work has been handed around as prize money to whoever was fortunate enough to be temporarily in favor. Forgeries of payrolls, time sheets, inspectors' reports, false affidavits and certifications have been frequent."

——The inquiry of the New York legislative committee concerning the alleged raising of a fund of $500,000 to prevent the passage of the bills against race track betting, and the offers of parts of it to certain legislators, has been suspended, owing to the committee's failure to procure the presence and testimony of James R. Keene and Harry Payne Whitney, who are to be questioned about the fund.——In San Francisco, the District Court of Appeals has affirmed the decision and sentence in the case of Abraham Ruef, the boss and associate of Mayor Schmitz who was found guilty of bribing supervisors. He must be imprisoned for fourteen years. Schmitz, who was sentenced, escaped on technicalities. He is now engaged in mining.——The present Mayor of San Francisco, P. H. McCarthy, in a letter to the grand jury asks for an investigation of the charge that he has accepted $70,000 in bribes. The editors of three papers, he says, have told him that he must resign after a settlement of the question where the Panama Exposition shall be held.

The Panama Canal

It is understood that the President in his forthcoming message will ask for an appropriation of $2,000,000 to be used in beginning work on fortifications at the terminals of the Panama Canal. Among those who will oppose the construction of forts there is Mr. Tawney, of Minnesota, chairman of the House Committee on Appropriations. Last week, while in the Canal Zone on a tour of inspection, he said in an interview published by a local newspaper:

"If the nations of the world will agree to regard the Panama Canal as neutral territory, there will be no need of fortifications. This great enterprise is being built with American money and in time of war there is no nation that would dare say to the United States: 'You cannot send your ships through the canal built by you at a tremendous cost of money and blood.' The canal is built for the benefit of commerce. The land is divided in order that the entire world may be united, that markets may be brought into closer communication one with another. The United States is big enough, and should be big enough, to bend all its energies to making the canal a world-wide commercial success instead of a war measure by which an advantage would be secured over an enemy."

In the dispatches of Washington press correspondents it is predicted that the money will be appropriated. The fortification of the Canal is desired, it is said, by representatives from the Pacific Coast and by a majority of those from the South, as well as by a considerable number from other parts of the country.——Satisfactory progress is reported in the annual statement of the Isthmian Canal Commission. Reference is made to setbacks caused by four slides, which required an additional excavation of 1,000,000 cubic yards of earth, and by three breaks, which added nearly 2,000,000 yards. During the year, 36,500,000 yards were removed. The maximum number of men employed, 38,676, was reached on March 31; the number at the end of the fiscal year was 35,578. There were no cases of yellow fever or plague, and the death rate for employees was 10.84 per thousand. Concerning the Canal's water supply the report says:

"Investigations carried on during the year indicate that during ordinary years there will be a considerable surplus of water from Gatun Lake, even in the dry season, and that the water supply of the worst known dry season for the last nineteen years, namely, that of 1908, would be sufficient to maintain through the canal an average daily number of passages three or four times as great as the average number now passing the Suez Canal, this after making reasonable deductions for evaporation, leakage, power supply and lockages."

The Commission maintains nineteen hotels, nineteen messes for laborers, and twenty kitchens for laborers. At the line hotels more than 2,000,000 meals were served at 30 cents each. The Tivoli Hotel showed a profit of $4,573 for the year.

Failure of Mexico's Revolutionists

There was no general uprising in Mexico on the 20th, the date chosen some time ago by the revolutionists, but a collision between them and a small body of troops at Guerrero, about 50 miles from the Texas boundary, was reported. On the 21st,

DR FRANCISCO I. MADERO,
The Mexican Revolutionary Leader.

however, a party of revolutionists attacked the tax collector's office in Gomez Palacio, which is not far from Torreon, and took $400. A few hours later they were driven to the hills by troops. There were similar disturbances in several other towns, and these were the subject of exaggerated reports in the press, which caused an impression that a widespread and formidable revolution was at hand. It is known now that only 25 persons (instead of 150) were killed in the riots of week before last at Puebla. On the 22d the revolutionists were driven out of all the towns where they had gained a foothold. At Parral, 13 of them were killed. President Diaz, despite his advanced age, was personally directing the Government's forces, working eighteen hours a day, and causing the arrest of suspected men, of whom he had a long list. The army was loyal, as a whole, altho a few soldiers had joined the revolutionists. Early in the week it was reported that General Bernardo Reyes was returning from France and would support Madero, the revolutionist leader, who had proclaimed himself provisional President. But on the 24th General Reyes, in Paris, published a statement. President Diaz, he said, was "a great patriot" and would speedily restore order. Madero lacked experience and had had no public career to make him formidable, but if a man of greater prestige, especially one having influence in the army, should appear behind him, the situation might become grave. He himself intended to remain in France and complete his mission there. President Diaz telegraphed this statement to all the cities and towns of Mexico. It is said to have insured the loyalty of the army. There is a report that General Reyes will be appointed Minister of War. On the 24th Foreign Minister Creel and the Minister of War declared that the Government was absolute master of the situation at every point, and that the revolutionists had become mere bandits or outlaws, fleeing from the troops. There was no doubt about any place except the small northern town of Guerrero, from which Madero's men, about 200 in number, had not been driven. The Government had confiscated Madero's extensive estates in the State of Coahuila. Madero himself was in hiding near the northern boundary. The jails were full of men arrested by President Diaz's orders. In a published statement he exprest regret that undue importance had been given to the disturbance by the United States press. What was probably the final engagement of the revolutionary movement took place on the 27th, twelve miles from the city of

Chihuahua, where 900 soldiers routed 400 Maderistas and killed 15 of them. ——James M. Reed, an American civil engineer, was shot and killed in Mexico City last week by a policeman who said that in this way he sought to avenge Rodriguez, the murderer who was lynched in Texas. The policeman is in jail.

Revolt of Brazilian Warships

The crews of Brazil's two new and very powerful Dreadnoughts, the "Minas Geraes" and the "Sao Paulo," mutinied on the night of the 22d, while the ships were lying in the harbor of Rio Janeiro, killed four officers, and then turned their guns upon the loyal ships and the city. They were soon joined by the coast defense ships, "Marshal Florian" and "Deodora," and the scout ship "Bahia." The mutiny began on the "Minas Geraes." Captain Neves, returning from a dinner on a French warship, found the sailors in control. He fought to regain command, and was killed, with three other officers. The mutineers had given command to Joao Candido, a sailor, who is said to be a negro. The movement at once spread to the "Sao Paulo" and the "Bahia," whose officers were overpowered and put on shore. The rebel squadron (which is the better part of Brazil's navy of fourteen vessels) then steamed around the harbor, flying the red flag. It captured a coal depot on an island. To President Fonseca the mutineers sent a wireless message demanding that corporal punishment on the ships be abolished, that the men's pay be increased in accordance with a bill recently introduced in Congress, and that their labor be reduced by enlarging the crews. They promised to bombard the city if these demands were not granted. There was no response, and the threatened bombardment was begun. On the 23d, shells were occasionally dropped in the city. Very little property was injured, but a woman and two children were killed. A member of Congress named Carvalho, formerly a naval officer, went out to the squadron under a flag of truce. The mutineers insisted upon their demands and also upon an act of amnesty. The Senate yielded and passed the desired act, but the Chamber of Deputies hesitated. On the following night the "Minas Geraes" took a position opposite the Government Palace and cleared for action. Two or three shells were dropped near the naval arsenal. This hastened action in the Chamber, where the mutineers' demands were granted, and an act of general amnesty was passed, by a vote of 114 to 23, after a stormy debate, in which blows were exchanged. When the time came to report the action of Congress to the mutineers they had put out to sea, still flying the red flag, but they returned on the 27th and restored the ships to the Government. Before leaving the harbor they sent to the President the following message:

"We express repentance for the action we took for our defence, and for the sake of order, justice and liberty we surrender our arms, confident that amnesty will be granted us by the National Congress and that corporal punishment will be abolished, as prescribed by law. It is our request that the internal service of the ships should be attended to by increasing the number of men without further sacrifice on our part. We remain obedient to your Excellency, in whom we are greatly confident."

The British Parliamentary Struggle

The present campaign in England is making up for its brevity by its violence. The issue is very sharply limited to the constitutional question of the reform of the House of Lords. The Government's veto bill was introduced into the Upper House by the Earl of Crewe. He said the bill constituted a request by the Government that the country restore a reasonable measure of freedom to its chosen representatives. In opposition to the Government bill the Marquis of Lansdowne presented his plan for overcoming the difficulty of a conflict between the two houses in the following resolutions:

It is desirable that provision be made for settling differences that may arise between the House of Commons and this House as reconstituted and reduced in numbers in accordance with the recent resolutions of this House.

That as to bills other than money bills such provision should be made on the following lines:

If a difference arises between the Houses in regard to any bill other than a money bill in two successive sessions and during an interval of not less than one year, and such dif-

ference is unable to be adjusted by other means, it shall be settled at a joint sitting composed of the members of the two Houses, provided that if the measure relates to a matter of great gravity and has not been adequately submitted to the judgment of the people, it shall not be referred to a joint sitting, but submitted for decision to the electors by a referendum.

That as to money bills, the provision should be on the following lines:

The Lords are prepared to forego their constitutional right to reject and amend money bills which are of a purely financial character, provided effectual provision is made against "tacking," and provided that if any question arises as to whether a bill or any of the provisions thereof are of a purely financial character, that question shall be referred to a joint committee of both Houses, with the Speaker of the House of Commons as chairman, and who shall have a casting vote only. If the committee holds that the bill or the provisions in question are not of a financial character, they shall be dealt with forthwith at a joint sitting of the Houses.

These resolutions were adopted, and together with Lord Rosebery's plan for the reform of the House of Lords, constituted the reply of the Opposition to the proposals of the Government. On their side the Liberals question the sincerity of the professed intention of self-reform on the part of the Lords. If they had been in earnest about it they have had abundant opportunity in years gone by. The proposed changes, according to the Liberals, would make the power of the House of Lords permanent and invulnerable, while at the same time it would be as certainly Conservative as it is at the present time. The Unionists are making the most of the danger of home rule and the $200,000 collected in the United States and Canada by Mr. Redmond for the Irish cause. Mr. Lloyd-George, Chancellor of the Exchequer, turned the tables by calling attention to the fact that the Opposition owes much of its power to the same source. In the last twenty years $80,000,000 had been paid in cruel rack rents to aristocratic Irish landlords by the children of the Irish peasants who had been driven across the sea by their oppression, and many noble houses tottering to their foundations had been restored by marriages with American heiresses. The Duke of Marlborough takes these remarks as a personal insult to himself and responds in the following bitter language:

"When Mr. George did me the honor of staying at Blenheim nearly three years ago, I certainly did not suspect I should ever eventually become a target of his insolent and unsavory invective. At that time I must have thought him a gentleman.

"But he seems to have since reverted to type and become himself. In his later appearances he is neither a pleasant nor an edifying spectacle. What do the real poor think, what can they think of this sham poor man, wallowing himself in every luxury which £5,000 a year can bring, while he stirs up the embers of class hatred? And let me point out to Mr. Lloyd-George that it is cowardly to attack the Lords thru their ladies, and that his insults touch at least one of his Cabinet colleagues."

Suffraget Riots

The violence of the suffragets continues to increase as they realize that the Parliament in which they had presumably a majority in favor of equal suffrage will be dissolved by the Government without being allowed an opportunity to vote on that subject. The woman suffrage bill, a compromise measure granting the ballot to taxpaying and self-supporting women, passed its second hearing in the House of Commons, but the Government did not grant it facilities for coming to a final vote, altho during the Conference there was a lull in legislation which might have afforded an opportunity for the consideration to such a measure. The Premier's statement that if he was still in power at the next session of Parliament, the Government would give facilities for the consideration of a woman suffrage bill so framed as to admit of free amendment did not satisfy the suffragists, altho it is being seized upon by the Opposition as another weapon against the Government. The London *Times* claims that the adoption of woman suffrage would weaken the British hold over India. Mr. Asquith, Mr. Birrell and Mr. Lloyd-George have during the past week been subjected to violent physical attacks by the suffragists. A mob of several hundred women broke thru the cordon of constables protecting the Premier's residence, No. 10 Downing street, and many missiles were thrown at the building without, however, breaking the windows. Premier Asquith was caught in crossing Parliamentary square and struck by a woman named Henrietta Williams. A dozen policemen came to his rescue and got him into a

taxicab. Augustine Birrell, Chief Secretary for Ireland, while passing thru St. James Park to the Atheneum Club was surrounded by a crowd of suffragets and suffered so much from their kicks and blows that he was confined to his bed next day and obliged to cancel his immediate engagements. In a later attack upon No. 10 Downing street the suffragets succeeded in smashing all of the lower windows. The women who were concerned in this and in the personal attacks upon the members of the Government were not released as the others have been, but were convicted and given the option of paying fines or going to jail. The women, who during the trial busied themselves with their knitting work, all elected the jail. Over 200 arrests have been made, including many women of prominence and high social position.

Tolstoy's Funeral

In accordance with his exprest desire the funeral of Count Tolstoy was of the simplest character and without the rites of the Orthodox Church. When the train from Astopova reached the railroad station of Zaseika the coffin was taken from the car by Tolstoy's sons and borne on their shoulders thru the woods and fields of Yasnaya Poliana to the house two miles distant. Thousands of students and peasants lined the pathway and filed thru the study where the body rested. At sunset it was carried thru the great throng of people, who were kneeling and singing the funeral hymn "Eternal Memory," to a wooded knoll on the estate. Tolstoy had exprest a wish to be buried here "under Poverty Oak, where in childhood we buried the green hobby horse."——When the Duma assembled the President of the Assembly called attention to the event in the following words:

"A great sorrow has betallen the fatherland. Tolstoy, the great thinker, artist and genius, the pride of Russia and the glory of mankind, is dead. May the merciful God open to him the kingdom of heaven!"

The Duma adjourned for a week in his honor, altho the extreme Conservatives opposed the motion arguing that it was improper to pay official homage to a man who had so bitterly attacked State and Church and family, and had no more respect for the Duma than for any other branch of the Government.——In St. Petersburg and other Russian cities crowds of people gathered on the streets and squares to sing and speak in honor of Tolstoy, but were dispersed by the police. In Kief a girl was trampled to death and more than a score of persons wounded by a charge of the Cossacks. ——The Czar made the following marginal note on the report of Tolstoy's death submitted to him by Premier Stolypin:

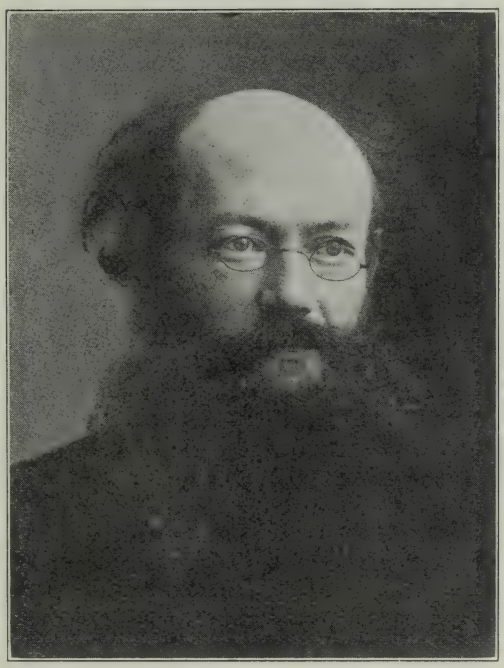
"I heartily regret the death of this great writer, who embodied in the golden age of his talent for creation the types of his fatherland, thus constituting one of the most glorious eras in the life of Russia. May he find in God a merciful judge."

The Socialists in the Reichstag

The opening of the Reichstag finds the German Government in a difficult position. The increase in the cost of living, which is ascribed to the protective policy, especially the exclusion of foreign meats, has caused widespread discontent, and the stringent measures of the police, as well as the rash claims of the Kaiser, have aroused opposition to the Government, which finds expression in an increased Socialist vote. The Reichstag now contains fifty-two Social Democrats, which is nine more than when the Reichstag adjourned six months ago. If popular feeling continues to run in the same direction it is possible that the Socialists may even have a majority after the elections of next year. The first question raised in the Reichstag was the admission of American meat, on which however, the Government refused to make any concession. The Minister of Agriculture declared that Germany could not afford to take the risk of infecting its own herds by importing diseased cattle, nor endanger the health of the community by allowing American meat to be sold in the German market. The Minister of the Interior denied that there was a scarcity of meat in the country, for the statistics showed that there was an average supply per capita and the poor were not underfed. Meat has simply risen in price, together with all other commodi-

ties, on account of the higher standard of living. All classes indulge in more luxuries than formerly. According to the calculations of the best economists, the wages in Germany had increased on the average thirty-seven per cent. between 1896 and 1910, while the cost of living had increased only twenty-two per cent. ——The Socialists, under the leadership of Herr Ledebour, made an attack upon the Government on the ground that the Kaiser had broken his promise not to make unauthorized statements, by his speech at Königsberg, August 26, in which he claimed that the Hohenzollerns ruled by divine right and not at the will of the people. "The Elector of Brandenburg," Ledebour said, "obtained the Prussian Crown from the Holy Roman Empire by begging and whining and all manner of entreaty at the Court of Vienna." He said he did not object to the Emperor's speaking as much as he chose on all possible subjects which His Majesty thought he understood, for, he continued, "none of our opponents plows so thoroly the soil wherein Social Democrat seed is to be sown as Emperor William II." But, he continued, it was unfair that those who undertook to reply to the Emperor should be prosecuted on the charge of insulting his Majesty. He declared that the Kaiser was "hereditarily afflicted with the self-glorification and the delusions which had brought the Stuarts and Bourbons to ruin and cost the Braganza dynasty the throne of Portugal." "Germany," Herr Ledebour said, "must be governed in a democratic parliamentary manner. The Emperor cannot attempt to rule against the opinion of the people. If he does, his position becomes untenable. He must put aside his personal opinion or the monarchical system will be eliminated." In his reply Chancellor von Bethmann-Hollweg asserted that the Kaiser's theory of his own position was justified by the history of the development of the Prussian state, and added that he was glad to see the Socialists come out openly and proclaim their republicanism, thus disclosing to the country the real aims of their propaganda. The leader of the Conservative party, Dr. von Heydebrand, declared that the bold avowal of the Socialists in favor of the republic made it imperative that the Chancellor should not wait for the arrival of the revolution, but should take immediate steps to nip it in the bud.

A Persian Railroad Scheme



The Anglo-Russian agreement in regard to Persia and other Central Asian states makes possible the construction of the long-delayed railroad connecting India with Europe. The missing link is the stretch of country between Baku in the Russian Caucasus and Nushki in British Baluchistan, about 1,600 miles altogether. A syndicate of Russian banks has been formed with the approval of the Government for the purpose of financing the railroad, and its agents are now in England to secure British co-operation. It is estimated that the cost will be somewhat over $100,000,000, and when it is completed the journey from London to Bombay may be made in a week. The railroad will follow down the west shore of the Caspian Sea, from Baku to Resht, thence straight across Persia thru Teheran and Kirman to Nushki. The terminal portions within the territory of Russia and Great Britain will be respectively under the exclusive control of those countries. The intermediate section thru Persia, about 1,100 miles, will be under the management of an international company, in which Russia, Great Britain and Persia will have the dominating interest. The Germans under the old regime obtained a concession for the construction of a railroad from Constantinople to Baghdad, but less than half of this has been constructed, and if it ever reaches Baghdad it is not likely to be extended thru Persia or even to the Persian Gulf, now that Russia and Great Britain jointly hold Persia. If constructed to the Persian Gulf and supplemented by a steamer line to Karachi, the time necessary from London would be about twelve days. The new Anglo-Russian line will therefore be much shorter, and since the German railroad thru Turkey could not be expected to pay for itself with local traffic, the proposal for the construction of the new line strikes a severe blow at its prospects of success.

Tolstoy's Influence in Russia

BY PRINCE KROPOTKIN

[No living man is better qualified to interpret Tolstoy's writings and influence than Peter Kropotkin. By race, friendship and views the two men are allied and have stood for two generations as the leading antagonists of bureaucratic Russia. Both have been advocates of extremely unconventional principles tending toward anarchy, but they have differed as to methods, for Kropotkin has not shared the absolute non-resistance theories of Tolstoy. This article was written for us some time ago, but in response to our recent question as to whether it needed revision in the light of later events, the author states that he considers no changes essential.—EDITOR.]

"WHAT is Tolstoy's influence in Russia?" is a question which I was often asked during my tour in America. The question is a very interesting one indeed, altho it is easier to ask it than to answer it. Not only because a man's influence can seldom be correctly estimated during his lifetime, but also on account of the variety of subjects, religious, moral, economical, political and artistic, upon which the voice of the great writer has been heard within the last thirty years.

PRINCE KROPOTKIN.

Taking, for instance, his last great work, "Resurrection," an intelligent Frenchman has made about it this remark: *"C'est un livre qui pèsera sur la conscience du siècle"*—"It is a book which will weigh upon the conscience of the coming century." And so it will, so it already does. It is impossible to read this novel without being assailed by a number of questions concerning the fundamental problem of each civilized society—its right of punishing those who break its laws, and the adequacy and juctice of the present system of punishment. We hand over our "criminals," who are, to a great extent, a product of our own penal institutions, to our courts of justice and jailers. But is this a reasonable and adequate means of self defense? Are we not adding a new injustice, and consequently a new evil, to those which already exist?

The question may not be new. However, few were those who had fixt attention to it, altho its literature was already very bulky. Now that the images of Katyusha and Neklúdoff, the court, the magistrates and the jurors — all familiar to us—have been imprest upon our minds by the colossal talent of Tolstoy (and "Resurrection" has been read in Russia in at least half a million copies; 220,000 in one single weekly), we cannot shake off these questions; we *must* find a new solution. Russia was always inclined to view the matter in the same light as Tolstoy does; for the Russian peasant the criminal has always been a *neschast nyi*—"an unfortunate"; but the peasant has had but little voice in the framing of Russia's institutions; and the new zeal of the reformers who undertake to redeem the "children criminals," the renewed endeavors of the prison reformers, and the articles recently published in the United States, in England, in France and in Russia itself, by authorities on prisons, and yet conceived on

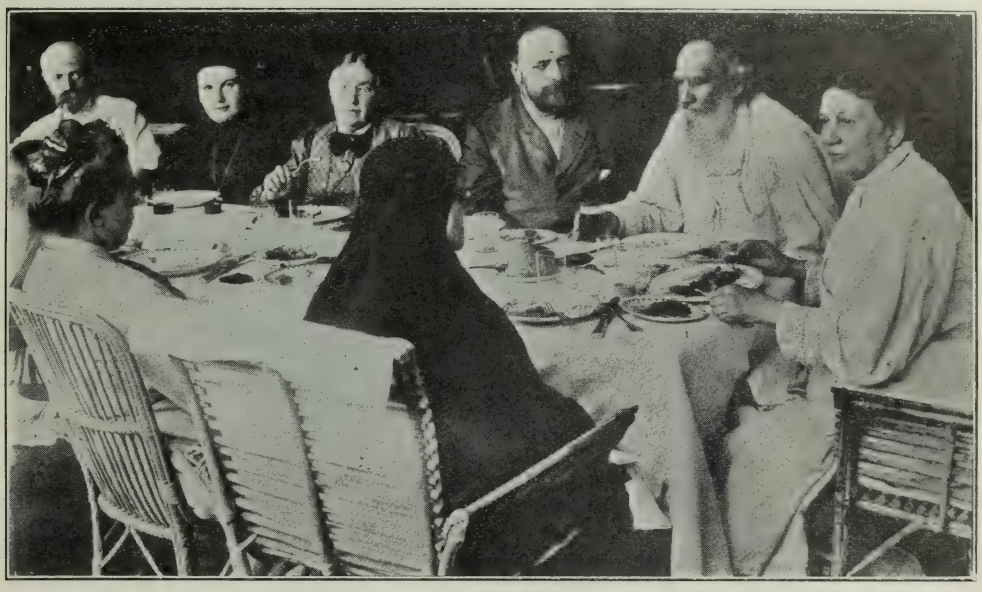
the same lines of thought as Tolstoy's, show that his last book really weighs already upon the conscience of the century.

Or, taking another great work of Tolstoy, "War and Peace," its deep and far-reaching influence is especially evident in Russia. It is felt in art, on the stage, among the painters, the novelists, and even in the daily press. As a rule, the Russian nation is not warlike. The peasant looks upon war as upon a calamity which has to be lived thru, but never can be desirable. The mass of the soldiers, taken from the plow, look upon warfare in the same way. Of course, there are officers who only see in war an opportunity for advancing in grades, and there are some Cossacks who see in it an opportunity for pillage. But the mass of the people thinks like our poet, Lermontoff, who wrote about his fatherland:

> "Its glory in the battlefield
> Does not appeal to me."

"War and Peace" consequently found a prepared ground; but the representation, in its true light, of the war-epopœia of 1812, of which the Russians are so proud, gave a new power to those who were opposed to war but did not dare to speak, and it silenced those who hitherto indulged in warming up the warlike spirit of the few by boasting of the great victories obtained by the Russian army over Napoleon I. The depth of the influence which "War and Peace" has exercised in Russia may be best appreciated from the fact that two such brilliant artists as the young novelist Garshin (his novels are translated into English) and the painter Vereschaghin, whose pictures are well known all over the world, gave all the powers of their talent to anti-war propaganda. And the fact is only the more striking on account of Garshin and Vereschagin having been both, like Tolstoy himself, military men, well known for their gallantry and audacity during the war.

The influence of Tolstoy's work was especially felt in Russia during the Turkish war of 1877-78. There was not one single war correspondent at that time who would have indulged in such expressions as these, which were quite common lately in the English press: "We peppered them with grape shot," "The lyddite bombs did splendid work," "They fell like ninepins," and the like. The most vulgar Russian war correspondent did not dare at that time to write "poetical descriptions" of the battles; and if rigorous censorship had not interfered, we should have seen the Russian papers full of the most vigorous and the most unreserved condemnation of the ways in which the Cossacks behaved in Manchuria during the Chinese war of 1900. Numbers of letters from Russia authorize me to make this statement. Tolstoy's share in bringing about these results is certainly immense, and his anti-war propaganda is surely what makes him especially dear to the great bulk of the Russian nation.



Going now over to another subject, every one who has read that dramatic novel, "Anna Karénina," surely remembers the beautiful scene of hay-making in a village. All the men, including Lévin, advance in a row, mowing the grass with their sithes, vying with each other in the width of the swing of one's sithe and in the rapidity of progress, while the women shake out the grass and put it in rows. Here, again, in his glorification of manual labor on the land, Tolstoy only exprest an idea which was widely spread at that time in Russia. Thousands of young men abandoned then their wealthy homes and went to work with the peasants on the land, or with the factory hands in the factories, while others settled in the villages, living the extremely poor life of peasants, midwives, doctors' aids, school teachers, scribes, wheelwrights and so on. "Simplification of life" and a return to the peasants' conditions of life, in order to help the emancipated serfs in getting education, to organize sanitary service among them, and the like, were the watchwords of the time. Numbers of novelists, such as Mordovtseff, Madame Krestovskaya, and quite a phalanx of so-called "populists" dealt with the subject in their novels. But here, again, when the great artist gave *his* picture of Lévin's work in the fields, when he had portrayed the joys found by Lévin in the exercise of his forces in the face of Nature, at sunrise and at sunset—these pictures engraved themselves in the minds and gave a new powerful impetus to the whole movement. What Turgenieff did for the intellectual and philosophical as-

pect of the Russian Risorzimento movement, Tolstoy did for its popular, democratic and "populist" aspect. That Tolstoy himself—the great writer and artist—took to the life of a peasant, following the plow and leading the harrow, had perhaps more influence abroad than it has had in Russia, where very many were doing the same in a quiet way, without its becoming known to the world. But his example reached such spheres as could not be reached by the propaganda of our circles when we launched the watchword: "Return to the people! Be the people!" And Tolstoy's perseverance in this line, and his subsequent writings maintained the idea which otherwise might have faded away.

The artificiality of life among the well-to-do classes, their continual hunting after new fads, their worship of art—not as an inspiration for nobler work but only to fill up their leisure time, and their philosophical and highly intellectual discussions ending in no action—not even in a defense of the rights of the intellectually developed individual—all these were so pitilessly and persistently denounced by Tolstoy that even those who were skeptical rallied round him.

In the face of these teachings, the "populists" maintained that Russia, which has 90,000,000 peasants relying for their living upon agriculture, cannot press thru the same phases of development as England did; and that the well being and intellectual development of 20,000,000 farmers must be the first aim of a Russia, who must look for examples and inspiration to the United States rather than to England. But the voice of the "populists" was nearly stifled by the Neo-Marxists in the 90's.

During that period Tolstoy remained the flag-bearer of the "populists." He became, so to say, the representative of all those thousands of men and women who live in Russia in the villages and carry on there their modest work of enlightenment amidst the poorest class, the peasants. And at the present time there is no exaggeration in saying that surely every school teacher, doctor, nurse, midwife and so on who live in the villages amidst the peasants are Tolstoites. Most of them do not share Tolstoy's views upon Christianity, and most of them surely do not agree with his views upon non-resistance; but they find in his writings the inspiration which makes them

devote their energies to the yet uneducated masses, and to start village schools, village libraries, village theaters, village operas, village sanitary stations, village school gardens and farms, and so on. In this respect Tolstoy's influence is even deeper and wider than the influence which Rousseau has ever exercised in France.

I wish I could appreciate in a more concrete way his influence as a religious teacher; but for many self-evident reasons this is almost impossible. All I can say is, that it must have have been immense at a certain time. I visited in 1897 a small Mennonite town in Manitoba, and found there, in the headmaster of a "progressive school," which had been started notwithstanding the opposition of the elders, a convinced and enthusiastic follower of Tolstoy.

A great religious movement, very similar to the movement which took place in Western Europe in the sixteenth century on the eve of the Reform, is now growing up in Russia. One-third, at least, of the peasants, artisans and merchants belong to all sorts of nonconformist churches, chapels and sects, offering the greatest imaginable variety in their teachings. While some of these nonconformists are merely fanatical interpreters of the mere letter of some passage of the gospels (flagellants and the like), or merely cling to a mere symbol, such as the eight-branched cross, or the "unrevised" prayer books of old, the others endeavor to revive the old communistic spirit of early Christianity, and deny to the state the right of inflicting military service upon the community, as well as its right of punishment—thus corresponding to the sixteenth century Anabaptists.

LEO TOLSTOY AND WILLIAM J. BRYAN.
This picture was made in 1906, when Mr. Bryan visited Tolstoy on his trip around the world.

Among all these nonconformists Tolstoy enjoys a great popularity and respect. Many came to see him and to

have a talk with him. His religious and moral pamphlets are widely discussed among the nonconformists, and the result is that they become inspired more and more with the moral aspects of Christianity, and cling less and less to the letter. "Not the words, but the sense of the gospels" is the substance of Tolstoy's teachings; and as the nonconformists of Russia see in him an adversary of the established Greek Orthodox Church, they willingly take from his writings the idea of moral, widely humanitarian inspiration which they never would have listened to if they came from a regular member of the Russian clergy. The excommunication of Tolstoy by the Holy Synod has only increased his influence among the Russian nonconformists.

And, finally, one cannot pass under silence Tolstoy's influence as a critic of art. What Tolstoy says in "What Is Art?" against art for art's sake, and the necessity of a higher moral inspiration in all works of true art, is not new in Russia. Our greatest writers, Lérmontoff, Hèrzen and especialy Turgenev have never understood art in a different way, and our great literary critics, Tchernyshévsky, Dobrolúhoff and Pisaréff, have long ago familiarized Russian readers with the views which Tolstoy has now developed in "What Is Art?" The artist who can have great inspirations, and for whom they are part of his life, cannot but strive to express them in his artistic productions, and the higher and broader these inspirations are, the higher will his art stand. Upon this point Tolstoy did not introduce anything new in Russia; while by describing the higher moral and humane inspirations in art as "Christian art," he only created a deplorable confusion. But it was necessary that these principles of purpose in art should be recognized by a great artist, and this Tolstoy has done unreservedly.

As to his second contention, that art becomes really great when it is accessible to the greatest possible number of human beings—which contention has called forth animated protests of the artists—permit myself to say that, with some qualifications, it is substantially correct. More than that, it is sure to exercise a deep influence upon Russian art altogether. One hardly will agree with Tolstoy when he says that a Russian popular song is greater art than one of the latest sonatas of Beethoven, because the former is accessible to every one, while the latter is accessible to but a limited number of people; but the fundamental idea of this assertion is correct, because the best art of Murillo, or Raphael, or Shakespeare is really accessible to the masses.

Tolstoy's example is certainly most unhappily chosen, because of all arts music, namely, orchestra and piano music, requires the most conventional training, or, rather, some adaptation is required to enjoy a symphony or even an opera—just as a certain adaptation is required before one begins to enjoy a stereoscopic view. A person who enters an opera house for the first time feels bewildered to begin with; but after some time he begins to enjoy the sounds; later on he is carried away by them. Notwithstanding the artificiality of the opera and its sung dialogs, the adaptation is usually very rapid with the great number; it requires a long time with the others, and may never come with the third. Italian peasants and artisans enjoy immensely the Italian operas, and altho it was believed a few years ago that Russian peasants would hardly enjoy Russian operas, it appears now that they enjoy immensely Dargomyzhsky's "Mermaid" and Syeroff's "Rogneda," altho the latter was written to a great extent under the influence of Wagner. As to Shakespeare's dramas, they were thoroly enjoyed by the London crowds in the times of Elizabeth, and are now enjoyed when some of his dramas have been played before village audiences.

It thus remains an open question whether a short accommodation would not be sufficient to make a quite ordinary person, endowed with a musical ear, enjoy a Beethoven sonata.

At any rate the chief service rendered by Tolstoy's book on art was his admirable protest against the "mannerism" and the "learned art" of those who attach much more value to the technics of art than to its contents.

This must be said, that in every one of the just indicated directions the influence of Tolstoy has been, and continues to be, very wide and deep, the more so as he

has found in Russia a well prepared ground for all the ideas he now advocates. Not only is he venerated and admired in Russia, not only has he followers everywhere, but he cannot appear in public, even at a remote railway station, without being surrounded by a crowd of men and women who testify him their *love*. "*Dear* Lev Nikolaevitch," "*our own* dear Lev Nikolaevitch," is how he is addrest. He has worked all his life for love, and he reaps it now all over Russia.

BROMLEY, KENT, ENGLAND.

TOLSTOY'S FAVORITE EXERCISE.

Tolstoy as a Man of Letters

BY WILLIAM LYON PHELPS, Ph.D.

LAMPSON PROFESSOR OF ENGLISH LITERATURE AT YALE UNIVERSITY.

IN one respect we have to go back to the death of Goethe in 1832 to find a parallel to the death of Tolstoy in 1910. I am not trying to prove that Tolstoy is as great a writer as Goethe, but this much is clear: during the last ten years of Goethe's life his position as the greatest living man of letters in the world was no more obvious and undisputed than the supremacy of Tolstoy during the first decade of the twentieth century. It is seldom in human history that any one living man can be confidently asserted to have no rival among his contemporaries in all the nations of the earth; but if a secret ballot had been taken during the last ten years among readers in civilized nations to discover who was the foremost living writer in the world, Tolstoy's name would have led all the rest by an enormous majority. Indeed, the sentiment on this point would have been much nearer unanimity than it would have been in the case of Goethe. For the English critics, with the exception of Carlyle, did not begin to appreciate the genius of the great German until years after his death. De Quincey, for example, said that Coleridge was a much greater writer than Goethe! On Saturday, November 19, anybody could have answered the question, Who is the world's greatest living writer? On Sunday, November 20, nobody could have answered it. There is not a single person on the planet at this moment who seems worthy to fill the place left vacant

by Tolstoy. This makes his death an international event.

Since the beginning of the publication of the "Memoirs" of Tolstoy, edited from Tolstoy's own notes, letters and journals by Birukov—the work is still in process of publication, altho several volumes have appeared—there has been a reaction against Tolstoy on the part of Russian critics. Perhaps it would be better to call it, not a reaction, but a shifting of the point of view. For many years Tolstoy was regarded as a world classic, an objective writer, who with vast creative power out of a wonderful imagination constructed first class novels and immortal characters. But since the appearance of these "Memoirs," and a knowledge of their contents is absolutely indispensable if one wishes to understand rather than merely to enjoy Tolstoy's work, several rather surprising things have become perfectly clear. Tolstoy was not an objective writer at all, but almost wholly subjective. The characters in all his novels, whether historical or realistic, are either correct portraits of his friends and acquaintances or are simply the man himself at different phases of his development. In a word, his novels, taken together, are his material and spiritual autobiography. Now many critics are sadly disappointed in all this, and feel that it somehow takes Tolstoy off his lofty eminence, that it makes him out much less of an artist. I do not see that this follows at all. But whether it does or not, there is no doubt of the fact that Tolstoy has drawn exclusively on his observation and experience. That is the reason why his books seem so true to life: they seem true because they are true.

His literary career has extended over a period of almost sixty years; his first book was "Childhood," and some of his latest work has appeared in recent numbers of THE INDEPENDENT. "Childhood," "Boyhood" and "Youth," which he wrote and published separately, attracted considerable attention among Russian critics. Dostoevski recognized the importance of the new man at once, and inquired excitedly what the signed initials L. N. T. meant. But these autobiographical stories were not masterpieces, tho they showed that simplicity, sympathy and sincerity which are the three dominant qualities of Russian fiction. Tolstoy very soon, however, in his three war sketches called "Sevastopol," proved himself to be a writer of the first rank. These are aglow with the unmistakable flame of genius, and all Russian war literature that followed from writers like Garshin, Andreev and Kuprin owe much to these early writings of the young officer Tolstoy. When Turgenev read "Sevastopol," away back in the fifties, he shouted "*Hurrah!*" and drank the author's health. And in spite of the long and melancholy quarrel that separated Turgenev and Tolstoy, the former never lost his faith in the younger man's literary power.

Tolstoy conquered the world with his epical historical novel, "War and Peace," but his fame outside of Russia did not seem secure until the publication in the seventies of his masterpiece, "Anna Karenina." This astonishing work has all the marks of immortality, and is one of the few novels that must unhesitatingly be assigned to a place in the front rank of the world's fiction. Indeed, I think it would be difficult to name with confidence a novel in any language that is distinctly superior to "Anna Karenina." I am aware that many Russians regard "War and Peace" as Tolstoy's best work; but personally I not only prefer "Anna Karenina" to any of his other productions, I would go so far as to say that if the choice were forced I had rather have "Anna Karenina" than all the rest of Tolstoy's books put together. It is a badly constructed piece of work, as all Russian novels are, except those by Turgenev; for, despite the fact that the Russian novels are the best in the world, Turgenev was the only Russian prose writer who showed genius in construction, and he remains their greatest artist. Prosper Merimée and George Moore both said that Turgenev was the greatest artist that has existed since antiquity.

"Anna Karenina" is an example of realism in its most impressive form. It shows what I should call both external and internal realism. It is a comedy of manners and at the same time a tragedy that reveals the very springs of passion. No caprice is too trivial, no emotion too colossal, to be beyond the writer's grasp. Besides the leading quartet of characters,

Anna, Vronsky, Levin, Kitty, there are a vast number of persons who seem amazingly alive. There are scenes in this book, like the horse race and the suicide of Anna, that are indelibly stamped on the reader's memory. And the moral force of the story is stupendous. It was quite unnecessary for Tolstoy to write religious parables and Christian tracts, beautiful as many of them are; for the Christian path of life is shown so plainly in this tremendous novel that the wayfaring man, tho a fool, could not err therein.

Shortly after the publication of "Anna Karenina" Tolstoy gave himself up to the teachings of the New Testament, making a complete and supreme surrender. Since that time, in spite of the eloquent entreaty of the dying Turgenev, Tolstoy abandoned literature as he had previously understood it, and wrote religious, ethical and sociological tracts. Many of these are little works of art, on account of the beauty and simplicity of their style; and their style has had far more to do with their circulation and their influence than the subject matter or the cogency of the reasoning. Still, during the last thirty years, three novels appeared that unquestionably belong to literature. These are "The Death of Ivan Ilyitch," "The Kreutzer Sonata" and "Resurrection"—works that indicated plainly that the genius of the writer was manifesting itself in a splendid plenitude of power. Indeed, the very latest things that came from the pen of the old writer, mere trifles in size, some of them, have all revealed that vital force which he alone possessed.

Turgenev rejoiced to have been Tolstoy's contemporary. We may all rejoice that we have lived in the same time with so mighty a man, and have witnessed the first appearance of works that will be remembered for generations after we are forgotten. Many people mourn the dearth of great writers, and one cannot help comparing German literature of today with that of one hundred years ago; English literature of today with that of fifty years ago; French literature of today with that of seventy years ago. It is pleasant to remember that we have lived in a time when Norway's two greatest writers were in full activity, and when one of the best novelists the world has ever seen was steadily producing masterpieces in Russia.

The four chief prose writers of Russia were all born in the nineteenth century, and sixty years ago all four were alive—Gogol, Turgenev, Dostoevski and Tolstoy. The youngest lacked the humor of Gogol, the art of Turgenev and the sympathy of Dostoevski; but he surpassed them in sheer vital force, and in that quality they were not easily surpassed.

NEW HAVEN, CONN.

Tolstoy

BY HARRY KEMP

In him the prophet reigned who sees
What other eyes but guess,
Life's slow convergence by degrees
Toward Peace and Righteousness.

His patriarchal beard fell grand,
He had that wizard brow
Which "Moses" gathered from the hand
Of Michael Angelo,

And his was dignity that comes
From Nature, not from men—
Not such as kings bestow with drums
And flourishes of pen.

He ever fought the unequal fight
Which comes of Wrong defied,
Was ever bridegroom to the Right
Which arms the weaker side;

For Wrong entrenches deep in lies
And wards with wile and pence,
But Truth such armament defies
Being her own defence.

His pulse grew still; he felt the Hand
Of that Event Divine
Which men call "Death"—nor understand—
Give him its seal and sign!

The barriers broke, his soul went free
To further quests afar,
And down the years his memory
Shall travel like a star.

LAWRENCE, KAN.

THE TOLSTOY HOME AT YASNAYA POLIANA.

Tolstoy at Home

BY KELLOGG DURLAND

[Mr. Durland is the author of "The Red Reign," the most widely known book on Russia and Russian conditions that has been written by an American since George Kennan's books on Siberia and the exile system. Mr. Durland spent all of the year 1906 and part of 1907 in the empire of the Czar. It was at this time that he visited Count Tolstoy at his home, Yasnaya Poliana.—EDITOR.]

TOLSTOY was enjoying a horseback ride the afternoon we reached Yasnaya Poliana. It was a clear day in early December. Snow softly blanketed all the country and the tree branches were white against a cobalt sky. All the way from Tula station we had been hearing about Leo Nicholaivitch, for our *yamschik* was one of Tolstoy's peasants. "He knows what is in our hearts," the *mujik* said, in explanation of his love for the count. Later we heard from the old man's own lips about the peasants he had visited that day. The life Tolstoy led in his home was infinite in its variety. So many aspects and activities go to make up the picture. During the several days of my visit I saw many sides of his existence, and I heard much more from his own people—his wife, his family, his friends, his peasants, his disciples. It was a wondrous world of itself, this Tolstoy home. And not so small a world by any means as the word implies.

"Yasnaya Poliana," which is interpreted Pleasant Clearing in the Woods, is set on a knoll that might approximately mark the heart of Russia. It is almost the geographical center of the Russia that lies in Europe, and there dwelt the man who above all others knew and understood the heart of the Russian people. Here came, as it must often have seemed to the Tolstoy family, all the world. Most of us journeyed thither in the spirit

of pilgrims, tho some came to scoff and some but to see. All were welcomed. Day after day thru all the months of latter years streamed visitors from every province in Russia, from every land on earth. Yet for each there was a room and a bright welcome, and a place at the hospitable table. No other spot has drawn so many different kinds of people from so many different places. Yet it is not on any highway, easy of access. A visit to Yasnaya Poliana entails long travel, and herein lies the greater tribute. Moscow is a long night's ride from St. Petersburg, and Tula is another night's ride from Moscow, and Yasnaya Poliana lies fourteen versts from Tula. But the weary distance was compensated when one felt the cordial grasp of the great warm hand and stood before the snapping, metallic eyes that twinkled deep in the cavernous sockets overhung by Tolstoy's beetling brows. The rugged frame, plainly hung with a loose peasant's blouse, sheltered a personality that did not disappoint. In the atmosphere so pregnant with the domination of this man we forgot about "Anna Karenina" and "Resurrection"; we ceased to be perplexed by moral doubts and creeds and theories and all the polemics he had launched upon the world. Here was Tolstoy. That was all.

COUNTESS TOLSTOY.

Yet not all. For there in his shadow lurked another, one who thru near a half century had hovered by him, about him ever watchful, always discerning, never wanting, until this second had become so much a welded part of the first that few of us remembered until afterward that there were two, and that the first without the second would not and could not have been what he was. At the long table in the great dining hall Tolstoy's place was at one end and at the other sat the Countess. The line of her guidance has not been set down on any chart nor written down in any book. Even Tolstoy himself forgot, so part and parcel of his life had she become. In the home this was clear to even the guest of an hour.

It was a crude, hand-hewn sledge that drew me over the crisp snow from the Tula station to the Tolstoy estate. We had only one horse, and, as time has little meaning to the *mujik,* we dawdled along and talked about the famine, the late war and the man I had come so far to see. This peasant had been drafted for service in the war and he took keen delight in telling us how Tolstoy had been helpful to the soldiers of his own village who were in Manchuria. None of the men wanted to go to war. They did not know what it was all about nor whom they were fighting. After the first battle this man and seven of his comrades from the same village got together to talk it over. They were all agreed that a battle was not at all to their liking. But how to escape further battles? "Let us write Leo Nicholaivitch about it," suggested one of them. The suggestion was accepted. It was in line with what they had been doing all their lives when they were perplexed and in trouble—they would go over to Yasnaya Poliana and have a talk with Leo Nicholaivitch. The letter was laboriously written, they all signed it, and it was started to its destination so far away. In due time it came to Tolstoy, who, touched by their simple faith, wrote back at length telling them

that all war was wrong, that the army ought not to be in Manchuria on its mission of slaughter, and that if their consciences were against it they did wrong to shoot at fellow human beings. The peasant continued:

"After that we always knew what to do. We knew in our hearts that it was wrong for us to fight. We marched into battle because we were made to do so, but after a few minutes the officers would go away somewhere and then we would run away. We always ran after that."

My invitation to Yasnaya Poliana was for several days. I wandered off across the fields with one of the household after I had been settled in the room I was to occupy, and so I did not see Tolstoy come in from his ride. Indeed, dusk, which settles early in that northland, in winter, had already descended when we returned. The house seemed to typify serenity, peace, comfort, as we approached. It was hard to realize that we were in the very heart of a land seething with revolt; that at that time the grip of Reaction was tightening as never before in the whole tragic history of that unhappy country, and that from border to border was wretchedness, misery and suffering. Pleasant it seemed standing there among the snow-coated trees in the quiet of the early evening hour; still and restful. Lights burned brightly within, and as we drew near the door a black poodle came to bark his playful, friendly welcome.

A man servant helped us unburden ourselves of our fur greatcoats and snow boots. At the head of the stairs the Countess stood waiting to take me to her husband, who was then resting in his study. She opened the door and motioned me to enter, then she turned and left. There he sat—Tolstoy! There was a thrill as the realization flashed upon one. "Good evening," he called in a cheery voice. "Come and sit near me," and he held out his heavy, toil-hardened hand. How warm it felt! The grip was firm. He said something about forgiving his not rising. I was too intent upon scanning his massive features to notice the first exchange of pleasantries, tho I was imprest by the friendliness of the greeting. "Tell me about my friends in America," he began as soon as I had drawn my chair near to his. "How is Ernest Crosby, and Henry George's son?" Several others he inquired about in rapid succession. Happily I knew some of those he wanted to hear from. A half hour must have passed before I had time to glance about the room and observe its orderly confusion. His plain desk was littered with papers, correspondence, pamphlets and books. Around the rooms were many shelves of books extending from the floor to eye level, while above, on the walls, were pictures and many photographs of men whom he had known and admired or whose work he appreciated. The photographs, like the books on the shelves, bespoke the universality of his acquaintance, his knowledge and his interests. There were photographs of friends in many lands, books in several languages. To me he spoke in English, at least at first. Later he dropped into French without apparently being conscious of the change of tongues. Never from the first minute did he treat me as a stranger whom he was receiving for the first time. His manner was rather that of one seeing again a friend after a lapse of time.

"Do you young men in America read Channing, Thoreau, Emerson?" he asked. "Do you read Garrison? All young men of the present day should read the writings of those four great Americans."

Repeatedly he went back to Henry George and Ernest Crosby. Those two, above all Americans whom he had known, he seemed to admire.

He talked on many topics, naturally including the unsettled situation in Russia at that time, and always coming round to his own religious views of life. A well-worn copy of Rousseau's "Emile" was on his desk and he read me many striking passages that exprest his own beliefs and teaching. One sentence that he reread several times has always remained with me: *"Si l'on n'eut écouté que ce que Dieu dit au cœur de l'homme, il n'y auroit jamais en qu' une religion sur la terre."* And he added:

"The great lesson that we have all to learn is to listen to the words God speaks to us in our hearts. We need no other religion or philosophy than this. We need no institution like a Church. This message is for the people of America as well as for the people of France or of Russia. The whole significance of the present terrible situation in Russia is that the

Russian people are being brought to the point where every other channel will be closed and only by turning to God will they be able to save themselves. Russia is now tending toward an abyss—moral, economic, political—and not until we are at the very bottom of that abyss shall we awake. But when the awakening comes it will be the greatest awakening the world has ever known for the whole people will turn to God as the only and direct salvation."

When Tolstoy grew tired and his conversation grew slow I withdrew from the room. At the evening meal in the dining-hall he also joined the company.

RECREATION AT YASNAYA POLIANA.
Count and Countess Tolstoy at the left.

A meal at the Tolstoy table was a memorable experience. There were always a dozen or fifteen to sit down together, and when I was there nearly every one represented a different political and religious opinion. In the immediate family was reflected almost every shade of opinion. There was Tolstoy himself, the avowed "anarchist"—was ever such a gentle, sweet, pure, kindly anarchist before? One son was not only a monarchist, but a supporter of autocracy, of the Czar, of Reaction in all its blackest forms. Another son was a Constitutional Democrat—a middle-of-the-road man. One daughter supported her father, while another agreed with her conservative husband, who was an Octobrist deputy in the Duma. Next to me sat a Social Revolutionist who supported terrorist tactics. Each was perfectly frank as to his own convictions, and open discussion was carried on every minute with the utmost animation, sometimes in Russian, sometimes in English or again in French, and now and again in German. The Count did not often participate in these remarkable forums, but he listened with closest attention. Sometimes he would get up from the table and with his hands clasped behind his back and his head bowed slowly pace up and down the room, never letting anything escape him.

Yasnaya Poliana is a big house without being grand or imposing, and its appointments are of comfort rather than of luxury. The self-imposed asceticism of the Count and the elegant indulgence of the rest of the family have both been exaggerated. Tolstoy in his later life

undoubtedly reduced his life to complete simplicity, but there could scarcely be real hardship when ever by his side was the one who, as has been so beautifully and truthfully exprest, "always managed to slip a piece of velvet under his crown of thorns at just the place where he wanted it to press hardest." His regimen was plain, but it could not smack of the pain of poverty. There were always loving ones near to tenderly forestall monastic flagellation and to contribute to making the atmosphere sweet and placid. It was, in every sense, a unique home. There never was one like it before, nor will be again. Prince and peasant were welcomed alike and every guest shared with all the family. Every one who came, from East or West, from North or South, brought something with him; news, ideas, seeds of thought, and each took away impressions that influence and last.

One son whom I met had recently had a period of worldly dissipation. His career had been eventful and far from the path his father desired him to walk. "When my father remonstrates," he would say, "I remind him that when he was my age he was a great deal worse, according to his own 'Confessions,' so that ends it!" And, perhaps, that was the secret of Tolstoy's broad humanism that each one who met him recognized and marked. He had lived completely. He had drunk of every cup, tasted every joy, every grief and every bitterness. So was he able to enter into the life and experience of every human being.

During the days that I remained on the estate many things happened, much was said, that I should like to share with all who are interested in this towering figure who so recently wandered away from the Pleasant Clearing in the Woods to so calmly, so unostentatiously, yet so dramatically meet his end; but for the nonce this brief and hasty glimpse must suffice, of the picture that must always be treasured in the memory of those who ever were privileged to look upon it—the picture of Tolstoy in his home.

New York City.

Landladies I Have Known

BY THE BACHELOR MAID

MY list is not so numerous as some. The Carlisles, for instance, have a record of thirty-seven for ten years of married life (they are now trying housekeeping), while the Wares confess to an average of two and a half a year since they came to this city on their honeymoon four years ago. But only very inexperienced persons—or those whom experience cannot teach—cherish the illusion that a new place can be found whose disadvantages will not balance the trials of another sort in the old, and therefore I, for my part, usually stay in a place until I am put out. (The foregoing will not, I trust, be taken too literally; I really never have as yet gone away under official escort or in a patrol wagon—or without my trunks. I only mean to group thus briefly and effectively a variety of circumstances which have at intervals made removal imperative even for one whose disposition is to want but little here below.) But what landladies I *have* had have been worth knowing, I think—from an educative standpoint.

My first belongs to my last year of college. I went back for more graduate study after a year at home, and overcrowded dormitories compelled me to seek a residence in the town. This I did by correspondence — a correspondence definite and businesslike, as I thought. On a rainy September afternoon my bag and I were deposited at Mrs. Thompson's door and I told the pretty girl who opened it to convey to Mrs. Thompson the news that Miss —— had arrived. Enter Mrs. Thompson—a little woman and pretty—smiling but manifestly bewildered. No, she had no room for me; certainly I had never engaged one. Upon reflection she believed that she did have a letter from some one of my name some time in the summer, before

she went to Newb'ryport for a month's rest, but Carrie attended to a good deal of her correspondence. I was young and rather timid then, and my rising tears touched the heart of Mrs. Thompson; also, what was more to the point, inspired her with an idea. I might have Miss Smith's room. Miss Smith had engaged a room on the third floor, but she hadn't been heard from for two or three weeks, and very likely she wouldn't come, so I might just as well go right up there. I went with joyful heart. Dinner was over, my trunk had come, and I was happily unpacking—albeit with a happiness somewhat tempered by the dimensions of the closet—when a brisk knock at the door was followed by the entrance of Mrs. Thompson. She was so sorry, but Miss Smith had come!! I omit the narration of the harrowing subsequent details. It will be sufficient to say that, after dumping my belongings promiscuously back into my trunk, I carried various toilet necessities down to the front room on the second floor, where Susan Gregory received me with a rage even more ill-concealed than my own. She wanted another girl for a room-mate, and I wanted no room-mate at all. (By Christmas nothing could have separated us.) And how I hated Mrs. Thompson, and despised the unwelcome, intrusive Miss Smith. (We have been fast friends all the succeeding years, and still exchange letters and Christmas presents.)

But before a week had passed I would not have taken anything for that front room, if it was so small that Susan and I had to take turns standing on the bed to dress, just because of the scenes I witnessed from its window. Over and over within the next few days I saw repeated, with ever-fascinating variations, the same drama in which I had played a leading part. A carriage drove up with two girls from Omaha, who had boarded with Mrs. Thompson the year before. "Hello, Mrs. Thompson!" they called, before the carriage had fully stopped, "here we are."

Mrs. Thompson rushed out. "Oh! you dear girls," and she kissed them both. "I'm *so* glad you're back. You're boarding up at the college this year, aren't you? What! You don't mean to say you expected to board *here?* Oh! I'm in a SCRA-APE! *I* didn't remember that you wanted a room *here.* I'm sure I don't know where I'm going to put you, for every room is full."

But she did put them somewhere, and others, till we numbered twenty strong. And it must be said that "the Thompsoniles" were reputed that year to "have the most fun of any girls in college." So I can hardly have the heart, when I recall the happy times and the friendships of that year, to say that some of them may not have been due to Mrs. Thompson's methods. "Mrs. Thompson's lack of methods" would be, however, a more accurate form of description, for nothing was systematic in her house except the way in which she changed servants. That took place regularly every fifteen days, and as regularly for the worse. And she could not manage her children or keep her accounts, she never knew when we had paid our board or how much, and apparently she did not care. But she let us make fudge in her kitchen and have private theatricals in her parlors, and sit up till all hours of the night, which is, as every one knows, one of the most damnable offenses against the regulations of every orthodox college. Certain members of the faculty lived—inconveniently—on the same street, and called on Mrs. Thompson at intervals upon missions of reproof and admonition, both of which she accepted in an amiable and reasonable spirit. She was sure, however, that the lights they had seen were in her own or her sons' windows, and then they must remember that she had several boarders (one) who were not students.

Then she would come to us.

"*Girls!*" impressively, "you just *must* shut your blinds tighter at night. I *can't* make those teachers believe the lights aren't in your rooms if *every* window in the house is lit up at midnight."

Honestly, I have always loved her for that. But from my present standpoint as a member of a college faculty myself I fear that I could not consistently recommend Mrs. Thompson as one of a list of approved keepers of boarding-houses for students.

The next autumn saw me many hundreds of miles both from New England

and my own home, and in a position as new to me as the region which environed it, since I had swung in the brief months of a summer vacation from the life of the college girl to the opposite pole of the college instructor.

It introduced me, too, to a new type of boarding-house. And I have known many men and women the annals of whose boarding-house doings would fill many books, but this is not a book, and it is landladies, and not their boarders, whom I have proposed to make my theme. Among many dissimilarities and individual peculiarities I have found a few characteristics which unfailingly mark them all. Usually widows, they have to a woman "seen better days," and, with only one exception in my experience, theirs is "a *home,* not a boarding-house." And "all the comforts of a home" embrace practically the following delights: A close watch upon your coming and going, confidential and fluent revelations as to the most intimate miseries of your landlady's existence, especially her inability to pay her coal bill (with intimations that for the size of it and likewise the gas bill you are the one principally to blame), paucity of towels, slim lunches, and a first-class price for it all—to be paid promptly, if you please, or in advance, if you are a stranger; for Mrs. Thompson alone of my collection failed to come out strong on this one quality indubitably "business-like." And, as I have said, I have just once resided in a house where all this "homelike" atmosphere was lacking. Its keeper was an unmarried woman, who, so far as I recall, never was heard to remind any one that she was a lady. Perhaps she realized that the fact was written so large all over her that audible mention of it was superfluous; perhaps she did not care—I cannot say. I only know that she alone of all my landladies never entered my room to talk of her own or others' affairs, that light and fuel seemed to strike her as legitimate articles for a boarder's use, that every day's dinner was a "company" one; that, in short, not one instance of petty meanness or meddlesome familiarity marked the time which I spent in her house. And she in fifteen years lifted herself unaided from poverty and debt to the ownership of one of the largest, handsomest and most popular boarding-houses in the entire city. She died during one of my vacations, and I wish to pay her memory the tribute of saying that under her roof alone I found something which did very nearly approach a *home,* and for the reason, apparently, that the house did not aspire to be one. Because it was practically a small hotel, I could *make* a home for myself of my room with almost as much independence as if I had owned a private apartment. I entertained my friends, went and came as I pleased, carried my own door-key, and had unlimited opportunity to be, as a disrespectful young Englishman put it, "just as wicked as I liked."

After a season of such unrestrained freedom to indulge my natural propensities, it may be imagined with what difficulty I readjusted myself to my next place, whose presiding genius had as one of her strong points the motherly interest with which she kept tab on the movements of her lodgers. Of course, it was unappreciative and nasty of me to feel irritated when my breakfast greeting was, "Somebody's gas burned mighty late last night," or "I woke up at a quarter to one, and everybody had come in but Miss ——"; but still I did, and sometimes possibly showed it. This lady was particularly kind, too, in the readiness with which she brought out for her boarders' edification the entire collection of skeletons comprised in her extended family connection. Perhaps she was justified in some disappointment when we failed to repay with a corresponding exhibition of our own, as was her daughter in her unfailing deduction—extensively aired—that the only reason for our not doing so must be that the condition of our household boneyard was indubitably too foul for revelation. Yet these perfectly legitimate feelings of theirs inspired many a secret indignation meeting of their unreasonable boarders. But, in spite of all, I am proud to say that at the end of two years we parted in friendship, and it is but just to add that that landlady supplied the most clean towels and made the best cake that I have ever enjoyed in any boarding-house.

My very first boarding venture in this

city was the occasion of much congratulation upon my good fortune in "being with such a perfectly charming private family." The delights of that experience were such that I have never tried a private family again. I would almost sooner risk my life in a college dormitory. The wife and mother only took a boarder or two because it supplied a little extra pin-money and occupied some rooms for which she had no other use. Therefore she gave us desserts twice a week, and on no account furnished fires in our rooms before breakfast. She was active in church work and maintained "a beautiful family life"—by exacting a kiss from each of the children at breakfast and bed-time—but it was only one of numerous similarly pleasant incidents when she flounced out of the dining-room in the midst of pouring the breakfast coffee, and remained invisible all day, because her husband said amiably, "My dear, you'll have to tell the cook that these biscuits are all dough in the middle." She and her husband were a conspicuous example of that most pathetic thing upon which the sun ever shines, a woman with no sense of humor married to a very witty man;* therefore it soon became a mortal offense if I laughed at the husband's jokes. The oldest daughter, too, strongly insinuated that I was guilty of conduct unbecoming a school-teacher in permitting men to call upon me, and the second daughter stopped speaking to me and developed nervous prostration because her father said that he liked to hear me play the piano.

I fled from this intimately homelike atmosphere to a widow whose children were still small, and whose house accommodated twenty-five persons. The wall paper in my room was a fresh and lovely blue, the windows overlooked a garden, and I saw a vista of joys ahead. I observed that upon my arrival the lady of the house carried her arm in a sling, and that she was reticent in her responses to my expressions of sympathy. Inside of a week I learned that the bones of her hand had been fractured by her wringing those delicate members in a frenzy of grief over the discovery that a bachelor lodger had been prompted to certain acts of kindness only by pity for her widowed helplessness and not by matrimonial intentions, and had retreated upon discovering how his conduct had been misconstrued. It was for *him* that my blue wall paper and blue-bordered towels had been prepared. I had chanced to appear at the psychological moment to secure his abandoned room.

I have always threatened to write a novel about that woman and that house. I do not know, then, how I am ever to select from the material stored in my memory what may be condensed within the compass of a few paragraphs. She was a thousand dollars behind on her rent when I entered her house, and our existence was enlivened by the monthly threat of her landlord to seize the furniture and turn us into the street. Similar conditions made it necessary for her to change her grocer and butcher with the new moons, and it was an interesting field for mathematical calculation with us as to how long it would be before she had exhausted the city's list of provision purveyors who did not know her too well to trust her. Her own readiness to trust men ought to have been a thing which they would have repaid with emulation, but perhaps the souls of butchers and grocers are impervious to those finer feelings which should be inspired by a beautiful example. The spiritual life of the landlord evidently does move upon a higher plane, for I believe that none of those gentlemen ever, even in his most vigorous moments, exacted anything more than that she should just move to another house and call it square. Some were of the opinion that in this the gentlemen were actuated less by exalted motives than by a recognition of the futility of attempting to get blood from a turnip. As to this I cannot say. All I know is that she finally died amid great comfort and greater debt, after having tasted far more of the joys of life and worn better clothes than many of us who know no better than to pay for them.

And her debts and her joys were largely due to her confidence in man—which noun is used strictly in the mas-

[*We are sorry the bachelor maid does not give further examples of the husband's wit. The scintillation cited would hardly entitle him even to a place in our "Pebble" column.—EDITOR.]

culine gender. A compliment to her gowns, an invitation to the opera or a supper, would enable almost any fairly presentable man to run up a board bill of five or six hundred dollars, and the satisfaction on her part quite equalled the financial advantage on his. If the man chanced to be single, she always saw in him a prospective husband; if he were married, she derived almost equal beatitude from feeling sorry for his wife.

Occasionally her confidence received a temporary jolt, and for the time being she always took it very hard. One of the most exciting of these occasions occurred when a handsome and polished young man, with no visible occupation, decided to commit suicide on the very day when his first month's board was due, and then, regretting the decision, woke us up at midnight with the information that he had taken an overdose of morphine by mistake. When he had been hurried off to a doctor and a stomach-pump, an excited group of us lingered in his room, and there I espied a paper which he had left on his table declaring in large characters that he had resolved to die. I handed it to our landlady, who had scarcely read it thru when she began to beat upon her breast and tear at her agitated curl-papers.

"Oh! the DASTARDLY villain," she screamed, "to *dare* to kill himself in my house before he had paid his board!"

Then she had one of her attacks of heart trouble, from which she was restored to life with almost as much difficulty as the suicide himself.

But the "poor boy," returning to us with black circles under his eyes and an air of touching humiliation, soon so worked upon her sympathies that he remained another month, pending a remittance from his distinguished uncle in North Carolina. Then one day, to save her the trouble of a trip downtown to pay her gas bill, he took fifteen dollars which she had scraped together as a sop to a soulless corporation—and did not return. But she said she knew the poor fellow needed it, and he certainly was a gentleman and *highly* connected, and she really didn't regret the money.

Somewhat different was her attitude toward the poor book agent who died of fever in her house. He had always paid his board, to be sure, but he wasn't much to look at, and was distinctly not a lady's man. When the doctor told her that the dreaded epidemic had entered her house she ran shrieking thru the hall, asking heaven why *this* had been visited upon her innocent head. Then she sent a servant to strip the sheets and blankets from his bed, and remained barricaded in her apartments until, a few days later, he was nailed up in a box and carried out to the potter's field.

This incident was the culmination of a number that had been hardening my resolution to seek a quieter if less interesting life. But I have never found a boarding-house which did not make life at least intermittently interesting, or a landlady save the maiden one already mentioned whom I do not recall with emotions attuned to her various peculiarities. There was the one who thought we used too much coal, and therefore fixed hours at which alone we might have fires, only to learn (after spring came) that it was her cook who had systematically carried off baskets of coal every day. There was also the one who appropriated our hairpins, and abstracted our new hats from their boxes and gowns from their hangers, when we were out, in order to copy them; the one who posted the notice, "Two hot baths ONLY allowed per week"; and the one who regularly opened all letters and packages which came for me to see if she could not find proof that I was being made love to by a married man. Again, there was the one who, tho now in reduced circumstances, had once moved in circles of such wealth and distinction that one young man in the house said that he was convinced that you could not mention to her a single crowned head of Europe without learning that her second cousin had been his intimate friend. He likewise said that she was "the biggest four-flusher on the face of the earth," which term, tho not, of course, in the collegiate vocabulary, I gather from the context to have been his euphemistic manner of indicating her singular eligibility for the first vice-presidency of the Equal Rights Sapphira Club. She was also, incidentally, a fiend incarnate, and,

as my recollections of her are still rather fresh, I do not trust myself to speak in detail of my months under her roof.

But my manner of arrival under that roof which now shelters me may be worth reciting. I had engaged board with Mrs. Burton before leaving for my summer vacation, and before my return in September I wrote her three times stating the day and the hour when she might expect me. My train was three hours late, so that I rang the bell of my new habitation at something after 11 p. m. By the moonlight I could see placards on the house-front adorned with some inscription strongly resembling "For Rent," and this, in connection with no response to a third ringing of the door-bell, did begin to arouse some questioning, if not apprehension, in my mind. The apprehensions were just getting the better of it when a male voice from a remote quarter called, "Who's there?"

I followed the voice to the rear of the building, where a young man stood surveying me from an upstairs balcony. I explained that I had come to board with Mrs. Burton. He asked if it was in that house or her other one. I replied that I was not aware that more than one house pertained to Mrs. Burton. He said:

"Well, she moved today. She couldn't get my things moved till tomorrow, so I'm staying here tonight. Just wait a minute, and I'll come down and get my machine and take you up to the other house."

Arrived at the new house, whose door-bell would not ring (and did not for a month afterward), the young man finally, by pebbles thrown at the windows, succeeded in evoking the landlady. She came down smiling, and considerably more serene than her newly arrived boarder. She said, oh! she didn't think it was necessary to write me that she was going to move—she thought I'd like this house just as well as the other; she did go over to the other house about 7 o'clock to see if I had come (my train was not *due* until 8.15), but all the men said if I hadn't come by *that* time I wasn't coming—and anyway, people so often said they were coming and then didn't. (My third letter assuring her that I *was* coming had reached her just the day before.)

After some distinctly animated discussion, in which it developed that she had no room ready for me, another young man was aroused from his slumbers, sent back to spend the night with my knight of the automobile, and I was put into his bed—with one sheet on it. Notwithstanding this rather tumultuous entrance into the house, I have remained—but I shall not be here a year from now. The entire episode is absolutely typical of Mrs. Burton's idea of keeping boarders. She does not allow it to trouble her in the least. In fact, she is the most emphatically of any landlady yet *not keeping a boarding-house.* She is a widow of various sorts, having buried one husband and divorced another, and being the intended wife of a third, as soon as the courts kindly release him from his present encumbrance. In the interregnum she is supporting herself by permitting a few desirable persons to reside in her house, at a good price per month, and fires and Sunday night suppers extra. (She told me a year ago that her stated price "included heat and everything," but I thoughtlessly omitted to have this sworn to before a notary.) The really serious occupation of her life is looking pretty, and her greatest joy is being told that, but for her grown children, no one would dream that she was a day over twenty-five. She is utterly unruffled in the presence of dirty table-linen; she has no date for changing bed-linen save as it is set by the irate demands of exhausted patience in her "guests"; she herself coquettishly and habitually lifts the corner of the table-cloth and wipes her mouth on it, an example followed quite as habitually, tho with something less of coquetry, by her children. She is the most vociferously feminine of women, and there is nothing that she so thoroly despises as a female suffragist. As for Charlotte Perkins Gilman's "baby segregation" idea, the bare mention of it makes her almost faint with indignation. "A *mother* knows best how to bring up her children." As incontestible proof of this she can offer two noisy and ill-bred daughters, one son who eloped at eighteen, lying to secure a marriage license, and a younger one who is an oft-detected thief. The other day she ordered him to leave the house and never return, but

when he had gone as far as the corner she decided to call him back and chastise him, and he knocked her down. This episode elicited much sympathy and smelling salts from the feminine contingent of the establishment, both somewhat keenly repented of when she appeared at dinner in a new gown which she had worked all afternoon to finish, and all smiles for the men, especially the star boarder.

A year ago when I sent the editor a sketch of my mission Sunday school class, he returned it with the comment that it was "too trivial." I appended some five hundred words of "moral lesson," and he then said it was very good.

Now, I propose to forestall at least that excuse for declining this article (tho it must be said that in the line of excuses he is amazingly resourceful, and *may* find another), by sending it in with the *"haec fabula docet"* already annexed. Seriously, if any one supposes that I have indulged in these reminiscences merely to gratify some personal spite against a few women at whose tables I have sat, he errs as profoundly as it is possible to do. I offer them because I suppose that my experiences are a not exaggerated type of those of the boarding public, with a generally unhappy and *not* generally beloved class of women, which is unfortunately large. The landlady affords the most notable and most numerous example of the woman who works for wages with absolutely no regard to inclination or fitness for it. It is undoubtedly a conservative estimate to say that more than 90 per cent. of feminine boarding-house keepers are stranded widows and non-supported wives, who turn to that because they do not know how to do anything else. Being a mother and taking boarders are two things which it is assumed that every woman can do without ever learning how. The absurdity of at least the latter assumption some of my experiences here related seem to me more than to hint. And the whole thing is a part of the pathetic fallacy, still so prevalent, of educating girls to be useless because "their sphere is the home," and they "will never have to support themselves." So long as men and women must board, there will be a field—great, remunerative, and commanding unqualified respect—for the educated, efficient and reasonable woman who will *make a profession* of conducting a comfortable, sanitary and honest boarding establishment. I would respectfully suggest to our schools of domestic economy that they transfer to a Department of Boarding-house Administration some of the over-stress which a survival of primitive sentimentalism now places upon the administration of the home.

"Forty"

BY WILLIAM A. JOHNSTON

Of the Editorial Staff of the New York World.

IT gave you quite a shock when you noticed the date-line on your morning paper. It reminded you that it was your birthday—your fortieth birthday.

You happened to glance in the mirror of the restaurant where you were breakfasting in solitary bachelor comfort—at least you always pretended to believe it was comfort—and you were suddenly dismayed. You saw in the mirror a pair of tired eyes around which wrinkles long ago had begun mapmaking. You saw a forehead fast losing its thatch. You noted sadly that the gray spots above the ears, which you had prided yourself gave you a *distingué* air now were entirely white, the undeniable white of age.

"Forty."

You turn again to your paper to try to forget your dissatisfaction. The obituary columns catch your eye. Strange, isn't it, you think, how often you find there the names of people you know.

You must know a lot more people than you used to. Then it comes to you that perhaps it is because more people you know are dying as they grow older—resolutely you try to dismiss the disturbing "age thought," but it will not be banished. You read the news epitaph of some distinguished citizen. The paper says he was sixty-four. That's a good, ripe old age, but wait—sixty-four less forty—he was only twenty-four years older than you. It strikes you with overwhelming dismay that you already have lived more than half of your probable life. Lots of people die before they reach sixty-four.

"Forty."

It does not seem possible. You have been drifting pleasantly along neglecting to reckon the years as they pass. Often and often you have put aside for the indefinite future things you meant to do. Always there was the feeling that there would be plenty of time later on. Suddenly now you realize that there is not plenty of time. Your fortieth birthday has brought realization of the fact that the years ahead are all too few. Long before you were forty you meant to have——

All thru the day, your fortieth birthday, you cannot help recalling the many things that—in the glorious optimism of twenty—you intended to have accomplished before you were forty—things you have not even tried to do or started to do yet. With the sadness of candid retrospection you review the promises you made to yourself and the boasts you made to your friends when at twenty you put your foot on the lowermost rung of the business ladder. Let us see, what were they?

"By the time that I am forty, I am going to have made enough and saved enough to retire on."

Were you really the boy that used to say that so often? That boy time and again computed what one dollar at compound interest amounted to. He had resolutely made up his mind that he always would live economically and save his money. That was the way to make money—Save Money. In twenty years a man could accumulate a lot.

You began your business career with seventy dollars a month. What a large amount it seemed in those days. Railroad conductors only received sixty or sixty-five and you had to "railroad" for years before you were made a conductor You recall pityingly the time you wanted to quit school to go to work at twenty-five a month and your people would not let you. It was when you were fifteen. Your chum had quit school and gone to work driving a laundry wagon. They wanted another boy to drive and he was sure he could get you the place. What was the use of school any way? Of course you wanted the place. When your father refused to let you take it you felt badly used, but looking back now from the superior hights of twenty years and seventy a month you had to admit that your father was right. An education does pay. Your chum—now hardly even an acquaintance—is still driving the laundry wagon. He is getting twenty-eight a month but next year they have promised him thirty. Even now at forty you are glad that your father didn't let you take that job, and it comes to you with a funny little pang that you haven't seen or heard of that boyhood chum of yours for at least eighteen years.

You recall how, on the first evening after you went to work, you took out pencil and pad and figured all evening: Board, five dollars a week; carfare, say, a dollar a week; pocket money, two dollars a week; clothes—your ideas on that subject were a little hazy for hitherto your father had always paid all your bills—say one hundred and twenty dollars a year, that's ten dollars a month. Yes, sir, you ought to be able to save at least twenty-five dollars a month the first year. In four months you'd have one hundred dollars, and in a year three hundred, not counting the interest. Next year you'd surely get a raise of at least twenty dollars a month. You'd save every cent of that and at the end of two years you'd have mighty close to one thousand dollars. When a man has a thousand dollars there are a lot of ways he can make money. He can buy property and sell it for a profit. Maybe it's quicker to buy stocks with it. Even if he leaves it in the bank at 4½ per cent. compound interest, compounded semi-annually, it piles up quickly.

You bought yourself a nice new memorandum book and for a few days you

religiously put down every cent you spent—carfare, 5; newspaper, 2; lunch, 25—you kept it up for at least a week till that evening you went to the theater with some of the fellows from the office. There were some expenses in the course of the evening's revelry that would not look well in the book so you did not put them down. Never mind, you would start again on New Year's Day and you would stick to it this time.

All thru that first week after you went to work you kept dreaming about your future income. The manager of your office got three hundred dollars a month —think of it. Well, in five years, not any longer, you'd be manager and you'd save out of three hundred, two hundred and thirty, or at least two hundred a month. In a year you'd have, call it, twenty-five hundred. It was going to be the easiest thing in the world to accumulate fifty thousand by the time you were forty, even if you didn't count the interest or the profit from investments. That ought to be at least twenty-five thousand more. On the income of seventy-five thousand a man ought to be able to live comfortably and do considerable traveling, too.

Three hundred a month! With a start you drop the dream of your boyhood and come back to the sad realities of forty. You haven't seventy-five thousand dollars or anywhere near it, tho for the last ten years you have been making considerably more than three hundred a month. Where has it all gone? You have saved practically nothing. You have in your pocket perhaps twenty dollars to run you till next pay day and you consider yourself lucky if your balance in the bank does not get perilously near the five hundred the bank requires as a minimum deposit.

Where *has* it all gone? You hark back over your last twenty years trying to answer the question to your own satisfaction. To begin with you must have spent a lot of it for food. Surely that's not your fault, for a man has to eat to live and eating costs a lot more now than it did twenty years ago. You try to excuse your expenditures with the thought that you could not find board at five dollars a week even if you wanted to. You try to blind yourself to the fact that even if you did find it you would not put up with it, for twenty years have wrought changes in your appetite as well as in yourself.

In the days of twenty a couple of eggs and a lot of buckwheat cakes was a fine breakfast, and corned beef and cabbage was a good enough dinner for anybody. You didn't find it uncomfortable either wedging yourself in at the long boarding-house table. In fact, you rather enjoyed the sociability of it. You know the taste of lots of things now that you had only read about then—lobster, truffles, caviar, frogs' legs—what was that tasty dish you had for breakfast, oh, yes, agneau Henri Quatre—lamb fried with sliced onions and potatoes with just a soupcon of red pepper, ninety cents it was, but well worth it. You reckon up the rest of your breakfast on this, your fortieth birthday—Baked apple, fifteen cents; buttered toast, fifteen cents; coffee with cream, twenty-five cents—one dollar and forty-five cents just for one breakfast. Then the waiter brought you two quarters and a nickel, so you gave him a quarter tip—that's one dollar and seventy cents.

"It's too much," you say to yourself with a frown, "a man ought to be able to get a good breakfast for a half a dollar."

He can, but you don't. The last time you tried one of those fifty-cent breakfasts the tablecloth was soiled, so you never went back.

There's no question about it that a lot of your money has gone for food. If you are a bachelor you console yourself by thinking that if you were married your food would cost you less. You feel that you might be able to save if it was not for this expensive restaurant eating. If you are married you sigh over your butcher and grocer bills and think how easy it must be for a bachelor to save. From either viewpoint the retrospect of money spent merely for eating is so far from satisfactory that you drop the subject and consider in what other way the money you intended to save has gone.

When you were twenty you did not smoke. Once your mother caught you at it and she said father would give you a gold watch if you would promise her not to smoke till you were twenty-one.

You kept that promise—at least you never were caught again—and you got the watch, but you have been smoking regularly ever since. It's funny, come to think of it, how much better cigars were years ago. You never smoke a cigar now that costs less than two for a quarter, in fact you often smoke quarter cigars. There was a time when you thought a nickel cigar was good enough for any one to smoke. They don't make good cheap cigars any more. It must be the fault of this Tobacco Trust.

Where else has your money gone? Rent must have taken a lot of it. The two rooms and bath you have had for the last five years cost you a thousand a year. That's five thousand right there, not counting the tips for service. It is high for a man of your income, of course, but a man has to be comfortable. In the fifteen years preceding you must have spent say seven thousand. That's twelve thousand—just for a place to sleep in and nothing to show for it.

You remember those lots you could have bought when you were twenty-two, ten of them for six hundred dollars. You had money enough to make the first payment and by a little economy you could have paid for them in two years. One of them sold the other day for $3,800. Ten times thirty-eight is thirty-eight thousand dollars. You wish now you had bought them and built a house. How nice it would have been all these years not to have been paying rent, to have had a home of your own and your property increasing in value all the time. You are reminded of another of your boyhood ambitions. How often you said to yourself:

"By the time I am forty I am going to have a big place of my own in the country."

All thru your boyhood days you had yearned to spend your days in the country. Your people lived in a town—neither city nor country. It wasn't enough of a city to have a theater. It wasn't enough of the country for your folks to keep a horse. All the books you read told about glorious times in the country — hunting, fishing, trapping. Your "American Boys' Handy Book" was just full of interesting things you could do if you only lived on a farm. The two weeks you spent at your grandfather's were the most delightful times of your boyhood. Each summer you renewed your vow that when you were a man you would have a place of your own with some woods on it, a place where you could do as you please, where you could have a lot of horses and dogs, where you could go around in your shirt sleeves all day long if you wanted to.

The country—it comes to you on your fortieth birthday that you haven't even seen the country except from a car window for at least eight years. An intense loathing for the city comes over you. You feel imprisoned by skyscrapers in a labyrinth of trolley tracks. The desire comes to be out in a big meadow where you can whistle and shout. You long to be stooping over some forest spring, sucking up with your lips the cooling rock water. You wonder why each year, when your vacation comes, you have been going to Atlantic City and such places. You know you don't enjoy yourself there half as much as you would in the country. If you only had that farm of your own which you always were intending to have. Let's see, it's twenty years since you have been on a horse and known the joy of owning a dog.

Perhaps it's not too late yet to provide for the country place. You seize the papers and turn to the real estate advertisements. You find there lots of places described such as you would like to have —farm-house, stables, tennis courts, orchard, trout stream, thirty acres of forest land—who said farm land was cheap?—all these places are valued at the tens of thousands. There was a time when you might have saved with some such place as this in view, but now you are forty. The business world hasn't much use for a man after he is sixty. Inexorably the feeling comes to you that it is too late. By the time you could accumulate enough to buy a country place worth living on you'd be too old to enjoy it. You begin to realize, too, how firmly city habits have become fastened on you. You like French cooking, mail delivered on Sunday, paved streets to walk on, daintily dressed women to look at. You are a slave to electric fans and a square of ice in your tumbler. You have the taxicab habit and you couldn't get along

without the baseball extras and your shower bath.

Sadly you turn this page of your ambition for the last time. You realize now that you never are going to own the place you pictured in your boyhood dreams. All you can see ahead now thru a dreary vista of years is the miserable furnished apartment existence you are living now, dreary, lonely, unending, till—you refuse to let your mind dwell on what your lot will be when you are too old and too ill to continue your business, when you are all alone, absolutely alone in the world. And it comes to you how often at twenty you said:

"By the time I am forty you will see me with boys of my own, and they'll have a sister or two. I believe every man ought to raise a family, and my children will be raised differently from the way I was."

You meant what you said. You always intended to get married. You always had looked forward to having a family of youngsters growing up around you. Why have you never married?

Your memory harks back to the girl in your home town, whom, at twenty, you were certain you were going to marry. Not that you had ever said anything to her about it, but you knew she understood. Together you had talked over your plans for making your way. She had been as confident as you that you would be a rich man by the time you were forty. You had grown very close to each other in those dreaming days. She had let you kiss her once or twice, and she never was the sort of girl that any fellow could kiss. The last time was the night before you went away to take your first job. You almost had told her that night that as soon as you had won out you were coming back to ask her to be your wife, but somehow you didn't. In a year you were glad you hadn't. You had met a girl in the city you liked better, whose manner of hair and clothes seemed more stylish. As at forty you look back at yourself you are ashamed of your having been ashamed of the girl you left behind you. "She was a mighty nice sort of a girl," you say to yourself. You had corresponded with each other twice a week for the first month or two. and then the letters had dwindled to the vanishing point. Soon you heard that she was to be married. You rack your brains now trying to think what her married name is and you wonder how she looks after twenty years. You recall that the news of her marriage gave you a sort of hurt feeling. You smile now at the thought.

"I don't believe I'd know her if I was to meet her in the street," you say to yourself, "but I guess she would know me all right. I haven't changed much."

No, not very much. You weighed one hundred and twenty then and had a small mustache and a large amount of hair. Now you weigh so much over two hundred you never get on the scales, you dare not let your mustache grow because it is nearly white and your hair is fast becoming a memory. There are bags under your eyes you didn't have twenty years ago and several flocks of crows have been nesting on your face. Your jowls are beefy from overindulgence in your appetite, and the complexion that made you a good-looking boy now is reddened and roughened. Your mouth has a discontented droop and the necessary, very necessary, eye-glasses, give an entirely different look to your face. No, you haven't changed—much.

But, you ask yourself, why have you never married? You have known a lot of charming and attactive women. There was Jessica. For nearly four years you called on her frequently. Occasionally you took her out to the theater or to dinner. She was everything a man could ask for a wife—of excellent family, well-educated, conservative in her ideas and dress, but always smart-looking. You and she were congenial in every way. You always had intended to ask her some day to marry you. You knew that she cared a great deal about you, yet she slipped away from you and had married some one else. What was that queer remark her sister had made to you afterward. Oh, yes:

"A girl may like a man very much, but the man she marries is the man who asks her."

It is some satisfaction to you in your lonely bachlerhood at forty to feel that you might have married Jessica if you

had asked her, but still it does not answer your soul's question, "Why haven't you?"

You review the line of charming and attractive women you have known, seeking the answer. It dawns on you that you do not spend nearly as much time with the other sex as you used to. You try to comfort yourself by thinking that you always were a good deal of "a man's man," but down in your forty-year-old heart you know the real reason is that you are getting beyond Nature's mating-time.

If you are honest with yourself you finally have to admit that you never married because you are selfish, downright selfish.

Several times when you were just on the point of proposing and did not. What was the thought that restrained you? It was always the same, that you could not afford to marry just yet. It was not that you hesitated about asking *her* to share your poverty. You were not thinking about the sacrifices she might have to make or the economies she would have to practise. Down in your selfish heart you were thinking that you needed all your income for yourself and that you could not support a wife without giving up a lot of little luxuries you wanted.

Now, at forty, you realize that your desires and expensive habits have increased even faster than your income, that it is not likely that you will ever marry. A great self-pity seizes you as you look blankly forward to a childless old age. You almost envy the lot of your older brother who is still back there in the home town struggling to feed, clothe and educate six children on an income not half as big as yours. You seriously think of taking one of his boys and educating him and perhaps by and by adopting him, but the idea quickly passes. Forty does not paint the glories of fatherhood in the colors of twenty.

A family, at any rate, would hamper a man a lot in accomplishing the things he set out to do. But, wait, have you accomplished much? What was that you used to say:

"By the time that I am forty I am going to be mighty well-read. I have mapped out a regular course and every month at least I am going to master some book worth while."

One of the subjects on which you were going to be well posted was political economy. You started with Karl Marx's "Capital." Like an unlaid ghost of your ambitious past it stares at you now from a shelf of your book case. You never got any further than the ninety-eighth page but thru all these twenty years you have carted it around with you, intending sometime to finish it. You rise up now in wrath and hurl the volume into the waste-paper basket. If you have lived to be forty without having read it you decide you can get along without it for the rest of your life.

But why haven't you carried out your plans for reading? Again you look back over your mis-spent years. At first it was the theater that distracted you. The first year or two after you left home and were located in the city you went to the theater at least three times a week. You were content then to sit in a gallery seat, and even when you took some girl with you the balcony was the hight of your ambition.

By and by you tired of the theater but you never resumed your reading. The nights you were not going to dances or calling on the girls you were playing cards or billiards. Poker, pool, bowling, chess, bridge—each season you seemed to have had a different fad, but always one that seriously interfered with reading. Well, a man in an office all day has to have some exercise and recreation. You think of your evenings mostly spent now in idling in your club and say to yourself:

"I'm not getting enough exercise these days. I think I will go up to the gymnasium a couple of nights a week and take up handball."

You think you will, but you won't. You're forty.

You ransack the record of your past in vain to try to find some fulfilled ambition. You always had intended to do a lot of traveling. Do you remember how you used to say:

"By the time that I am forty I will have been all over Europe. I am not going to wait until I am too old to enjoy it to do my traveling. Some day, too, I'm going to India."

Forty, and you haven't even been to Europe once. Of course, none of your friends suspect that you never have been

abroad. From talking to returned travelers, from reading the Sunday newspapers, and from the Englishmen and Frenchmen you have met in a business and social way, you talk familiarly of both London and Paris. When you hear some one speak of the grill at the Cecil or the Cheshire Cheese, you nod knowingly. While perhaps you never actually have told anyone that you had been abroad time and again you have allowed them to gain that impression. Yet actually the nearest you ever have been to Europe was that time you had one thousand dollars saved up and had written to the different steamship lines for circulars. That always was what deterred you—the difficulty of accumulating enough money. You had made up your mind that you couldn't start with less than fifteen hundred, but when the time for the two months' vacation arranged for drew near you saw that all you would be able to amass would be the even thousand.

You invested the money in a stock that promised quick returns. You have the stock yet, not worth the paper it is printed on.

That is one compensation for being forty. You've learned a lot by experience, by stern lessons that only experience can teach.

A ray of comfort comes into your gloomy retrospect. There must be some compensations for having lived so many years. What are they?

Friends—perhaps most of all you are satisfied with the friends your life has brought you. You count them over one by one, not so many as they might be, but still friends of whom any man may well be proud. You find in your reckoning four or five or six men in whose companionship you ever have pleasure and profit. Your tastes are alike, your minds are mated, your habits of life mutually congenial. The bonds of understanding and appreciation between you are so firmly established by tests and time that you know that nothing but death can mar your pleasant associations.

Your forty years have brought you a better knowledge of how to live. You take things much more placidly. Troubles that twenty years ago would have given you sleepless nights and unhappy days, you now dismiss with a smile. Twenty years have taught you the futility of worry. You do the best you can and if things do not go right—well fifty years from now it will make no difference—yes in twenty years from now, a year from now, next week, possibly tomorrow.

If you have lived anywhere near the right sort of a life you can look back and know that the world is just a little bit the better for your having lived in it. That successful young man was once your office boy. It is a pleasure to realize that you gave him his start. It was you who brought together that young married couple after their quarrel and "they lived happily ever afterward." There must be scores of people you have helped over rough places. Surely, too, you have passed on to others the lessons of life that your own experiences have taught you.

There is still another compensation of forty. You can look complacently back on the unfulfilled prophecies of those who were certain you would come to some bad end. It is one of the comforts of forty to realize that you and the bad boys you went with couldn't have been so bad after all. That boy in your class who was expelled is now a successful novelist. The bad boy with whom you could associate only in secret is now a college president.

And whatever you may think of yourself it is a great satisfaction to realize that back in the home town at any rate you are looked on and talked about as a success.

Perhaps forty isn't such a bad age after all.

NEW YORK CITY.

A Summer Among Modernists

BY BENJAMIN W. BACON, D.D.

PROFESSOR OF NEW TESTAMENT CRITICISM AND EXEGESIS AT YALE UNIVERSITY.

THE term modernism was coined in the Vatican and is defined on high Roman Catholic authority as the invasion of the Church's *jure divino* sphere of control by the spirit of democracy. But modernism is by no means confined to Roman Catholic circles. Prescription "by divine right" in matters of faith and practice is not less obnoxious in Protestant democracies than in Roman Catholic or Greek Orthodox autocracies, and the substitution of an infallible Scripture for an infallible hierocracy does not better the matter, unless the right of private interpretation be conceded. Now the nominal conceding of this right is just what has worked havoc with Protestant uniformity. Protestant modernists make as free with this principle as Catholic modernists with that of the "interpretation" of ex-cathedra utterances; and they are met in the same way —by appeal to the authority of tradition, the voice of the past. The modernist is a democrat in respect to ecclesiastical authority; he anchors firmly on the principle, "He that would be great among you, let him be your servant"; he believes in free Christianity. He is also a progressive in religion; he believes in the principle of development, in a Spirit of Truth, accessible to all, continually guiding the teachable into larger and larger apprehension of the truth. The Catholic modernist has most to fear from ecclesiastical domination, and therefore is mainly concerned with ecclesiastical politics; the Protestant has most to fear from the domination of a mummified theological system, and therefore

BANQUET AT LANDWEHR CASINO, BERLIN.

World Congress for Free Christianity and Religious Progress. The names in order from left to right are Rouffiac, Monod, Bertrand, Murri, P. Loyson, Canderlier, Rabby, Funk, Gregory, Bacon, Stefano, Giran, Vulliéty, Maystre, Reyss, Montet, Gounelle.

directs his principal effort toward intellectual liberty; but modernism is modernism, whether the authority assailed be John Calvin or the Pope. Therefore we offer no further apology for treating the fifth triennial "World's Congress for Free Christianity and Religious Progress," held in Berlin from the 5th to the 10th of last August, as in reality a congress of modernists.

The extraordinary success of the undertaking in point of attendance was doubtless due in part to the efficient management of the general secretary, Rev. Charles W. Wendte, D. D., of Boston, Mass. The great company of travelers who took the journey to Berlin and back, via England and the Continent, to be joined en route by equal numbers from England, France and The Netherlands, these and the local adherents who together made up the 2,500 regular subscribers for tickets to all sessions of the congress at Berlin, were doubtless recruited by the energy of Dr. Wendte and his efficient colleagues in other lands; but this does not account for all. Nothing save an extraordinarily deep and serious interest in the problems discussed will account for the continuous packing of the largest halls in Berlin to the limit of their capacity during five consecutive days, each occupied by three three-hour sessions devoted to addresses often difficult and abstruse, mostly in German, but many in French and English, and at least one of the most notable in Italian. The total number of persons in attendance on all the sessions was conservatively estimated at 7,000, and the strained attention paid to even the last of the speakers on a nine-hour program was something which the writer at least has never seen equaled elsewhere.

The congress is doubtless open to the criticism that it had no tangible result save a general diffusion of liberal sentiment. The nature of the gathering precluded the adoption of formal resolutions binding on those who might choose to vote in their favor. Had the congress exprest even a unanimous approval of any particular policy it is doubtful whether any authority, whether of Church or civil state, would have paid the slightest attention to it. And a

THE ABBEY, AVENUE DES TILLEULS.

glance at the program shows that no attempt was made to concentrate upon any specific conclusion. The assigned topics were of the broadest and most general character, such as "What Do Religious Liberals of Other Nationalities Owe to the Religious Life and the Theological Science of Germany?" or "The Sympathetic Relations Which Should Exist Between Religious Bodies, and Between Various Tendencies (Richtungen) Within the Same." Individual speakers were allowed extraordinary latitude. They might, if endowed, like Harnack, with the sure instinct of a great public speaker, in combination with the insight of a great scholar and historian, present a fundamental characterization of the historic faith, showing it to be a product of the fusion of two great streams of religious thought. Such was the opening address of the congress by the great Church historian of Berlin, under the title, "The Twofold Gospel in the New Testament." On the other hand speakers wrapped in subjective contemplation might labor to inspire the congress on

such themes as "Man's Longing for the Infinite." The indefiniteness of the program tempted him who occupied the speaker's desk to seize the occasion for the tendering of rhetorical bouquets or to presume upon the wonderful patience of the great audience with glorification of his own specialty; it tempted him who sat in the seat of the scornful to describe the congress as "a picnic."

In reality the congress combined sentiment and science. The volume of "Proceedings" soon to appear in English, French and German will prove what valuable contributions were made toward present practical problems of the laborer for religious and moral progress, problems of civics, of education, of international peace, of temperance, of historical analysis and interpretation, and of the psychology and philosophy of religion. These subjects were treated by well-selected experts of international reputation with the thoroness belonging to the expert, and the directness and simplicity required by the nature of the audience. On the other hand, at the multitude of tables spread for the noonday meal—an excellent five-course dinner at a cost of 36 cents—in the great dining-hall and out of doors in the garden of the Casino, or at the smaller groups at afternoon tea, or at the dinner between afternoon and evening sessions, there would be found a host of impromptu clubs. Men of all languages, from all quarters of the world, known to one another by reputation and by study of one another's contributions to a common subject, would here meet, often for the first time, face to face. Many were the groups of distinguished scholars and religious leaders, many the polyglot conversations and comparisons of projects and results. No; the "picnic" element of the congress was by no means to be despised.

When at last the closing address was given by the octogenarian precursor of modernism in France, le père Hyacinthe-Loyson, on "The Federation of Religions," and the great assembly, Jews, Mohammedans, Buddhists included, had risen and recited together the Lord's Prayer, "each man in the tongue wherein he was born," there were few who could regret the sacrifices entailed in their attendance on the Congress of 1910, fewer still who did not covet ardently the privilege of attending its successor at Paris in 1913.

Great was the outward contrast of the little gathering at the ancient Cistercian monastery at Pontigny in the very heart of rural France, to which we next betook ourselves. Here nothing was modern save the modernists. Of the ancient monastery founded by Hugh of Mâcon in 1114, little remains save the great abbey church, built in 1150 by Thibault the Great, Count of Champagne, still in excellent repair, and serving, or rather far surpassing, the needs of the little hamlet of 700 souls. The village is known as Pontigny from the imposing stone bridge which crosses the River Serain just in front of the monastery walls. Passing under the archway flanked by the porter's lodge and up the great avenue of trees toward the principal façade of the church we turn sharply to the left just before reaching the sacred portal and enter the high-walled enclosure of the monastery grounds, protected in addition on the further side by a moat thru which the swift waters of the Serain have been directed.

Of the great quadrangle of buildings which once enclosed the court, giving accommodations to 500 monks, only one of the shorter sides remains intact, abutting on the abbey church. This was once the granary for tithes; the more extensive buildings which formed the other sides and end of the great quadrangle, and the cloisters, two sides of which were formed by the abbey church, and the granary on the side away from the court, were destroyed after the abolition of the religious orders in the Revolution between 1793 and 1800. Only a few scattered ruins remain. In 1840 the Archbishop of Sens bought the property and established there a few diocesan missionaries, who became the "fathers of St. Edmund of Pontigny," taking their name from the Archbishop of Canterbury, who in 1240 took refuge in this monastery that had already proved an asylum to his two illustrious predecessors, Thomas à Becket (in 1164-1166) and Stephen Langton (in 1208-1215), and who lies buried beneath the church.

Almost nothing remained of the order at Pontigny when the law of 1906 came to effect its dissolution. A Parisian pro-

fessor, M. Paul Desjardins, acquired the whole property at public sale and determined to put it to a use in keeping with its great history.

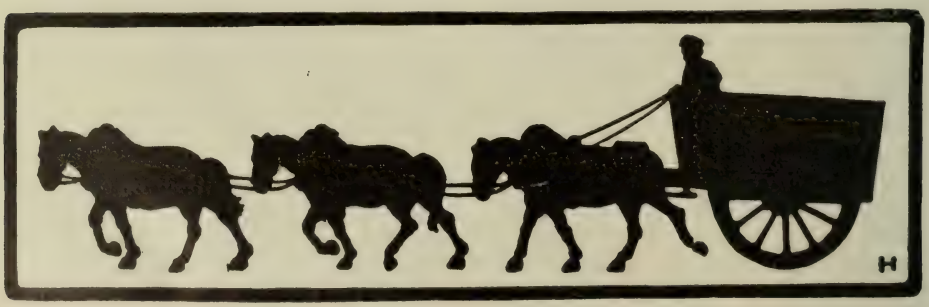
Desjardins had been one of the founders of *L'Union pour la Vérité,* a brotherhood pledged "to maintain among its members by discipline of mind and of conduct that perpetual freedom of the soul which is required for the quest of truth and the struggle for equity"; also "to maintain publicly by example and by propaganda an active love of truth and equity, and to infuse critical methods into the general conduct of life." Pontigny, restored and beautified, its gardens tilled again, its vaulted halls and lofty chambers cleaned and beautified, its great refectory and kitchen adapted to modern requirements, its chambers and public rooms supplied with antique and beautiful furniture, all as the cultured owner and his no less cultured and charming wife had planned and adapted it as a home for their summer's retirement, was dedicated to the service of *L'Union pour la Vérité.* The fifty days of vacation from July 31 to September 19, 1910, were subdivided into five periods of ten days each, during each of which twenty-four guests might be entertained at the abbey, after a plan combining the idea of the Anglo-Saxon "summer meetings" or "coöperative holidays" with the convent "*retraite*" in vogue in Roman Catholic countries. A *Comite provisoire parisien,* including among its better known members Messieurs Paul Desjardins and Alfred Loisy, but intended to be replaced in October, 1910, by an international committee, was entrusted with the duty of selecting from among all applicants those best qualified to profit by the opportunity for discussion and social intimacy during each of the periods. These were devoted in order of succession to (1) Jurisprudence, or the history and progress of the institutions of national and social equity;

THE CHATEAU AT PONTIGNY.

(2) Art, and its expression of the life of the past; (3) Religion, an analysis of its psychology and history; (4) Actual Conditions of Industrial and Agricultural Labor; (5) Contemporary Poetry.

Only the first two afternoon hours of each day were set apart for assigned topics discussed in general assembly of all the guests, male and female; and even in this more formal discussion all had opportunity to join. The rest of the day was left free for the cultivation of personal friendships among those who had thus been drawn together by a common interest, and who for the most part met one another for the first time. Naturally the

discussions of the general meeting were carried on by twos and threes according as each found a kindred spirit.

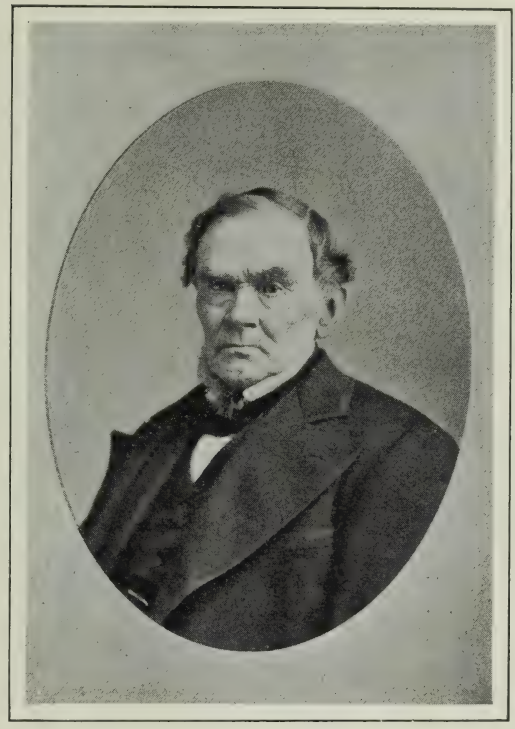


It went without saying that the functions of presiding officer should be left in the hands of our genial host. But it was also almost a matter of course that the leading figure during the period devoted to problems of religion should be Loisy. Of the rest who participated the best known to the outside world were Rev. A. L. Lilley, the friend of Father Tyrrell, and Paul Sabatier, author of the "Life of St. Francis of Assisi."

At Pontigny, as in Berlin, the drift of discussion was toward problems of religious and moral education: How to conserve, in midst of the rapid crumbling of external authorities, the sentiment of religious loyalty; how to develop that integrity of character which religion at its best can develop as can nothing else. Keen and discriminating were the analyses of conditions and causes in the general discussions, close and intimate the colloquies as we sauntered by twos and threes along the ancient leafy garden walks, or on the brink of the moated river. Surely it is a significant change that is witnessed by these abbey walls that once furnished an asylum to refugees from the world in monastic seclusion. Those who now gather in the vaulted refectory, or walk and talk under the ruined cloister arches, are some of them excommunicates from the communion of Rome for the hope they entertain of a broader, more spiritual, more progressive Church. All are devotees of a type of religion which manifests itself not in seclusion for the saving of one's own individual soul, but in the service of humanity. All experienced there the larger, deeper communion, from which no papal edict can debar, the fellowship of the spirit of Christ.

Never was forecast of the Church's future more difficult than in our time. Changes of belief, changes of institutions and forms are advancing with unprecedented swiftness and power. What will result from the effort of Rome to carry its doctrine of sovereignty by divine right to the extreme of autocratic prescription of faith and practice? On the one side is the effort to resist all progress, all vital change, all democracy, and rigidly to limit the thought of Christendom to the theology of Aquinas. On the other side is an awakening spirit of revolt against all *jure divino* authority, but especially clerical authority. What will be the issue? Are the two hostile tendencies destined in the near future to precipitate an irrepressible conflict? Is the separation of Church and State and the secularization of state education, that today is sweeping over the whole continent of Europe, destined to produce a pagan generation, destitute of the high loyalties, the ennobling sentiments of religious faith? Who can tell?

In the meantime, gatherings such as those of the summer of 1910, the more private and intimate as well as the more public and widely heralded, are not without significance. Both are planning for continuation. Pontigny expects to see year by year its groups of kindred spirits exchanging thoughts on the great issues of social progress. Triennially the congresses are to be held "for Free Religion and Progressive Christianity." "The religion of the spirit" is bestirring itself as well as "the religions of authority."



New Haven, Conn.

Literature

Humor and Religion of a Wall Street Captain Kidd

ONE of the most entertaining and instructive books of the year is this autobiographical account of the life of Daniel Drew,* chief wrecker of the Erie Railroad and founder of the Drew Theological Seminary. The story is richly humorous, and holds up to bitter ridicule some of the striking inconsistencies of modern life. If one desires to see the curious workings of a religious mind entangled in the development of a commercial system that has become largely discredited because of its disregard of the claims of human sympathy and legal justice he cannot do better than read this volume. It will be remembered that Drew lived and did his work, good and bad, in a time of transition and swift evolution, when sporadic industries, fragmentary social life and rampant independency were slowly merging toward coherence and relative consolidation. In the process of transformation there were almost unlimited possibilities on the one hand for heroic helpfulness in seizing upon the social ethic of the future, or, on the other hand, for gorging one's self to satiety on the spoils of change while holding loosely to the individual ethic of the past. This latter choice Drew made, and in spite of his vaunted piety, his life from beginning to end left one great wake of desolation, wreckage and destruction, while he like some bird of prey fattened on the decaying carcasses of his victims, until nemesis took a hand and he himself was thrown out on the rubbish heap. Drew came into prominence about 1850 thru his steamboat deals, and later, with Fisk and Gould, he became notorious thru the Erie Railroad and Wall Street scandals. His whole life, however, was a preparation for the crooked work on a grand scale which marked his later years. He seemed to take delight in "getting the best" of some one, or avoiding the law, or even taking advantage of the Lord. He got around the law when as a mere youth he sold "bob veal," and beat the people out of their money when later he bought prime beef. He outwitted "Hen" Astor by watering his stock well just before putting them on the scales, and as a tavern keeper he gave drinks to the boys in order that their aim might be less accurate at the turkey raffles he had prepared. How natural that such a man should run opposition to his own steamboat company, or wreck his own railroad, or throw overboard in business deals his own friends, or beat out of its funds the theological seminary he had established and to which he had given his name!

DANIEL DREW.

*THE BOOK OF DANIEL DREW. A Glimpse of the Fisk-Gould-Tweed Régime from the Inside. *By Bouck White.* New York: Doubleday, Page & Co. $1.50.

Yes, indeed, "Uncle Dan'l" was a real "bear" even in his tastes. He would go into the basest and most odious kinds of financial corruption and treachery, and the suffering of others was nothing to him so long as he profited by it. He tells us that he was sorry to have the Civil War close as his chances for gain were thereby curtailed. In spite of the great expense, he

"felt that the Boys in Blue, sometimes tramping all night thru fever swamps, or lying in the camp hospitals sick and wounded and dying, earned all the monthly pay they got. Because they were beating the waters, so to speak, and we in Wall Street were getting the fish."

Yet there was another side to Daniel Drew, his religious side, which seems to have been sincere in its way, and for that very reason somewhat of a psychological puzzle. His religion was almost completely divorced from his business life, and when he was most intent upon corrupting the courts, or fleecing his Wall Street innocents, or stealing a railroad's funds, he was enjoying his prayer and class meetings, and "testifying" to the "power of justifying grace." In his moments of religious enthusiasm he was led to give liberally to his church and institutions of learning. Mr. White tells us in the preface of this book that it was written up from jottings made by Drew's own hand. Essentially it is a biography told in autobiographical form. Mr. White has done well to preserve even in the parts from his own pen the first person, as the problems of a unique personality are thus better set before the reader, and the humor of many a situation is saved. In fact its humor as well as its satire on the decaying forms of religion, ethics and commercial life is a very pronounced feature of the book. What a bundle of reminiscence, shrewdness and slaps at human weakness do we find in "Uncle Dan'l's" account of his early life in the show business:

"Only we didn't call it a show in those days, nor a circus—no siree. The people wouldn't have come near us. Because the preachers thundered against circuses and all such worldliness. To get the trade of the church people, we called it a 'Menagerie' and 'The Great Moral and Educational Exhibition'."

The naive way in which the story reveals "Uncle Dan'l's" traits may be largely due to the editor, but it is none the less enjoyable. The hundreds of old proverbs and sententious comparisons which fall from "Uncle Dan'l's" lips and pen add to the vividness of his personality and afford continual amusement to the reader of the story. The echoes of his drover days ring thru all his later life and color his language. "Happy as pigs in pea straw" was his expression when as a fugitive from justice in New Jersey he thought of the joys of his New York home and Wednesday night class meeting.

Of course, Drew Theological Seminary can in no sense be looked upon as sponsor for the life of its founder, nor would it be fair to suppose that this school in any way condones the offenses of which he was guilty, or approves the business methods he practised, but one may deeply regret that the name of such a coarse, ignorant, conscienceless pirate, as is here depicted, should be enshrined in an institution whose object is to prepare preachers of righteousness for honorable and efficient service in the growing kingdom of God.

Poetry as a Science

THE controversy over Mr. Hudson Maxim's book* amply illustrates the need of what he sets out to furnish—a definition of poetry which shall serve as a standard for determining what is the real and what the imitation. The most contradictory opinions have been exprest: the author, it would seem, is at once a philosopher and a charlatan, a true poet and a writer of versified nonsense. If, then, he has solved the age-long problem of what is poetry, it is evident that his solution has not been universally accepted.

The reader will naturally approach Mr. Maxim's book with a good many hesitancies and doubts. What it promises to do is something rather more than is expected to be performed by one whose life has been spent in other fields than literature. The reader will have his doubts strengthened, moreover, if he takes preliminary note of the photograph of the author and of the two drawings in which he is represented

*THE SCIENCE OF POETRY AND THE PHILOSOPHY OF LANGUAGE. *By Hudson Maxim.* New York: Funk & Wagnalls Co. $2.50.

astride the heretofore unbroken Pegasus. Still more doubtful will the reader become when he lights upon some of the examples wherein the author paraphrases Milton and Shakespeare; and a settled skepticism is likely to possess him when he chances upon the author's contributions to the collection of "great poetic lines" at the end of the book. There are 192 of these, of which 23 are credited to Mr. Maxim, 21 to Mr. Edwin Markham, and 7 to Mr. George Sterling, while minor poets such as Wordsworth and Byron are credited with 3 each and Burns 2. An average student of poetry will have small difficulty in detecting the author's lines among the lines of the masters.

Nevertheless, the book is not lightly to be dismissed. A man may write wretched verse and think it great because it is his own, and yet be able to appreciate and understand real poetry. His flaunting egotism may obscure his exposition, and yet he may have a real message. This book shows study and thought, a definite purpose, and up to a certain point an observance of scientific method. The introductory parts are on the whole excellent. The basis is well laid, even if the superstructure becomes more and more defective as it climbs. It is a book which cannot help but stimulate thought and to some extent modify one's standards of literary judgment.

But does it fulfil its promise? There are some eighteen questions that the author asserts he has scientifically settled, and he has recently offered to pay the sum of $10,000 if a committee of three does not agree that his answers to eight of these questions "are more thoroly, more scientifically, more truthfully and more precisely stated than anywhere else in the world's literature." Pending the appointment and decision of this juridical tribunal, the world ought perhaps to withhold its opinion, or at least to speak with grave caution. Yet it may be asked if the author's definition of poetry, "The expression of insensuous thought in sensuous terms by artistic trope," is any more specifically inclusive of what is really poetic and exclusive of what is not than are many other definitions that could be named. It is somewhat obvious that an acceptance of the definition would necessitate a readjustment of our notions of poetry. There is, for instance, no trope, artistic or otherwise, in Tennyson's picture:

"Myriads of rivulets hurrying thru the lawn,
The moan of doves in immemorial elms,
And murmuring of innumerable bees,"

while the thought is certainly sensuous, and the terms are only sensuous in that they are onomatopoetic. A literal meaning of the word trope would compel the denial of its presence in Wordsworth's

"The silence that is in the starry skies,
The sleep that is among the lonely hills,"

and in

"To me the meanest flower that blows can give
Thoughts that do often lie too deep for tears."

And yet all of these are instinct with what the world holds to be poetry.

Trope is the essence of Mr. Maxim's definition; and therefore rhythm and meter are no necessary part of poetry, tho they may add to it a certain charm. And thus Herbert Spencer's

"That grand epic written by the finger of God upon the strata of the earth,"

is poetry, while Wordsworth's

Frosty rime
That in the morning whitened hill and plain
And is no more,"

would be only "tem-potentry" — a rhythmical and metrical use of impressive words. So, also, Mr. Maxim's bombastic and unmeaning trope,

"On the primal air wild skies were flung,"

is a "great poetic line," all the more impressive for being strung in meter, while Wordsworth's

"Will no one tell me what she sings?
Perhaps the plaintive numbers flow
For old, unhappy, far-off things
And battles long ago,"

would, strictly considered, be nothing more than "tem-potentry."

Mr. Maxim has sought to give a scientific definition to something heretofore undefined in scientific terms. What he has really done is to give us some scientific preliminaries; some speculations and classifications more or less scientific, but at least in many respects helpful and suggestive; a few neologisms not likely to be accepted; a good deal of unnecessary egotism and of dogmatic assertion, and a collection of exceptionally bad original verse, no better than Sylvester

wrote for his more scientific little volume on the same subject.

How to Know Architecture. By Frank E. Wallis. New York: Harper & Brothers. $2.

Most writers on architecture are like the man who wanted to jump over a hill and took a mile run in order to gain enough momentum. They get out of breath over Egypt, Greece and Rome, so when they come to times in which people are mostly interested they can say little or nothing. This is not always to be regretted, however, for they usually have such a contempt for everything modern that their opinions would not be valuable anyway. The chief virtue of Mr. Wallis is the avoidance of this fault. He is not afraid to insert a picture of the new Pennsylvania station as an example of the Roman style, of the Herald building as Italian and a Düsseldorf department store as Gothic, in the same volume with the Parthenon, the Doge's Palace and Notre Dame de Paris. The publisher's promise on the slip cover, "After you have read this book you can look at any building in your town—or anywhere—and tell what kind of architectural name to call it by," is not to be taken literally, for the elements are so mixed in us that the most expert architect could not always do that, but the book will aid the reader in tracing the ancestral traits in the buildings he sees around him. It may in fact come to him as a delightful revelation that there is "architecture" in his own town, and that he can take pleasure in it by learning something about its significance and origin.

Porfirio Diaz. By José F. Godoy. New York: G. P. Putnam's Sons. $2.

Godoy's *Porfirio Diaz* purports to be a biography, but it might better be described as a deification. All of the virtues that ever inhabited mankind are ascribed, explicitly or inferentially, to Diaz, with none of the failings. If he has ever done a wrongful act, if he has ever failed in judgment, if he has ever faltered in duty, the fact is not recorded. Nor might the reader suppose that any one has ever presumed to criticise Diaz. The serious charges against Mexico and her President which have found voice of late are wholly ignored. Peace, justice and prosperity inhabit the land, and to Diaz alone the credit is due. The

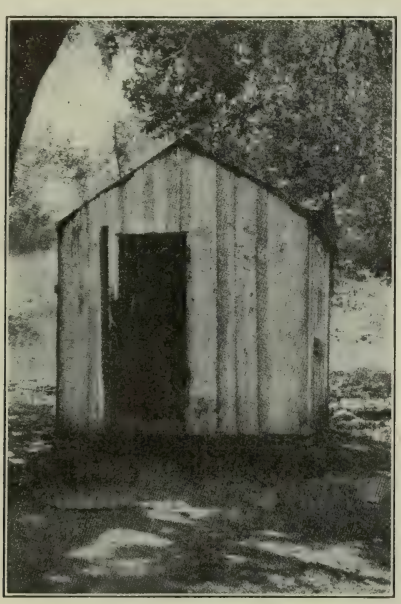
"SKIPPER IRESON," BY WILL H. LOW.
(Scribner's.)

author's view of his hero is supported by quotations, many of them fulsome in the extreme, from a considerable number of more or less prominent men.

A Painter's Progress. By Will H. Low. New York: Charles Scribner's Sons. $1.50.

Whenever the neophyte comes face to face with the successful man there are two questions that he burns to ask. The first is "How did you do it?" and the second, which perhaps is what he really meant by the first, is "How can I do it?" It is therefore no small favor when a man of Mr. Low's standing talks to the students of the Art Institute of Chicago so frankly and unaffectedly about his early ambitions and obstacles and points out so clearly the opportunities of the future. This is a book of interest and inspiration, for Mr. Low's views on the purpose of art are broad and progressive. He looks beyond the easel canvas and crowded gallery to a greater and more democratic form of art, finding expression both in our public buildings and our homes.



An Affair of Dishonor. A Psychological Historical Romance. By William De Morgan. New York: Henry Holt & Co. $1.50.

Mr. De Morgan has deliberately turned his face from London in his latest novel, *An Affair of Dishonor,* and has walked back into eighteenth century England and into a rural community. The story is historical in the sense that the author has taken his stand in a time when the duel was a recognized method of settling difficulties between men of position. It is psychological because the drama is, after the stirring scene of the duel in the first chapter, a mental one enacted in two minds. It is too prolonged to hold the reader's interest. The prolixity, not to say gentle garrulity, of De Morgan's style, which gives such charm to his narrative, is not adapted to the psychological novel. We grow tired of sitting cramped up in somebody's brain, watching its workings, especially if the morbid thoughts move heavily in a vicious circle. And we have small sympathy with either of the two leading characters. We are introduced to Lucinda in the triumphant flush of joyous sinning. If we had known her as an innocent little girl, and had loved her as William De Morgan knows how to make us love his delectable little girls, like Alice-for-Short and Lizeran, he might have won our sympathy for her later self. As it is, she leaves us cold. And the narrator of the tale makes Oliver so detestable a villain and shows his hate so plainly on every page that we are alienated from the start, and care very little what his

evil thoughts may be. We hope De Morgan will forsake the evil ways of hybrid psychological-historical romance and return to his London, his bits of perfect cockney dialect and his more attractive contemporary characters. We are sure he has more good novels up his sleeve, in his earlier and happier manner. *An Affair of Dishonor* is a strong short story which has been made too tenuous by expanding into a novel.

Memories and Impressions. By Helena Modjeska [An Autobiography]. New York: The Macmillan Co. $4.

The name of Madame Modjeska is so closely identified with the history of the

SIENKIEWICZ'S SHANTY.
From "Modjeska's Memoirs."

American stage, that readers will be more interested in her chatty descriptions of this country than in the detailed cataloging of her Polish friends. Yet her *Memories and Impressions,* as a record, reveals the excellent qualities of atmosphere and temperament, even tho, as a record, it is rather devoid of enlightening criticism. As a mere outlining of her professional position, this book is not exceptional; from the very first Madame Modjeska was marked for distinguished service on the stage, and she had the usual ups and downs of the theater, overcoming the difficulties of language, tho not losing her accent. As a picture of Polish domestic and revolutionary life, the opening section of the volume possesses a marked narrative flavor, mixed with an emotional patriotism characteristic of foreigners. In addition to these qualities, one gains a rapid but full impression of the period of acting in America usually regarded by old theatergoers as the heyday of art—the period of Booth. Our popular knowledge of Poland is not scant; America has been very kind to artists coming from that opprest country. How opprest it was in the 60's and 70's is vividly described by Modjeska, who was, thru her connections, thrown with highly artistic and intellectual people. In fact, here is what makes her "chatty" social sketches so entertaining. Wherever she went—America, England, Germany, France—she was greeted by those highest in public esteem. Only when she tries to estimate the artist does she show limitation—perhaps expressional rather than intellectual—for she confesses in these memoirs that she was always a good listener. Her notebook, her letters, her interpretations are not marked by any clear, concise phraseology, even when contrasting types of acting represented by the French and Italian schools. The general reader will enjoy her lines descriptive of Sienkiewicz, who emigrated to California before Modjeska came, and who always remained her close friend, and sent back to Warsaw an account of her American début. Many of her foreign friends figure before the American musical public. Paderewski, Sembrich, Hofmann, the De Reszkes—all were known to her, and flit across the pages of her book in shy fashion. Generally speaking, *Memories and Impressions* contains charm and a certain Polish unity; it is entertaining, but not enlightening. There is a perfunctory tone running thru it which might be naive were it not artificial. As a specimen of book-making, the volume is like lead; the publishers should not have used such heavy paper, even tho their desire was to print the pictures and text at the same time, thus avoiding inserts. Whoever edited this volume for Madame Modjeska had the good sense to retain quaint phrases and explanations which are foreign to the American ear.

Mosquito or Man? The Conquest of the Tropical World. By Sir Rubert W. Boyce, M. B., F. R. S. Illustrated. New York: E. P. Dutton & Co. 8vo, $3.50.

A vigorous campaign of prevention has been carried on in recent years against all insect-borne diseases. *Mosquito or Man?* by Sir Rubert Boyce, is a distinct contribution to the literature of this subject, so vital to the public health. The sub-title is *The Conquest of the Tropical World;* nevertheless, the problems presented spread beyond the tropics and directly concern the public health everywhere. The preface states that in this study, "Nations possess a force which above all others can wrest vast provinces from the sway of the insect pests, which, tho minute in size, yet in their aggregate mass have defied and hurled back man when he has ventured in their domain." The book begins with a description of the tropical medicine movement in England, by whose scientists most of the work has been done. The author follows the history of the growth of sanitation in the tropics out of the superstition and traditions of the "so-called deadly miasm," a convenient term to cover all causes of disease, to the present time, when science has at last placed the responsibility for the transmission of many diseases upon the real offender, the insect. It was as late as 1891 that Dr. Theobold Smith established the first real proof of the transmission of a disease by an insect. One of the leading dictionaries in 1890 defined malaria as "a disease emanating from the soil"! Since Professor Smith proved that Texas fever was conveyed by a tick it has been shown that insects, either mechanically or acting as intermediate hosts, transmit bubonic plague, consumption, typhoid, erysipelas, leprosy, yellow fever, filariasis, tick fever and many other diseases. Professor Boyce tells of the work of the earlier investigators, but for some reason fails to mention that of Professor Smith. He then gives an historical survey of the relation of the mosquito to filaria, to malaria, to yellow fever, and the plans of campaign tried against this dangerous insect. The suggestions requiring the co-operation of the people and the Government in this work are thoroly practical. In part, too, he considers sleeping sickness, the relation of flies to disease, hookworm disease, Malta fever, the "rise and fall of disease," plague, tick fever, leprosy and tuberculosis. The forces of sanitary reform exterminating these diseases have been improved ways of living, less overcrowding, refuse removal and destruction, sewering and water supplies, better food, hospitals for the isolation of suspected cases and medical inspection. Tho in special works and monographs much of this material has previously appeared, this book brings together in a single readable volume an excellent résumé of the subject up to date. There is a large number of admirable illustrations.

Flamsted Quarries. By Mary E. Waller. Boston: Little, Brown & Co. $1.50.

Miss Waller's first important novel since her remarkable "Wood-Carver of 'Lympus," *Flamsted Quarries,* is a story of regeneration. We find a grave fault in its psychology but not in its intention or its interest. No man endures seven years of life in prison with so few marks left on his character. That he assumes the punishment voluntarily, that his repentance is most sincere, and his manliness unquestionable, are considerations that challenge us to sympathy and admiration, but they can not change the stern law of effect. Imprisonment ought not to make a man hard, suspicious and moody—but it does. We may, some day, hit upon some means more effectual because more loving, of reforming prisoners without making them as we do now men marked for life with the convict stamp. The novel is noble in its conception and interesting in its development of plot and character. The little vaudeville singer Aileen, transported from the stage in New York to a rocky hillside town in Maine famous for its granite quarries, is one of the season's most delightful heroines. Father Honoré, the priest of Flamsted, the town that grew up about the granite quarries, is a gentle and fatherly man, with a touch of St. Francis in his composition. The animosity between Googe and Champney, the rival families of the village, seems overstrained. The long expiation of the hero is assumed to be essential to his salvation. We wonder if it was really so.

When restoration has been made and no man further injured by the crime, was it absolutely required that a man should break stones for seven years to prove his penitence. A mother was to be considered; and it seems to us that remission of a penalty might, under such circumstances as those of the story, achieve better results than a sterner justice would suffer. Miss Waller judges otherwise, and she may know better than we the exact discipline her hero needed. But that he could react so quickly from the years of imprisonment sounds a note of unreality in an otherwise admirable novel.

Literary Notes

....Block calendars with quotations from Dickens, Shakespeare, Ruskin, Tennyson, the Bible, etc., are issued for 1911 by Dutton & Co., N. Y. The same firm has also a varied line of booklets and Christmas cards.

....Those who wish to express their love of Dickens by the use of the Dickens Centenary Testimonial Stamps for the benefit of his descendants may procure the stamps in twenty-five cent books of twelve from F. A. Jones, Press Club, N. Y.

....Hervey White, author of "Differences," "When Eve Was Not Created" and other novels, has set up a press of his own in his Catskill home so he can get things printed just the way he wants them. The first publication of the "Maverick Press," Woodstock, N. Y., is a dainty volume of his recent poems in which the *Ship of Souls* has the title rôle.

....While keeping much of the old terminology, Rev. W. L. Walker, of Glasgow, has given in his *Gospel of Reconciliation* (Scribners, $2 net) a fresh and vigorous interpretation, in harmony with modern thought, of Paul's doctrine of the Cross on both its judicial and ethical sides. The author tries with much success to eliminate all that is artificial in the Christian conception of the Atonement and to relate it to life.

....As the English people make more of holidays than we, so it is natural that the English periodicals, usually so staid, should blossom out at Christmas with even greater splendor than ours. These handsomely illustrated numbers appear simultaneously in Europe and America a month in advance, and are all really to be classed as are annuals. *The London Graphic, Illustrated London News, Black and White,* sell at 50 cents, *Le Figaro Illustre* in French or English, at $1, and *Pears' Annual,* at 35 cents.

....The lectures given in Berlin University by President Benjamin Ide Wheeler, of California, where he filled the Roosevelt professorship last year, are published by Karl J. Trübner, Strassburg, under the title of *Unterricht und Demokratie in Amerika.* They should be overset into English so as to reach a wider public here, for even his elementary descriptions of American universities would not be so superfluous to any of us as we think, and his frank and fair discussion of educational characteristics would be of value to all of us.

....The first issue of *The Oriental Economic Review,* edited by Mr. Motosada Zumoto, the accomplished director of "The Oriental Information Agency," 33 Nassau Street, N. Y., is before us. The little magazine will be published fortnightly and will summarize East Asian affairs. It proposes to devote itself largely to promoting commerce and peace between the East and the West in general, and Japan and the United States in particular. Judging by the first issue we should expect it to become a valuable medium of correct information for all Americans interested in Asia and Japan. Mr. Zumoto has already been a valued contributor to THE INDEPENDENT, and we wish his venture all success.

Pebbles

MEN do it, but did you ever hear of a girl backing out on her wedding day?—*Atchison Globe.*

"YOUR wife looks charming tonight, Mr. Blinkers," remarked the hostess at the reception. "Her new costume simply beggars description."

"Well, I don't know as to that," rejoined Blinkers, "but it almost beggared me."—*Chicago News.*

BACHELOR maids were formerly called *old* maids because they looked their age. They tried to look pleasant, but they only succeeded in looking ferocious. They were always looking for a man, too—under the bed. It's a poor place to look. When a man is scared, he does not crawl under the bed; he gets drunk and goes to jail. He knows where he will be safe.

Nowadays, a bachelor maid may be an old maid, but she refuses to look the part. She has learned that growing old is a habit, and a bad habit, too, so every New Year she swears off the habit and a few years off her age and looks as young and lovely as ever. How she does it no man knows, and no man cares—so long as she is successful.

The single woman must be her own meal ticket, but it is easier to work than to work a stingy husband, and waiting *for* a husband is no harder than waiting *on* one. She, of course, loses out on some of the joys of married life, and no doubt there are times when the bachelor maid longs for the companionship of a big, strong man who would love her and beat her and otherwise keep her in a state of pleasurable excitement. But she has one recourse. She can go to the theater and watch the villain choke the leading lady, and imagination will do the rest. So why should she marry a *mere* man? She does not—that is why she is a bachelor maid.—*W. B. Kerr.*

The Independent

Entered at New York Post Office as Second Class Matter
Publisher, Clarence W. Bowen
130 Fulton Street - - - New York

A WEEKLY MAGAZINE. FOUNDED IN 1848.

One Year, $3.00. Single Copies, 10 Cents.

Single copies over six months old 25 cents. Postage to any foreign country in the Universal Postal Union, $1.75 a year extra; to Canada, $1.00 extra. Subscriptions will be received for other periodicals, and clubbing rates will be granted as low as offered by any responsible agency.

Order for the change of an address should be received two weeks before change is to take effect. The old as well as the new address should be given.

For the convenience of our subscribers we will send on receipt of publisher's price any book reviewed or advertised in our columns.

Volumes of The Independent are completed at the end of December and June, and a full index is furnished free on application. Neat binders holding in book form thirteen current issues will be furnished for 45 cents.

If the numbers comprising any semi-annual volume are returned to us prepaid in good condition with $1.50 we will bind the volume in handsome and substantial half buckram and deliver it free anywhere in the United States.

We are always glad to receive articles for examination, but writers desiring the return of their manuscripts, if not accepted, should send a stamped and addressed envelope. We cannot, however, even so, hold ourselves responsible for their return. Authors should preserve a copy.

Advertising rates will be furnished on application.

Mr. Hitchcock's War upon Swindles

It is not easy to overestimate the importance and the value to the public of Postmaster-General Hitchcock's pursuit of swindlers who have been robbing the ignorant by means of the mails. Formerly it was the practice of the department to content itself, in the case of a detected swindler, by issuing what was called a fraud order. This checked his criminal activity for a time, but the excluded concern was soon reorganized under another name. The new way is to arrest, indict and prosecute the guilty officers, to confiscate the tools of their trade and to bring their criminal business to an end. It has been used this year in no less than seventy-eight cases, and the corporations or firms thus brought to account had in five years robbed the American people of more than $100,000,000.

In one day last week there were two striking examples of the Post Office Department's good work, both shown in New York City. Some years ago a young man who had exhibited ability as a salesman for a coal company in the Middle West decided to become what he called a promoter of companies dealing in oil, mines, or timber. In fact his purpose was to become a swindler. His name was Burr. Associated with him were his brother and two or three young men of the same kind. They took offices in New York, craftily selecting a famous building of curious shape, pictures of which could be used effectively in their circulars to the unwary. At first there was a firm called Burr Brothers; three years ago the firm was incorporated in Connecticut, under the same name and with the modest capital of $100,000. It became very prosperous. Agencies were established in Seattle, San Francisco, Chicago, Cleveland and other cities. Occasionally the brothers visited their native town in the West and dazzled the people there with a lavish display of diamonds. All was going well with them until the Post Office Department's inspectors put them under arrest and seized their books and other office property, including a long list of names (with addresses) which they called the "sucker list," and which, as an asset, they had in their accounts valued at $100,000. It was a list of persons who could be duped, or who, having been deceived once, probably could be swindled again.

Now let us see what these robbers had done. The official report shows a list of thirty-two corporations the stock of which they had sold. Many of them they had organized. Four mining companies, organized by Burr Brothers, and capitalized at $3,500,000, are no longer in existence. Fourteen other mining companies, capitalized at $24,500,000, the greater part of whose stock they sold, usually at par value, are now dead. They made six oil companies, capital $4,650,000, and sold substantially all of the stock. Two of these have joined the dead mining companies. They also distributed the shares of six other corporations, two of them said to be railroad companies. The capital of these, on paper, was $11,500,000. All of them, Mr. Hitchcock says, are "out of existence." The aggregate capitalization of all these thirty-two concerns was $42,250,000. He says that the Burrs sold between $40,000,000 and $50,000,000 of stock. The money was coming in when the officers arrested them. Burr Brothers' mail that day contained $20,000. It

was coming from farmers in the West, from mechanics in the East, from widows who gave to these rascals the life insurance money left by their husbands. And the companies in which they invested were dead or were about to die.

Another concern, called a wireless telephone company, whose officers were arrested on the same day, was capitalized at $5,000,000 and had organized affiliated corporations capitalized at $35,000,000. Its offices were in "the Wall Street district," not far from those of a rascally banana company, whose organizers were indicted last week.

All these swindlers deserve severe punishment, and we hope they will get it. The exposure and prosecution of them will enlighten many who have been in danger of giving their money to similar thieves who are still at large. There are many of them. Mr. Hitchcock says the department's raids upon seventy-eight corporations or firms are "only a beginning."

The Post Office Department is doing its duty. We desire to point out what seems to us to be the duty of certain other interested persons. We refer to the members of the New York Stock Exchange, the eminent financiers and bankers of New York City, and the authorities of the city and State. Has it not been possible for the city government or the government of the State to do a part of this work which the Federal Post Office Department has taken up? Ought not the financiers and bankers of New York to take measures for the exclusion of such rascally swindlers from the money center of the New World?

The operations of such robbers are very effective in exciting prejudice thruout the interior of the country against "Wall Street," the Stock Exchange, and the legitimate and honorable financial business of the great city. Such swindlers commonly seek quarters in the "Wall Street district" and profess to be on familiar terms with great financiers and famous banking institutions. Their ignorant and unfortunate dupes blame "the Wall Street gamblers." The victims of bucket shops are accustomed to say that their money was lost in Wall Street. We venture to say that New York finance and financiers suffer much unjustly in the estimation of people far away by reason of the losses caused by such men as the Burr Brothers. We are not saying that New York finance and Stock Exchange operations are wholly above criticism, but neither should be blamed unjustly for the work of such swindlers as the Post Office Department is pursuing.

It seems to us that it would be expedient and profitable for New York financiers, bankers and members of the Stock Exchange to make and maintain a kind of protective agency, whose aim would be to detect swindlers like the Burrs, and assist the Federal or local authorities in bringing them speedily to justice. Such an organization would serve the public interest, and at the same time tend to give to New York finance thruout the country such standing as it justly deserves.

A Protecting Navy

FAR be it from us to disparage the value of a navy in time of war. In a war age, a period in which nations expect to settle their quarrels by war, a navy, like an army, is necessary. It is a destruction and waste of money and life, but it must be endured for the protection of the liberties of those who survive, and for what is called national honor. For a nation like ours, or like Great Britain, a navy is more important, in an age of war, than an army.

In an age of peace a navy, like an army, is an absurdity. Its whole advantage is in war. It becomes, then, very important for a nation and its statesmen to be able to judge whether the old age of war has passed or is passing, or whether disputes between nations are still to be settled by force of arms. What is our age, peace or war? In future cases of difference between us and Great Britain, or France, or Germany, or Japan, will we get so angry that we will fight, or will we keep our temper and save our men and money, and settle our quarrel by arbitration? We believe the age of peace has begun, and we believe it is safe to act accordingly. But the governments do not yet think so. They have a pride in their armies and navies, and each tries to rival its neighbor in the threat of armaments.

Among these is Canada. She has lived hitherto as in an age of peace, and has lived safely for a hundred years. But now, just when the age of war is passing by, she is getting nervous. She must begin to have a navy of her own, and she will find that plaything a very expensive luxury. Canada will begin with four big cruisers and six destroyers, to cost ten million dollars, and over a million more annually to keep them running. Now, Canada has not the slightest use for these cruisers and destroyers. She is absolutely in no danger of war. And Canada knows she is in no danger, and that it is of no advantage to her that she should put that heavy tax on her thrifty citizens. She is doing it, not for herself, but as a public declaration that she is loyal to Great Britain, and that so long as Great Britain keeps up the craze that she must maintain as strong a navy as any other two Powers put together, Canada must help her. It is a self-denying ordinance, and has that much of praise; but why should she encourage Great Britain in this insanity of the nations?

And just now we are having fresh proof that a navy is not only an expensive, but also a dangerous plaything. The toy may explode. We have had within the last few weeks two striking examples of it. First we had the Portuguese example. It was the navy which overthrew the royal government, bombarded the capital, and then drew over or conquered the army and expelled the King and all his family. That was the mischief of a navy. Did not the King wish he had no navy? And lately Brazil has been creating a navy. Her two proud battleships were in the harbor near the capital, where the Congress was in session. The men of the fleet rose suddenly in mutiny, fired cannon balls into the city, and threatened to destroy it if their demands were not granted, with complete amnesty for their mutiny. What could the Congress do? It had no defense against its boasted defenders, and it was compelled to submit to the humiliating terms. This is the third time that the Brazilian navy has revolted. In 1880 it helped to overthrow Dom Pedro's empire and proclaimed a republic, and only four years ago again it revolted, under its admiral, as did the Portuguese navy the other day, and poured shot into Rio Janeiro. What is the advantage of a navy to the republic of Brazil? All that it has achieved is to compel Argentina, which had suppressed its navy, to start a new one in self-protection against its northern neighbor. Thus we see two navies, created to defend their nations against foreign foes, making war instead on the nation that created them. This is a contingency to be considered.

Nor are these isolated cases. It is only a few years ago that Russia's war vessels at Sevastopol did precisely the same thing—mutinied, killed their officers and sailed away to foreign ports. With a navy it is always to be considered how loyal it may be. Canada will do well to reverse her policy and withdraw the contracts before they are signed. She has absolutely no need for a navy, loyal or disloyal.

Germany and the World's Peace

The Peace Movement has passed the stage of argument among thinking men that have no selfish or barbaric interests to serve. The question that remains is whether peace can be maintained; not whether it ought to be, if education and wise public policy can maintain it.

As bearing on the question in this form, the latest studies of that careful student of history and the art of war, Rear Admiral A. T. Mahan, will be read with more than passing interest. Admiral Mahan has that insight which fixes upon the strategic situation in public affairs as in a campaign. In his new book on "The Interest of America in International Conditions" he unhesitatingly names German power and policy as the present menace of the world's peace.

It has been no sentimental consideration that has prevented European war since 1878. In the most literal sense of the words, peace has been kept by the "balance of power." So delicate has this balance been, so inexorably certain has been coalition against any one nation that should venture upon offensive operations, that no Power had seriously thought of such an adventure until the present Emperor of Germany came to

the throne. Of this man no publicist who values his reputation would affirm that any purpose has filled the horizon of a monstrous egotism save that of making Germany the arbiter of life and death among the civilized and uncivilized nations of the world. Indeed, one would have to ignore the Kaiser's own tiresome iteration of his divine mission to entertain a different opinion.

Admiral Mahan is too seasoned a product of official training to state the case in quite such phraseology, but his meaning is not for that reason less clear. Germany's navy is rapidly becoming more powerful than any other except England's; the German army is unequaled. Every other interest of civilization is being subordinated in Germany to economic production and preparation for war. Even the universities are little by little being made to feel the iron hand inside the velvet glove, known as the Ministry of Instruction. The spirit of free inquiry, which before the Franco-Prussian war made Germany great among the scientific nations of the world, is straining at the leash. The Germany of today has only a half contemptuous toleration for Fichte's proposition that Germany's true role among the peoples is that of intellectual leadership.

Admiral Mahan does not advise an open alliance of the United States with any other Power to resist German pretensions, but he does not disguise his convictions as to where American interest lies. Great Britain can never menace the United States, for Canada is her hostage. Not so with Germany, which, without concealment, resents our policy of the open door in the Far East, and our Monroe Doctrine for South America. England, the United States and Japan are the nations in a strategic position to maintain international peace.

It would be folly to underestimate so sober and scientific an analysis of the situation as Admiral Mahan has made, but it is not out of place to call to mind certain factors in the problem which perhaps he has not adequately valued.

The political crisis in Great Britain is revealing a keener perception by Englishmen than they have shown hitherto of the weakest spot in the British imperial armor. Great Britain can never hope for that perfect understanding with the people of the United States which she more and more desires until the Irish question is settled. Let Irish aspirations once be satisfied, let Ireland be bound to the Empire with whole-hearted loyalty, and nothing can prevent that mutual sympathy between the great English-speaking peoples of the world which spontaneously grows out of their common language, their common institutions, their common history and traditions. That the pacification of Ireland is nearer realization today than its most ardent prophets have dared to hope is indicated by every sign in the political firmament.

Another factor full of the promise of peace we find in Germany itself. The German people are not all imperialistic, and the elements openly hostile to the Kaiser and his policy are hourly gaining strength. The great central force of the opposition is the Socialist party, which is uncompromisingly antagonistic to militarism under every form and plea. And Socialism in Germany is today so vigorous, so practical and so aggressive that there is every reason to expect that within a few years it will control the Reichstag. No better evidence of its increasing power, and of the self-restraint that comes with responsibility, than was afforded by the refusal of the International Socialist Congress at Copenhagen to adopt the resolution offered by Keir Hardie, calling for a general strike in trades tributary to war in any nation entering upon hostilities. Conservative writers like Admiral Mahan have not yet waked up to the tremendous significance of the international Socialist movement as a power enlisted for the maintenance of the world's peace.

Mascots

We wish we could believe that those who make much of mascots really are only having a little silly amusement and are merely pretending to believe in their value. But that we cannot accept much as we would like to. They are so earnest in their assertions, so pained if there be no mascot or if it be lost, that we must suppose that not a few of them really believe that the mascot brings "luck." Of

course the wiser ones take the mascot as a sort of joke, at most a symbol, something like a banner; and they make much of it just as a soldier defends his flag. Yet the flag is no mascot, is not supposed to bring luck; it is simply a symbol, while a mascot is considerably more than either a joke or a symbol.

The other day Mr. Wellman, the airman, proposed a flight across the Atlantic, and to secure a favorable result he took with him a black cat as a mascot. Did he believe that the black cat would make his voyage successful? Apparently so, for, a story tells us, the cat dropped off into the water, and in fear of the bad luck that might result he stopped his craft and fished up the cat and again proceeded hopefully. We judge that there are even college students who would expect to lose a football game if their mascot were to be lost or die.

Now what is the essence of this worship of the mascot? It is the belief that the presence of a good mascot will bring the advantage of luck as additional to the advantage of skill. The bare presence of the black cat commands luck, gives success. It is like what used in chemistry to be called catalysis, but chemists now know that no substance acts magically by its mere presence, but the effects can be explained by ordinary physical and chemical laws. So there is no such thing as luck, and no such thing as any advantage that comes by the presence of any luck-bringer.

The doctrine and worship of the mascot are very old and are the prevailing form of idolatry in the most degraded savage tribes. They make themselves amulets out of bones or teeth or any other object which will bring success, as they believe. Their sorcerers make grotesque amulets, and the people wear them. They are very commonly worshiped by certain races in Africa, and the superstition, silly as it is, survives after a considerable degree of culture. Many a Mohammedan wears a portion of the Koran bound about his arm to protect him if he goes into battle; and in Europe and America many Christians wear medals or little squares of cloth with an idea that their presence will be some sort of protection. The old superstition dies hard. Apparently intelligent people will carry a horse-chestnut in the pocket as a preventive against rheumatism. Whether called a gree-gree, or an amulet or a mascot or what else, it is not merely silly, but it is a superstition; and it assumes that apart from the laws of Nature and the will of God the world is ruled by chance, and that a black cat or a goat or a written amulet or a bone or tooth can command chance and rule the universe. It is called fetishism, and it is the lowest, most ignorant and degraded of all religions.

We have recognized the fact that many, perhaps most, of those who must have a mascot know perfectly well that they are fooling. But that kind of low fooling ought not to be encouraged. It should not be taught to children. Lord Lytton said well: "On earth rules conscience; in Heaven watches God; but Fortune is the phantom we invoke to silence the one and to dethrone the other."

Government Monopolies

The French Government is confronted with a peculiar difficulty. Just now, when it needs all the money it can get for workingmen's pensions and other reforms, it is threatened with the loss of one of its important revenues, that derived from the match monopoly. It might be supposed that tobacco and matches, in spite of their comparatively recent introduction as luxuries, had become necessities to so large a proportion of the population that a government which monopolized both was in possession of an assured income. Every cigar and pipeful involves the use of a match, probably more than one if they are of government manufacture, besides those that are used for the ignition of better things than tobacco, such as candles and kindling wood. But the match is in danger of losing its own monopoly. The electric light, whether suspended from wires or carried in the pocket, requires no match, and self-lighting attachments of spongy platinum or some cheaper material are being put on gas jets.

The most recent and dangerous rival of the match is, however, the new cerium alloy of iron, which, on being struck or even gently scratched, gives off a shower of brilliant sparks. The pocket cigar lighters now made in Germany for the

use of the new metal are hardly larger than a match box, and rarely require to be replenished. No poisonous phosphorus, no scratching on walls or trousers, no blowing out in the wind, no sulfurous odor, no danger of fire from matches thrown down. It is a curious reversion to the older form of striking a light, the use of flint and steel, except that the flint is replaced by cerium-iron. Such cases of atavism are not uncommon in the history of invention. The earliest bicycles had two wheels of equal size. These were abandoned for the high wheel with a little wheel trailing behind or running in front, but in a few years we restored them to their former equality. The first cars propelled by engines used the common highway, and now, after having run on rails for half a century, they come back to the road.

The match should celebrate its centenary in 1927, but it begins to look as if it would not live to see it. At any rate, the French Government, alarmed at the threatened extinction of the match, is making violent efforts to prevent the invasion of this rival from over the Rhine. It is against the law to sell the cerium lighters or even to own them, and strangers who openly display the new playthings are liable to get into trouble. Nevertheless, it is impossible to keep them out altogether. They are surreptitiously slipped into one's hand on the boulevards like indecent postal cards.

The search for matches at the French frontier has long been one of the vexations of the tourist. Last summer the custom house officers found a dozen matches in the pocket of an American tourist and imposed a fine of a franc apiece for them, a rate of $2.40 a dozen. He tried to throw them away, but that was against the law. To give them to the inspectors, it seemed, was bribery; to burn them on the spot, arson. So he paid his fine and then demanded the matches, saying that he had to have them in France. "Why?" asked the judge. "To light the French matches with," was the reply.

The bather who wants to take a bottle of sea water must first get a Government permit. One would think that there was enough water left in the ocean. One might object that France does not own all the salt water of the world anyway. But there is the danger that the bottleful of water might be evaporated and so salt obtained which had not paid the Government tax. A French woman who kept a small tobacco shop was recently arrested and fined for selling cigarets not made of tobacco. They were not sold with intent to deceive. They were presumably less injurious, being free from nicotine. But their use would cut down the Government revenue. The raising of tobacco is restricted to certain localities in France, and in Spain, where it is also a Government monopoly, it is almost all imported notwithstanding there is an abundance of good tobacco land in Spain. But if it were grown freely somebody might roll up a leaf and smoke it on the sly.

In the United States the manufacture of matches and tobacco is also practically monopolized, but there is this difference, that the Government does not get the profit of the business. So probably the people of France think they are better off in spite of petty annoyances and interference with the progress of invention. But the nervousness manifested by European governments over any reduction in the consumption of luxuries from which they derive a large part of their revenues suggests that here is a powerful weapon that socialists and syndicalists have not yet made use of. It might be more effective than that often threatened and never occurring general strike. If the socialists of Germany would only sign the temperance pledge and the syndicalists of France swear off smoking they would drive both countries into bankruptcy in a year without riots, bloodshed or sabotage. But perhaps the Government would call such concerted abstinence revolutionary and make compulsory a certain per capita consumption of liquor and tobacco.

Gorgons and Furies

MEDUSA had snakes in her hair. One who looked at her face was turned to stone. When Perseus went to cut off her head he had to carry a mirror, so as to see only her reflection, and then a bag to put her head in. The present British Gorgons are enough to petrify us all with amazement, they are so venomous, so unlike real women, and we are not grieved to see them bagged in prison.

They flock by the hundreds, not poor and ignorant, but what would be called ladies if they did not act so; young women and middle-aged, women of culture, members of clubs, and they form a mob, rush the police, batter them, catch a leading member of the Cabinet as he is peaceably walking the streets, knock him about, beat him so that he has to be put under a surgeon's charge, and then they go to the houses in which the Cabinet Ministers live and smash the windows, like a pack of hooligans. And all this they do in the calm assurance that the police will be gentle with them, will "show great forbearance" because they are "ladies," and will not beat them back rudely with their clubs as masculine rioters would be treated and deserve to be treated. And when they are arrested by the score, that is just what they wanted, what they had planned for; and when brought before the magistrate they refuse to pay a fine and elect to go to prison for ten days, or a month, or two months, expecting to be treated like "first-class misdemeanants"; and when they come out they carry their imprisonment as a badge of merit, put on a special uniform and march together as the proudest show in the procession of the suffragist demonstration.

At this distance it is impossible, much as one gladly favors their demand for the ballot, to sympathize with them in the way they go to work to get it. Their method is that of lawless violence. It is war, war against society, against law—and they know it and mean it. It is precisely the same as the way that masculine and feminine strikers act in a labor dispute, when they use force, brickbats, and pistols, and bombs, to secure their purpose.

And it succeeds fairly well. Doing evil that good may come often gets the goods, for all that St. Paul says of the just damnation of those who employ such a method. The naval strikers in the harbor of Rio Janeiro who shot up the town got their demands. The coal strikers compelled the President to intervene in their behalf. And now these Gorgonian furies have—we must admit it—attracted such attention to their demands as sugar and spice and everything nice would never have secured, and there is a promise that the berated and besieged Cabinet will present a bill in their behalf some time in the coming Parliament, but they do not thank Mr. Asquith for it, because a Parliament may last for seven years, and they are in a hurry.

Well, we prefer the appeal to reason rather than the appeal to physical force. The latter may be necessary in England, but here in lawful ways we have equal rights for women in five States, and the reform is moving East. It will come; but we like our way better than the rout and hideous roar of the Thracian Mænads who beset Orpheus or of the London furies who beset Mr. Birrell.

Better Ethical Standards

Mr. Loeb is quoted as affirming that our nation has begun to establish, or possibly to accept, ethical standards of a much higher character than it held only a few years ago. He is reported as saying that we are improving at a rate astonishing to every one who studies it—continually and enormously. To confirm this he points to the changes in our Customs offices, where social, financial and political influence has practically ceased to have effect on the enforcement of law. He quotes Woodrow Wilson, now Governor-elect Wilson, as saying that the exposure of crime is so much more sure in these days that it more than accounts for the apparent multiplicity of crime. This is good doctrine to hold, and it is pleasant to believe on the part of those who love their country. That it is not too full of optimism we believe can be demonstrated. Whatever anybody may say of Mr. Roosevelt, or whatever may be thought of a few of his scattered political theories, nobody can deny that a very large share of the momentum given to moral issues in political life and ethical purposing in general socal life is due to his courage during his official career. This must be taken into account constantly in estimating the public man. It is not a question whether one of our leaders has made a blunder or not, but whether his purposes are charged with social righteousness. Does the man make for the true and the good, or for the selfish and the greedy? There is lit-

tle danger for our institutions from the theories of noble men; we shall go under, if we go under at all, from the undermining force of falsehood and selfishness. The struggle today is a cleancut wrestle between greedy and unprincipled unrighteousness and a determination to see the Golden Rule proved to be a working factor in human society. It was a fortunate day for the American people when Governor Folk, of Missouri, as a simple prosecuting attorney, decided that law must be enforced, and that he as attorney for the law must enforce it. It began the breakdown of a system of graft and greed that seemed to be absolutely impregnable. We believe that Mr. Loeb is right, and that the American people has made an astonishing stride lightward and rightward during the last half dozen years.

New Jersey's Woman Graduate

In the editorial entitled "The Fifth Star in the Woman's Flag," published in THE INDEPENDENT November 17, we stated that one of the chief obstacles to the progress of women was the refusal to allow them equal educational and industrial opportunities, and we referred to New Jersey as one of the States in which no woman can get a college education. We are glad to learn that there is to be in the future one or more exceptions to this rule. Upsala College, Kenilworth, N. J., is co-educational and has one woman in its senior class. We earnestly hope that she will hold out until next spring, so that New Jersey may have one woman graduate to match the hundreds who are being educated in every Western State. There is, we repeat, only one way by which the dominant sex can keep the weaker in subjection and that is by the use of force. The primitive man used a club. In this age physical violence has been replaced by other forms of force, such as wealth and education, and there is manifest a determination on the part of some men of our day to keep women from acquiring either of these weapons of self-defense by keeping them out of as many occupations and universities as possible. But there are still many ways by which women can get an education and earn their own living, and they should make use of such freedom as they have to gain more. Nowadays women have "clubs" that may be of service in this matter.

Industrial Diseases

The American Association for Labor Legislation reports the first labor clinic. Three large four story buildings, well equipped with scientific apparatus, in hospital wards, lecture room, library, laboratory, are dedicated to the eradication of those diseases which accompany some of our industrial employments. In the hospital is being treated a man palsied with mercurial poisoning received in a hat factory, and the problem is what to do with such cases as this, as well as how to avoid their multiplication. Another patient suffers with lead colic, a house painter, whose children have died during their first few months, apparently from the presence of poison. Others are being treated for over-strain, dusty atmospheres, and from other sorts of poison. It is proposed to extend the clinic into industrial establishments, and supplement the work of government inspectors. Unfortunately this noble establishment is not in our own country, but in Italy. A committee of experts for labor legislation has recently presented a memorial on industrial diseases to the President, stating that there are not less than thirteen million cases of sickness each year among our industrial workers. This stands for not less than half a billion dollars. It is estimated that one-fourth of this loss is preventable, and should be prevented. We quite agree with the secretary of our American association that the United States needs an institution that will correlate the experience of our hygienists, and a hospital to accelerate progress in the study of causes and prevention. We have a great deal to learn in the way of eliminating poisons from our industrial pursuits. We have been teaching the farmer and the fruit grower to use an enormous amount of arsenical poisons, without a suggestion that he may poison himself while saving his products. The American Association for Labor Legislation held its first American Congress last June, and it is

quite certain that the matter will grow into adequate proportions with some speed. The most valuable aid would be an American clinic for the study and prevention of industrial diseases.

Royal Sport

We may presume that the five hundred tamed deer shot in western Massachusetts last week were shot for food, but that is not the case with the five hundred deer shot by the Emperor of Germany and the Czar of Russia and their party in the great hunt at the preserve of Oranienburg. There had been no hunting for five years and the deer were as tame as cows. Stands were set up for the royal imperial marksmen and the deer driven up to them by the beaters, and Emperor William was so happy as to kill fifty unsuspecting creatures, while his Russian guest shot but nineteen. We can imagine butchers getting hardened to their daily task and ceasing to feel any pangs when they kill as quickly and scientifically as they can; but we should think it would be difficult for the most devoted lover of the chase to find much fun in shooting at a distance a herd of deer preserved for that purpose, and wounded wherever the bullet might hit. But we ought not to be surprised, for if kings think the killing of men in war the noblest of all employments, and the title of War-lord the highest praise, and war worthy of the most devoted labor, why, shooting deer from a stand may be royal fun to that sort of a pervert.

A Bicameral Parliament

The British Conservatives are doing their best to persuade the people in the next election that the question before them is the choice between one chamber or two. They declare that it is the purpose of the Liberals to destroy the House of Lords by taking away all its power and putting all under the tyranny of the House of Commons. They tell the electors that other countries, like the United States, have an upper and a lower chamber to their Congress or Parliament, and that there is no safety in a single house. That sounds reasonable; but let it be considered what kind of a second chamber Great Britain has, and will have, under any possible reorganization. It will not represent the people. Its members will not be elected by the people. With the best reorganization possible half the members or more will get their position by birth. They will represent only a class composed of those whose ancestors got the good will of the sovereign and had money and lands. They have no more right to rule than the members of a jockey club. What they have done in the past they will do in the future. They have thwarted the will of the people again and again. It has been impossible to get a truly liberal measure enacted into law. The veto of the Lords has in this Parliament been used against the Education Bill, the Plural Voting Bill, the Scottish Land Bill and the Licensing Bill. It stands in the way of all desirable reforms in Ireland, Scotland and Wales. Some way must be found to make it possible to overcome this obstacle, and the reform of the House of Lords will not secure it. It is because of the hereditary character of the House of Lords that the bicameral system there cannot defend itself by the analogy of the United States. Our Senators are chosen by the people, indirectly to be sure, but we shall mend that.

The same correspondent of the London Times who gave so admirable a series of letters about conditions in India is now furnishing a similar series about the American occupation of the Philippines. His report is extremely favorable. In the fourth letter he can hardly find words strong enough to praise the work done in the reconstruction and development of the city of Manila. About the old walled city, with its 200,000 inhabitants, a new Manila is rising to provide for 2,000,000 people, and streets and sanitation are well attended to, and cholera and smallpox have been almost exterminated thruout the islands. In a fifth letter he takes up the bothersome Friars' Land trouble and fully supports our Government in the matter.

We observe with pleasure that the negroes of the country are beginning to try to support, as far as possible, their own institutions of learning. An excellent example is in Georgia, where the

African Methodist Episcopal Church is very strong. The supporters of the Morris Brown College at Atlanta have raised for it $25,000, for which no white man has been solicited, and no colored man outside of the A. M. E. Church in Georgia. This is the largest sum negroes of any section or denomination have raised for an educational institution. The A. M. E. Church has 94,000 members in Georgia.

It is money, nothing but base money, that has led the City Council of Baltimore to pass an ordinance forbidding negroes to purchase property in a block occupied by white residents, and, to avoid constitutional objections, white men to buy in a block occupied by negroes. The trouble is that the negroes are rising, getting wealth, and they want to live in better houses and surroundings; but when they move into a street the valuation of other houses declines. Any fair court would see the purpose of the law as directed against the negroes and not against the whites.

We are glad that Congressman Tawney, chairman of the Appropriations Committee, as well as Congressman Foster, chairman of the Foreign Affairs Committee, is strongly opposed to the fortifying of the Panama Canal. He would have a convention of the world Powers to neutralize the Canal. Of course General Wood in his report asks for a considerable increase in the regular army, for use in protecting the Panama Canal and Hawaii, besides a reserve force of 300,000 men. If the Canal were neutralized there would be a saving, and the use of the rural police will before long reduce the necessity of the army in the Philippines.

The British Prime Minister, Mr. Asquith, puts the burden of increasing armaments thus:

"All admit and deplore the evil. Yet each country by itself is helpless to arrest the growth of armaments. No single country can even temporarily reduce its expenditure and so risk the security of its possessions. We seem to be in a vicious circle; vast armaments create distrust between Governments, and that distrust stimulates expenditure on armaments. Yet I am not without hope that under the growing pressure of the best public feeling in every part of the world a good political feeling may even before very long become so general among the Powers as to put an end to this wasteful and disastrous competition in hostile preparations."

Professor Haeckel has withdrawn from the Prussian Evangelical Church. It means very little, as membership may mean very little. One born in it is supposed to remain in it as long as he lives and to pay its assessments; but of late thousands who have no interest in the Church have withdrawn to escape taxation for it, and to the benefit of the Church itself. Haeckel has not been a believer, and we are surprised that he remained in it so long.

The news is reported that the Spanish authorities have come to an agreement with the Catholic Church by which an associations law will be accepted, that is, a law incorporating churches. But the French bishops, by a majority vote, were ready to accept a French associations law, but were forbidden by the Vatican. We presume the Vatican has been approached in this case and has consented, with no regard to precedent, for it is an ecclesiastical rule, "*Non datur argumentum a pari.*"

The farmers are not afraid of centralization when it is of advantage to them. At the meeting of the National Grange, in Atlantic City, last week, they voted that the Interstate Commerce Commission should have power to fix rates and compel obedience to its rulings; and if Congress does not give this power they would have the Government take absolute control if not ownership of the railroads.

The news comes to us from Portugal that all the bishops and higher clergy have given in their adhesion to the republic. That is not wholly surprising. There has been no action of the republic, so far as reported, that would be particularly offensive to the regular clergy. The hostility is to the monks and nuns; and it is well known that the parochial clergy and their bishops are often not well disposed to the favored orders.

INSURANCE

How Women May Save

THE question of saving money comes home to women as well as men. The great increase in the number of business women during recent years makes this of increasing importance to them. Business or professional women dependent upon their own efforts for support and confronted by this problem and who may not have considered life insurance as a possible anchor to windward might beneficially turn their attention to it. A women enjoying even a large income finds it so easy to spend it that the matter of saving is too often pushed aside unless it is systematically provided for. There is, of course, the ever-ready savings bank, which is a very useful institution. Every woman ought to have a bank account. It makes for thrift and independence. But a savings bank has one or two obvious disadvantages. It pays at most but 4 per cent. and it is very easy to draw out therefrom money on deposit. A woman wants a new gown. She draws on her bank account to buy it. She has a thousand other wants and her bank account is always subject to draft. If, then, the woman with the bank account takes out a fifteen or twenty year endowment policy in a good company she has both safety and security. She avoids the uncertainty that would attend investment in real estate, which requires varying amounts each year to maintain it. She has no unexpected assessments in her life insurance investment. The annual premium remains the same for the term she selects. She cannot lose, because in a company like the New York Life, after the payment of two annual premiums substantially corresponding to deposits, she can take a paid-up policy for approximately the amount she has expended on it, which sum will be paid at the end of the original specified period or at death. By means of insurance she at once creates for herself an estate equivalent to years of saving and depositing in savings banks. She may in times of stress also borrow money on her insurance policy. The time for her to begin with insurance as an investment is during youth, since, if the woman cannot then save something for such a benefit she never will be able to do so. The business or professional woman, in sheer self-defense, ought not to neglect the matter of life insurance. The money it signifies will be equally welcome whether she is married or single when the endowment matures.

A HEARING on the subject of increased freight rates was given last week by the Interstate Commerce Commission sitting at Washington, D. C. This hearing was rendered notable by the appearance before the Commission of George E. Ide, president of the Home Life Insurance Company of New York. Mr. Ide was the spokesman for the Association of Life Insurance Presidents, and his views as set forth at the hearing had been submitted to Paul Morton, head of the Equitable Life Assurance Society of the United States, who approved them. Mr. Ide referred to the close relations of life insurance policyholders with the rate question because of the ownership of railroad stock by the insuring companies and pleaded against the impairment of their investments. He declared that the life insurance companies of the State of New York alone own one-eighth of the entire railroad bond issues of the country, and remarked that "any move which even sentimentally affects unfavorably the railroads of the land would strike a blow at the great army of thrifty citizens who are policyholders in life insurance companies." He argued that any action which decreased the earning power of railroads and caused them to cut dividends would seriously affect the life insurance companies. "The shipper, the jobber, the salesman and consumer, all have rights of paramount importance," he declared, "but the policyholders and savings bank investors must also be considered." The railroad securities held by his company, Mr. Ide said, paid an average of four and three-eighths per cent., which he declared to be somewhat lower than the return on the investment five years ago.

FINANCIAL

The Securities Market

LAST week's market for securities was weak and unusually narrow. Only 1,144,600 shares were sold on the New York Stock Exchange, against 2,453,600 in the week preceding, and nearly 5,000,000 in the corresponding week of 1909. On Saturday the business done amounted to only 64,900 shares. Net losses for the week, in the leading active issues, ranged from 1 to 1¾. Rates for time loans and loans on call declined. The bulk of the trading, as for a long time past, was in Steel, Reading and Union Pacific, these three stocks showing transactions amounting to 646,000 shares out of the total of 1,144,600. The movement in these stocks is generally ascribed to professional manipulation. Very little interest in the stock market is now manifested by the public, and the large financial powers await the decision in the railroad freight rate case. The disturbance in Mexico had no perceptible effect upon the general market, but Mexican Government 4 per cent. bonds lost 3½ points (falling to 92½) on small sales.

In the steel industry the Corporation has made a further reduction of active blast furnace capacity. "Those steel casting, malleable and other interests which depend very largely upon railroads," says the *Iron Trade Review*, "are feeling severely the policy of the railroads of limiting purchases to absolute necessities." President Ripley, of the Atchison road, says his company is not in the market for any rails or equipment. In order to "keep net earnings on an even keel," he asserts, it will be necessary to reduce maintenance charges. He expresses the opinion that if all the desired increase of rates should be granted, it would not offset the effect of the commission's rulings during the last year.

The Tax on Net Earnings

REGULATIONS, approved by the President, relating to the inspection of returns under the new law imposing a tax on the net earnings of corporations, were made public at the end of last week. It is well known that for various reasons access to these records of the business of corporations is desired by competitors and by other inquiring persons. There must be written application, with a statement of reasons, even from the officers of executive departments, and it must be signed by the department's head. Applications from State officers for information to be used in legal proceedings or otherwise will be referred to the Attorney-General. Secretary MacVeagh may, at his discretion, permit a shareholder to see the returns of his corporation, but the reasons must be set forth. Information is to be given only at the revenue office in Washington. Revenue officers elsewhere are strictly forbidden to give it to any person. It is provided, however, that returns of the following corporations "shall be open to the inspection of any person upon written application," accompanied by a statement of pertinent facts:

"All companies whose stock is listed upon any duly organized stock exchange for the purpose of having their shares dealt in by the public generally.

"All corporations whose stock is advertised in the press or offered to the public by the corporation itself for sale."

While these paragraphs appear to include the leading railroad and industrial companies, the second is aimed at corporations of doubtful quality, like those get-rich-quick concerns which have recently been exposed by the Post Office Department. Those who apply for information about corporations of this second class are advised by the Treasury Department to bring with them the advertisements. With respect to some of these concerns there cannot be too much publicity as to their actual financial condition.

....The Canadian Pacific Railroad Company has presented to Parliament a petition for an act authorizing it to construct and operate ten branch lines, in all 553 miles, in the provinces of Alberta, Manitoba and Saskatchewan.

....Recent estimates showed that the world's output of gold in the nine months ending with September was a shade less than the output in the corresponding months of 1909, but the Rand output is increasing, having been in October larger than in any previous month.

The Independent

VOL. LXIX NEW YORK, THURSDAY, DECEMBER 8, 1910 No. 3236

Survey of the World

The President's Message

There are nearly 30,000 words in the President's message to Congress. At the beginning he speaks of the "eminently just results" secured by the arbitration of the fisheries dispute at The Hague, and of the "great patriotic service" rendered in that case by the leading counsel for this country, Senator Elihu Root, who imposed the condition that he should receive no compensation. After referring to the award in the Orinoco Steamship case, he shows that successful efforts have been made so to modify the provisions for the International Prize Court that the constitutionality of the agreement for such a court cannot be questioned. The court will soon be established. Replies from the Powers also inspire hope that the proposition for the endowment of this court with the functions of an Arbitral Court of Justice will be accepted. Appointments to the Peace Commission authorized by Congress have not been made because he is waiting to hear whether foreign governments are willing to appoint similar commissions for joint action. In the review of our relations with foreign Powers he gives a brief history of the Hukuang loan for railways in China, and of the recent negotiations for a second loan ($50,000,000) to China for use in currency reform:

> 'For the success of this loan and the contemplated reforms, which are of the greatest importance to the commercial interests of the United States and the civilized world at large, it is realized that an expert will be necessary, and our Government has received assurances from China that such an adviser, who shall be an American, will be engaged."

Under the head of Latin America, the value of the Pan-American conference conventions concerning trade-marks, patents, copyrights and the arbitration of pecuniary claims is pointed out, and the cordial relations of the delegates are mentioned. Our part in the successful mediation between Peru and Ecuador is regarded with much satisfaction. The negotiations for a loan from American bankers to Honduras are nearly completed. In Nicaragua, the success of the revolutionists has proved that Secretary Knox was right in saying that they represented a majority of the people. Mr. Taft is very glad to announce that Argentina has given an order for the construction of two battleships in this country. He thinks we should have legislation to make possible and convenient the establishment of American banks and branches of American banks in foreign countries, for the favorable financing of foreign trade and in order that we may make use of foreign commercial opportunities. He argues earnestly for the development and promotion of our mercantile marine by legislation, strongly urging the passage of a bill for mail subsidy or other subvention. Again he asks that jurisdiction over crimes in violation of the treaty rights of aliens be given to the Federal courts, in order that the Federal Government may be able to redeem its treaty promises. Under the head of the Treasury Department, speaking of the earnest effort to reduce expenses, he says that the final estimates for the coming fiscal year are less by $52,964,887 than the appropriations for the current year, and that they indicate a surplus of $50,000,000, or, if Panama Canal estimates be included, a deficit of $7,000,000. The cost of Panama fortifications will be $19,000,000. If no appropriation for them be made, there will be a surplus of $12,000,000. Much space is

given to a showing of the economies and reforms in the department, where useless offices have been abolished. Antiquated auditing methods are to be improved. The Post Office Department auditor has already saved $120,000 a year. Archaic methods at the ports are to be changed. It is recommended that some collection districts be abolished and that others be made branches. In the Bureau of Engraving and Printing $440,000 a year has been saved by cutting out useless divisions. Mr. Taft sharply criticises the method of making appropriations for public buildings. There should be, he says, reports to Congress from a commission of Government experts as to the Government's needs in the way of buildings. The Monetary Commission has completed an exhaustive study of the banking and currency systems of foreign countries. He urges upon Congress the importance of a careful study of these systems in our own country:

"It is idle to dream of commercial expansion, and of the development of our national trade on a scale that measures up our matchless opportunities, unless we can lay a solid foundation in a sound and enduring banking and currency system. The problem is not partisan, is not sectional—it is national."

Tariff, Trusts and Railroads

Taking up the tariff, Mr. Taft first points to the removal of discriminations abroad by means of the maximum and minimum provisions. Proclamations, 134 in number, applying the minimum rates, cover the entire commercial world and have given marked advantages to our commerce. Negotiations for tariff reciprocity with Canada are in progress. The new tax on the net earnings of corporations (which is a part of the tariff act) has been easily collected. Reference is made to the new regulations concerning publicity, which were recently set forth in our pages. As to the new tariff duties, Mr. Taft says:

"The schedules of the rates of duty in the Payne tariff act have been subjected to a great deal of criticism, some of it just, more of it unfounded, and to much misrepresentation. The act was adopted in pursuance of a declaration by the party which is responsible for it that a customs bill should be a tariff for the protection of home industries, the measure of the protection to be the difference between the cost of producing the imported article abroad and the cost of producing it at home, together with such addition to that difference as might give a reasonable profit to the home producer. The basis for the criticism of this tariff is that in respect to a number of the schedules the declared measure was not followed, but a higher difference retained or inserted by way of undue discrimination in favor of certain industries and manufactures. Little, if any, of the criticism of the tariff has been directed against the protective principle above stated; but the main body of the criticism has been based on the charge that the attempt to conform to the measure of protection was not honestly and sincerely adhered to."

Neither Congress nor its experts had time to acquire the needed information as to the difference in production costs. In order to do better in the future, Congress, at his request, provided for the work of the tariff board. This board "has been diligent in preparing itself for the necessary investigations." If the schedules be treated one by one as occasion shall arise, and only after the report of a competent board, "the shock to business will be avoided":

"It is not likely that the board will be able to make a report during the present session of Congress on any of the schedules, because a proper examination involves an enormous amount of detail and a great deal of care; but I hope to be able at the opening of the new Congress, or at least during the session of that Congress, to bring to its attention the facts in regard to those schedules in the present tariff that may prove to need amendment."

But Congress should co-operate by limiting consideration to one schedule at a time, because a new revision of all the schedules would "only repeat the evil from which the business of the country has in times past suffered most grievously by stagnation and uncertainty, pending the settlement of a law affecting all business directly or indirectly." The separate schedule plan, however, "facilitates the removal of noteworthy defects in an important law without a disturbance of business prosperity." Other governments have permanent bureaus of tariff experts. Mr. Taft is convinced that our board should be made a permanent tariff commission, and perhaps enlarged. Whatever tariff policy is to be adopted, "the necessary legislation should be based on an impartial, thoro and continuous study of the facts."——The President points to the activity of the Depart-

ment of Justice in enforcing the anti-trust law, and he renews his recommendation for the enactment of a law for the Federal incorporation of companies engaged in interstate commerce. The first part of the report of the Commissioner of Corporations on the lumber industry, just completed, does not treat of the existence of a combination in the manufacture of lumber, but it shows that the ownership of standing timber calls for serious attention:

"The direct investigation made by the Commissioner covered an area which contains 80 per cent. of the privately owned timber of the country. His report shows that one-half of the timber in this area is owned by 200 individuals and corporations; that 14 per cent. is owned by 3 corporations, and that there is very extensive interownership of stock, as well as other circumstances, all pointing to friendly relations among those who own a majority of this timber a relationship which might lead to a combination for the maintenance of a price that would be very detrimental to the public interest, and would create the necessity of removing all tariff obstacles to the free importations of lumber from other countries."

There has not been time, Mr. Taft says, to test the utility of this year's additions to the interstate commerce law. He remarks that his recommendations with respect to a road's purchase of a parallel road's stock, the issue of stock and bonds, and the making of temporary traffic agreements, were not followed. He will not repeat them this session. The first is probably covered by the anti-trust law; the Hadley commission is inquiring concerning stock and bonds, and the object of the third was misconstrued by many who thought it was designed to weaken the Sherman act. He thinks there should be an appropriation to enable the commission to make a valuation of all railroads. At the end of the message he says:

"I do not now recommend any amendment to the Anti Trust law. In other words, it seems to me that the existing legislation with reference to the regulation of corporations and the restraint of their business has reached a point where we can stop for a while and witness the effect of the vigorous execution of the laws on the statute books in restraining the abuses which certainly did exist and which roused the public to demand reform. If this test develops a need for further legislation, well and good, but until then let us execute what we have. Due to the reform movements of the present decade, there has undoubtedly been a great improvement in business methods and standards and in the earnestness of effort on the part of business men to comply with the law. They are now seeking to know the exact limitations upon business methods imposed by the law, and these will doubtless be made clearer by the decisions of the Supreme Court in cases pending before it. I believe it to be in the interest of all the people of the country that for the time being the activities of government, in addition to enforcing the existing law, be directed toward the economy of administration and the enlargement of opportunities for foreign trade, the conservation and improvement of our agricultural lands, the building up of home industries, and the strengthening of confidence of capital in domestic investment."

Other Subjects

Mr. Taft urges Congress to act promptly upon pending conservation measures. Referring to his speech at St. Paul, he asks that provision be made for leasing the Government's coal and phosphate lands and water power sites. Leasing in Alaska, he says, would promote the construction of railroads and the development of the Territory. He recommends a wider application of the merit principle in the diplomatic and consular services, and that postmasters of the first, second and third classes be placed in the classified service. This, he says, would take the postmasters out of politics and increase the efficiency of the service. He would like to see the classified service include all the local officers of the Treasury, Post Office, Justice, Interior and Commerce departments. He refers to offices thruout the country, appointments to which are now subject to confirmation by the Senate. The fortification of the Panama Canal he strongly favors. Tolls, he thinks, should not exceed $1 per net ton. Beginning with January next, the Suez rate is to be about $1.40. Our Government should furnish supplies and dock facilities along the canal to foreign ships as well as to our own navy. Our interstate railroads should be forbidden to own ships engaged in trade thru the canal. He shows how the Postmaster-General is wiping out the annual deficit without impairing the efficiency of the service, recommends the adoption of the parcels post on rural delivery routes, and says that justice requires an increase of postage rates on second-class mail matter, such as maga-

zines. He again asks for statutory regulation of the issue of injunctions. Some modifications of the pending bill to extend the eight-hour law are suggested. The army needs more officers and engineers. Appropriations should be made for the fortifications at Manila and Pearl Harbor. Certain shipyards of the Government can profitably be abolished. The program of two new battleships each year should be followed. Guantanamo should be developed as a naval base. There should be some fitting recognition of Robert E. Peary's great achievement. The salaries of the Supreme Court Justices and of the judges of the other Federal courts should be increased. The need of reform in judicial procedure is considered at some length. There is much to be commended, the President says, in the pending bill concerning the government of Porto Rico, but he opposes the provision for a partially elective Senate.

Canada's Navy

At the end of an acrimonious debate which had consumed nine days, the Canadian House of Commons, on the 2d, supported the Laurier Government's naval policy by a vote of 126 to 70. This means that the Government will soon award contracts for the construction of four cruisers and six torpedo boat destroyers. These are to be built in Canada, and the Government is negotiating with several British firms for the establishment of shipyards there. The first of the cruisers will be finished about three years hence, and the cost of the entire proposed navy will be about $10,000,000. A naval college or training school will be opened at Halifax in January. In the debate, the Opposition demanded that the project be submitted to the people for a vote, and claimed that it was designed to be a step toward independence. In one of his speeches, Premier Laurier said Canada should have a naval policy fitted to its own purposes, and that its Parliament and people should decide whether at any time it should take part in wars as to which it had no voice. He had no fear of war between the United States and Great Britain, because both nations were so highly civilized. Nor did he fear invasion of Eastern Canada, but it would be folly, he thought, to say that there was no danger whatever of attack on the Pacific Coast.

The Situation in Mexico

At the end of last week there was no revolutionary opposition to the Government in Mexico, except in the northwestern State of Chihuahua. There the insurgents, 2,000 or 3,000 in number, were holding all except one of the towns on the Chihuahua & Pacific Railroad, and were said to have the passive support of a majority of the people. It was asserted that the Government had sent a Peace Commission of prominent residents of Chihuahua, on a special train carrying a flag of truce, to treat with the rebel leaders, but this was denied by the Minister of War. *El Paladin*, a revolutionist paper in Mexico City, and *El Correo*, a similar paper in Chihuahua, were suppressed and their editors arrested. Mexican jails everywhere were said to be crowded with revolutionists. It was reported that the Maya Indians in Yucatan had revolted and killed fifty-three soldiers.——President Diaz was inaugurated on the 1st, for the eighth time. There were only simple ceremonies. As dean of the diplomatic corps, the United States Ambassador made a brief address of congratulation. President Diaz authorized the following message to all nations:

"It is very gratifying to me to say that my heart is full of faith in the progress of a people, who, like the Mexican, have known how to conquer by their own efforts a place among the lovers of toil after having proved their valor in patriotic defense of country, and that never as today could I declare that Mexico belongs definitely to the group of new nations of assured stability, because against the firm guarantee of peace which we possess, no influence tending toward its dissolution can now or ever shall be able to prevail."

All the Cabinet ministers were reappointed.——Following the surrender of the naval mutineers at Rio Janeiro, and the restoration of the warships to the Government, there has been much discontent in both the navy and the army of Brazil, owing to disapproval of the amnesty act. ——Delegates have been elected in Nicaragua for a convention to be held on the 31st, at which a constitution will be drafted and provision made for keeping

President Estrada in office until the popular election in July, 1912.

The British Elections

The Parliament which met for the first time on February 15 was dissolved on November 28 and immediate elections ordered for a new one to assemble January 31, 1911. The King's speech at the close was very brief, expressing satisfaction at the settlement by the Hague Tribunal of the long dispute between the United States and Canada and Newfoundland, and regret that the inter-party conference had failed to come to any agreement over the reformation of the House of Lords. The first polling was held on Saturday, December 3, and, including the precincts where no opposition was offered, resulting in the filling of 125 seats, of which the Government got 63 and the Opposition 62. The Unionists gained six seats from the Liberals and one from the Laborites. The Liberals gained four, having a net gain to the Opposition of three. Judging by this the Liberals will be returned to power but with a decreased majority. The campaign was short, sharp and indecisive. The Unionists made their first attack on Home Rule and the dictation of the American dollar. They asked what effect it would have on the fortunes of an American political party to have it known that a fund of £40,000 had been raised in England to carry an election in the United States. The force of the charge was somewhat weakened when Mr. Redmond explained that a large part of the Irish fund had been raised in Canada and that among the contributors were the Canadian Premier and other prominent men of unquestioned loyalty. It was argued that Canada and other British colonies favored Home Rule for Ireland; the Unionists, who thought so highly of Colonial opinion, could not well call that policy a treasonable blow at England. At the suggestion of Home Rule, however, Ulster is as much excited as when Gladstone proposed it in 1886. An open air mass meeting of 20,000 persons was held at Belfast in which armed resistance and secession were advocated. A war fund of $120,000 was subscribed for the purpose of buying arms and training troops. The following message was sent to Mr. Balfour:

"In all solemnity, we now declare that Home Rule will bring Ireland not peace, but the sword. If an Irish Parliament is set up the Unionists of the south, allied with the men of Ulster, will not acknowledge its authority. They will neither obey its decress nor pay its taxes."

——The tariff issue seemed likely to become the leading issue of the present campaign as it was of the last. The Unionists declared that the advance in the cost of living in England was due to free trade, and that British commerce and manufactures were doomed unless a tariff was imposed. Mr. Lloyd-George, Chancellor of the Exchequer, parried this in his characteristic style:

"Our foreign trade has increased by £90,000,000 since last year. We have sold more to Germany than ever before. Ah, but the wicked German; what's he up to now? He's buying our goods! You may depend upon it the Yellow Press will find some sinister motive in that. We sold this year more cutlery to Germany than ever before. What did they want it for? To cut our throats, of course."

The tariff issue was, however, removed from the campaign by an adroit move on the part of the leader of the Opposition, Mr. Balfour. On the same evening when Mr. Asquith, speaking in Reading, asked sarcastically whether the Unionists would accept a referendum on the tariff question if they were elected to office, Mr. Balfour, speaking in London, advocated that very proposition, saying:

"Without question tariff reform is a great change. I admit that this election cannot be described as being taken upon tariff reform simply, and I have not the least objection to submitting the principles of tariff reform to a referendum. Why should I object? Is the tariff reform project taxation in the interest of individuals or classes? If tariff reform is anything, it is a great national and imperial policy, and I am perfectly willing to submit it to the judgment of the country.

"It seems to me our opponents ought at once to respond with the generosity of honorable combatants and say, 'Well, you have consented that the principles of tariff reform shall be made the subject of a referendum. We agree if you do that home rule shall also be made the subject of a referendum.'"

The Liberals were somewhat disconcerted at this stealing of their thunder but opposed the referendum on various grounds. It was, they claimed, merely a trick to gain time and should be called a "deferendum." Mr. Lloyd-George said that each referendum would cost $10,-

000,000 and that it would put a more effective weapon in the hands of the wealthy classes. Mr. Birrell denounced it as delusive, dangerous, unworkable and calculated to destroy free representative government. Mr. Asquith described Mr. Balfour's "volte face" on the questions of the reform of the House of Lords and tariff reform as unique—almost indecent. He said he could not imagine a greater caricature of the referendum than in putting a few abstract questions to the people without concrete embodiment of the proposals. If any one but a sane and responsible statesman had contemplated such a scheme he would be called a madman. After study of the working of the referendum in foreign countries, the Premier continued, he had arrived at the conclusion that it had proved a most unsatisfactory and disappointing method of ascertaining public opinion.——The political meetings of the week, whenever a member of the Government spoke, have been disturbed by shouts of "Votes for Women" from suffrage advocates of both sexes.

Spain

Premier Canalejas is receiving congratulations from all quarters on his settlement of the Moroccan difficulties, which caused Spain a long period of fighting and indirectly started the Barcelona riots. According to the terms of the convention Morocco will pay Spain an indemnity of about $13,000,000, in seventy-five annual instalments and guaranteed by 55 per cent. of the Moroccan share of the mining imposts. This indemnity covers also the Spanish losses at Casablanca. The Spanish territory along the Riff coast is extended beyond the part now occupied by the Spanish troops. The territory surrounding the Spanish posts will be in charge of native police under Spanish officers. Custom houses are to be established at Melilla. El Mokri, the special ambassador of Morocco to Spain, has returned home in order to get the approval of the Sultan to the new treaty. ——The law proposed by the Government for obligatory military service, now under discussion in the Senate, is regarded by the Catholics as an anti-clerical measure because young priests and theological students are no longer to be exempt. The Bishop of Madrid declares that the measure violates the canonical law of ecclesiastical immunity and would deplete the ranks of the clergy. A conscription bill is also criticised because it favors the rich, since it grants partial exemption to those who can pay for it, altho the cost of exemption is raised. Recruits who pay into the treasury $400 will be discharged at the end of five months if they show themselves proficient in military drill and marksmanship.——The Clericals in the Senate also oppose the bill for secular education. The Bishop of Madrid stated that all civilized nations with the exception of France have religious education, and that statistics show that since the abolition of such education in France crime has greatly increased in that country.——The Ferrer question has again come up in the Senate. The present Government claims that responsibility for the execution rests entirely upon their Conservative predecessors in office.——The "Padlock bill," prohibiting the formation of monastic establishments, is still under discussion in the Chamber of Deputies, but the Premier hopes to get it thru the Cortes before the end of the year. The bill has already passed the Senate.——Students in the University of Saragossa, indignant at the refusal of the rector to put forward the Christmas holidays, went out on a strike. A lively fight took place between the strikers and the "scab" students who persisted in attending classes. Many students were injured and much damage done to the building. The students at the University of Madrid have also struck, and there have been several conflicts with the police. The students forced the resignation of the chief of police, but the disorders continue.——There is a strike of 8,000 metal workers in Barcelona, and also a strike of the miners at Huelva, in both cases accompanied by some rioting. A gunboat and a battalion of infantry have been sent to reinforce the garrison at Huelva. In discussing the affair in the Cortes the Minister of Commerce and Labor stated that the mining companies at Huelva had cheated the Government by reporting their capital as much less than it really is.

THE MACMILLAN COMPANY

For the Holiday Book Number of "The Independent"

A SELECTION FROM THE HOLIDAY BOOKS OF THE YEAR

BY W. G. BOWDOIN

Any of the books reviewed or advertised in this number will be sent by THE INDEPENDENT on receipt of price.

ON Christmas Day in the Evening[1] is a delightful little story by Grace S. Richmond. It has a homely New England village background, and the petty jealousies of a small provincial community stand out as Mary E. Wilkins or Sarah Orne Jewett might have portrayed them. Into the story comes the saving grace of love inspired by a Christmas service gotten up in haste, but which, thru the agency of a superannuated old man, sometime a minister, whose words were inspired, came universal peace in so far as the little community was concerned.

William J. Locke has taken some very commonplace material in his holiday theme, entitled *A Christmas Mystery,*[2] and out of it he has made a fine story. Three great men are taken as moving figures in the tale. Mr. Locke skilfully shows how much these men of attainment can accomplish in varying fields and yet miss elemental truths. The teachings and significance of Christmas are shown to have a new and very helpful meaning. We reproduce the book's frontispiece.

Another purely Christmas story is that by Abbie Farwell Brown, entitled *The Christmas Angel.*[3] In a parabolic form, this story deals with skepticism, doubt and even hatred on the part of a worldly-wise woman, and, somewhat after the manner so charmingly used by Dickens in his "Christmas Carol," the skepticism, doubt and hatred are swept away and are replaced by resolution, decision and finally charity, which is easily the greatest of them all.

While we are celebrating the Christmas holidays it is appropriate to pause and turn back for a moment, as we may with *Colonial Holidays,*[4] and see from contemporary accounts how the festal seasons were observed in the old days. The admirable illustrations of Walter Tittle in full color aid the reader with imagination well on toward realism. The numerous illuminations are far above the average.

A Christmas season without any carols or hymns would not be fully Christmas. Dann's *Christmas Carols and Hymns*[5]

[1] ON CHRISTMAS DAY IN THE EVENING. *By Grace Richmond.* New York: Doubleday Page. 50 cents.

[2] A CHRISTMAS MYSTERY. *By William J. Locke.* New York: John Lane. 75 cents.

[3] THE CHRISTMAS ANGEL. *By Abbie Farwell Brown.* Houghton-Mifflin. 60 cents.

[4] COLONIAL HOLIDAYS. Being a collection of Contemporary Accounts of Holiday Celebrations in Colonial Times. Compiled. New York: Doubleday, Page. $2.50.

[5] CHRISTMAS CAROLS AND HYMNS. *By Hollis Dann,* New York: American Book. 45 cents.

includes a collection brought together by the author in which appear the standard Christmas hymns, as well as the most beautiful and attractive Christmas chorals. These may be conveniently used in schools and by church choirs. Such a volume will be helpful also to those wishing to revive the old English custom of singing carols as one of the features of Christmas Day.

Two years ago the Shackletons issued a volume on "The Quest of the Colonial." This dealt with the charm of the search. In Dyer's *The Lure of the An-*

TRISTRAM DISGUISED HIMSELF AS A BEGGAR.
From "The Romance of Tristram and Iseult." (Lippincott.)

FRONTISPIECE IN DYER'S "THE LURE OF THE ANTIQUE."
(The Century Co.)

tique[6] we have a book that gives a reason for the faith that is in us. It touches lightly upon the quest, but it is more directly concerned with the objects dear to the collectors' hearts. It covers a wide field and includes chairs, old desks, tables, sideboards, bedsteads, clocks, looking-glasses, lamps, candlesticks, Staffordshire pottery, Wedgwood, Lusterware, Lowestoft, old silver, pewter, Sheffield, brass and copper utensils, and a lot of other things conveniently grouped under the generic term of antiques. The frontispiece is reproduced.

A sumptuous volume is *Stafford House,*[7] as written by Lord Ronald Sutherland Gower, and in which he gives some account of the art treasures it contains. The illustrations include some hundred full-page photogravures of the contents of that stately building, embracing a selection of the paintings, statuary, objects d'art, furniture, tapestry, the grand staircase, the gallery and state apartments. The edition is limited to 200 numbered copies sold only by subscription.

Christian Symbolism[8] is included in the "Little Books on Art" series, to which

[7] STAFFORD HOUSE. *By Lord Ronald Sutherland Gower.* Manzi, Joyant & Co. $250.

[8] CHRISTIAN SYMBOLISM. *By Mrs. Henry Jenner,* New York: McClurg. $1.

some reference was made in this department last year. The book is intended to supply in a short and somewhat popular form a guide to the general principles on which are based the symbolism of the Christian religion. This is well accomplished. One of the book's illustrations is reproduced.

PHOENIX RISING FROM THE FLAMES.

From a thirteenth century bestiary in the Ashmolean Museum, Oxford. Reproduction of illustration from Jenner's "Christian Symbolism." (McClurg.)

Any one who is interested in prints will take up Keppel's *The Golden Age of Engraving*[9] with reverent hands. It introduces a personal and biographical note that is always interesting to the reader. It also shows how largely the element of chance influences a man's career. Keppel had no idea of making print selling his life work, but the hand of chance fell upon him and he did. The result was journeyings to and from Europe, wide acquaintance with artists and etchers, and a successful career as an art dealer. The volume is illustrated with reproductions of the works of ancient and modern masters. His chapter on Whistler is a delightful contribution to the already copious amount of Whistleriana.

The season has produced a new Whistler book[10] just at the time when almost everybody thought that everything about Whistler was known that was worth knowing. This book deals with Whistler's work as an artist almost to the exclusion of everything else. Only a few words are said about his personality, and unlike most of the earlier books about this master no anecdotes about him are introduced. The various influences that conspired to aid him in development are noted and considered with keen appreciation and loving sympathy. The illustrations are well chosen and the volume contains an excellent bibliography.

The growing appreciation of Japanese prints makes the volume, *A History of Japanese Color-Prints*,[11] by W. von Seidlitz, especially welcome. The book on "Japanese Illustration," by Edward F. Strange, about the only volume to which there is ready access, is by no means what it should be, and since the death of Ernest Francisco Fenollosa we have had no authoritative writer upon the work of the Japanese wood-block printers. If in judging Japanese prints we apply Occidental standards, the Japanese fall far short in attainment. It should be borne in mind that the Japanese artists, from the very beginning of their work with color-prints until now, have had ideals and standards peculiarly their own, and which we often find as difficult to translate as we do the signatures of the artists. The author is modest in his claims regarding the completeness of his work, and it is doubtless true that much still remains to be done in regard to the color-prints of Japan. The present book is, however, a conscientious and successful effort at the synthetic presentment of our knowledge of Japanese color-printing and is a safe guide for those desiring direction in this most fascinating field. Hokusai's "The Wave," from the book, has been reproduced.

In *Lavender and Other Verse*[12] the lines are, generally speaking, well thought out, and some of the translations show much technical skill. The edition is limited to 230 copies, which are printed on Fabriano Italian hand-made paper.

A Day with Burns, A Day with Tennyson, A Day with Wordsworth and *A Day with Browning*,[13] in a series entitled "Days with the Poets" are designed to entice the reader into a closer acquaintance. The little volumes are all illustrated in color by E. W. Haslehurst, Dudley Hardy, W. J. Neatby, W. H. Margetson, Lewis Baumer and W. Russell Flint.

The very recent development of aviation makes the republication of Trowbridge's *Darius Green and His Flying*

[9] THE GOLDEN AGE OF ENGRAVING. *By Frederick Keppel.* New York: Baker, Taylor. $3.

[10] THE WHISTLER BOOK. *By Sadakichi Hartmann.* L. C. Page. $2.50.

[11] A HISTORY OF JAPANESE COLOR-PRINTS. *By W. von Seidlitz.* Philadelphia: Lippincott. $6.50.

[12] LAVENDER AND OTHER VERSE. *By Edward Robeson Taylor.* Paul Elder. $2.

[13] A DAY WITH BURNS. A DAY WITH TENNYSON. A DAY WITH WORDSWORTH. A DAY WITH BROWNING. Hodder & Stoughton. 50 cents each.

Machine,[14] written more than forty years ago, exceedingly timely, for it brings to public attention one of the forgotten forerunners of the Wright brothers, Grahame-White, Moissant and Bleriot, an early victim of aviation to whom no monument has been erected.

When San Francisco was experiencing her horror of flame and palpitating earth on April 18, 1906, there was but little opportunity to think of the poetic side of ruin and the devouring fire element. With the passing of time, however, and the rebuilding of the city it became less and less repellant to hark back to the days of distress and terror, and now Louis J. Stellmann has gathered together pictures of the earthquake and accompanied them with song. His book is called *The Vanished Ruin Era. San Francisco's Classic Artistry of Ruin.*[15]

The Romance of Tristram and Iseult,[16] that legend which in its various forms constitutes a matchless love epic, has been given new life and an appropriate dress by Florence Simmonds. in a translation she has made from the French of Joseph Bedier. The fatality of love, its purification by suffering and its sanctification by death, win a place for this twelfth century legend, as composed in our own times, in the hearts of sympathetic men and women of today, and takes an additional popular interest from the fact that it forms the motif of one of the Wagnerian operas. The book is copiously illustrated in color by Maurice Lalau. A black and white reproduction is printed herewith.

Most of us have been so accustomed to think only of Howard Pyle as an artist that it will come somewhat as a surprise to find that he has been working for seven years as an author. In *The Story of the Grail and the Passing of Arthur,*[17] however, we have the fourth and last of four histories relating to the life and to the kingship of Arthur, King of England, who inspired his authorship. The story of Sir Geraint, as set forth in this book, is based upon old-time record, which Mr. Pyle has shaped and adapted to modernity. The text forms a truly delectable history and takes the reader into realms first penetrated by the ancient Welsh author.

[14] DARIUS GREEN AND HIS FLYING MACHINE. *By John T. Trowbridge.* Houghton-Mifflin. 50 cents.
[15] THE VANISHED RUIN ERA. *By Louise J. Stellmann.* Paul Elder. $2.50.
[16] THE ROMANCE OF TRISTRAM AND ISEULT. *By Joseph Bedier.* Philadelphia: Lippincott. $3.75.
[17] THE STORY OF THE GRAIL AND THE PASSING OF ARTHUR. *By Howard Pyle.* New York: Scribner's. $2.50.

"THE WAVE." BY HOKUSAI.
From Seidlitz's "A History of Japanese Color-Prints." (Lippincotts.)

A QUARTZ MILL OF TODAY.
From Peixotto's "Romantic California." (Scribner's.)

The tremendous hold that Mrs. Browning's *Sonnets from the Portuguese*[18] continue to have upon the reading public is once more indicated by a new edition of these sonnets, which have been edited by Arthur Guiterman, with preface, notes and an appendix, introducing Robert Browning's related poems. Half in joke, half in hoax, the famous title was invented, but the message they bear is real and permanent. Sixteen hundred copies of this edition have been printed.

[18]SONNETS FROM THE PORTUGUESE. *By Elizabeth Barrett Browning.* Paul Elder. $1.75.

Myrtle Reed, whose prose fancies have considerable vogue, now presents *Sonnets to a Lover.*[19] That the lines she writes are clever goes without saying.

W. Lee Hankey has chosen *The Deserted Village,*[20] as produced by Oliver Goldsmith four years before his death in 1774, as an illustrative medium. The result has been most happy and the famous poem now takes on a new, happy and artistic interpretation.

[19]SONNETS TO A LOVER. *By Myrtle Reed.* New York: Putnams. $1.25.

[20]THE DESERTED VILLAGE. *By Oliver Goldsmith.* New York: Dodd, Mead. $4.50.

Another Goldsmith item that appears this year in a new dress is *The Good-Natured Man*,[21] a comedy, with the illustrations in color from original drawings by Frederick Simpson Coburn. In this connection it is interesting to note that *The Good-Natured Man* was first performed at Covent Garden Theater, London (then under the management of the elder Colman), on January 29, 1768. It ran ten nights and went through at least five editions the same year. Some account of the probable derivation of the comedy is an incidental feature of the volume.

Entirely similar in idea is the compan-

[21] THE GOOD-NATURED MAN. *By Oliver Goldsmith.* New York: Putnams. $2.50.

Copyright, 1910, by Harper & Brothers.

"DOES A BOY GET A CHANCE TO WHITEWASH A FENCE EVERY DAY?"

Frontispiece from the new edition of Mark Twain's "The Adventures of Tom Swayer." (Harper & Bros.)

ion volume, *She Stoops to Conquer.*[22] The illustrations are by the same artist, and the style thruout is the same. The play, of which it is the reading version, was produced at the same theater five years later and ran twelve nights, from which it will be seen that the runs of classical dramas were far more restricted in the old days than is now the case.

Harrison Fisher's contribution to the holiday books this year is entitled *A Garden of Girls.*[23] Into this volume Mr. Fisher has crowded a number of his types. They are all pretty, of course, and they all accompany selected verses, which they happily interpret. The illustrations are in full color and every one has been carefully selected.

Cupid's Cyclopedia,[24] as evolved by John Cecil Clay and Oliver Herford, is very clever, both in text and illustration. It had to be, or there was no excuse for it. With this book the most inexperienced swain can easily fit and prepare himself for a most aggressive campaign that must be successful if he has any latent talent whatever. The book suggests topics for conversation and a complete knowledge of it will bridge over those awful pauses that are so destructive of sentimentality.

There is a considerable amount of good common sense in *The College Freshman's Don't Book.*[25] It appears under the guise of persiflage, but the author has contrived to introduce an undertone that will be very helpful to the college undergraduate, or indeed any one else who cares to read between the lines.

Ralph Henry Barbour has this year written another of his charming little romances under the title of *The Golden Heart.*[26] It is a pretty little love tale which will appeal to those with sentiment. The illustrations in full color are by Clarence F. Underwood, and the decorations are by Edward Stratton Holloway.

In *The Girl I Left Behind Me*[27] some rather thin romantic narrative gives John Rae an excuse for producing some perfectly delightful illustrations, in which the flavor of the antique stands out and

[22] She Stoops to Conquer. A Comedy. *By Oliver Goldsmith.* New York: Putnams. $2.50.

AN ENGLISH WAY-SIDE COTTAGE.
From Wood's "Ribbon Roads." (Putnams.)

"The scout . . . deliberately laid aside his paddle, and raised the fatal rifle."

Specimen illustration by E. Boyd Smith for a special gift edition for young folks of Cooper's "The Last of the Mohicans," reproduced by permission of the publishers, Henry Holt and Company, for the Holiday Book Number of THE INDEPENDENT.

presents a girl that turned the head of a young Irish nobleman thru sheer attractiveness. The costuming and environment has been most admirably portrayed. The text is in italic. One of Mr. Rae's illustrations has been reproduced.

Mark Twain's diverting story of *The Adventures of Tom Sawyer*[28] appears this season in a special illustrated edition in which the conceptions of the humorist are interpreted by Worth Brehm. How well he has done this work can be gathered from the frontispiece of the book, which is reproduced in this issue.

If it be true that there were in the beginning only four jokes, and that all we now have are modifications of the original four, then *Four Hundred Good Stories*[29] have been modified to good purpose. In this collection there are many good stories. They will lend themselves well to after-dinner speeches and to many other excellent purposes.

The tour of *Ribbon Roads*[30] covers England, Scotland, Ireland, Holland, Germany, France and Italy. Thousands have journeyed over the same route and yet we have in this book something new, something perhaps due to the intoxication of the wind blown into the face and eyes by rapid flight. As we read we see old things in a new light; enthusiasm colors things with a rosy hue. The motor car adds to the joy of traveling, for thanks to the invention of brakes, the car can be stopped when desired for rest or observation from a vantage point. The camera can thus get an impression just as well as on a walking tour, and when you wish to go forward you lose no time. A car gives one a sense of freedom, for there is a new delight in entering a town by the byway instead of the highway. One of the book's illustrations appears in reproduction. It gives a familiar type of English wayside scenery.

FRONTISPIECE IN LOCKE'S "A CHRISTMAS MYSTERY." (Lane.)

If a person can spend a vacation anywhere in a novel and interesting fashion, and then come home charged with the delightful memories of gala days, new experiences, new visions and much more in which others may be interested, and then write a book about it all so that others may enjoy what the author has enjoyed—that were indeed idealistic. That is exactly what Mary J. Atkinson has done in *A Chateau in Brittany*.[31] The charms of Northwestern France have not appealed to her in vain, for her narrative is colored with enthusiasm that is reflected on every page. Her eyes were open to anything that was interesting, and she has packed her book with very interesting material.

[28] THE ADVENTURES OF TOM SAWYER. *By Mark Twain.* New York: Harpers. $2.

[29] FOUR HUNDRED GOOD STORIES. *By Robert Rudd Whiting.* New York: Baker, Taylor. $1.

[30] RIBBON ROADS: A MOTOR TOUR ABROAD. *By A. T. and B. R. Wood.* New York: Putnams. $2.50.

[31] A CHATEAU IN BRITTANY *By Mary J. Atkinson.* James Pott. $2.50.

Mary Russell Mitford's *Our Village*[32] is among this year's reprints, with an appreciative introduction by Anne Thackery Ritchie, and more than one hundred illustrations by Hugh Thomson and sixteen color plates by Alfred Rawlings. It is an admirable presentation of the book of one who numbered among her friends Mrs. Trollope, Miss Landon, Miss Edgeworth, Mrs. Browning, Mrs. Opie, John Ruskin and Charles Kingsley.

California's fruitfulness, her equable climate, the wealth of her fields and flowers, the beauty of her garden spots, and her romantic, historic background, appeal to every lover of the picturesque, and make the State a Mecca for landscape painters. To point out the lesser known attractions of the Golden State is the object of *Romantic California*[33] as written by Ernest Peixotto and illustrated by him.

Venice, the Queen of the Adriatic, is still mistress of the hearts of historical writers. In *Venice and Its Story,*[34] beautifully illustrated with color plates and in black and white, we come into intimate contact with the history of a state unparalleled in Europe for permanence and stability. Its old-time maritime supremacy lives once more in the book's pages. The Doge's palaces, the Piazzetta and the Column of St. Mark, its lion, its horses and its birds, the Grand Canal, the Ponte di Rialto, the gondoliers and a thousand Venetian things all have a place, and the Venice old and new makes a strong and stirring appeal to the reader.

The Holy Land[35] is a companion volume to last year's "Egypt and Its Monuments." Robert Hichens, the author, in its preparation journeyed from Baalbec to Jerusalem on horseback and reached Jerusalem for Holy Week. Merely as an example of fine commercial bookmaking, introducing illustrations in color from paintings by Jules Guerin, it is worthy of the season. It is a pleasure for the book lover merely to see a book like this, with its wide margins, carefully selected illustrations, harmonious binding, appropriate paper and its deckle edges. It is artistic thruout.

Frank Reynolds has lavished a deal of gorgeous color and pictorial art upon *Mr. Pickwick.*[36] The immortal creations of Dickens reappear in honor of his centenary in many new forms, but still recognizable as old friends. The fat boy, for example, remains fat and the picture shows him asleep fast enough. The book will delight the Dickens lover.

Shakespeare's Tragedy of Hamlet[37] has been similarly illustrated by W. G. Simmonds. Thirty full-page colored inserts as produced by him appear as illustrations in the volume, and to the former pictorial interpretations of Shakespeare's characters are now added those of Mr. Simmonds. The result in so far as the present book is concerned has been very happy, and its pictorial and the typographical sides go well together.

Mothers and Fathers,[38] by Juliet Wilbor Tompkins, is a series of studies wherein the older and the younger generations with their differing points of view are eloquently set forth. The stories are told with infinite skill and much pathos. No one can read them without being moved by them. The technique of the stories is uniformly good. The frontispiece is by Alice Barber Stevens, and the cover and end papers are decorative.

The Book of Friendship[39] of this year is similar in plan and scope to "The Book of Christmas" of last year. The present volume is concerned with a consideration of one of the secrets of success, which lies in the art of getting on with people. The compiler has ranged far and wide in his quest for quotations, and in the book he has produced he has massed some charming tributes to friendship. Samuel M. Crothers has written the introduction, and its illustrations are by Wladyslaw T. Benda.

Mr. Hugh Black, of Free St. George's, Edinburgh, is perhaps the most popular preacher in Scotland. His book on "Friendship," issued in 1908, instantly became popular. Since the appearance of his initial volume he has written sev-

[32] OUR VILLAGE. *By Mary Russell Mitford.* New York: Macmillan. $3.50.
[33] ROMANTIC CALIFORNIA. *By Ernest Peixotto.* New York: Scribner's. $2.50.
[34] VENICE AND ITS STORY. *By T. Okey.* New York: Dutton. $4.
[35] THE HOLY LAND. *By Robert Hichens.* New York: The Century. $6.
[36] MR. PICKWICK. *Illustrated in Color by Frank Reynolds, R.I.* Hodder & Stoughton. $5.
[37] SHAKESPEARE'S TRAGEDY OF HAMLET. *Illustrated by W. G. Simmonds.* Hodder & Stoughton. $4.50.
[38] MOTHERS AND FATHERS. *By Juliet Wilbur Tompkins.* New York: Baker, Taylor. $1.50.
[39] THE BOOK OF FRIENDSHIP. *By Samuel M. Crothers.* New York: Macmillan. $1.25.

eral others, to which he now adds illuminating thoughts and studies on *Comfort.*[40] The purpose of the present book is to show the practical ways whereby a brave soul can gather courage and strength and comfort.

The use of the guest book is exceedingly likely to spread when such a volume as *A Book of Hospitalities and a Record of Guests.*[41] is made available. The social joys will linger and recur again and again when its filled pages are turned over. They will serve to bring back floods of recollections that would be lost but for it or some substitute. The "Foreword on Old House Mottoes," by Arthur Guiterman, is worthy of more than a passing notice.

In English Costume[42] we have a treatise dealing with the main facts as to costume and into which much illustrative material, derived from illuminated MSS., sepulchral effigies, monumental brasses, paintings, statuary, ancient wills, inventories, and the contents of the chief museums has been added so as to make a most attractive book. Emphasis has been laid upon the ordinary, everyday clothes

CROQUET ON THE PARSON'S LAWN.
From Mills's "The Girl I Left Behind Me. (Dodd, Mead.)

[40] COMFORT. *By Hugh Black.* New York: Revell. $1.50.

[41] A BOOK OF HOSPITALITIES AND A RECORD OF GUESTS. With a Foreword on Old House Mottoes by Arthur Guitermann. Paul Elder. $1.50.

[42] ENGLISH COSTUME. *By George Clinch.* New York: McClurg. $2.50.

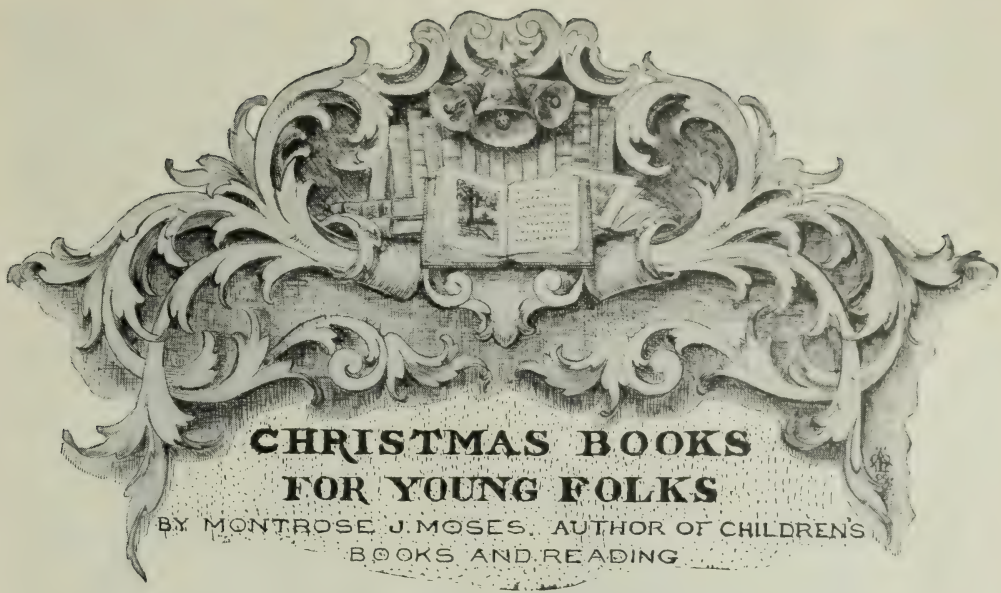
of the English people during the past centuries.

No attempt is made toward a complete history of landscape painting in *Great Masters of Landscape Painting,*[43] from the French of Emile Michel, but the volume deals with the most prominent leaders in the art in chronological order, with conservative estimates of their relative importance. The book of necessity deals only with modern art, since landscape painting was practically unknown in antiquity. The imitation of Nature seemingly made no direct appeal to those to whom mythology was a part of their very life and whose art dealt almost altogether with religion. The book is also silent upon the landscape art of the Far East. Great as were the achievements of Hokusai and some of his followers as landscape artists, their work, according to the present volume, lacks the individual originality and rich diversity of feeling which we admire in our Western masters, and so their consideration is left for other hands. The conception of the book calls, however, for numerous illustrations, and as we turn the pages of the book we fairly revel in its pictorial side. The paper used has been well calculated to aid in securing the best results in reproduction and the book is sumptuous.

A White-Paper Garden[44] takes us into the poetry of Nature. The author includes pine trees, weeds and winter winds with calla lilies, lilacs and squashes. She fences in her garden, now with snowdrifts, and gives one a picture of winter; now with August fogs, and lets the chickens stray among the currant bushes. At one moment the reader is made to feel that he is turning over the leaves of "The Old Farmer's Almanac," where are ushered in the advancing months each in its appropriate dress, with advice as to the proper face to turn to Nature, while, in parallel columns, rain and sunshine chase each other down the numerals with a vagueness puzzling to understand. This editorial way of sitting in the city office, with "plant and seed, fruit and bulb catalogs—herbals, botanies, manuals" spilling over the chairs, with scissors in hand and the waste-paper basket hard by filled with rejected poems on autumn and spring—is certainly in this case conducive to the easy delights of gardening in the library, and the reader sings to himself:

> "Thus the farmer sows his seed;
> Thus he stands and takes his ease,"

and wishes heartily that he were that easeful farmer in the country. It is a poetical garden, starting with the conifers about an old-fashioned house, with no bathtubs in it, and ending with the singing of December storms thru the New England hemlock.



The book on the *Summer Flowers of the High Alps,*[45] as prepared by Somerville Hastings, is interesting to have during the holiday season. The colored plates of Alpine plants which constitute the special feature of this book are all reproduced from color photographs taken directly from Nature. The Lumière color photography has been very successfully used in connection with the three-color process in the production of the illustrative plates, and the book is more than ordinarily appealing to those with any appreciation whatever for the beautiful.

As usual, Thomas B. Mosher, of Portland, Me., is issuing a very attractive list of books. It includes the following dainty examples of bookmaking, done for the most part with wide meadows of margin and rivulets of text, which is characteristic of the Mosher volumes: *Under a Fool's Cap:* Songs by Daniel Henry Holmes ($1.00); *The Riding to Lithend,* a play in one act, by Gordon Bottomley ($0.50); *Lyrical Poems,* by Percy Bysshe Shelley ($0.50); *Thyrsis and the Scholar-Gipsy,* by Matthew Arnold ($0.40); *Plato's Apology of Socrates,* translated by Benjamin Jowett ($1.25); *Passages from the Philosophy of Herbert Spencer,* chosen by Clara Sherwood Stevens ($1.50); Shelley's *A Defense of Poetry* ($0.25); *Dante at Verona,* by Dante Gabriel Rossetti, with frontispiece ($0.50); Browning's *Italy, My Italy,* with frontispiece ($0.50); Swinburne's *Siena* ($0.50), and Meredith's *Love in the Valley* ($0.40). Most of the title pages are rubricated.

[43] GREAT MASTERS OF LANDSCAPE PAINTING. *By Emile Michel.* Copiously Illustrated. Philadelphia: Lippincott. $7.50.

[44] A WHITE-PAPER GARDEN. *By Sara Andrew Shafer.* New York: McClurg. $2.50.

[45] SUMMER FLOWERS OF THE HIGH ALPS. *By Somerville Hastings.* New York: Dutton. $2.50.

CHRISTMAS BOOKS FOR YOUNG FOLKS

BY MONTROSE J. MOSES, AUTHOR OF CHILDREN'S BOOKS AND READING

Any of the books reviewed or advertised in this number will be sent by THE INDEPENDENT on receipt of price.

[Books of special interest or importance are marked *.]

IT is comparatively easy to account for the development of children's literature along historical lines, to trace certain intellectual causes that made the field broaden with the mental emancipation of women. It is a comparatively simple matter to discover the mere external aspects of the yearly output, and to determine therefrom the differences between stories for girls and stories for boys. But it is not so easy to separate the wheat from the chaff by any strict principle of selection, for our literature of a juvenile character is average rather than distinctive.

Reprints

**A Wonder Book and Tanglewood Tales.* Nathaniel Hawthorne. Pictures by Maxfield Parrish. Duffield & Co. $2.50.

A Wonder Book and Tanglewood Tales. Nathaniel Hawthorne. Illustrations by H. Granville Fell. J. M. Dent; E. P. Dutton & Co. $2.50.

The Pilgrim's Progress. John Bunyan. Illustrated by Frank C. Papé. J. M. Dent; E. P. Dutton & Co. $3.

**The Last of the Mohicans; or, A Narrative of 1757.* James Fenimore Cooper. Illustrated by E. Boyd Smith. Henry Holt & Co. $1.35 net.

We and the World: A Book for Boys. Juliana Horatia Ewing. Illustrations by M. V. Wheelhouse. [Macmillan Co.] London: G. Bell & Sons. 2s. 6d.

**The Brownies and Other Tales.* Juliana Horatia Ewing. Illustrations by Alice B. Woodward. [Macmillan Co.] G. Bell & Sons. 2s. 6d.

Bimbi: Stories for Children. Louisa de la Ramée (Ouida). J. B. Lippincott Co. $1.50.

**Mopsa the Fairy.* Jean Ingelow. J. B. Lippincott Co. $1.50.

**The Adventures of Tom Sawyer.* Mark Twain. Illustrated by Worth Brehm. Harper & Bros. $2 net.

**The Children's Book.* Edited by Horace E. Scudder. Cover design by Maxfield Parrish and frontispiece by A. I. Keller. Houghton Mifflin Co. $2.50.

Tales from Shakespeare. Charles and Mary Lamb. Baker & Taylor Co. $1.50.

Alice in Wonderland. Lewis Carroll. Illustrated by Charles Robinson. Cassell & Co. $1.

We find a certain feeling for beauty in the number of reprints issued each year. Maxfield Parrish's pictures for Hawthorne's *Wonder Book and Tanglewood Tales* combined are marvels of rich color, majesty and grace. Grown people will enjoy them most, for the volume is sumptuous in format, however childlike in content. The two books are also published together in the Dent edition, for which Mr. Fell has made some color illustrations, a little too brilliant, conventional and imitative. The Duffield volume spoils one for any other.

Despite the fact that children do not read *The Pilgrim's Progress,* publishers evidently think they should, to judge by the numerous reissues. The latest comes from Dutton, and the illustrations by Papé are excellent, especially the one in which Christian warns Sloth, Simple and Presumption. But again this adequate book fades in comparison with the Scrib-

ner edition, for which Byam Shaw painted his highly imaginative canvases.

We welcome a new printing of Cooper's *The Last of the Mohicans,* which the Holts have brought out in pleasing form, with fair interpretative drawings by Boyd Smith, who believes in pale color. After examining the book, we are of the opinion that the text has not been edited,

Librarians, teachers and children should be grateful to Bell & Sons for their charming issues of Mrs. Ewing's books, this season represented by *The Brownies and Other Tales* and *We and the World.* The type may be too fine, but the pictures are simple, and some of them delightfully old-fashioned. Lippincott & Co. are also performing a service by publishing their holiday editions of juvenile classics, such as Jean Ingelow's *Mopsa the Fairy* and Ouida's *Bimbi: Stories for Children.* As an illustrator of these stories, Miss Kirk just escapes spontaneity; we congratulate the publishers on the general appearance of their printed page, with its beautiful type and clean, wide margins.

The new edition of Mark Twain's *The Adventures of Tom Sawyer,* which comes from the press of the Harpers, is embellished with full-page studies by Worth Brehm, charged with the boy spirit which characterizes most of the work by this excellent artist. As for the story, it has lost none of its freshness or its humor.

Horace E. Scudder's famous compilation, *The Children's Book,* with its varied contents, never fails to bring pleasure, and the publishers have done a service in reissuing it.

Educational

**Travels at Home.* By Mark Twain. Selected from "Roughing It" and "Life on the Mississippi." Percival Chubb. Harper & Bros. 50 cents.
The Louisa Alcott Story Book. Edited for Schools by Fanny E. Coe. Little, Brown & Co. 50 cents.
Some Great Stories and How to Tell Them. Richard Thomas Wyche. Newson & Co. $1.
**Story Telling: What to Tell and How to Tell It.* Edna Lyman. A. C. McClurg & Co. 75 cents.
**The Luxury of Children.* Edward Sandford Martin. Illustrated by Sarah S. Stilwell. Harper & Bros. $1.50.

Children's literature is receiving careful attention and extended study. We are in sympathy with Mr. Chubb's attitude toward contemporary authorship and the schools. His volume, gleaned from the writings of Howells, was distinctive, generally as well as educationally, and the Harpers were wise in asking him to compile a Mark Twain book from "Roughing It" and "Life on the Mississippi." The problem of supplementary reading is well met in this small book; it will be read for its own sake, and much profit is to be had from Mr. Chubb's introduction, clearly written and simply interpretative.

But whereas we see a reason for this volume, it is with regret that we record *The Louisa Alcott Story Book,* edited for schools by Fanny E. Coe, and containing a biographical sketch. The contents are indicative of the scope of the volume—an attempt to show how ethical Miss Alcott was. We dislike making a business of morality in our books for children, and it is wrong to separate "lessons" from their setting. Yet we feel that this volume will sell, because of the fact that, educationally, ethics are in the air.

Special attention is at present being concentrated on methods of telling stories to young people. Miss Sara Cone Bryant has written two excellent books on the subject, and now Mr. Wyche, in his *Some Great Stories and How to Tell Them,* attempts to put his extensive experience into narrative form for teachers and librarians.

Another handy volume is Edna Lyman's *Story Telling: What to Tell and How to Tell It,* a more popular survey, interspersed with programs for the "story hour," and with actual examples for use. We heartily endorse the chapter on "Reading Aloud to Children."

In passing, let us note that the Harpers are still advertising E. S. Martin's *The Luxury of Children.*

Nature and Natural History

**The Book of the Animal Kingdom. Mammals.* W. Percival Westell. E. P. Dutton & Co. $4.
Under the Open Sky. Being a Year with Nature. Samuel Christian Schmucker. J. B. Lippincott Co. $1.50 net.
Lives of the Fur Folk. M. D. Haviland. Longmans, Green & Co.
Earth and Sky Every Child Should Know. Julia E. Rogers. Doubleday, Page & Co. $1.20 net.
Star People. Katharine Fay Dewey. Houghton-Mifflin Co. $1.50.
Comrades of the Trails. G. E. Theodore Roberts. L. C. Page & Co. $1.50.

Wilderness Pets at Camp Buckshaw. Edward Breck. Houghton Mifflin Co. $1.50 net.

Brothers in Fur. Eliza Orne White. Houghton Mifflin Co. $1.

The Adventures of Two Ants. Told by Nanny Hammarström. Translated from the Swedish by A. E. B. Fries. Frederick A. Stokes Co. $1.

The Hump Tree Stories. Mary Joss Jones. Paul Elder & Co. $1.

bine scientific accuracy with popular understanding, and in his preface gives promise of a bird book. Despite its weight, this is an excellent hand-guide for zoo and museum.

A pleasing volume is *Lives of the Fu*

"TAKING A CHAIN FROM OFF HER NECK, SHE SAID, GENTLEMAN, WEAR THIS FOR ME.'"

ILLUSTRATION FROM "TALES FROM SHAKESPEARE."
(Baker, Taylor.)

The most pleasurable feature of Mr. Westell's book of mammals consists in the fourteen color plates and the two hundred and fifty photographs accompanying the text of a rather thick volume. The author has attempted to com-

Folk, most attractive in its format, with marginal pen and ink studies. The incidents related were actual, and the author in his attempt to humanize the fox, rabbit, cat and badger enters the disputed field of animal instinct. Children won't

be bothered by this, however. *Brothers in Fur* is a related story, which recalls the old-time *Only a Cat,* now out of print.

Mr. Schmucker's *Under the Open Sky* is a calendar arrangement of the natural life in field and forest. His object is a worthy one, and he writes with feeling if not with the picturesqueness or distinction of John Burroughs.

Earth and Sky consists of simple talks by Miss Julia E. Rogers on geological and astronomical topics *Every Child Should Know.* The volume is serviceable in scope and original in text. Katharine F. Dewey has combined a number of stories about the heavens in *Star People.* In conversational style, astronomy facts visible to the eye are located and described.

As a piece of fiction, Theodore Roberts's *Comrades of the Trails* has the same nature element which characterizes his brother's work. We have often said in these columns that we cannot object to dramatizing Nature if in that way a feeling *for* Nature is aroused.

Large Illustrated Books

Chatterbox. 1910. Founded by J. Erskine Clarke. Dana Estes & Co. $1.25.
Caldwell's Boys and Girls at Home. H. M. Caldwell Co. $1.25.
The Brownies' Latest Adventures. Palmer Cox. The Century Co. $1.50.
**Chicken World.* Drawn by E. Boyd Smith. G. P. Putnam's Sons. $2 net.
**The Animal Trainer.* From the French of P. Guigou. By Edgar Mills. Pictures by A. Vimar. Duffield & Co. $1.25.
**Peter Pan in Kensington Gardens.* J. M. Barrie. Illustrated by Arthur Rackham. Charles Scribner's Sons. $1.50 net.
The Slant Book. Peter Newell. Harper & Bros. $1.25.
The Frogs o' Poolo; or, Wonder Ways of Tiny Folks. Joshua Freeman Crowell. Illustrated by Harold Sichel. E. P. Dutton & Co. $1.50.
Why? Reflections for Children. John Rae. Dodd, Mead & Co. $1.25.
The Journey Book. DeWitt Clinton Falls. The Century Co. $1.
Rainy Day Pastimes for Children. Baroness von Palm. Dana Estes & Co. $1.
Hiawatha Alphabet. Florence Holbrook. Illustrated by H. D. Pohl. Rand, McNally & Co. 75 cents.

There are always numberless picture books which attract the notice of the buyer, but which to the reviewer are passed without comment. The usual comic supplement style and the ingenious "cut up" portfolios are brilliantly aglow with mischief.

From a mass of big books peeps forth the familiar exterior of *Chatterbox,* containing a story by John Masefield; nowhere else than in this annual are we able to procure such old-fashioned pictures or such melodramatic bravery. The Caldwells are publishing a collection of stories and verse, *Boys and Girls at Home,* done in large type, and in the English spirit for little people. Palmer Cox's goblins every year disport themselves, the latest pranks being of a civic and worthy kind. In a way, these Brownies are annual performers, in eight large books of harmless good humor.

As a juvenile companion to "Chantecler," E. Boyd Smith's *Chicken World* comes at an opportune moment. The artist's pictures are interpretative in a human fashion of all the feelings of the barnyard; there is an excellent spirit of fun in the situations, with much delicacy in the marginal panels.

Mr. Mills has done well to translate Guigou's *L'Illustre Dompteur* in his *The Animal Trainer,* for, while the text contains a note better understood by adults, the pictures in color by Vimar are always a delight to examine for their agility in idea and for the telling effect of their lines. There is nothing complicated in such work.

The Slant Book is Peter Newell's recent perpetration of originality—not any way near as clever as "The Hole Book"; in fact, far more mischievous in its intent. The slant of the streets down which a baby carriage rolls gives a moral slant to the artist's funny vision. The volume is out of the ordinary in shape and wrong in angle.

Why? is an odd volume of questions to which answers are furnished by holding the opposite page in front of a mirror; this mirror is cleverly inserted in the front cover and forms part of the question mark beneath the title. The answers are rightly reflected in this glass. Since picture books often depend on oddity, and also on occupation, Mr. Falls's *The Journey Book* will keep young eyes busy while on travels in many lands.

Classics, Legends

Stories from Dante. Susan Cunnington. Illustrated by Evelyn Paul. Thomas Y. Crowell & Co. $1.50 net.
**Stories from the Chronicle of the Cid.* Mary W. Plummer. Henry Holt & Co. 90 cents net.
Stories from Shakespeare. Retold by Thomas Carter. Thomas Y. Crowell & Co. $1.50 net.
**The Story of the Grail and the Passing of Arthur.* Howard Pyle. Charles Scribner's Sons. $2.50 net.
Knighthood in Germ and Flower. John Harrington Cox. Little, Brown & Co. $1.25.

Frontispiece from "The Other Side of the Rainbow," by Florence Bone, reproduced by permission of the publishers, Eaton & Mains, for the Holiday Book Number of THE INDEPENDENT.

The Heroic Life and Exploits of Siegfried, the Dragon-Slayer. Retold by Dora Ford Madeley, Thomas Y. Crowell & Co. $1.50.

Days before History. H. R. Hall. Thomas Y. Crowell & Co. $1.50.

Old Greek Nature Stories. F. A. Farrar. Reproductions of masterpieces used as illustrations. Thomas Y. Crowell & Co. $1.50 net.

**The Boys' Cuchulain: Heroic Legends of Ireland.* Eleanor Hull. Thomas Y. Crowell & Co. $1.50.

Tales from the Alhambra. Washington Irving. Adapted by Josephine Brower. Houghton Mifflin Co. $1.25 net.

**Stories from Old French Romance.* E. M. Wilmot-Buxton. Frederick A. Stokes Co.

**The Children's Plutarch.* F. J. Gould. Introduction by W. D. Howells. Illustrated by Walter Crane. Harper & Bros. 75 cents.

It is useless to spend much time pondering whether the "retold" books ever become an incentive toward the originals. If the supply is indicative of demand, then this species of book is popular. Susan Cunnington's *Stories from Dante* consider in somewhat of a scholarly and historical fashion the actual characters mentioned in "The Divine Comedy." The opening chapters deal with Dante and his times; altogether, the book is a fair guide to the original; to some it may be an incentive, especially thru the color plates by Evelyn Paul. Miss Plummer dedicates her *Stories from the Chronicle of the Cid* to the boy members of the Pratt Institute Free Library. The writing is direct, almost too closely literal at times, the author's main object being that of the storyteller whose reading has not been too scholarly, but has been confined to a few picturesque authorities on the legends.

In *Stories from Shakespeare,* Thomas Carter employs the method of balancing his narrative with copious quotation from the original.

Knighthood in Germ and Flower is a simple rendition of the Anglo-Saxon epic, Beowulf, and of the Arthurian tale, Sir Gawain and the Green Knight, by Prof. John Harrington Cox, and adapted by him for school use. The publishers were wise not to make of it an educational-looking volume, for it is full of the saga spirit, and reads like a story.

It is always a question what sources to use in the retelling of such a story as *The Heroic Life and Exploits of Siegfried the Dragon-Slayer.* The great German epic is not the only one followed by Dora F. Madeley in her new volume, with its illustrations by Stephen Reid. There are other legends, even as there are other sources than Malory for King Arthur. The author's style makes no effort to reproduce the heroic rhythm.

Days Before History, by H. R. Hall, is a narration of the life of prehistoric man, wherein all the essentials of savage existence are described thru the medium of a slight story. A candid preface for children is a doubtful expedient; in fact, for young readers, a book should be able to stand on its own interest, without assurances of any kind.

In form and scope, F. A. Farrar's *Old Greek Nature Stories* is inviting; it aims to supply a need in Nature study, and an index fairly indicates how inclusive it is. The illustrations are reproductions of famous paintings and statues. Such a title as *The Boys' Cuchulain* is foreboding, and not until the reader understands that Eleanor Hull has retold some of the heroic legends of Ireland will the right curiosity be aroused. Retelling is a doubtful process. Such criticism would apply to Josephine Brower's *Tales from the Alhambra,* by Washington Irving. Young people have a sufficient quantity of fairy and legendary lore to bide the time when Irving himself is suited to their understanding. The publishers, nevertheless, have printed an attractive volume.

A small book of *Stories from Old French Romance* has been written by E. M. Wilmot-Buxton; it comprises seven chapters and includes "Aucassin and Nicolette," as well as the "Death of Roland." The volume is compact, tasteful and adequately written. F. J. Gould's rendering of *Plutarch* has pleased W. D. Howells sufficiently to say so publicly in an introduction which applies the words "moving," "glowing" and "sublime" to stories meant for young people aged about ten to fourteen. A curious feature is what the author calls an *ethical* index. There are three illustrations by Walter Crane. Perhaps the most important volume in the "retold" class is Howard Pyle's new *Story of the Grail and the Passing of Arthur,* uniform with his other books.

Fairy, Folk and Hero Tales

**The Lilac Fairy Book.* Edited by Andrew Lang. Longmans, Green & Co. $1.60 net.

The Fairy Ring. Edited by Kate Douglas Wiggin and Nora Archibald Smith. Doubleday, Page & Co. $1.25 net.

Molly and the Unwiseman Abroad. John Kendrick Bangs. Pictures by Grace G. Wiedersheim. J. B. Lippincott Co. $1.50.

**Finella in Fairyland.* Demetra Kenneth Brown. Houghton Mifflin Co. 50 cents net.

The Other Side of the Rainbow. Being the Adventures of Old-Fashioned Jane. Florence Bone. Eaton & Mains. 85 cents.

The Hollow Tree Snowed-in Book. Albert Bigelow Paine. Illustrated by J. M. Condé. Harper & Bros. $1.50.

REDUCED COVER DESIGN.
From Scudder's "The Children's Book." (Houghton Mifflin.)

No holiday season is complete that does not bring with it a fairy tale book edited by Mr. Lang. The new lilac cover embraces a contents similar in scope to previous volumes, and there is a delightful spirit in the preface, which bears a confession on Mr. Lang's part as to the manner in which he and his wife accomplish their work. We are sorry we cannot unreservedly indorse the variegated series, but folklore is an antiquarian interest and not a juvenile necessity. If his *Blue* and *Red* volumes are popular, the character of the tales therein is sufficient reason why.

Nevertheless, Mr. Lang is a better guide than Mrs. Wiggin, who may have literary judgment which is brought to bear in *The Fairy Ring,* but which had best be employed in original storytelling.

Mr. Charles Welsh is much better able, because of his professional equipment, to judge of the *Fairy Tales Children Love,* and we believe that he has accomplished his editing well. For his one volume contains a wealth of classic lore, and his introduction traces, however sketchily, the chief characteristics of the *genre,* and the most important exponents of the form. The student of children's literature will find this book of service.

More sumptuous in format, denoting the rare taste of a man of letters, is a large volume of *The Sleeping Beauty and Other Fairy Tales,* retold from the old French by Quiller-Couch, and handsomely illustrated by Edmund Dulac. The translator has taken the liberty to modify where he has thought best, but the essential spirit of Perrault is retained, while the delicate atmosphere of the time when fairy tales were a court accomplishment and fashion is unfailingly suggested by the pictures. This is a rare gift book—too beautiful for wide circulation and unnecessarily rich for childran. The publishers need to issue a cheap edition, as the Scribners have this year done of Rackham's *Peter Pan.* Logan Marshall's *Fairy Tales of All Nations* is but one of the many attempts to give a cosmopolitan collection of stories for children. But we hope the young readers will not take fright when they see the illustrations, which are garish, ugly and unnecessarily revolting.

Miss Sowerby has retold Grimm for Duffield & Co., and her sister has illustrated the volume, in sharp, clean, doll-like color; while Mrs. Lucas has translated Andersen. The latter volume is attractive in general appearance, and the printed page, tho close, is clear. Elizabeth Grierson's *Scottish Fairy Book* is one in an excellent series now including tales from the Welsh and Irish. The stories that once pleased James IV. still retain their picturesqueness and action. We beseech the publishers to eliminate from future editions the blinding splotches of red type on every page. Such decoration is a hindrance and a menace.

Willy Pogány just misses being a distinctive artist; the manner in which he has decorated Lilian Gask's *Folk Tales from Many Lands* is full of taste, but a little too thoughtful in arrangement. Children do not care from what country a story comes, but they test by the unfailing standard of interest. This

volume is "retold" with some feeling and the selections are varied. We have examined better volumes than Mr. Mabie's *Folk Tales Every Child Should Know;* the many volumes in this series do not encourage one to confidence, for their selection appears to be haphazard, and their popularity is largely dependent upon a title.

Hero Tales of the Far North is the outward expression of Jacob Riis's patriotism; we are sorry to see him overdoing his Americanism, but his Northern blood is quick and gives zest to his narrative concerning knight-errants, apostles, warrior bishops and other real persons who helped in the welding of a country.

The Baker & Taylor Company are issuing "Golden Books for Children," under the editorial supervision of Clifton Johnson; two volumes—*The Arabian Nights* and *Robin Hood*—have been published this year, and they are, in appearance and style, thoroly adequate and handy, even tho the covers are too startlingly red. An introduction has been written for each story, telling its history.

The Flint Heart, as a pseudo-fairy tale, is an excellent example of how such an author as Eden Phillpotts might just escape making a distinctive success in his conscious imitation of a conventional model. What disaster the flint heart brings is told in a number of queer adventures which are interspersed with poor jingles, but wherever Mr. Phillpotts refers to Dartmoor his tone becomes sure and authoritative.

The Emerald City of Oz, so we are assured by its author, L. Frank Baum, is to be the last of a long series of fantastical tales which began with the popular "Wizard of Oz." The enthusiasm of young readers has entered largely into the composition of these books, and Mr. Baum truly says in his confession that this latest story is based on many suggestions received from them. "My, what imaginations these children have developed!"

Mrs. Wiedersheim's pictures, first made familiar to us thru the advertising of a certain soup, are very funny, and in John Kendrick Bangs's *Molly and the Unwiseman Abroad,* her people are unusually wide-eyed and chubby. Mr. Bangs has read his "Alice" to advantage, tho he has caught none of the real nonsense of Lewis Carroll. What made me attracted toward the story chiefly, I must confess, was the name of Molly's rubber doll, Whistlebinkie. That is why I followed them on their trip abroad.

A dainty-looking volume is Florence Bone's *The Other Side of the Rainbow;* it is a wonder story of sweet sentiment—a rather incomplete moral tale, spectacular in some ways, and not over-original. *Finella in Fairyland* is a slim, delicate conception from the pen of Demetra Kenneth Brown, suitable for small children, and tells of the transformation of a naughty girl into a good one; the Nature touches are very charming. As for Albert Bigelow Paine's *The Hollow Tree Snowed-in Book,* it will prove a boon to the story-teller, tho it is far from being as dramatic as the Uncle Remus folk lore. But Mr. Paine has deep feeling for children and is worthy of Christmas consideration.

Ethics and Religion

An Old, Old Story-Book. Compiled from the Old Testament. Eva March Tappan. Houghton Mifflin Co. $1.50.
Old Testament Stories for Little Children. Laura Ella Cragin. Fleming H. Revell Co. $1.25 net.
Suffer Little Children: A Child's Life of Christ, Catharine Shaw. R. F. Fenno & Co. $2.50.
A Book of the Christ Child. Eleanor Hammond Broadus. D. Appleton & Co. $1.75.
Little Talks to Little People. James M. Farrar, D.D. Funk & Wagnalls Co. $1.20 net.
The Children's Pulpit. Edwin Hallock Byington. The Pilgrim Press. 75 cents net.
Ethics for Children: A Guide for Teachers and Parents. Ella Lyman Cabot. Houghton Mifflin Co. $1.25.
Mother and Daughter. A Book of Ideals for Girls. Mrs. Burton Chance. The Century Co. $1 net.

The question of morals and ethics in literature for children is a disputed one and varies in its relative strength quite as much as it ever did. This season's output is more varied than that of last, even if not more original. The only way in which one may misuse Bible authority or ethical sanction is in the act of retelling. In this respect the books have no distinction. Ella L. Cabot's *Ethics for Children* is a commendable guide for teachers and parents, embracing many excellent selections and authoritative references.

Dr. Eva March Tappan is perhaps wiser in her actual use of the Bible version in her *An Old, Old Story-Book.* She confines herself entirely to the Old Testament, omitting from the text those passages alone which have no clear or

necessary significance. Another volume, *Old Testament Stories for Little Children*, by Laura E. Cragin, embraces the same scope, its object being to follow closely the narrative thread of the original. What these writers seem to lose sight of is the fact that the Bible itself is in every way more simple than such sub-

COVER DESIGN OF "A CHILD'S BOOK OF OLD VERSES."
(Duffield.)

terfuge. This Bible adherence is so much more legitimate than the way Catharine Shaw, in *Suffer Little Children,* narrates the life of Christ.

A Book of the Christ Child is a creditable compilation, made by Eleanor Hammond Broadus, and consisting of poems and carols by Milton, Luther, Herrick and Rossetti, together with selections from the Coventry Miracle Plays. The pages have decorative borders and there are reproductions of the famous canvases by Raphael, Murillo, Correggio, Botticelli and others. The cover design is a medallion of Raphael's "Madonna of the Chair."

Sermons for children are apt to be unmistakably condescending; in them information is dragged for the purpose of example rather than because the preacher *knew.* Dr. Farrar's *Little Talks to Little People* is hardly more than a book of anecdotal interest, with the direct purpose of driving home a text. There are fifty-two sermons in this Funk & Wagnalls volume, arranged with an amount of seasonable and reasonable care, but carrying the conventional tone of preceptor rather than of comrade.

We may be pardoned in over-emphasizing our disapproval, not of the goodness recommended and suggested in Mrs. Burton Chance's *Mother and Daughter,* but of the anemic life offered as the real life. The things we are asked to remember in an attempt to be true to our moral selves would turn us all into self-conscious prigs.

Verse

**A Child's Book of Old Verses.* Selected and Illustrated by Jessie Willcox Smith. Duffield & Co. $2.50.

**The Story of Hiawatha.* Adapted from Longfellow by Winston Stokes. With the Original Poem. Illustrated by M. L. Kirk. Frederick A. Stokes Co. $2 net.

Sugar and Spice and All That's Nice. A Book of Nursery Rhymes and Verses. Selected by Mary Wilder Tileston. Little, Brown & Co. $1.50.

The Child's Harvest of Verse. Mary Wilder Tileston. Little, Brown & Co. $1.50. [Two parts, suitable for ages, 6-10, 10-13.]

**The Children's Book of Ballads.* Selected by Mary W. Tileston. Little, Brown & Co. $1.50.

In the realm of poetry, we cannot ever go far wrong, even tho the anthology be incomplete. With her customary poetic treatment of childhood, Jessie Willcox Smith has illustrated her own compilation, called *A Child's Book of Old Verses.* This is an attractive volume, doubly attractive because of its cover design and judicious selection of catholic judgment. On looking thru the pages we are convinced that such choice must have been reached only after some extensive advice. Such a procedure is wise for the casual anthologist. *The Story of Hiawatha* is another of those books which are luxuries, as far as format is concerned. It comprises an adapted version of the poem besides the original itself, and the interpretation is feelingly executed by Mr. Winston Stokes, whose desire is to give the proper nature value to the forest. We may be altogether wrong in our prejudices, but any interpretation of a classic should be suppressed as far as possible from a volume like this, so full of color, largely hightened by M. L. Kirk's ambitious and somewhat literal full page illustrations. Not that we do not appreciate Mr. Stokes's work, which is well done, but in its very excellence it has the fundamental defects of its kind. As a gift book, this would be hard to equal.

Mary W. Tileston has compiled three anthologies for Little, Brown. These grade in educational interest, beginning with *Sugar and Spice and All That's Nice* and passing to *The Child's Harvest of Verse* and *The Children's Book of Ballads.* There is very little design in the arrangement of the poems—tho the "Harvest" collection contains an index of subjects, grouped according to the different notes of fancy. These volumes cannot but impress one with the unusual amount of richness available in the field of rhymes, jingles, and verse.

Biography

**The Boy's Drake.* Story of the Great Sea Fighter of the Sixteenth Century. Edwin M. Bacon, Charles Scribner's Sons. $1.50 net.

The Boys' Napoleon. Harold F. B. Wheeler. Thomas Y. Crowell & Co. $1.50.

**Bellerophon: "The Bravest of the Brave."* Edward Fraser. Frederick A. Stokes Co. $2.

Charlemagne. Translated from the German of Ferdinand Schmidt. George P. Upton. A. C. McClurg & Co. 50 cents net.

Queen Maria Sophia of Naples. From the German of Carl Küchler. George P. Upton. A. C. McClurg & Co. 50 cents net.

Prince Eugene. From the German of L. Würdig. A. C. McClurg & Co. 50 cents net.

Eugénie: Empress of the French. From the German of Erich Holm. George P. Upton. A. C. McClurg & Co. 50 cents net.

A Guide to Biography for Young Readers. American Men of Mind. Burton E. Stevenson. Baker & Taylor Co. $1.25 net.

**Lewis Carroll: In Wonderland and at Home.* Belle Moses. D. Appleton & Co. $1.25 net.

Ten Boys from History. Kate Dickinson Sweetser. Illustrated by George Alfred Williams. Duffield & Co. $2.

There is never much brilliancy in the biographical literature for children; this may be because the grown-up writer has no ability to look at greatness from the youthful standpoint: to measure its true valor and value, and to picture it in full heroic bearing. Already the Scribners have issued an excellent "Boy's Hakluyt," and now, in the same form and by the same author, Edwin M. Bacon, they publish *The Boy's Drake.* It is based on contemporary narratives, and the events are spirited and presented simply; they are of sufficient uncertainty to make them romantically adventurous as well as historically true.

A new *The Boys' Napoleon* has reached our desk; it is written by Harold F. B. Wheeler, and is one of the Crowells's importations. It bears a certain tone of authority, and is evenly written. The narrative is holding and touches on all significant points regarding the Little Corporal. A fit companion volume is the Stokes's *Bellerophon,* by Edward Fraser, the story of a man-of-war in service for twenty-two years, and upon whose deck Napoleon paced on his way to Elba. The book is well printed and satisfactorily illustrated. The cover design in especial deserves mention.

Burton E. Stevenson's *A Guide to Biography* considers "American Men of Mind." In plan this is a continuation of a former volume of "Men of Action." It is more a biographical dictionary than a readable book, and is divided into such sections as Painters, Sculptors, the Stage, Scientists and Educators, Philanthropists and Reformers, Men of Affairs and Inventors. About 450 names are considered.

Miss Belle Moses has already written a successful biography of Louisa May Alcott, in which she describes the incentives and the small incidents behind the stories of that famous author for children. This volume has been followed by a similar treatment of *Lewis Carroll,* a fascinating narrative tracing the origins of "Alice" and the "Snark." The real art of interesting children is contained in Miss Moses's work; she fairly well fulfils Mr. Dodgson's own definition of autobiography as being what biography ought to be.

Ten Boys from History is by Kate D. Sweetser, who is already familiar to young readers thru her "Ten Girls from Dickens" and related volumes. The nine studies deal with the fame of boys, rather than with the boys after they had grown into fame.

History and Travel

**When America Became a Nation.* [Third Volume in the American History Series.] Tudor Jenks. T. Y. Crowell & Co. $1.25.

John and Betty's History Visit. Margaret Williamson. Lothrop, Lee & Shepard Co.

**Young Americans in the British Isles.* Everett T. Tomlinson. Houghton Mifflin Co. $1.50.

**The Children's Story of Westminster Abbey.* G. E. Troutbeck. Frederick A. Stokes Co.

A Guide to Great Cities: For Young Travelers and Others. Northwestern Europe. Esther Singleton. The Baker & Taylor Co. $1.25 net.

Betty in Canada. Fritz in Germany. Boris in Russia. Gerda in Sweden. Etta Blaisdell McDonald and Julia Dalrymple. Little, Brown & Co. 60 cents each

Two Schoolgirls of Florence. May Baldwin. E. P. Dutton & Co. $1.50.

The right historical tone has been adopted by Mr. Tudor Jenks in a series of which *When America Became a Nation* is the third; he believes that young readers, especially of advanced grades, should know of the development of this country not only through its active facts, but thru those social and economic forces which are greater than battles. This book covers the period from 1790 to 1859. We hope this series is destined for wide circulation.

Margaret Williamson evidently believes in conversation as a medium for carrying information, since her *John and Betty's History Visit* is told in this manner. It is a personally conducted tour, smacking of the Rollo style, and one marvels over the glibness with which the grown-ups reel off fact and fancy for the benefit of inquiring minds. Much more satisfying is Everett T. Tomlinson's *Young Americans in the British Isles,* a juvenile Baedeker, written in less of a handbook way, but covering the ground fully both as to details and illustrations, which are copiously supplied. G. E. Troutbeck's *Story of Westminster Abbey* could have been made more interesting because of so fascinating a subject; the narrative is too concise, tho it deals with all important points, emphasizing them with excellent photographs. *A Guide to Great Cities* of Northwestern Europe has been prepared by Esther Singleton for Baker & Taylor. A full index is serviceable. All one can say about

such a book is that it supplies a certain need, although the field is already adequately filled. Such a "guide" is for reference only.

Fiction and travel are skilfully combined in May Baldwin's *Two Schoolgirls of Florence,* which just escapes being a distinctive story. This may be because its bulky form is disconcerting; nevertheless there is an atmosphere that is thoroly Italian, even tho the narrative in incident and characterization is stretched to gain the desired end.

Plays and Games

**Walter Camp's Book of Foot-Ball.* Walter Camp. [Library of Sport.] The Century Co. $2 net.

The Boys' Book of Model Aeroplanes. How to Build and Fly Them. With the Story of the Evolution of the Flying Machine. The Century Co. $1.20 net.

How to Build an Aeroplane. Robert Petit. Translated from the French. D. Van Nostrand Co. $1.50 net. [A technical treatise, mainly designed for the specialist.]

**Magicians' Tricks: How They Are Done.* Henry Hatton and Adrian Plate. The Century Co. $1.60 net.

The Wonderland of Stamps. W. Dwight Burroughs. Frederick A. Stokes Co. $1.50.

The House of the Heart and Other Plays for Children. Constance D'Arcy Mackay. Henry Holt & Co. $1.10 net.

Holiday Plays. Five one-act pieces for Washington's Birthday, Lincoln's Birthday, Memorial Day, Fourth of July, and Thanksgiving. Marguerite Merington. Duffield & Co. $1.25.

Harper's Book of Little Plays. Introduction by Madalene D. Barnum. Harper & Bros. $1.

Short Plays from Dickens. Arranged by Horace B. Browne. Charles Scribner's Sons. $1 net.

There is fascination in reading a volume by an expert and an enthusiast. *Walter Camp's Book of Football* is excellent reading, presenting full information, historical and technical, regarding the game. Even the uninitiated will appreciate the clarity with which the subject is treated, and all college men will welcome the personal note, and the manliness with which Mr. Camp tackles the ball. This is a good book of sport.

The Boys' Book of Model Aeroplanes is timely and practical. Mr. Francis A. Collins understands the subject, especially from the angle of juvenile experiment. The second part of his "treatise" considers "the history and science of aviation."

After a great amount of time in analyzing Hatton and Plate's *Magicians' Tricks; How They Are Done,* the amateur may be able to put some of the directions into practice. The book is full of fun and cleverness, but it is not easy. We are all clumsy with our hands, and this "profession" depends on infinite pains.

Among amusement activities, that of stamp collecting still holds its own; there is in it the zest of hunting, but W. Dwight Burroughs, studying the history and symbolism of the designs upon stamps, comes to the conclusion in *The*

"SHE ROLLED THE CHEESE DOWN THE HILL."
From "Grimm's Fairy Tales." (Sowerby. Stokes.)

Wonderland of Stamps that the information is just as great as the mere sport of collecting. His book, save that it resorts to the unfortunate conversational style, is suggestive, containing, as illustrative matter, the reproductions of 200 stamps.

School teachers will welcome the possibilities in four volumes of plays, intended especially for juvenile use. Constance Mackay's *The House of the Heart* is of distinctive literary quality and is practical in arrangement. The author has been affected by the morality dramas. Marguerite Merington's *Holiday Plays* are what the name implies—each one of

"THE ANIMAL TRAINER."
(Duffield.)

the five consisting of a single act. *Harper's Book of Little Plays* is more on the conventional order for schoolroom use. Of them all, H. B. Browne's *Short Plays from Dickens,* is more pretentious. Amateur dramatic societies will welcome it.

Distinctive Fiction

**Rewards and Fairies.* Rudyard Kipling. Doubleday, Page & Co. $1.50.
**Billy Topsail & Company.* A Story for Boys. Norman Duncan. Fleming H. Revell Co. $1.50.
**Phoebe and Ernest.* Inez Haynes Gillmore. Henry Holt & Co. $1.50.
**Rebecca of Sunnybrook Farm.* Kate Douglas Wiggin. [Holiday Edition.] Houghton Mifflin Co. $1.50.
**Nelly's Silver Mine.* Helen Hunt Jackson. [Reprint.] Illustrated by Harriet Roosevelt Richards. Little, Brown & Co. $2.
**The Home-Comers.* Winifred Kirkland. Houghton Mifflin Co. $1.20 net.
Philippa at Halcyon. Katharine Holland Brown. Charles Scribner's Sons. $1.50.
Betty Gaston: The Seventh Girl. Marion Ames Taggart. W. A. Wilde Co. $1.50. [The continuation of a series that has marked qualities tho sameness of incident.]
**The Christmas Angel.* Abbie Farwell Brown. Illustrated by Reginald Birch. Houghton Mifflin Co. 60 cents net.
The Lakerim Cruise. Rupert Hughes. The Century Co. $1.50. [Eleven boys hunt for a twelfth who ran away from home.]

Our writers are being overworked, and the democratic average of our readers' tastes undervalued, even undeveloped. In our children's literature we fail to recognize the imagination, we refuse to gratify the physical demand of childhood, we let lie fallow those broader wholesouled judgments which are relieved of ethical qualms, and which are born of a sound, active, vigorous, full-blooded mind.

In this respect Rudyard Kipling always satisfies, and his *Rewards and Fairies,* continuing the beautiful quality of "Puck of Pook's Hill," is rich in history and mystic description which are rare qualities. The tales may be beyond the average child, but there is much that will linger in the realm of the half understood.

Norman Duncan's *Billy Topsail & Company* is just the right sort of work for boys, for it is full of dash and real adventure, and as a sequel has lost none of the splendid tang of the previous volume. In subject, it deals with trading in the Far North.

Not often can we say of a writer that her characters are clever and her story bright. But this is what we do claim for Inez H. Gillmore's *Phoebe and Ernest,* wherein the situations are excellently humorous, and the feelings of the boy and girl graphically indicated.

While not so excellent as "Introducing Corinna," Winifred Kirkland's new book, *The Home-Comers,* has charm and hopefulness. We congratulate this writer upon the directness with which she views life—the directness of a good comrade. We might have been able to say this also of Miss Brown's college story, *Philippa at Halcyon,* if there had not been too conscious an air that each chapter must end with some moral result. But in spite

of this artificiality, there is satisfactory writing in this book.

We congratulate Miss Abbie Farwell Brown upon her clean, wholesome and effective booklet, *The Christmas Angel,* which tells of happiness to many thru the vagaries of an old maid with a hardened heart. Mr. Birch's pictures add to the holiday spirit of this refreshing volume.

It is impossible to give separate treatment to the fiction that floods the desk of THE INDEPENDENT. We will have to let a general statement suffice as an introduction to several lists which by no means cover the field. I am inclined to believe that overproductivity in the juvenile book market at least enables a publisher to issue books in every way worthy of preservation. The publishing business is mostly gauged by profit and loss, and that is why so much fiction is issued yearly; it would not pay otherwise. Yet such condition makes it all the more difficult to give proper examination to the book when one goes to the book store.

Of course, this overproductivity has had a demoralizing effect upon the writers; it has converted style from something distinctive and rich to something meager and without definite form; it has multiplied each author's demand without guaranteeing his capacity, and without being assured of his capability; it has forced the serial into an interminable series which is simply the value of the first volume decreased to the *n*th magnitude. The lists we append by no means exhaust the volumes sent to us for review. But space will not permit us to continue. We therefore advise the reader to seek further information from the nearest librarian whose business it is to know and to guide.

Historical Fiction

**The Little King.* A Story of the Childhood of Louis XIV, King of France. Charles Major. The Macmillan Co. $1.50.

The Rout of the Foreigner. A Story of the Reign of Henry III. Gulielma Zollinger. A. C. McClurg & Co. $1.50.

**Martin Hyde: The Duke's Messenger.* John Masefield. Illustrated. Little, Brown & Co. $1.50. [A Tale of the Pretender.]

A Little Maid of Boston Town. Margaret Sidney Lothrop, Lee & Shepard Co. $1.50.

Light Horse Harry's Legion. Everett T. Tomlinson. Houghton Mifflin Co. $1.50.

Fighting with Fremont: A Tale of the Conquest of California. E. P. Dutton & Co. $1.50.

The Young Blockaders: A Story of the Civil War. [War for the Union Series.] Everett T. Tomlinson. Lothrop, Lee & Shepard Co. $1.50.

A Daughter of the Revolution. Jessie Anderson Chase. Richard G. Badger. $1.

The Green Door. Mary E. Wilkins-Freeman. Moffat, Yard & Co. $1 net.

Series for Boys

At the Home Plate. Albertus T. Dudley. Lothrop, Lee & Shepard Co. $1.25. [This is the second volume of "Stories of the Triangular League." A mixture of many sports. One of the students is brother to the most unpopular among the teachers.]

The Automobile Boys of Lakeport; or, A Run for Fun and Fame. Edward Stratemeyer. Lothrop, Lee & Shepard Co. $1.25. [Fifth volume in "The Lakeport Series." The jealousies, trials, adventures and hairbreadth escapes of young heroes, who run into a mystery.]

Jack Collerton's Engine. Hollis Godfrey. Little, Brown & Co. $1.25. [Second volume in a series known as "Young Captains of Industry." This engine, which belongs to the airship of the hero's father, is stolen by a rival company, and the story, up to date in subject, deals with the exciting attempt to recover it.]

Dave Porter at Star Ranch; or, The Cowboy's Secret. Edward Stratemeyer. Lothrop, Lee & Shepard Co. $1.25. [Sixth volume of "Dave Porter Series." Dave and some school friends spend their vacation in Colorado. The neighboring ranch is owned by the father of a "vicious" schoolmate.]

The Young Guide; or, Two Live Boys in the Maine Woods. C. B. Burleigh. Lothrop, Lee & Shepard Co. $1.50. [Third volume of "Norman Carver Series." A story of hunting, in which the hero has hard times with some "undesirable citizens."]

A United States Midshipman in the Philippines. Lieut.-Com. Yates Stirling, Jr., U. S. N. The Penn Publishing Co. [Third volume in a series. The heroes serve in a gunboat during the American conflict. An introduction gives in synopsis the main outlines of the previous stories.]

Midshipman Ralph Osborn at Sea. Com. Edward L. Beach, U. S. N. W. A. Wilde Co. $1.50. [The second volume in a series attempting to depict navy life in its progression.]

Series for Girls

Sidney: Her Senior Year. Anna Chapin Ray. Little, Brown & Co. $1.50. [This is the sixth in a series known as "The Sidney Books." The author is a graduate of Smith College; she carries her heroine thru Commencement Day into a romance.]

The Wide-Awake Girls at College. Katharine Ruth Ellis. Little, Brown & Co. $1.50. [The third in a series. A mixture of fun and romance, wherein "the friendship of true women" is the dominant note.]

Betty's Happy Year. Carolyn Wells. The Century Co. $1.50. [With the assistance of Reginald Birch's illustrations, Miss Wells tells of a heroine's frolics during the holidays of a year, including a birthday.]

Patty's Success. Carolyn Wells. Dodd, Mead & Co. $1.25. [This is the eighth volume in the "Patty Series."]

Dorothy Brooke's Vacation. Frances Campbell Sparhawk. Thomas Y. Crowell & Co. $1.50. [The second volume in a series. A wholesome book intended for the ages, 14-16. The vacation is spent in a motor car, and there is a sprinkling of melodrama.]

Betty Wales on the Campus. Margaret Warde. Penn Publishing Co. $1.25. [The seventh in a series of stories for girls. An Introduction places the characters as they appeared in previous volumes.]

Helen Grant's Decision. Amanda M. Douglas. Lothrop, Lee & Shepard Co. $1.25. [The eighth in a series of mediocre books, horribly illustrated by Amy Brooks.]

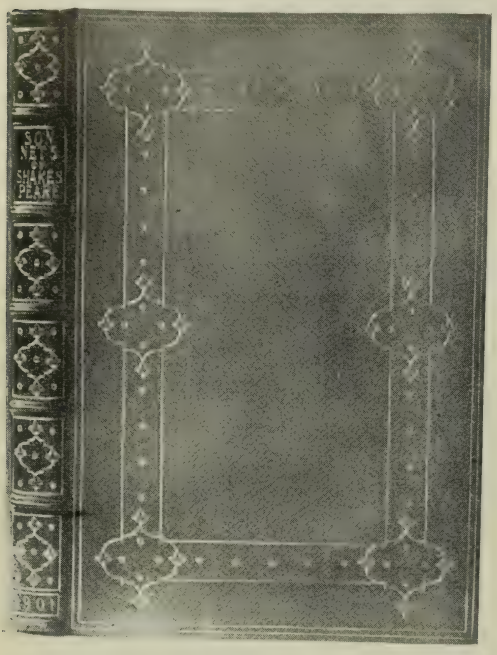
Modern Tendencies in Bookbinding

BY EMILY PRESTON

[Miss Preston is perhaps the best known woman bookbinder in this country. She was a pupil of Cobden-Sandersen at the famous Dove's Bindery and has also worked in some of the best of the Paris shops. Her binding is characterized by excellence in forwarding and artistic tooling.—EDITOR.]

THE steady growth of general interest in fine bookbinding is a very significant factor in the present development of the craft; significant, and satisfactory. The collector is no longer the sole patron of the binder, who has come to count in his year's work a large proportion of orders from persons who find the possession of a few hand bound books a luxury, and who consequently give careful thought to every purchase. The owner of one or two such volumes wishes to assure himself not only of durability in technique and material, but of a lasting appeal in the decoration. To him bizarre and unconventional designs offer no temptation, and often his choice is the design showing most restraint. In this he is the antithesis of the large buyer, who many times allows his desire for novelty to mar the dignity of his collection. This is not the customer who gives *carte blanche* orders; he is possibly acquiring his volumes at some personal sacrifice and he enjoys the opportunity to consider and choose, as a foretaste of the pleasure of possession. He is not the bookseller's ideal buyer, for as a rule, he comes direct to the binder, but he is the restraining influence that is creating in modern bookbinding a tendency toward dignity, and studied simplicity. I should say that the public attitude in regard to unconventional design in its application to book covers was never more antipathetic, and present binders who, in an effort to be unique, break over the conventional limitations, have found their place in public esteem to be one of shifting sands. To

AN OLD-TIME SHOP: "THE HOUSE OF THE BOOK."



A CORNER IN MISS PRESTON'S BINDERY.

illustrate: Three years ago Messrs. Dodd & Mead exhibited at their Fifth avenue shop a small collection of bindings executed in Paris by M. Charles Meunier. These books were of a fine standard of technical excellence, but in decoration the artist seemed quite to have forgotten that his medium was a book cover; all the banalities of the *art nouveau* found expression on his covers, and the exhibition was esthetically as well as substantially a failure. In like manner the volumes in the Poor collection, on which the binders had expended their energies in pictorial decoration, received very scant admiration. On the other hand, let us review our book exhibitions of the past five years. At the Grolier Club; at Copley Hall, under the direction of the Boston Society of Arts and Crafts; at the Guild of Book Workers; the Society of Craftsmen; the large loan exhibition of contemporary binders at the National Arts Club; the smaller showing by Houghton & Mifflin of Miss Cole's fine work; the exhibition of Cobden-Sanderson's books at Columbia University Library; at the permanent exhibition in Scribner's little room one finds the keynote to be reserve. The craftsman seems to appreciate that his design is to beautify a book, and that it demands no necessary sacrifice of originality to adhere to certain fixed rules.

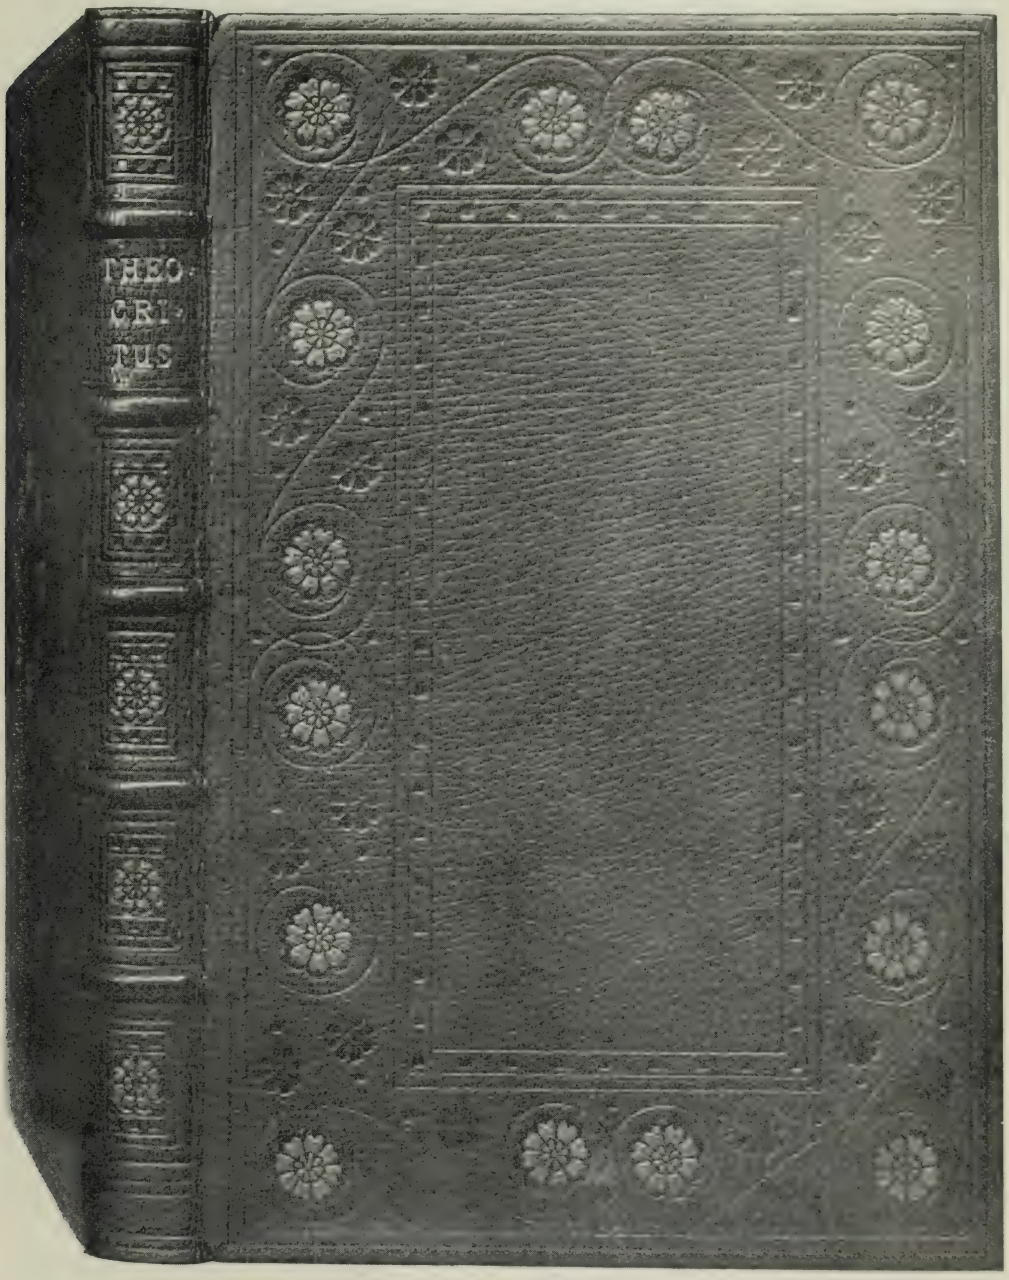
The early eighties of the last century saw established a brilliant era in the craft of bookbinding, and mark the beginning of what may be termed the modern school. Cuzin, Jolly, Ruban, Mercier, are only a few of the men who were maintaining in France the standard of superb technique that Trantz had revived. Already Miss Prideaux had proven a worthy successor to Mary Collet, and Bedford, Zaehnsdorf and Rivière were producing work of fine technical skill. Also, two distinctly new styles of decoration were in process of development. One, in France, by Marius-Michel; the other, in England, by Cobden-Sanderson. These two men were at the threshold of their careers. The former

had the advantage of a score of years, not in age, but in training, and the further advantage of inheritance, his father being one of the foremost binders of his day. But, strangely, it was Michel who trod down convention, while Sanderson held to it tenaciously. Each has a distinctive style, which many followers have

SHAKESPEARE'S SONNETS.
Binding by Helen G. Haskell, in dark blue crushed levant, with inlays of lighter shade of blue; gold tooled.

adopted, and both are great figures in the book world. Marius-Michel is still binding, and tho we may deplore the style of decoration he has chosen to identify with his art, we cannot deny him to be one of the great binders of his day. His imitators, however, have arrived at excesses of banality impossible to accept. Cobden-Sanderson, at the age of seventy, has closed the doors of his bindery, and is resting on his past achievement. Cuzin is dead long since, but his son, and Mercier, his finisher, are great names in the current exhibitions. Probably all the collections of modern bindings owe their existence to the impetus these several men I mention gave to an interest in fine books.

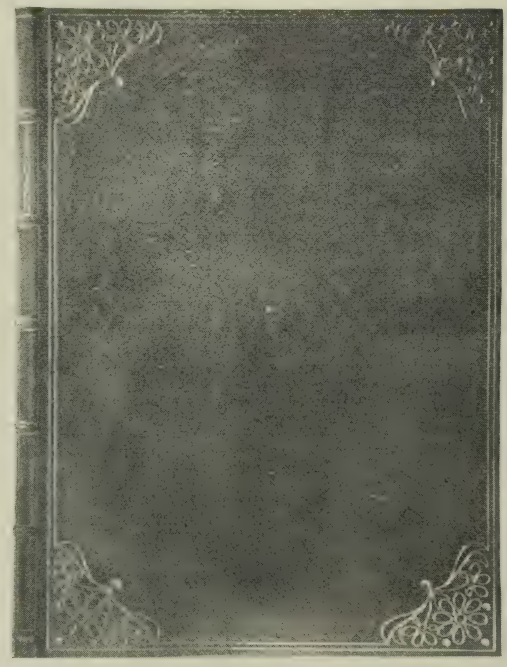
The Grolier Club, founded in 1884, numbered among its members most of the men who collected bindings. And at that time the collections, since grown so famous, and in many instances scattered again under the auctioneer's hammer, were in the making. To the influence of this club may be attributed the first interest in America in fine bindings. The group of men whose love of books brought about this organization were keen in the pursuit of new treasures. They bought with prodigal extravagance and with great acumen, and it was with one impulse that they spread the gospel of the beautiful book. All the foreign binders profited by this American awakening, and I doubt if the finest specimens of their work are not to be found in our



DOUBLURE FOR EVIRADNUS,
By A. Cuzin; white calf; gold tooled.

private collections. At this period there was, save Matthews, no American binder of superior merit. The Club Bindery, Stikeman, Zahn, Bradstreets and the score of amateurs were to come later. Europe reaped the benefit of all the early enthusiasm, and upon the modern Europeans, mainly upon modern Frenchmen, must be placed the responsibility for most of the volumes in our collections

whose designs are completely lacking in charm.



The founding of the Doves Bindery in London removed Cobden-Sanderson from the amateurs and made it possible for him to give his patrons a supply of his bindings in better proportion to their demand. This was followed in a few years by the establishment in New York of the Club Bindery, the stock of which was owned by members of the Grolier Club. Here the highest class of French skilled labor produced works that were marvels of technical excellence. The

BINDING BY L. AVERILL COLE,

workmen came out of the best Paris ateliers, and all the equipment was imported, like the labor. The Club Bindery was short lived; a decade saw it come and go, and I think its failure lay in its limitations. The output went almost completely to the collectors who owned the stock, the individual buyer having no part in its maintenance. But tho it is now entirely of the past, this bindery was of incalculable importance to the American binders and their workmen, who saw the fine tooling those Frenchmen were capable of doing, and learned many a salutary lesson of the value of technique.

Fifteen years ago a new element aroused a still wider interest in bookbinding — the amateur, of whom Miss Prideaux and Cobden-Sanderson were the forerunners. In this term I include all, professional or otherwise, who have learned every process of the craft; who have not served the usual apprenticeship and become in time journeymen, trained in one branch alone, but have studied with a view to doing all the work themselves. In England, in France and in Italy, book-loving men and women began going into the good workshops for instruction. The first American to take up this work seriously was Miss Nordhoff, who went to London in 1895 to study with Mr. Cobden-Sanderson. The Doves Bindery had been established two years previously and was much in the public notice in those days, so Miss Nordhoff found an unique position open to her when she finished her course and returned to New York to open her own workshop. A number of pupils were eager to join her classes, and she was asked to address one of the open meetings of the Grolier Club, a very signal compliment to her craft ability. I dare say there are several hundred amateurs in our country at the present time, doing binding for pure love of it, who might well use the motto of the old collectors, *Io—et amicorum,* inasmuch as they never offer their books for sale. Some of them produce a good class of work, that would bring no discredit upon an exhibition. Many have workshops in their homes, while others go season after season to some teacher, finding this the surest method of taking time for their chosen craft. At least fifty good craftsmen, belonging to this amateur class, are established in various of our larger cities, teaching as well as taking orders. Their work is seen at exhibitions, and often is very well known. Some of these binders have acquired a fine technique and have also achieved distinction of style. Most have received at least part of their training abroad. Cobden-Sanderson, Douglas Cockerell and Sutcliffe & Sangorski, in London; Domont, Cuzin fils and Réné Kieffer, in Paris, and Jacob, in Brussels, are the popular foreign teachers, and many of the pupils choose to acquire a knowledge of several styles by studying with more than one.

SEVEN POEMS OF TENNYSON.
Bound in the Doves Bindery, F. J. Cobden-Sanderson, in dark blue crushed levant morocco, gold tooled.

If an old print of a medieval bindery were compared to a photograph of one of the small workshops in which hand binding only is done, a great similarity would be found in the essential points. The presses, the sewing bench, the stamps for decoration, and many of the

tools are much the same as the early craftsmen evolved. One would suppose that this established standard would make it easy to buy all necessary outfit; but, on the contrary, here in America, owing to the prevailing use of machinery, the hand binder found it very difficult, until within the last few years, to equip a workshop with the required tools. Some important tools and most materials must still be imported, and only a few dealers will trouble to keep them in stock. To establish a bureau of information and mutual help, the Guild of Book-workers was organized four years ago and has proved of great value. A binder member of this guild had the enterprise to start a little shop in which all materials and many tools are offered for sale.

Apart from the excellence of their work, the amateurs are a very potent factor in the present development of binding—primarily because they see with a trained eye, and this training has included a study of styles and of periods. Their work in design has been chiefly in its application to book decoration, hence their criticism is intelligent and their appreciation counts. Moreover, during their novitiate, they have, consciously or not, educated a certain number of friends in fine bookmaking —people perhaps who had never before given much thought to the actual making of a book; who had been content to go into a shop and buy a good commercial edition of a favorite author, quite indifferent to the treasures of printing and binding that shop might contain. When they see the work actually done, and have listened to an exposition of the various processes by an enthusiast, they become keen to see and to know more of the fascinating handicraft of binding, and this awakened interest becomes in time the intelligent appreciation which is the noteworthy feature of our present exhibitions.

New York City.

Some Events in Westminster

BY JUSTIN McCARTHY

THESE islands were much astonished this morning by the news that the joint conference appointed to consult as to the best way of bringing the veto question to a satisfactory settlement had come actually to an end and had broken up. No explanation whatever has as yet been given as to the differences of opinion which brought about the utter breaking up of the conference, and only when Parliament reassembles, on Tuesday of next week, will any ministerial statement be made on the subject. This news came as an utter surprise to the public in general, even to that portion of the public who follow with close and well-practised attention all ministerial and parliamentary movements.

The project of a Liberal and Tory conference chosen by the present Government with a hope of thereby obtaining some valuable and practical suggestions by a co-operation of Liberal and Tory intelligence and experience, has now become an absurd and ignominious failure.

I must own that I am one of those who feel much disappointed at this ignominious collapse of the conference project. It seemed to me that the central idea of the scheme was one of high promise and at the same time of very practical character. Indeed, it appeared to open out a prospect of the rival parliamentary parties entering into an arrangement for the holding of a series of conferences between the two great rival powers of the Houses and of the country to consider and accomplish some administrative reform or improvement which had nothing to do with merely political change. Despite the as yet utter and unexplained failure of the recent conference, I still feel strongly impelled to call the especial attention of my readers thruout the American States to the peculiarity and the importance of this recent course taken by the Liberal English Administration in starting a conference between the two great opposing parties in British political life with regard to the possibility of coming to an

AUGUSTINE BIRRELL, M.P.

understanding and an agreement as to the measures most necessary for immediate adoption in Great Britain and Ireland. There must always be admitted on both sides of political life some grievances, some troubles, calling for an early settlement, which at the same time do not involve any irreconcilable political differences of opinion. In the ordinary conditions of things a measure brought in for such a purpose by the party then holding power in the state would be received instinctively with an immediate impulse toward hostility by the party in opposition, and the course of prolonged debate would in all probability increase the animation and the resolve of the Opposition. Now, if the new method of action originated by Mr. Asquith and his colleagues should yet get, under happier auspices, another chance of testing its merits, it may be the means of smoothing the way to success of many a well-conceived and statesmanlike project for the benefit of the community. Of course, just for the present the interest of the country and of the world in general, so far as our forthcoming session of Parliament is concerned, will be mainly engrossed by the consideration of the great struggle to go on between the hereditary and the representative chambers. We may look forward, at all events, to a hard-working and a hopeful session of the House of Commons and to the disturbing prospect of a certain general election, which, after all, if it is to come, might as well come early as late in the next year.

Since I wrote my latest article for THE INDEPENDENT the long-expected volume entitled "Lady John Russell: A Memoir," with selections from her diaries and correspondence, has been published by Messrs. Methuen & Co., London. The work is chiefly constructed by Lady Agatha Russell, daughter of the late Lady John Russell, who afterward, as my American readers well know, became the Countess Russell when her husband, the celebrated Lord John, was sent to the House of Lords as an earl. Lady Agatha was assisted in the construction of this long and very difficult work by a very accomplished and brilliant political writer, Mr. Desmond McCarthy, who, I must say with regret, is not a member of my family. I had, however, the honor and pleasure of being, during many years after Earl Russell's death, a friend and a very frequent visitor at Pembroke Lodge, the residence of his widow. She was one of the most gifted, accomplished and charming women I have ever known, and my acquaintance with her daughter, Lady Agatha, is maintained so closely that I was allowed to contribute some pages to this volume now issued—these pages entitled "Recollections of Frances, Countess Russell," by Justin McCarthy. It is not, however, to my own short contribution to this volume that I desire to attract attention, but to the whole of the picture which this gifted and devoted daughter gives of her father and mother. During the most distinguished passages of their career in political as well as in private life, Lady John Russell was the closest companion of her husband's political career as well as his literary and artistic studies, and they were both great lovers of the arts and of literature. The volume is adorned by a number of illustrations, chiefly miniature portraits of its prin-

cipal figures, and many sketches of scenery from the grounds of Pembroke Lodge. I cannot feel the slightest doubt that this remarkable volume will have a thoroly cordial reception thruout all parts of the United States, and I sincerely hope that my friend Lady Agatha may live long enough to enjoy in good health the success of her work.

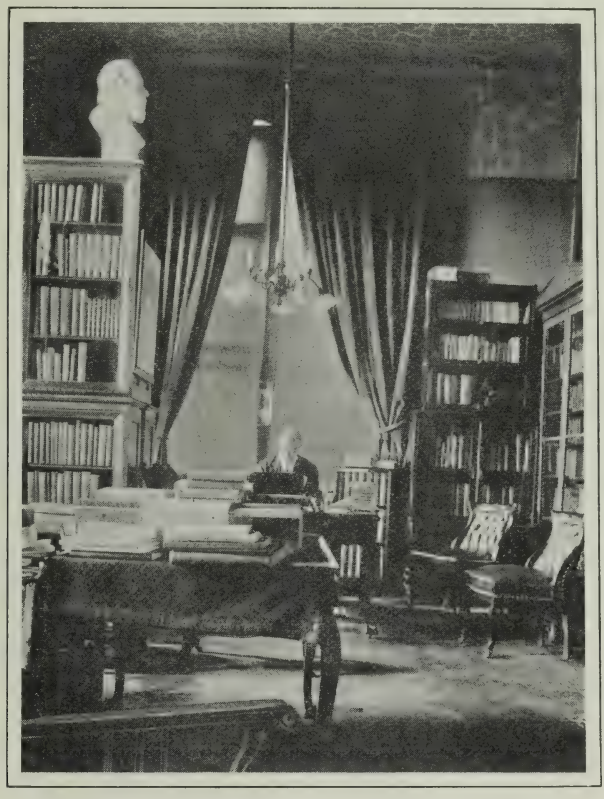
I may say that the book would be a delight to every intelligent and sympathetic reader if only because of the picture it gives to the world of the devoted and I may say the romantic love of the great statesman for his wife and of the wife for her husband which it gives in the many letters interchanged between the pair at every critical period when Lord John's political duties took him for a time from the side of the wife who was also his thoro intellectual and political companion and comrade. A great part of Lord John Russell's period of rule as a leading member of the British Government came to be at a time when the disturbances in Ireland, the natural resistance to unjust and oppressive sectarian and landlord and political rule, called forth resistance which could not have been withheld by any country peopled by men of patriotism and courage. Even under these conditions we learn from this volume that Lord John Russell had much sympathy with representatives of Ireland in Parliament, and that the heart of his devoted wife pleaded warmly and continuously for Ireland in her appeals for justice, toleration in religion, and equality in political life and in citizenship. Deeply as the late Countess Russell was interested, and it might almost be said absorbed in her husband's career as a member of the Liberal Government, it must be owned, and indeed she frankly and sweetly confesses it herself, that there sometimes came a crisis when she felt and acknowledges in some of her letters to members of her family and friends that she was touched by a thrill of gratification on his having to retire altogether for the time from administrative office and to come back to enjoy and augment the delights of domestic life with his wife and their children. I do not believe that during the present generation a more remarkable, more interesting and more memorable biographical memoir has been published than this which Lady Agatha Russell has succeeded in calling into existence. The book required for its full construction the combining help of politicians active and meditative, and Lady Agatha Russell has called to her assistance and appropriately disposed of the contributions which were offered to her filial and patriotic undertaking.

We have just had another biographical volume issued from the press which is sure to arouse much interest among all who have to do with the world of politics. This is "John Bright: A Monograph," by R. Barry O'Brien, with a preface by the Right Hon. Augustine

BARRY O'BRIEN.

Birrell, published by Messrs. Smith, Elder & Co., London. Mr. Barry O'Brien has already made himself known as a biographer of some success by his volume on Charles Stewart Parnell and that on Lord Russell of Killowen, the great lawyer and orator who defended Parnell and his parliamentary colleagues when they were put on trial because of the charges made by the *Times* newspaper and founded on the forgeries concocted and contributed by the man Pigott. Pigott, it will be remembered, afterward fled to Spain, and when about to be surrendered by the Spanish authorities to the demand for his extradition by Great Britain, committed suicide to save himself from recapture. This volume has an especial interest for me because all the earlier years of my London life in politics and journalism were spent in close intercourse with John Bright. I was then a writer of leading articles for the London *Morning Star,* the political organ of Richard Cobden and John Bright, and of which I afterward became the editor. I retained that position until when, after the death of Cobden and when Bright had withdrawn from his association with the journal, I voluntarily resigned my post, was succeeded by John Morley, now Lord Morley of Blackburn, and set out on my first visit to the United States. Mr. Barry O'Brien is a devoted and an enthusiastic admirer of Bright's eloquence as well as of his political and personal character, and I am well prepared to echo every word of his eulogies. If the present generation of readers in England and in the United States require any reminder of Bright, this new volume may well supply the requirement. The preface by the Right Hon. Augustine Birrell, Chief Secretary for Ireland, is, like the biography itself, the work of a genuine enthusiast, and the more strictly accurate in its measure of Bright's oratorical capacity because of its very enthusiasm.

I have to come somewhat late with my notice of one of the most remarkable biographical volumes given to the world during the present generation. This is the first volume of "The Life of Benjamin Disraeli, Earl of Beaconsfield," by William Flavelle Moneypenny, published by John Murray. The volume deals with Disraeli's life until his entrance into the House of Commons, in which he won the fame that has made him best known to the whole civilized world. The first volume is mainly composed of letters passing between the young Benjamin Disraeli and his near relatives, and from this fact it becomes, as may be easily imagined, more interesting and indeed even more fascinating than the story of the life recorded according to the usual method could well be set out. We find from these letters that the name or nickname of "Dizzy" was not affixed to the novelist and political leader by some humorist, but was an early nickname created by the young Benjamin himself in the days when he was yet wholly unknown to the British public, and accepted with ready good humor by his loved and loving sister Sarah and other members of his household. The letters which illumine this first volume are delightful reading, and they shed sparkles over the pages of the whole of the narrative until they bring us to the close of the volume and up to his election for Maidstone. We leave him as he is about to take a short holiday after the toils of his candidature and before the reassembling of the House of Commons. I had many opportunities of hearing Disraeli in the debates of the 'great representative assembly of which he made one of the most brilliant figures during so many years, and afterward in the House of Lords, where, as Lord Beaconsfield, he ranked unquestionably among the few peers to whose presence and to whose utterances the interest of the general public was closely given. Disraeli was not a great statesman, altho he had unquestionably many admirable gifts as an administrator. He was not a great orator in the sense that Gladstone and Bright and even the late Lord Derby were orators, but he was undoubtedly a most brilliant debater, a sparkling satirist, and a figure to be remembered distinctly in literature and in politics. The civilized world will look out with increasing interest for the coming volumes of this remarkable story of a life.



London, England.

The Authors Club

BY AN AUTHOR

THERE have been many "Literary Clubs" in America, but "The Authors Club" is in no sense one of these. When organized, and ever since, it has stood alone and unique, despite the birth in Boston, Philadelphia and London of later organizations with kindred name and approximately kindred objects.

It had its origin in 1882, in a real-

THE CURATOR'S DESK.

ization by several of our leading men of letters that there was need of a club that should bring together our literary workers on a purely social basis—*not* a literary club, but a club of literary men—not a place where exercises would be held, papers read and the members "improved" or bored as the case might be, but a place where they could meet and talk and eat and drink and smoke with never the fear of organized "shop" or of the "little thing" which some fellow had "dashed off last night." Tho national in its scope, New York was its natural location, for even then Boston had lost its pre-eminence as the home of American letters.

Other clubs had and have since been organized in the metropolis which aimed to be centers of literary or artistic circles, but in every case the needs and expenses of club existence in the most expensive city in the world loomed large before their founders and inducted into their requirements of admission open clauses that looked innocent but that were logically bound to destroy or cloud the atmosphere which the organizers had hoped to maintain. One of these constitutions is a good example of what I

mean. It prescribes that the membership shall consist of "Authors, artists *and amateurs of literature and the fine arts.*"

Obviously the italicized clause came very soon to mean any desirable man who had friends inside, with the result that the club now numbers about one hundred and fifty "authors and artists" and about eight hundred and fifty "amateurs of literature and the fine arts." It is easy to see how such a proportion must affect the maintenance of a literary or artistic atmosphere, and similar clauses have resulted similarly in many other clubs that began with like ideals.

The founders of the Authors Club realized this danger. They wished to be just an authors' club and they deemed it best to sacrifice to that end, as they felt they must, the idea of general club facilities. Therefore the clause upon which membership depended was made to read that the candidate should be "The author of a published book proper to literature or of creditable literary work equivalent to such book." Some peril might seem to lurk in the second paragraph, but its interpretation has always been so strict that in twenty-eight years scarcely a dozen members have come in under its provisions, and there is much talk of dropping it entirely. An anecdote seems pertinent in this connection. Some years ago a doubter remarked to one of the members that there seemed to be a lot of names in the club book that he'd never heard of. "Yes," replied the member, "but haven't you got our name a bit twisted? We're not 'the *Great* Authors Club,' you know. Fortunately for many of us we're just the *Authors* Club.'"

And yet, when you read the list of founders, you cannot but feel that it included most of those who deserved well of American literature. There were George William Curtis, Edmund Clarence Stedman, Richard Grant White, Bronson Howard, Parke Godwin, Hjalmar Hjorth Boyesen, Richard Watson Gilder, Edward and George Carey Eggleston, Noah Brooks, Charlton T. Lewis, Brander Matthews, Lawrence Hutton,

EAST END OF THE CLUB ROOMS.

WEST END OF THE ROOMS.

Hamilton W. Mabie, and others scarcely less widely known, and, while most of these men have since passed over to the silent majority, the rolls of the club have always shown a large proportion of the best names of the craft. In the list of deceased members are Eugene Field, Noah Porter, Thomas Wallace Knox, "Bill Nye," Hamilton Gibson, Edward Bellamy, Harold Frederic, Stephen Crane, Charles Dudley Warner, Frank Stockton, Richard Henry Stoddard, Joseph Jefferson, Henry Harland, Carl Schurz, Moncure D. Conway, Daniel Coit Gilman, John LaFarge and "Mark Twain," while among the living one hundred and ninety members—a greater number than ever before—are, besides the few surviving founders, Joseph A. Altsheler, Irving Bacheller, John Kendrick Bangs, Richard Burton, George W. Cable, Will Carleton, Andrew Carnegie, Robert W. Chambers, John D. Champlin, William Church, Arthur Colton, George Wharton Edwards, Henry George, Jr., Franklin Henry Giddings, Will N. Harben, Arthur Sherburne Hardy, Thomas Wentworth Higginson, David Jayne, Frederick Trever Hill, Ernest Ingersoll, Wallace Irwin, Robert Underwood Johnson, William George Jordan, George Kennan, Walter Learned, Charles Battell Loomis, Seth Low, George B. McClellan, George Barr McCutcheon, Tom Masson, Thomas Nelson Page, Samuel Minturn Peck, Edward H. Peple, Horace Porter, George Haven Putnam, James Ford Rhodes, James Whitcomb Riley, Josiah Royce, Charles Edward Russell, Clinton Scollard, Edward M. Shepard, Thomas R. Sheer, F. Hopkinson Smith, Oscar S. Straus, William P. Trent, Henry Van Dyke, William Hayes Ward and Andrew D. White. Only space limitations bar the mention of many more equally well known. It may be seen from these names that the club is a national and in no sense a local organization.

In the matter of honorary membership, action has been very conservative. Of Americans, besides three or four of our greatest authors who were to pass away soon after the club's founding: Lowell,

Whittier and Holmes, the honor has been practically confined to men already members whose ripe years, long proven loyalty and literary position have seemed to warrant it: Stoddard, Stedman, Parke Godwin, "Mark Twain" and Edward and George Cary Eggleston. Of distinguished foreign authors the list has included Matthew Arnold, Robert Louis Stevenson, Alphonse Daudet and George Meredith. It still holds James Bryce, "Maarten Maartens," John Morley, Jean Jules Jusserand, Justin McCarthy and Thomas Hardy. So much for the personnel—or no, I had almost forgot to mention that Harriet Beecher Stowe was also an honorary member—the only woman whose name has ever appeared on the rolls. There has never been a president: the chairman of the Executive Council does duty for him, and that office is now held by Henry Holt, with Duffield Osborne and Rossiter Johnson respectively secretary and treasurer.

In the matter of creature comforts the club has not suffered very seriously for its loyalty to an ideal. By the gift of one of its members, Andrew Carnegie, it holds quarters in the building that bears his name, where, on every second Thursday night, the members and their guests are the guests of the club with all the hospitality which that word implies, while on the intervening Thursdays there is a smaller but no less agreeable gathering which had its origin, some years ago, in the suggestion of a member of the council that there should be "a mezzanine supper on mezzanine Thursdays." For the rest, the rooms are open from twelve to six, with the curator in attendance, and those who wish to use them at other hours are provided with keys and an admonition not to leave the door unlocked.

POE'S PORTRAIT AND MSS. ON SOUTH WALL.

Of relics of deep literary interest there are many to be seen at the club rooms, things that have been confided to its keeping as being their most proper custodian: the chairs of Stoddard and Bay-

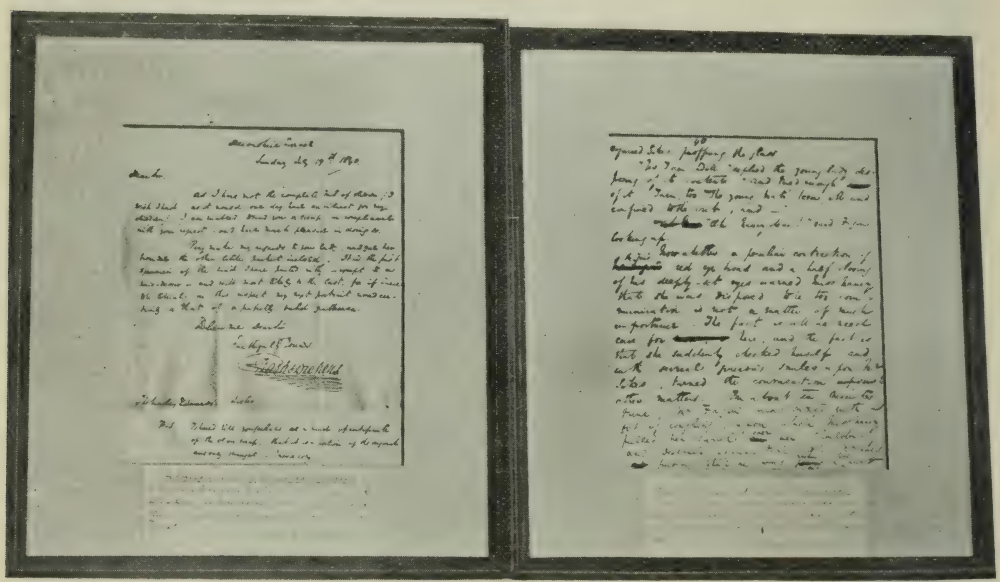
ard Taylor, the last pen with which the latter wrote, desks and book cases that have belonged to the names of the past, and a mass of interesting manuscripts and letters, most of them the bequest of Mr. Stoddard and which represent about all the authors best known in English literature.

The library comprises, first, all the works of the members, and —another anecdote, if I may. Once when the keys to these cases were mislaid for a few days, one of the club suggested that the council had "done it on purpose, so that members couldn't get at each other's books and run the risk of vitiating their styles."

Second, there has been an especial effort to collect as complete as possible a library of literary biographies; third, there are such books of reference as will be most useful to members who desire to work at the club, and fourth, there is the famous Stoddard library of notable volumes, including the 1645 (first) edition of Milton's "Poems" (the first published book bearing his name), a beautiful edition of Sir John Suckling, the royal coat of arms printed on the binding of which shows it to have belonged to some member of the royal family. John Milton's copy of Henry Vaughan's "Flores Solitudinis," with his initial signature on the title page, Robert Burns's copy of "The Lark," and Sir Walter Scott's of Cervantes's "Persiles and Sigismunda," which afterward came into the possession of the virtuoso, Charles Kirkpatrick Sharpe, the first two volumes of "The Arabian Nights' Entertainments" on the fly leaf of which may be read "Marianne Hunt, from her affectionate husband, L. H.," Coleridge's copy of Colquhoun's "Treatise on Indigence," which bears this note: "There appear to me many and important exceptions to several of the doctrines and proposals advanced in this Treatise, yet it is an excellent Book, spite of these exceptions, G. T. C.," a copy of Donne's Poems printed in 1657 and bound in the parchment of an old deed dated 1496, and a Guzman de Alfarache that bears at the top of the first page "John Keats from his friend J. R(ice), 20 April, 1818," and on another page a note by Rice: "Purchased by me A. D. 1818 and given to John Keats and upon his death, 1825, returned to Mr. Rice." On several pages are annotations in Keats's hand and on page 235 a pencil caricature sketch of Keats, probably of his friend Haydon. This list also might be extended indefinitely, but the greatest prize of all is a copy of Henrie Cornelius Agrippa, published in 1569, which bears upon its title page, in ink faded almost past deciphering, the name of William Shakespeare, very like the signature in the second folio edition. At the top of the page is the autograph signature of Hugh Holland with the two H's written as a double H intertwined under his motto "Secreta mea mihi." The poet Holland flourished in Shakespeare's time and wrote verses that were prefixed to the first folio edition of the plays. All this, with other evidence, seems to point to the ownership of the book by the

THE FIREPLACE AT ENTRANCE.

divine William himself and the addition of one more to the scanty list of his extant signatures.



I have said that there were no exercises, but perhaps I should confine this statement to the club meetings. The last night of the year—Watch Night—is an occasion when the rule is relaxed, but the "exercises" are not exactly "literary" —at least, not in a serious way. Perhaps a couple of Watch Night notifications will give a faint idea of their character. That of 1902-1903 reads:

"The club will meet, as usual, on the evening of December 31st, that we may cross the midnight line together in a cheerful company and give fitting expression to our seasonable emotions. Members will please come prepared to confess their literary sins and to declare a purpose of reformation. Any one who has never felt the conviction of sin or who can find in his own life nothing that calls for public repentance, will be at liberty to confess the sins of some other party."

Here is the notice of 1909-1910:

"The club will meet on Friday evening, December 31st, to provide its members with exultation over past victories and refreshment for new combats. We grow old, but the challenging years spring ever young from the nursery of time. Therefore be it decreed that we take to ourselves such food of philosophy as the frivolous may offer, with such seasoning of folly as the wise may sprinkle. If the flavor of the dish be high, pray ye all that appetite shall respond and digestion be not lacking. Health to you, and life just long enough."

To cull extracts, the last Watch Night began with a sketch of "The Authors Club of the Future," represented as a stock broker's office with manager at desk, blackboard properly run, tape with members eagerly consulting the latest quotations on "Romantic common" and "Poetry unpreferred," staid authors of high standing on the messengers' bench in caps and jackets, running in and out at the curt orders of the manager, etc. Later there burst in a delegation of three more or less well known authoresses from Butte, Mont., and Brooklyn, bearing a yellow banner that demanded "Membership for Women," and the spokesman, a well known humorist masquerading as a certain poetess of passion, deftly chained himself to the chairman and declaimed his plea. So the evening progressed with, as always, the club anthem, "The Rolling World," which, by the bye, had been rendered the year before by Homer and Omar (whom Alfred Austin insisted on mixing up), Shakespeare and Eleanor Glyn. I fancy a good many New Yorkers would have opened their eyes to see a staid gentleman of their acquaintance in a flaming wig and evening gown, assuming, most acceptably, the role of the authoress of "Three Weeks"; and then lights out at twelve, "Auld Lang Syne" in the dark and "For He's a Jolly Good Fellow" in

DICKENS MS. AND LETTER AT AUTHORS CLUB.

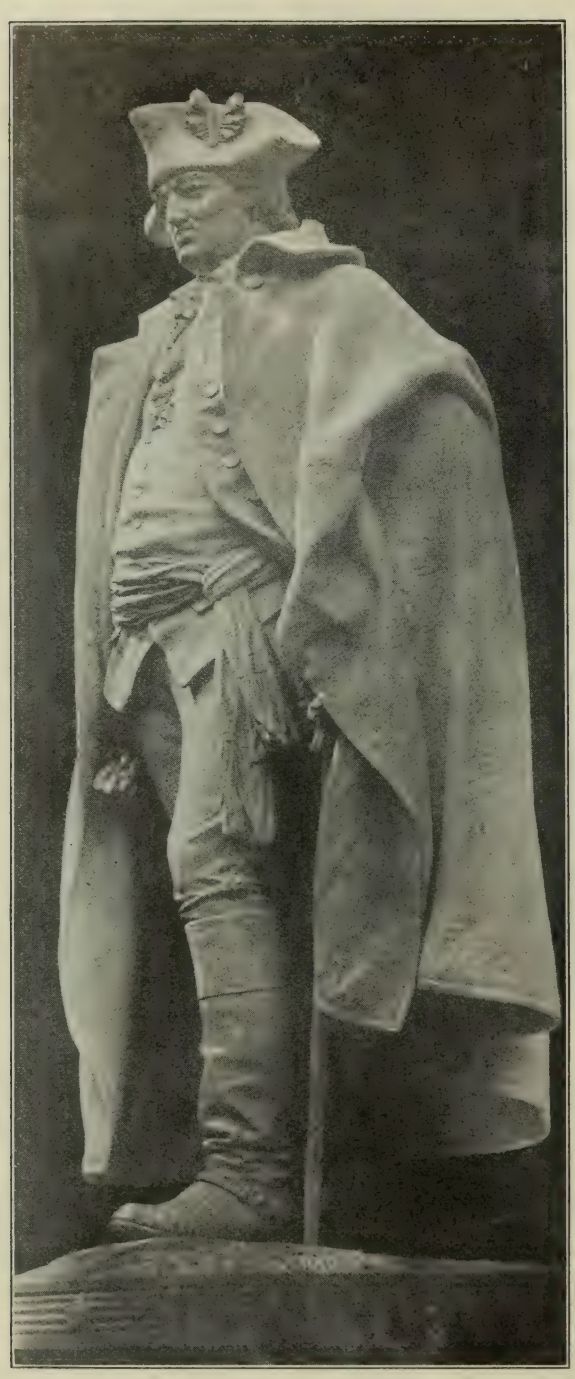
greeting to the New Year in the awakened flare of the electricity. These things are of ancient tradition and must always be.

Last year an innovation was introduced in the shape of a series of afternoon lectures on literary subjects, the popularity of which bids fair to make them a permanent institution. Brander Matthews, Henry Van Dyke, F. Hopkinson Smith and Hamilton W. Mabie were the first lecturers. Also, in an informal way, the club has from time to time, entertained visiting foreign authors: Ambassador Jusserand, William J. Locke, Sir Martin Conway and many others, while notable among its receptions was the one given some years ago to Horace Porter, Andrew D. White and Oscar S. Straus to celebrate the appointment by one administration of three of the members to be Ambassadors of the United States to France, Germany and Turkey. Incidentally the club feels competent and is prepared to furnish any number of ambassadors the nation may require. David Jayne Hill and Mr. Straus are its present contributions to the diplomatic service.

In the matter of dinners, recipients of the authors' hospitality have been their honored honorary member, James Bryce, and their generous benefactor and fellow author, Andrew Carnegie. These functions have been purely family affairs and no guests have been included.

Of the features that impress themselves most strongly on the casual visitor to the club, first and foremost is the spirit of absolute democracy that pervades the place. The author of twenty books of note and the author of one volume of fugitive verse meet on an absolute level as brothers in the cause of letters, and the atmosphere of sincere, friendly interest that men find is always a delight and an inspiration. No prejudices stand against a candidate and his opinions are his own; only he must be an author who has never debased the ethics of his guild, a gentleman and a clubable companion; that is all, and, as a result, you hear subjects of interest discussed there from every side with an intimacy of knowledge and a broadness of varied viewpoints that are always illuminating. The influence of the club on the development of American literature and the higher ethics of the craft has been none the less strong because indirectly exerted and if the time should ever come when circumstances might render possible the establishment of general club facilities and a home and a working center for non-resident members visiting New York, it is not easy to measure the power for good that the club, thus become a necessity as well as a pleasure to our authors, might be able to exert. The limitations of a comparatively small membership and of low dues for men of a profession whose returns are seldom large seem to bar the realization of such an ideal, if the club is to remain, as it always must, an Authors Club; but it is good to dream big, and who knows?

New York City.



Life's Promise and Fulfilment

BY WILLIAM DeWITT HYDE

Youth sees in Life a challenge to his powers;
No hint of sorrow in her deep, clear eyes:
With love and joy to fill the shining hours
She beckons him to win with her the prize.

Followed, she proves to be a cunning thief;
Steals youth and pleasure; sends old age and pain:
Yet in all kindness, knowing loss and grief
When nobly borne are glory and great gain.

Brunswick, Me.

GENERAL BARON VON STEUBEN.

On December 7 was unveiled this bronze statue of Frederich William Augustus, Baron von Steuben, "Instructor-General of the Continental Army, with the rank of Major-General." Von Steuben was born at Magdeburg in 1730, and died in Steuben Township, near Utica, N. Y., in 1794. His statue, executed by Albert Jaegers, of Suffern, N. Y., stands at the northwest corner of Lafayette Square, Washington. It is eleven feet in height and surmounts a twenty-foot pedestal of granite, flanked by bronze groups. President Taft and other celebrities shared in the ceremonies in honor of the great Prussian.

The Future of Opera

BY GIACOMO PUCCINI

[Signor Puccini, composer of "Madame Butterfiy," "La Vie de Bohème" and other operas, is at present superintending arrangements for the first production of his newest work, "The Girl of the Golden West," at the Metropolitan Opera House this Saturday evening. This article was obtained as an interview by a representative of THE INDEPENDENT.—EDITOR.]

THE future of opera? Ah, very well, I will tell you. But you must first tell me what the people are going to want and what the next great musical genius will be like.

The next great musical genius, strong enough to sweep all before him, rout all schools, destroy all conventions, telling popular taste to its face that it is a pantaloon and knows nothing about music—yet finally winning the public and triumphing brilliantly, as geniuses have done before! Where is that genius? What is his nationality? When will he arrive? What will he think and do when he arrives?

GIACOMO PUCCINI.

Tell me these things, and I will tell you about the future opera.

In our city of Milan, you say, we are upon the musical mountain-tops and should be able to perceive what is coming. Even so, operatic tendencies differ widely in different countries. With us at this time you find increased popularity of the bel canto. German opera and Italian opera go their own ways, with the gulf between them wider than ever. The German more and more puts the emphasis on orchestration; the Italian upon vocalization. Germans have had great men—we do not say otherwise. Beethoven, for instance, was great enough to have been an Italian.

Wagner was a genius; he tore down and built to suit himself. He made his own school and was the only disciple. There is no one doing Wagner's work today, nor is there likely to be.

The world is changing, vast cyclopean forces have been enslaved by man and are doing his work. His great steamships defy wind and waves, his railways annihilate space, he sends his message three thousand miles in the twinkling of an eye, he flies thru the air like an arrow. Some of his works are majestic, vying with the majesty of nature. Material progress must affect the music of the future. But in what manner?

Italy has not lost, in music, during the last hundred years. We have gained in knowledge and the inspiration is as great as ever. There are with us many young musicians and composers whose work is interesting and hopeful.

America? Perhaps something good for the world may develop here. All the material is here, the voices, the appreciation. The Metropolitan Opera House performances are fine. The best is given in the best way, but prices are so high that only the comparatively rich are served in this one city.

There should be opera in all the great cities; it is educational in that it is refining. Nor is widespread musical culture necessary. Music is a universal language of the emotions; and with us the common people go in multitudes to the opera, laughing and crying as the music compels them. Yet they cannot tell a B flat from a G natural!

NEW YORK, November 24.

UNION THEOLOGICAL SEMINARY.

THE NEW QUADRANGLE FROM THE TERRACE.

No other theological seminary and no university in the country is so grandly housed as is Union Seminary in New York. Its new buildings form a quadrangle around a large open square. They embrace a splendid library, a beautiful chapel, all needed lecture rooms and residences for professors and students. The cost of the land and buildings was two and a half million dollars, given by generous friends. The gift of land, which extends from 120th to 122d streets, and from Broadway to Claremont avenue, two large city blocks, was given by the late D. Willis James, who also gave $1,600,000; and after his death his widow gave $300,000 to erect the beautiful chapel. Another large giver was the late John Crosby Brown, who, with his wife, gave $125,000. The buildings are of Gothic architecture, as represented at Cambridge University. The dedicatory services last week were attended by representatives of various denominational schools of theology and by presidents or other representatives of colleges and universities in this country, as well as of other institutions as far off as Oxford, Syria and Japan.

The Independent

Entered at New York Post Office as Second Class Matter
Publisher, Clarence W. Bowen
130 Fulton Street - - - New York

A WEEKLY MAGAZINE. FOUNDED IN 1848.

One Year, $3.00. Single Copies, 10 Cents.

Single copies over six months old 25 cents. Postage to any foreign country in the Universal Postal Union, $1.75 a year extra; to Canada, $1.00 extra. Subscriptions will be received for other periodicals, and clubbing rates will be granted as low as offered by any responsible agency.

Order for the change of an address should be received two weeks before change is to take effect. The old as well as the new address should be given.

For the convenience of our subscribers we will send on receipt of publisher's price any book reviewed or advertised in our columns.

Volumes of The Independent are completed at the end of December and June, and a full index is furnished free on application. Neat binders holding in book form thirteen current issues will be furnished for 45 cents.

If the numbers comprising any semi-annual volume are returned to us prepaid in good condition with $1.50 we will bind the volume in handsome and substantial half buckram and deliver it free anywhere in the United States.

We are always glad to receive articles for examination, but writers desiring the return of their manuscripts, if not accepted, should send a stamped and addressed envelope. We cannot, however, even so, hold ourselves responsible for their return. Authors should preserve a copy.

Advertising rates will be furnished on application.

Mr. Taft's Message

MANY of those who read the President's message will turn first to those parts of it which relate to the tariff. It is not forgotten that much was said about the tariff in the recent campaign, and that the main cause of Republican defeat was a popular conviction that the tariff had been very badly revised. Mr. Taft, like many of his party's leaders in the closing weeks of the campaign, holds up before the people the tariff board. The revisers were criticised, he says, because they did not conform to the platform's rule and promise that the duties should be measured by the difference in production costs, plus a reasonable profit. They did not have time, he continues, to ascertain what the production costs were, but the board will get the facts. He forgets that when one foreign Government, at the request of our Government, forwarded an elaborate statement of production costs, it was at first hidden in the room of the Senate committee and then, after repeated demands had brought it to light, was denounced as evidence that Germany was wrongfully interfering with our domestic affairs. The board, Mr. Taft says, will get the facts which are needed (and which some, at least, of the revisers did not want), and upon its reports the tariff may be so corrected, one schedule at a time, that business will not be disturbed.

When will the board report? Mr. Taft had an opportunity both to satisfy in part an imperative public demand and to forestall the action of the coming Democratic House. The board "has been diligent in preparing itself for the necesary investigation." It will not be able to report as to any of the schedules during the present session, but he hopes to submit a report to the coming Democratic House at the opening of the new Congress, or at least during that Congress's term. In the meantime he will ask that the board be made permanent, and he would not object to an enlargement of it. Unfortunately, he may not even get at this session an appropriation for its work, and when the Democratic majority comes in it will probably end the board's existence. The board should submit at the present session a report, even if it should be one relating to only part of a schedule, or only one tariff duty. We remember that the late Carroll D. Wright, while Commissioner of Labor, was able to ascertain the production cost in this country of many protected articles, and to show, we think, in some instances that the tariff exceeded the entire production cost, to say nothing of a difference between cost here and cost abroad. If such examples can be found now, the board, if it can do nothing else at present, might exhibit them. The situation requires that it should do something to save its own life. If it should show facts calling for the reduction of only a few duties, the present Democratic minority could not reasonably refuse to vote for such reduction, and a good beginning would be made. The President has neglected an inviting opportunity.

In this long message he considers many other subjects. We are imprest by his recommendations for a wide and radical extension of the application of the merit principle. They are the most striking parts of the paper. He would have all the postmasters of the first, second and third classes, those whose appointments are subject to confirmation by the Senate, placed in the classified service. He even expresses the opinion that this serv-

ice should include all the local officers, thruout the country, of the Treasury, Justice, Post Office, Interior and Commerce executive departments. These recommendations and opinions are enough to make the message a memorable one. Surely they are to be praised. There is also much evidence of careful saving, reform of antiquated and costly methods, and consequent reduction of expenses, notably in the Treasury and Post Office departments. The estimates of money to be appropriated for the coming year have been pared down, until a surplus may be expected, if there be no expenditures for Panama Canal fortifications. We see no convincing force in his argument for such fortifications. He says:

"We have built the canal. It is our property. By convention we have indicated our desire for, and indeed undertaken, its universal and equal use. It is also well known that one of the chief objects in the construction of the canal has been to increase the military effectiveness of our Navy. Failure to fortify the canal would leave the attainment of both these aims in the position of rights and obligations which we should be powerless to enforce and which could never in any other way be absolutely safeguarded against a desperate and irresponsible enemy."

Could not the same ends be accomplished by a neutralization of the Canal and Zone, under an agreement made by and with all the great maritime and military Powers? Ought not our Government to seek such an agreement before beginning to construct costly fortifications?

There is to be no currency legislation. The President merely asks Congress to study the currency problem. He seeks no important additions to the railroad law, but would like an appropriation that will enable the Commission to make a valuation of the railroads. He urges the passage of the bill relating to injunctions, and of the eight-hour bill, with certain reasonable modifications. He asks prompt action at this session upon his conservation program, and it seems to us that Congress should be able to do the work. These conservation propositions are really of great importance, and his extensive withdrawals of coal, oil and other lands call for legislation that will permit a reasonable and honest use and development of the property. We can refer to only a few of the topics as to which he gives information or makes recommendations. We are glad to know that there is ground for expectation that the International Prize Court will be endowed with the functions of an Arbitral Court of Justice.

The closing paragraphs of the message (which we quote elsewhere), are not, it seems to us, fully in harmony with much that precedes them or with the dominant forward spirit of the time. If in legislation for the regulation of corporations we have gone far enough for the present, we should "stop for a while." Perhaps it is true that we should await the effect of a vigorous execution of existing laws. It is possible that one of these laws, the Sherman Anti-Trust act, needs to be changed, and not in the direction of greater severity. The coming decisions of the Supreme Court may throw light upon this point. Many who read these closing remarks of Mr. Taft will think they are designed to discourage further legislation upon subjects as to which they earnestly believe that more legislation is needed. Others will find in them an echo of their own desires. Very little general legislation of any kind can be obtained at the present session, but there should be an attempt to procure all needed legislation that can be had. After adjournment on March 4, we shall probably have to "stop for a while," because not much will be accomplished by a Democratic House and a Republican Senate in a Congress session immediately preceding a Presidential election.

Union Seminary

THE speakers at the dinner following the dedication of Union Theological Seminary in this city last week made much of the fact that there are five denominations among the students of the seminary—or so the papers had it—and the representative of Oxford said that this would not be possible in England. We should be surprised if there were only five denominations among the students. It is rather among the professors that there are five denominations; President Francis Brown is a Presbyterian, Professor Briggs an Episcopalian and Professor McGiffert a Congregational-

ist, and we presume other denominations are represented in the faculty. Why should there not be? It was named Union Seminary to include Presbyterians and Congregationalists, and both have been always on its faculty. There was a time when the Presbyterians endorsed it for their students, but they withdrew their endorsement after the Briggs trial, and the seminary responded by declaring itself independent.

It is a grand thing to have a great central seminary, at the same time free, independent, progressive, evangelical and open to all, attached to no ism, but solely to the great science of religion, in its philosophy, history and present service. Let it be tied to no one sect, for the notions and prejudices that separate sects are not religion, but the epiphytic mistletoe of religion, where they are not even worse—its parasites, its fungous disfigurements. A date for Easter is no part of religion, nor a style of a rite, nor a question of free-will, nor a rule of Church order. These are forms, not spirit, worth studying historically in a theological seminary, but not worth fighting about and separating over. The division of sects is a tragedy which we ought to be getting over. And we are getting over it. We all want to tear down the fences; at least all but ours. That is what is meant by the Federal Council, which federates the Churches. That is what is meant by the declaration for unity of the Episcopal Convention, and that action of the Disciples, in their late great meeting in Topeka, when they confest that they had been too sectarian, and that they would henceforth emphasize rather their duty of fellowship and unity with all other Christians. Union Seminary is well placed for such service, on Morningside Hights, close to Columbia University and the Episcopal Cathedral.

Church union was the central theme of all the exercises of dedication. The chief address was by Professor Briggs, who cherishes the hope that somehow even the Roman Church may add its mighty strength to assure the Church Catholic of the world. Our divisions he denounced as the shame of Protestantism, which has produced the gravest evils. He would have the churches of a town consolidated into one, served by a presbytery of ministers, with one strong executive head, another to take charge of pastoral affairs, another to teach, and another to do the soul-stirring preaching. There is nothing sectarian about that, and why not do it? We have taken one great step; we have federated our denominations, and now it is for our wise ecclesiasts to find the next step, which shall make union, full union, and yet union with free differences, actual, effective and visible to all, because all will be in it and achieving it. We should like to see Professor Briggs's plan tried.

The attacks made on Union Seminary some years ago for its teaching of biblical criticism have not injured it. The young men flock to it, and its student body is larger now, we believe, than that of any other seminary in the country.

To What Profit?

We are to have an energetic promotion of "efficiency." Observant "outsiders," with a talent for meddling in what is none of their business, have discovered that "practical" American business men, puffed up with a vain conceit of "experience," really know little about their respective jobs. One of these meddlers points out that from the building of the Tower of Babel until now, bricklayers have been allowed to waste three parts of muscle power to one part effectively applied. In like manner, it appears that shoveling, an art that runs back to dim antiquity, had never been understood until the "butter-in," who had been doing some of the "heavy standing around," discovered that if shovels were made of a certain size and shape, and were handled with a properly correlated set of movements, fivefold more sand or coal could be moved in a given time, wages be increased seven-tenths, and the laborers be much improved in health. These are among the cruder examples that our efficiency promoters are employing with deadly effect against the self-made business man, of whom America has been so enormously proud, and who, incidentally, has been so enormously proud of himself.

And now comes a mere lawyer, one Mr. Brandeis, who squandered his youth

upon books and lectures, who never was a trainboy or a brakeman, and with unprecedented effrontery he tells the practical railroad people that they are wasting a million dollars a day because they don't know how to do their "stunt." The hapless public, which has been under the miserable necessity these many years of riding on railroad trains, and of shipping freight from point to point, has sometimes suspected that the railroad manager had precious little "gumption" as a provider of facilities, but the public had assumed that the manager did know how to exploit his labor army and to make profits for Wall Street to dissipate. Naturally enough, the railroad men have "stumped" Mr. Brandeis to name his own salary for putting the roads on an "efficiency" basis. Mr. Brandeis, who is not "that easy," disconcertingly replies that without pay he will devote time and effort to the managers in a conference or a series of conferences—a sort of teachers' institute—how to teach the trick to their force.

We shamelessly confess that our chief interest in all this is that of getting another kind of "outsider." We represent that most impertinent element of all, which "just stands around and laughs." Our business is merely to cultivate the sense of humor; for, when you come to think of it, this is the only business that an editor can carry on. The sense of humor is only a sense of proportion, adequately integrated and differentiated. The art of living in this little world of ours calls for proportion and correlation, and the editor is one who, in his way, has discovered, like Gilbreth and Brandeis in their way, that most people have not learned how to make adjustments according to the rule of three. They have inherited instincts and acquired habits, most of which are atrociously bad.

Now, as promoters of humor we are moved to ask: What is bound to happen after our "practical" men have been convinced that the theoretical bystander, the professional efficiency director, must be called in to direct operations? What is to become of our cherished "American" traditions about the preternatural intuition of self-made men? Are our business geniuses to be brought to the low estate of mere "units of productive power"? Is their God-given ability to be subjected to inspection, to the indignities of the time-clock and the tally-sheet? Are they, like their laborers' clerks, foremen and superintendents, to become so many "hands," or, worse, so many cogs, pins and eccentrics in the economic machine?

Frankly, we see no escape for them. They have been found out, their ineffectiveness has been exposed, and those of them that cannot fall into the new ways and take the new pace must go to the wall. The vast productive organization of mankind must "make good" by adequate output. It is the decree of fate, and many ineffective innocents must suffer.

But why stop here? As professional promoters of humor we must follow our logic to the bitter end. What is this output, for the maximum amassing of which human brains and pains, muscles and quivering nerves, must be exploited to the limit? Corn and wheat and whisky, kine and swine, pig iron and hat pins, tobacco and tickers, hobble skirts and bridge whist—but why try to quote a census of crops and manufactures? These things are supposed to have their uses, but what uses? In particular, what uses may we expect them to have for a mankind that has eliminated every object of endeavor, every ambition, every cerebral throb, every muscular contraction, that does not make a maximum contribution to the production of these things?

Is it just possible that, of all the sapient suggestions offered by "outsiders" and "butters-in" thruout the ages, the pithiest was the inquiry of an old-time and now somewhat neglected humorist: "What shall it profit a man if he gain the whole world and lose his own soul?"

Mrs. Eddy's Death

We have been informed that Mrs. Eddy died last Sunday. It has been asserted that Mrs. Eddy died a year and a half ago. We had been told by believers that Mrs. Eddy would probably never die, but be the first fruits of the better age when death, the last enemy, shall be conquered, as all suffering and sickness have been. For why should there be death any more than suffering and pain in a world which is all mind, which pos-

sesses nothing material? That was the teaching of Mrs. Eddy.

Admitting that she is dead, and has only just died, as the guardians who have kept her so long in seclusion declare, and as a physician reports, legally recognized as such and called in to certify under the law to her death, it is timely to say that her career presents an extraordinary illustration of the capacity of the human mind to accept and believe, if positively enough asserted, the most absurd and self-evident falsities supported by a flood of incomprehensible profundity. The basis of her doctrine, that of the denial of matter which we see and feel, every one of us, and the denial of suffering and pain, and the uselessness of any remedies but negation and prayer, is a contradiction of both experience and reason, the very anarchy of both philosophy and religion. It flouts consciousness and it degrades religion by making its chief purpose to get rid of bodily ailments instead of dealing with well people. Its theological schools are schools of healing, and most of its prophets are "healers." That is not religion, only the travesty of it. To be sure a good life is required, and prayer, but the chief purpose of it seems to be directed against gout and fever and toothache—and be sure never to call in a doctor, only a "healer," who will will you well.

We are not particularly concerned with the question where Mrs. Eddy learned her doctrine, whether from an earlier mental science teacher or whether she invented it herself. Doubtless she is responsible for the religious coating of it, which has made it *Christian* Science. It has often done good, we do not doubt, for it has taught us how far the mind can control the body and inhibit nervous excess. Dr. Briggs has lately remarked that Christian Science is the revenge which religion suffers for the neglect by the Church of its duties of healing. Just what he means is not very clear, but perhaps he has in mind the promise of the Emmanuel movement in the Episcopal Church. We find the better service of Mrs. Eddy's teaching in the fact that it has called somewhat more the attention of the medical faculty to the mental resources of healing which they have long possessed and in a measure have used, not always to the patient's knowledge.

While Christian Science is neither Christian nor science, and while it has produced a book which stands, in the view of its believers who imagine they understand it, even with the Bible, we rejoice that it has cultivated a real ethical character. They are, on the whole, an excellent body of men and women. They could not be otherwise, for they are all taken over from the more earnest members of the churches. They are serious, and they think they think. Such people are not thoughtlessly bad. But we do not give all the credit of their moral and religious quality to what they have learned from "Science and Health," Mrs. Eddy's Bible, the very title of which makes health supreme over religion, or, rather, makes religion the phagocyte of disease.

Mrs. Eddy's acknowledged death is likely to create a crisis in the Christian Science Church with its 300,000 devoted members. But while they were of necessity loyal to their aged prophetess it is impossible that the Boston junta will be able to hold them with the same loyalty. There are various interpretations and "brands" within the Church. Mrs. Stetson here in New York is a far abler woman than Mrs. Eddy ever was, and she has patiently bided her time, and has not a few followers. We anticipate one or more schisms to add to our already numerous religious or quasi-religious sects. But with division will follow disintegration, and in no great time the cult will dwindle, for it has no scientific basis and it cannot long hold its followers. Yet it is not wholly bad, only irrational; and it has comforted not a few and healed a good many sick folk.

A Bad Defense of a Good Cause

EQUAL suffrage for men and women we believe in, but we like to see it defended with good logic and sound history. Bad logic or false history will discredit the best cause.

An example of such error in an otherwise admirable speech in defense of equal suffrage we find in an address by George Harvey, published for general circulation by the Equal Franchise Soci-

ety. It is an able address, and it takes up one by one the arguments against giving the franchise to women and punctures them with deserved sarcasm. It carries the weight of a man known for his ability and for his position as editor of *The North American Review* and *Harper's Weekly;* and what he says will easily be accepted on his authority as the acknowledged truth, and on one important point might mislead many.

Among the arguments offered against giving the vote to women he replies to that offered by "the clergyman benighted." This aforesaid clergyman declares that woman must not vote because Genesis says that woman was made from Adam's rib, "with the deliberate intention of the Creator to make her a subject of man; and when she sets up a claim of equality she violates a divine ordinance." This story, he says, is a legend, and we do not deny it, but we have no use for Mr. Harvey's own account of its origin. He begins:

"Ezra, the scribe, compiled the books of the Old Testament during the captivity in Babylon, which began only 586 B. C. They comprised the laws, the wonderful legends, the proverbs, and the songs which had been transmitted thru successive generations by word of mouth and pin-pricks upon leather."

"Pin-pricks upon leather"—that is interesting; we would like to know about it—nothing but pin-pricks upon leather till the time of Ezra! And Ezra compiled the Old Testament during the captivity in Babylon. That is an assertion new to scholars. If he compiled it, it would naturally be supposed that he did it in Palestine after the captivity and during the Persian domination. And his compilation embraced the whole Old Testament, including the Proverbs and the Psalms. Even Jewish tradition does not say that. Mr. Harvey is quite too conservative, and gives to a large part of the Old Testament an antiquity which no scholars would claim for it.

But these are errors perhaps pardonable, for Ezra is generally believed to have had some hand in compiling a part of the canon. Our teacher of historical criticism proceeds to tell us the contents of these pin-pricked writings compiled by Ezra:

"They contained, and contain now in modern translations, no reference to the story of creation. That was an after-thought. Forty years ago its origin was unknown. Not until the famous inscriptions were unearthed from the ruins of Nineveh by the British Museum in 1872 was the true source of the Biblical account definitely established. Then it was found that Ezra had taken it bodily from the Chaldean tradition."

This is remarkable. Mr. Harvey seems to mean that Ezra found in Hebrew tradition and legend no account of the creation, but learnt it from Babylonia and there and then added it to the Hebrew service, taking it all "bodily from the Chaldean tradition." Now, the actual fact is that inscriptions unearthed from the ruins of Nineveh in 1872 were secured not by the British Museum but by George Smith working for the London *Telegraph*, and that Botta and Layard had made their famous discoveries twenty and thirty years before. And it is the fact, further, that we have absolutely no evidence that Ezra took the story of the creation of man from this "Chaldean tradition," for not a hint of it has yet been found in the famous tablets. We do have a very variant and brief account of the creation of the earth, one that agrees but scantily with the Genesis story; and we have a full and parallel story of the Deluge, but we have absolutely nothing about the creation of Adam and Eve, nothing about the rib. It is peculiar to Genesis.

But Mr. Harvey proceeds to enlighten us further on the origin of the biblical account. He says:

"The legend had stood the test of incalculable time. The narrations of all great peoples coincided—Aryan, Persian, Parsee, Etruscan, Hindoo—all confirmed the version of the Zend-Avesta and the Bundehesh to the effect that the Ahuramazda first created a single androgynous being with two faces, separated later into two personalities. Here was the source of the Biblical account of the creation of male and female at one and the same time on a basis of perfect equality."

That is fine. The original story, he tells us, made man and woman equals, but was afterward corrupted. The Persian and Parsee narrations "confirm" the Zend-Avesta and the Bundehesh, and we should think they might, as they are identical; but it would be enlightening to have it shown how the late Bundehesh—for the Zend-Avesta had no such story—happened to possess the primitive legend. There is absolutely no evidence whatever

that the original tradition made man androgynous. We know perfectly well the origin of the bifrons, with two faces, and both masculine. And it cannot be shown that these were original Aryan, Etruscan and Hindoo legends which confirm the androgynous story.

But Mr. Harvey has one resource left, from Tahiti! He gives us the ancient story thus:

"Tarao caused the man to fall asleep and while he slept he took out one of his *ivi,* or bones, and with it made a woman whom he gave to the man as his wife, and they became the progenitors of mankind. The woman's name was *Ivi,* which signifies a bone. So comes to us not only the early biography but even the name."

And this our new biblical critic accepts as primitive and original! One who can believe that can believe all the rest he has told us.

It is not for us to explore the sources of these errors. They belong to the class of learned *nugæ* which discovers that Krishna and Christ are identical. We simply say that no intelligent student of biblical criticism, conservative or radical, and no student of Oriental languages or inscriptions, can be named as authority for these statements.

We may add that Mr. Harvey's treatment of Paul's commands is not quite so bad. In part it is good, altho his declaration that Paul did not write the Epistle to the Ephesians is quite too positive. If the reader is surprised that such statements should be made by a man so intelligent and learned as the editor of *The North American Review,* we have an explanation suggested by an unbeliever in the popularly accepted authorship of the Iliad, who holds that the poem was not written by Homer, but by another poet of the same name.

A Whirlwind Campaign

An American political contest seems like a very slow, monotonous, decorous, dull and spiritless affair compared with the present campaign in England. Mr. Roosevelt would be out of his element in English politics. His style of campaigning would be regarded as too quiet, impersonal and restrained to make an effect upon the electorate. Mr. Bryan would be equally useless. Holding the views he does, he would be a mere drag on the Conservative party. It takes a long time to get England started, but when it once gets dislodged from the place where it has stuck for centuries, it comes down like an avalanche.

In the United States we do things decently and in order. We know when election day is coming and we can prepare for it in advance. It comes around as regularly as tax day or the Fourth of July, being in fact a little like both. The Republican party was not anxious for an election last month. It had nothing, apparently, to gain by it, and something, as it appears, to lose. But the calendar left no option. Suppose, however, our Representatives were sent to Congress on the indeterminate sentence system, and could remain in power so long as they kept together as a majority, what would be thought if Mr. Taft, not being quite satisfied with the support he was receiving, had suddenly, a couple of weeks ago, made up his mind to try for a better, and had ordered a new election just before Christmas? That is about what happened in England.

The election came so unexpectedly and quickly that neither party organizations nor party issues were prepared for it. At this distance it looks indeed like a whirlwind; all parties shifting ground rapidly and throwing dust in each other's eyes. In the darkness and confusion it is hard to distinguish friend from foe, or to find a flag to rally around. Premier Asquith is attacked by the suffragets as he comes from Parliament, where he has just conceded what they have clamored for, the right of way for a suffrage bill. Mr. Birrell, lifelong advocate of equal suffrage, suffers similar indignities from the militant sisterhood. The Conservative papers which a few weeks ago were calmly discussing various forms of "devolution" involving practically all the Irish have claimed, are now denouncing Home Rule with all their former virulence.

Last spring the Lords were resolved to die rather than surrender their ancestral rights. They appealed to the science of heredity in support of their claims, eloquently urging the importance of good breeding whether applied to puppies or peers. Last month the Lords voluntar-

ily abandoned the hereditary principle without a murmur and declared themselves in favor of an Upper House that should be altogether half elective or appointive and indeed, from outside the peerage. Mr. Balfour declares that tariff reform is the great constructive principle to which his party stands committed, and a few days later he amends his remarks by announcing that the party if put in power would not attempt to carry out its tariff policy but would submit the question to a referendum.

The Liberals find it hard to hit a moving target. Most of their ammunition is rendered useless. They cannot attack the House of Lords with their usual zest because the House of Lords has ostensibly surrendered, and it is un-British to hit a man when he's down. They cannot plead for the poor man's budget because the budget is approved even by the Opposition. Their free trade arguments must be laid aside because the tariff issue is withdrawn. They are forced to oppose the introduction of the referendum altho that measure is naturally in line with Liberal principles. Mr. Asquith dared the Unionists to submit tariff reform to a referendum and Mr. Balfour the same night said he would. Mr. Balfour then dared the Government to make Home Rule the subject of a referendum and Mr. Redmond accepted the challenge, saying that the Irish party is willing and anxious to submit the principle of Home Rule to a referendum of the British people.

But, however great the confusion of the contest, it is evident that progress is being made, and whatever the outcome may be the Liberals have gained a victory. On almost every point, the Unionists now occupy what which a few years ago would be regarded as advanced Liberal ground; and even if they should come into power a real reaction would be impossible. The British political system seems to be contrived for the purpose of making one party carry out the policies that the other has proposed.

Provost Smith

The election of Prof. Edgar Fahs Smith as Provost of the University of Pennsylvania is one of those rare events about which it is proper to use the very common words "gives universal satisfaction." Certainly no choice could be more popular with the student body with whom he has been very closely associated, partly thru his long service as Vice-Provost and chairman of the athletic committee, and still more thru his personal friendliness. He is reputed to know by sight and name every student in the university. Since there are now over five thousand of them, this is a sweeping statement, but the existence of such a campus legend is sufficient evi-

PROVOST EDGAR F. SMITH.

dence of the unusual interest he takes in the personnel of the student body. Among the chemists of the country he is the object of envy, as the only American chemist who has all the platinum ware he needs. Now that platinum is high and scarce and more useful than ever, his enterprise in stocking his laboratory early is appreciated by his colleagues in other institutions. Dr. Smith came back from Göttingen in the Centennial year, enthusiastic over the opening field of electro-chemistry, and his students were weighing up neat little kathode deposits when most chemists were fussing

with filter papers and could not tell a volt from an ampere if they had them in their hands. Since then his laboratory has made over two hundred contributions to the science, mostly dealing with analytical methods and rare metals. He was born in York, Pa., in 1856, and was graduated by the University of Pennsylvania in 1874. The change in the University will not be so great as it appears, for much of the work of internal administration has for many years devolved upon the Vice-Provost, and ex-Provost Harrison will, as a member of the board of trustees, continue his labors for the financial advancement of the university. It will be the duty of the new Provost to see that the handsome new buildings are occupied by professors of the highest standing, and to give the university a reputation at home and abroad commensurate with its size and equipment.

Maize

A three billion corn crop is something more than startling, it is revolutionary. It is going to regulate prices and do a good deal more in the way of modifying dietetic habits. Corn will come into our daily menu in some form. We note that the corn belt is widening, and to this in some degree is due the enormous crop. A recent report on the work of corn clubs in Louisiana, conducted by boys, on areas of half an acre to an acre, give an average of over 100 bushels per acre in that State, which has heretofore been supposed to be quite out of the corn belt. The best yield from one parish is over 153 bushels to the acre, and the second best yield is still over 100. Another parish reports several yields of 104 bushels and above. At the Covington, Miss., Fair, the general average yield among forty-eight competitors was 94 bushels, while the highest yield was 214 bushels per acre. At this rate let Illinois and Kansas wake up, for we doubt if they can show anything better even from their rich bottom lands. Georgia is doing nearly as well, and now that the use of legumes is understood the old worn-out lands of Virginia are rapidly becoming fairly good corn lands. After an extensive tour of the Southern States, one of the professors of the Northwestern Agricultural College reports that the Southern States can grow more corn to the acre and better corn than the Northwest, because corn is largely of atmospheric growth, and the Southern States have that to perfection. Only one-fifth of the plant depends on the soil; the rest of it depends on a temperature of about eighty-five or ninety degrees. Some years the corn fails altogether to ripen in New England; this can never occur in Georgia. All that the Southerner has to do is to learn how to prepare the soil to do its very small porportion of work for the corn plant; and that he is learning readily. There is no reason why our corn crop should not reach four billions inside the next five years. This forward march of our greatest cereal will be extremely welcome to the great body of consumers.

The Conference of Governors

The annual conference of Governors of our States, inaugurated by President Roosevelt, is finding its way to real service. When it met in Washington it had the appearance of being dominated by the President, and so they have now met in Louisville, Ky. But there another danger appeared, that of a hospitality which would interfere with their sessions and influences. So they adjourned sooner than expected and planned in future to attend to business instead of functions. The great advantage of these conferences is likely to be that they will give opportunity to consult on uniform legislation, and thus help the efforts of our bar associations and the plans for the reform of marriage and other laws. On many matters which are of national concern plans for uniform State legislation are the only recourse, unless we give new power to Congress by amendment to the Constitution or by its extreme judicial interpretation. But that is not what Governors will desire. They will be a power to oppose executive and judicial usurpation. Such was the plea of Governor-elect Wilson, of New Jersey. He would not be jealous of national authority, but where the Constitution has left powers to the States he would have them exercise them; and he would have Governors value their rights as parts of the legislative department in their States, with the duty to recommend

legislation, and to recommend it strongly in any way they may think wise before the legislature or the people, and in the form of bills presented to the legislature. We may expect henceforth that what is called the House of Governors will be a needed united force for the public weal. We thank Mr. Roosevelt for its creation.

Josiah's Discovery of the Law

The biblical scholar will be interested in the attempt of the distinguished Egyptologist Edouard Naville, in a paper on the discovery of the Law under King Josiah, to show that quite probably this was the book of Deuteronomy, hidden in the foundations of the temple, and that the reason why the high priest Hilkiah had to give it to Shaphan the scribe to be read was because it had been written in the Assyrian character, which was earlier the *lingua franca* of the country, but which had in Josiah's time been supplanted by the Phenician letters, tho the learned scribe would have understood it. Shaphan, according to M. Naville, found it of such importance that he translated it and read it to the people, and it was incorporated in the sacred canon. The Egyptians, he says, were accustomed to inscribe chapters of the Book of the Dead on stone and hide them under a divine statue, and he gives numerous examples. It was in Solomon's time, under the influence of his relations with Hiram, King of Tyre, that the old Assyrian script is supposed to have been exchanged for the more convenient Phenician characters, Solomon being the great scholar among the kings of Israel. We commend this article by M. Naville to our friends the enemies of the higher critics, but warn them not to take his pure conjecture as conclusive proof that Deuteronomy was written by Moses. They will find the article in the "*Mémoires de l'Academie des Inscriptiones*" of this year. We observe that the biblical account does not say that the book was found under the foundations, but "in the temple"; and that nothing is said of translation, and that M. Naville does not take into consideration the literary difficulties on which the higher critics depend. Mr. Naville's study is more interesting than conclusive. We cannot accept it.

The papers gave columns to the debut of Miss Helen Taft and the list of 1,200 guests. But much more interesting to us is the little cosy party at the White House a few days before to which Miss Taft invited a few of her girl classmates at Bryn Mawr. Among them was one girl who is obliged to earn her own way by acting as secretary to a lady. Each of the girl guests was asked to invite a gentleman as escort, and this girl brought a young clerk in one of the Bureaus. The whole entertainment was in the choicest style, but the choicest part of it was its democracy.

It is a new wrinkle in politics that the newly elected Governor of Massachusetts should begin a campaign over the State to defeat the re-election to the Senate of Mr. Lodge. Mr. Foss was elected as a Democrat, and the Legislature which will choose the Senator is Republican, and Mr. Foss, Democrat, is traveling the State to persuade Republicans to urge their representatives to vote against their present Senator. We do not approve the position of Mr. Lodge on the tariff, but Mr. Foss's present campaign is very peculiar, possibly unseemly.

Seeing that Mrs. Humphry Ward is the most energetic and able of the opponents of woman suffrage in England, the following remark, made by Israel Zangwill in his recent Albert Hall speech, is worth quoting:

> "If I had my way, I would begin by giving the vote to a single woman. And I would give it first to that woman who by her public zeal, her oratorical talents, and, above all, her passionate and unresting political activity, has shown herself most worthy of a vote—need I say I refer to Mrs. Humphry Ward?"

By the vote of 188 to 152 the Congregation held at Oxford has decided to retain Greek as a compulsory subject in Responsions, which means the first of the three examinations which a candidate for the degree of A. B. has to pass. The margin is small, and probably Greek is doomed to be omitted before long at its chief seat in Great Britain as a required study.

INSURANCE

The Menace of the Match in the United States

A STARTLING commentary on the waste and extravagance of the American people is their reckless misuse of matches. The ninety million or so people in this country use as many matches as the nine hundred million in the rest of the world. If one is in need of a match anywhere in Continental Europe, he must seek it in its proper place. Matches are not wasted in the Old World. Centuries of training in thrift and economy make the Continentals conscious of the fact that matches cost money. Where does one find matches in America? They are practically in every room in every building, public or private. The American breathes imprecations if he cannot, at any moment of the day or night, reach out his hand and find a match. They repose in the pockets or linings of every old coat and waistcoat; they are scattered about desk and bureau drawers; they are found in every accumulation of rubbish, wherever it may be; they are so carelessly and recklessly thrown about that rats and mice have adopted them as a standard article for nest building, certain always of an available supply.

Unfortunately, the burden of this extravagance is not confined to the matches themselves. This little article, unknown until 1832, while perhaps the most important factor in our civilization, has been doing its best, ever since its creation, to destroy the world it was designed to serve. The assistance given it as an instrument of destruction by the carelessness of the American people is a matter of amazement to Continental countries. The average per capita property loss by fire in Central, Western and Southern Europe is 33 cents; in the United States the average is $3.02. One of the reasons for this astonishing difference is obvious when conditions are scrutinized. While this is being written, for instance, a continuous shower of imperfectly extinguished matches is falling into waste baskets, rubbish heaps, upon the rugs of clubs, hotels, dwellings and offices, thrown by careless smokers. Men reputed to be good fathers have been known to light their cigars in the hallway of their homes, throw the lighted match in the general direction of a cuspidor, and walk out, to return in half an hour to see firemen rescuing their sleeping children from second-story windows.

The number of persons burned to death in the United States each year by the parlor match is between eight and nine hundred, and the property loss more than $10,000,000. The parlor match is the common variety which can be ignited upon any hard surface, as distinguished from the safety match, which cannot ordinarily be ignited except upon the box in which it is sold.

Denmark and Switzerland absolutely prohibit the use of parlor matches, and other Continental countries impose restrictions upon their manufacture and sale more or less comprehensive. It is in America only, where cheap wooden buildings abound, and where, therefore, restrictions are most vitally needed, that the parlor match is free to slay and burn.

If the facts and statistics of the enormous American fire waste, and the relation of the parlor match thereto, could be clearly appreciated by our people, it is impossible to believe that our laws would long permit the unrestricted manufacture and sale of so great a menace to our common safety.

NEW YORK CITY. ROBERT J. LAWRENCE.

INSURANCE is a good thing, but even a good thing may be debased and rendered vile. This remark applies directly to the encouragement of obtaining loans on old or existing life insurance policies for the purpose of taking out new insurance. There are, of course, times when it is permissible to contract a loan on your life insurance policy. This should, however, always be done with fear and trembling, and when the emergency passes the loan should be religiously repaid, lest the beneficiary suffer. Some companies—the New York Life is one—are unalterably against this practice and severely reprimand agency directors for first offenses of this kind and follow this with discharge if the thing is repeated. This is as it should be, as the practice is merely a form of "twisting" which should always be discouraged.

Financial

Unwarranted Pessimism

THERE was published thruout the country on the morning of the 28th ult. the report of a long and pessimistic interview with James J. Hill. It originally appeared in the leading newspaper of St. Paul, the city where he has his home. The effect of it upon the stock market was immediate and severe. Prices of the leading active securities suffered a loss of 3 or 4 points. During the week there was continuous liquidation. Net losses for the week ranged from 4 to 7 points. The business done amounted to 4,143,600 shares, against only 1,144,600 for the week preceding. Almost exactly two-thirds of the shares sold were those of the Steel Corporation (1,220,800), Reading Railroad (875,600), and Union Pacific Railroad (673,100), the losses for these leaders ranging from 5 to 7⅜ points. On the 30th some feared that the steel manufacturers, in conference on that day, would reduce prices. They did not do so. Their views concerning the industry were on the whole favorable. Prices, they said, were fair and should not be cut down. While orders were covering only 50 per cent. of capacity, an improvement was expected. It became known that the Pennsylvania Railroad has ordered 150,000 tons of rails.

Mr. Hill has published a qualified repudiation of the gloomy interview. He was reported to be saying that a suspension of activity was at hand; that thousands of workmen would be idle next year; that no improvements were projected and that falling demand would severely affect the iron, coal and lumber industries. Some other railroad men have since exprest similar but less pessimistic opinions; others disagree sharply with the interview and predict improvement and continued progress. It is suspected that some railroad men desire to subject the Interstate Commerce Commission to the pressure of an apprehensive public, in order that the proposed increase of freight rates may be approved.

There is nothing in the general situation to cause hard times. The crops have been large, on the whole larger than ever before. Our banks are in good condition. During the past autumn there was no stringency in the money market, which has been an easy one in New York. General business is not wholly satisfactory to the men engaged in it, but, as one of the trade reviews says, it is moving along on lines of safety, with a fair average of prosperity. Panics are sometimes caused by nothing but fright. They can be made by sheer fright when they are not warranted by actual conditions. Great capitalists whose opinions have weight with the masses should carefully guard their public utterances.

....The Pennsylvania Railroad Company now has 64,869 shareholders, and the average holding is about 127 shares. Nearly half of the shareholders are women.

....The banks of the United States hold $4,723,300,000 in securities. Railroad bonds, $1,455,100,000, stand first in the list; the State, county and municipal bonds amount to $1,044,000,000, and the value of the United States bonds is $773,300,000.

....Returns made to the Internal Revenue Bureau show the following totals for the 262,490 corporations subject to the new tax on net earnings: Capital stock, $52,371,626,752; bonded debt, $31,333,052,606; net income for the year, $3,125,480,000.

....We are glad that the firm of Fisk & Robinson is able to resume business. It had been long and favorably known as a firm dealing in large amounts of Government and municipal bonds when, nearly a year ago, dullness in the bond market and commitments to several railroad undertakings compelled suspension. The firm resuming business consists of Harvey Edward Fisk, George H. Robinson and Thomas G. Cook.

The Independent

VOL. LXIX NEW YORK, THURSDAY, DECEMBER 15, 1910 No. 3237

Survey of the World

The Census Bureau has issued the following table of statistics:

THE UNITED STATES TOTAL POPULATION COMPARATIVE SUMMARY FOR 1910, 1900 AND 1890.

States.	1910	1900	1890	Increase 1900 to 1910 Number	Increase 1900 to 1910 Per cent.	Increase 1890 to 1900 Number	Increase 1890 to 1900 Per cent.	Rank in Population 1910	1900	1890

Military and naval	.....	91,219	.....	.....	....	.....	....	..	..	..

[1]Includes 953,243 persons in Porto Rico (1899 census).

[2]Decrease.

[3]Indian Territory ranked 39 in population in 1900, but for comparison the population is included in the Oklahoma figures.

[4]According to the census of Porto Rico, taken in 1899 under the direction of the War Department.

The Judiciary

Associate Justice Edward Douglas White, of Louisiana, succeeds the late Melville W. Fuller, as Chief Justice of the Supreme Court. Until very recently it has been expected that former Governor Hughes would receive this appointment. The opposition to the latter, whom the President seems to have favored, among other reasons, because of Mr. Hughes's relative youth and the likelihood of long service, was apparently based upon the fact that Justice Hughes is the youngest member of the Court and is in temperament somewhat less compromising than has been deemed essential in the case of a presiding justice. Joseph R. Lamar, of Augusta, former Justice of the Supreme Court of Georgia, receives the Associate Justiceship vacated by the advancement of Justice White, and Judge Willis Van Devanter, of the Eighth Judicial Circuit, is named to succeed Justice Moody, resigned. The reconstituted Supreme Court will be made up of six Republicans and three Democrats, including the new Chief Justice. For the newly created Commercial Court President Taft's nominations are announced to be as follows:

Presiding Judge, to serve for five years, Martin A. Knapp, of New York, now chairman of the Interstate Commerce Commission. Judges of the court: Robert W. Archbald, now United States District Judge of Pennsylvania, to serve four years; William H. Hunt, of Montana, now Associate Justice of the Customs Court, to serve for three years; United States District Judge Arthur C. Denison, of Michigan, to serve for two years, and Julian W. Mack, a lawyer of Chicago, to serve for one year.

Chairman Knapp will be succeeded on the Interstate Commission by Prof. B. H. Meyer, of Wisconsin, a member of the Wisconsin Railroad Commission and the new Federal Railroad Securities Investigating Commission.

Trust Cases

In the case of the Government against nearly all the railroad companies which are engaged in the anthracite coal trade, for violation of the Sherman Act, the United States Circuit Court, at Philadelphia, has decided that they are guilty of no general conspiracy or combination to promote monopoly and maintain certain prices, but that the Temple Iron Company (a corporation which they control and of which their presidents are directors) is an unlawful combination, in violation of the Sherman Act. The Government's application for an injunction against this company is granted. All of the three judges agreed that there was no general combination; two of them voted to dismiss the charge that the railroads' agreement to pay independent mines 65 per cent. of the tidewater selling price was unlawful, and two held that the law was violated by the existence and operations of the Temple Iron Company. The Government will appeal to the Supreme Court, except with respect to this company. It is said by officers of the Department of Justice that this decision foreshadows a similar one concerning the National Packing Company, whose relation to the beef companies in Chicago is like that of the Temple Iron Company to the anthracite railroads.——At Detroit, on the 6th, a Federal grand jury indicted what is called the Bathtub Trust, a combination controlling 85 per cent. of the output of enameled ironware. The indictments are against 16 corporations or firms and 32 officers of them. A suit for the dissolution of the combination was begun some weeks ago. Four of the indicted concerns are in Pittsburgh, four in Ohio, and three in New York. It is alleged that the combination controlled nearly 400 jobbers and compelled them to submit to terms which fixed prices and eliminated competition with the independent manufacturers. This was done partly by means of licenses for the use of patents for which the organizers of the combination expended $6,000.

The Case of Mr. Ballinger

The majority report of the Congressional Committee which investigated the "Ballinger-Pinchot case," the prime issue being the so-called Cunningham coal-land entries, in Alaska, is now made public. It announces:

"The evidence has wholly failed to make out a case. Neither any fact proved, nor all the facts put together, exhibit Mr. Ballinger as being anything but a competent and honorable gentleman, honestly and faithfully performing the duties of his high office with an eye single to the public interest."

This report is signed by Senators Nelson (chairman), Flint, Sutherland and Root, and Representatives McCall, Olmsted and Denby, all Republicans. The minority report, issued some months since, condemned the Secretary of the Interior. The majority report finds:

"That he is not an enemy of, nor hostile to, a reasonable and judicious policy of conservation, and that no ground whatever has been shown justifying the opinion that he is not a faithful and efficient public officer."

It sets forth the fact that the entire known coal fields of Alaska (more than 8,000,000 acres) are still in Government ownership, and asserts that public interests "are not threatened or endangered under existing conditions." As for the Cunningham claims:

"if they are regular, patents should be allowed. If they are fraudulent, the claims should be cancelled. The claimants are entitled to an impartial judgment upon their rights in the premises."

Respecting the future of Alaskan coal lands, the report favors the leasing system, recommended by Mr. Taft in his late message. Editorially we comment upon these matters, and the ground taken by Mr. Ballinger in his report, made public December 9. Mr. Ballinger favors the leasing of oil and gas lands, and states that there now remains an unappropriated area of 711,986,409 acres of public land in the United States and Alaska, and adds that it has been the Congressional policy to dispose of public lands without regard to revenue, even coal lands being sold for a nominal figure. "Under more conservative theories," he continues, it is a question

"of saving the remnant of the public lands from monopolization or misuse without abandoning the old policies of encouraging development. The highest productive use of these lands is the concern of the people,"

—and a matter with which Congress must deal. Existing withdrawals of coal, oil, phosphate and water-power lands now aggregate 91,000,000 acres.

"A failure to release much of the lands now under withdrawals by new and amendatory acts directing the manner of their disposition will inhibit development and greatly retard the new and struggling settlements and industries of many of the Western States and Territories."

In regard to the much discussed Cunningham entries of 1907:

"I deem it of the highest importance that all these cases, involving 33 entries, or 5,280 acres, of coal lands, be transferred from the jurisdiction of the General Land Office directly to the Court of Appeals of the District of Columbia for consideration and adjudication. . . . This procedure may well be provided by special direction in the bill now pending in Congress for the authorization of appeals in land cases from the Interior Department to that court. . . .

"Without domestic coal in Alaska, railroad construction and operation is prohibitive, and without both only the roughest pioneer development is possible. In addition to the necessity of opening up and developing coal deposits in Alaska for railroad operation, it is equally important that it should be available for mining operations and as a means of supplying the navy and trans-Pacific commerce."

Pending legislation concerning water-power sites, 1,450,000 acres are now withdrawn from distribution. Mr. Ballinger holds that, considering the fact that the States own the waters in the streams, and have police powers to supervise public utilities, a direct and effective method of control would be to trustee the power sites to the States in some such manner as proposed by a bill now pending in Congress. He earnestly advises the adoption of

"legislation which will in any event retain the fee title to the lands in the people and effectually vest the power of regulation and control in the State or in the Federal Government, and which will not result in limiting prompt and economical development or permit monopolization or extortion. . . ."

Agriculture

Secretary Wilson in his annual report states that farmers are not responsible for the prevailing high price of food-stuffs. After investigating the retail price of milk in seventy-eight large cities, he states that the farmer receives, on an average, a scant half of the consumer's payment. "The other half," he continues,

"goes to the railway companies for carriage, to the wholesale milk dealer if there is one in the chain of distribution and to the retailer who delivers at the consumer's door."

On various other farm products the farmer receives from 48 to 75 per cent. of the retail price. The Secretary of Agriculture blames, in especial, the middlemen, as being responsible for the regime of high prices. He advocates a system of farmers' co-operative societies, to work in common with consumers' co-operative societies. He estimates the

value of our agricultural products in 1910 at almost nine billion dollars. "At no time in the world's history" has a country equalled this record. The amount exseeds that of 1909 by $305,000,000. In regard to exports, where cotton leads, and packinghouse products follow, these reach in 1910 the value of $871,107,067.

Political Contests

That Dr. Woodrow Wilson is regarded as a Presidential possibility lends importance to the New Jersey Senatorial contest. Dr. Wilson issued on December 8 a statement favoring the candidacy of James E. Martine, to succeed Senator Kean, and his pronouncement was promptly followed by a retort upon the part of ex-Senator James Smith, Jr., declaring that the Governor-elect's attitude was "neither fair nor honorable," and "an unwarranted attempt to coerce the Legislature." This view is not accepted by those who have read Dr. Wilson's statement without personal or factional bias. The Governor-elect, while recognizing that he has "no part in the choice of a Senator," so far as his prospective office goes, makes it clear that the recent campaign places him "in an unusual position":

"I offered, if elected, to be the political spokesman and adviser of the people. I even asked the voters who did not care to make their choice of Governor upon that understanding not to vote for me, . . . and I cannot escape the responsibility involved. . . . I know that the people of New Jersey do not desire Mr. James Smith, Jr., to be sent again to the Senate. If he should be, he will not go as their representative. . . . At the recent primaries, 48,000 Democratic voters, a majority of the whole number who voted at the primaries, declared their preference for Mr. Martine, of Union County. For me, that vote is conclusive."

Dr. Wilson's declaration followed a conference held with Mr. Smith on December 6, at which he urged the latter candidate to remove from the contest. Mr. Martine, "The Farmer Orator," is a picturesque figure in the New Jersey Democracy, having stumped the State in every campaign since Governor Joel Parker was nominated. Tho he has never held any elective office other than as common councilman, he has been twice defeated for Congress, three times for State Senator, four times for Assembly, twice before the convention for Governor, once for Sheriff and once for Mayor. Three years ago he was the unanimous choice of the minority in the Legislature for United States Senator He is now in his sixtieth year.

Cuba

In a published interview, President Gomez, of Cuba, declares that he does not intend to stand for re-election.——General Guerra, commander of the Cuban army, has testified in court that Rafael Perez, formerly a police lieutenant, is the man who attempted to assassinate him. Perez disappeared the day after the assault, and is said to be in Porto Rico. It is thought by some that the attempt to kill Guerra was hastened by a bill pending in Congress, providing that the head of the army should be irremovable except for cause. This bill was not approved by General Monteagudo, commander of the Rural Guard. The charges laid before the Supreme Court (which declined to consider them) by Vice-President Zayas and Mr. Steinhart (formerly United States Consul) concerning a plot to assassinate them, continue to be the subject of bitter discussion in Havana. Mr. Steinhart says his testimony should be made public by the court. The *Prensa* newspaper invites propositions from chemists for furnishing a poison to remove Vice-President Zayas without leaving any clue. President Gomez has been informed by the United States Minister that there was no foundation for the report that President Taft, while at Guantanamo, discussed the political aspect of the attempt to assassinate Guerra—— The assertion of a Berlin newspaper that Cuba was compelled by the Washington Government to cancel orders for ships in Germany and to buy the ships in the United States is denied by Cuba's Minister to Germany, who says that the bids from the United States were lower than any from German shipbuilders.

Mexico's Revolutionists

At the end of last week Mexico's revolutionists were still active only in the northern State of Chihuahua and some other places near the border, but there were indications that it would be difficult for the Government to subdue them completely there, owing to the at-

titude of a majority of the people. Guerrero was taken again on the 6th by the insurgents, but they were driven out on the 9th by the Government, which now has 3,000 soldiers in Chihuahua and Durango.——At the request of the Diaz Government, our Department of Justice has caused the arrest in Washington of Juan Sanchez Ancona, a journalist and formerly a member of the Mexican Congress, who is held for extradition. Ancona, an associate of Madero, the revolutionist leader, is the son of a former Mexican Minister to Italy, the cousin of the present Mexican Ambassador to Great Britain, and brother-in-law of a former Ambassador to the United States. In the Mexican capital he founded a paper called *Nuevo Mexico,* in which he attacked President Diaz. It was suppressed three times, and finally, when it was confiscated, he left the country, to become an associate and adviser of Madero in Texas and elsewhere. The charge against him is that while he was manager of another paper, in 1906, he caused a wrongful use of money contributed for the entertainment of the poor. He and his friends say that it is wholly unwarranted, that he remained in the Mexican capital nearly four years after the contributions in question were made, and that the Diaz Government really intends to put him on trial for sedition.——President Estrada, of Nicaragua, by decree has invited all political exiles to return. It is said that even Zelaya will revisit Managua, after remaining a few months in New York, where, his son says, he expects to arrive on January 15.——Panama has sent Dr. Carlos Mendoza on a mission to Colombia, and it is thought this may be a step toward a reconciliation of the two countries.——In the Senate, at Washington, Mr. Frye, chairman of the Commerce Committee, has introduced a bill providing that tolls for all vessels of United States registry passing thru the Panama Canal shall be paid by the national Government.

Another Revolt at Rio Janeiro

Soldiers of Brazil's Marine Corps, who were stationed in forts on the Island of Cobras, in the harbor of Rio Janeiro and about a mile from the city, rebelled on the night of the 9th, captured their officers and sent them to the mainland. They were joined in revolt by a majority of the men on the scoutship "Rio Grande de Sul." At half past five on the following morning, the land batteries and two warships opened fire upon the island, and the rebels responded vigorously, using shrapnel. Twenty citizens were killed or fatally injured. For ten hours the bombardment was continued, with one brief respite when the mutineers, with a flag of truce, asked for time to care for their wounded. At 11 o'clock that night they surrendered. More than 200 of them had been killed or disabled. The Senate, despite the opposition of Ruy Barbosa, formerly president of that body, voted to declare a state of siege for thirty days.——Bolivian troops last week surprised and attacked the Peruvian garrison at Guayabil, on the Bolivian frontier, and many Peruvian soldiers were killed. Reinforcements were sent to the place by the Peruvian Government. It is feared that the affair will cause war between the two countries.——In Uruguay there is talk of another revolution. All the Nationalist members of the Chamber of Deputies have resigned.——It is reported at Washington that the old Tacna-Arica dispute between Peru and Chile will soon be settled by a division of the territory in controversy, with a payment of money to Peru.——Final payment has been made by the municipality of Bogota (Colombia) to the New Jersey corporation which owned the street railways there, and they are now the property of the city. The price was $800,000. Operation of the railway by capitalists from the United States (who obtained their concession from President Reyes) was sharply disapproved by the people, who boycotted the cars and impeded the service by riots.

The English Elections

The result of the election so far is nil. At the end of the first week's voting three-fourths of the new Parliament have been elected, and the opposing parties stand exactly where they did before. Each has gained 21 seats from the other. The Conservatives and Unionists of the

Opposition now have 226 votes, and the Government Coalition 278, divided as follows: Liberal, 183; Labor, 32; Redmond Nationalists, 56; O'Brien Nationalists, 7. The popular vote of the Unionists has in most cases increased, but usually not enough to overcome the Liberal majority. Notwithstanding the strenuous efforts of speakers on both sides to impress upon the electorate the seriousness of the crisis and to make them believe that the new issues involve the very existence of their country, the voters refuse to be stampeded in either direction but vote along party lines about as usual. The indecisive outcome of the poll leaves the future dark. The Liberals claim that being returned with a majority nearly or quite as large as before the question on which they appealed to the country, the curtailment of the veto power of the House of Lords, is settled and the King cannot refuse to create enough Liberal peers to carry the Veto Bill and their other legislation thru the Upper House. The Unionists claim that the decreased popular vote is a virtual defeat, not justifying such violent change in the constitution as the annulment of the House of Lords, and they suggest a second conference and a coalition ministry. It is possible Mr. Balfour may retire as this is the third time the Unionist party has met defeat under his leadership. Mr. Lloyd-George, on being asked during one of his speeches how many more elections would be necessary before the veto power of the Lords would be abolished, answered confidently "Not one!" Asked further when the Liberals intended to introduce a Home Rule bill he said:

"I hope at the first available moment. It is not merely extending self-government to Ireland. Wales, Scotland and England want self-government. We are treading on each other's toes. Parliament is not doing any work because Parliament, which should look after matters of the greatest moment, is attending only to trivial matters which would be beneath the attention of many county councils. After disposing of the veto the first thing will be to reconstruct the imperial machinery so as to free the Commons from trivial local and provincial details."

On the other hand, Mr. J. L. Garvan, who, on account of his positive opinions, has set the pace for the Opposition, declares that "Ulster will never tolerate any truckling to Nationalist ambitions in which it sees peril to its religion and its liberty," and that there is danger that a shot fired in Ulster might have the same effect as a cry of "Fire!" in a theater, and might precipitate a civil war like the attack on Fort Sumter.——The details of the elections offer some points of interest. Winston Churchill, the Home Secretary, was returned from Dundee, but his majority was reduced by 1,500 votes. Premier Asquith is re-elected from East Fife with a loss of 200. Chancellor of the Exchequer Lloyd-George increased his majority slightly in the Carnarvon district, in Wales. Mrs. Humphry Ward, altho a strong anti-suffragist, secured the election of her son, Arnold S. Ward, from the Watford division of Hertfordshire, by issuing an able series of political arguments entitled "Letters to My Neighbors." John Burns, President of the Local Government Board, received more than double his former majority in Battersea, somewhat unexpectedly, for the Unionists made a hot fight against him, and a Socialist candidate, Shaw (not G. B. S.), was put up on the expectation that he would gain the vote of the Labor men, who were thought to have lost confidence in Burns. In Cork, the leader of the Independent Nationalists, William O'Brien, defeated William Redmond, brother of John Redmond, leader of the regular Nationalists. Waldorf Astor, formerly of New York, was elected as a Unionist from Plymouth, where he was defeated last January.

French Reform Legislation

In France a strong temperance movement has developed in recent years altho it takes different forms than in Anglo-Saxon countries. The great increase in the consumption of alcoholic liquors, particularly of ardent spirits, has been accompanied by an alarming increase in crime. The tendency to physical deterioration, the ravages of tuberculosis and the fall in the birth rate are ascribed in part to the same cause. So there has arisen a demand for preventive as well as punitive measures, and the evils of alcoholism have been set forth in pamphlets and posters by lead-

ing scientists and public men. An anti-alcoholic group of Deputies has been formed in the Chamber to push temperance legislation, particularly the bill now before the Senate and Chamber limiting the number of saloons. Since 1880, when the restrictions on them were removed, the number of saloons in France has risen from 334,000 to about 500,000. The Government approves of the bill and two Ministers have been designated to support it in the Senate.——A committee of the Chamber of Deputies, headed by the Radical-Socialist Ferdinand Buisson, has reported in favor of the bill giving women the local suffrage. They would have the right to vote for city, communal and departmental councillors and would be eligible for election to these offices. The committee points out that in the Middle Ages women owning property took part in local affairs but that the Revolution, while it promoted the rights of men, was reactionary in regard to women. Now that women are entering the professions, the report argues that they should participate in municipal and commercial government. ——The candidacy of Madame Curie for a seat in the Academy of Sciences has raised the question of the eligibility of women to this supreme honor. If it were not for her sex there is no doubt that Madame Curie would be elected, for her investigations in radio-activity have added a bright page to the annals of French science and won for her the Nobel Prize. Her most recent triumph is the isolation of the metal, radium, which has hitherto been known only in the form of its salts.——The question of women's labor in the home is now occupying the attention of legislators and social reformers. It is recognized that the large amount of underpaid and unpaid domestic labor is one of the greatest obstacles against the general raising of the standard of wages and that since women have not the freedom and political rights of men they must, like children, be protected from exploitation. Many suggestions have been made for the solution of this difficult problem, among others that a minimum wage be established by law for women working at home on sewing, dressmaking, millinery, artificial flowers, etc.

Turkish Affairs

It has been often rumored of late that a revolution is imminent in the Turkish Government on account of the strained relations existing between the Administration and the Nationalist Committee. The Committee is determined to maintain strict control over the Government which it established, and it has required the Grand Vizier to submit the Parliamentary address outlining his policy to the Committee for approval before it is read in the Chamber of Deputies. Haki Pasha has reluctantly consented because it seemed the only way to avoid a conflict and perhaps a military dictatorship. The danger seems to have been removed for the present, for when the Grand Vizier outlined his policy to the Chamber the Government received a vote of confidence of 125 to 63. The Opposition is, however, very much dissatisfied with the Government for the purchase of two old battleships from Germany and the borrowing of $30,000,000 from a syndicate of German bankers, a large part of which fund it is thought will be spent in the purchase of armament from German manufacturers.—— The Turkish Government has secured the money deposited by the deposed Sultan Abdul Hamid in German banks. These funds, amounting to $4,500,000, the Sultan when in power had placed in the German Imperial Bank under an agreement that the money should not be withdrawn except upon the presentation of a request signed with his own hand and sealed with a secret seal.——The Cretans persist in their determination to secure a complete separation of the island from Turkey and its annexation to Greece, in spite of the remonstrance of the ruling Powers. When the Cretan National Assembly opened in the latter part of November the Christian members came together early and unanimously voted in favor of union with Greece. The Mohammedan members of the Assembly declared the action illegal, as they were not notified to attend.——A rising of the Bedouins of Syria is reported. The tribesmen attacked the Turkish garrison at Kerah, near the Dead Sea. They captured a fortress, massacred the garrison and killed more than 100 Christian inhabitants of the place.

The Panama Exposition for San Francisco

BY BENJAMIN IDE WHEELER, LL.D.

[We have asked President Wheeler, of the University of California, to explain why San Francisco wants the Panama Exposition. The illustrations we have borrowed from the literature sent out by the exposition committee.—EDITOR.]

THE opening of the Panama Canal will signalize man's hitherto most drastic humiliation of nature; but of vastly greater import than that—it will mark a stadium whereat the history of mankind on the globe passes to its final phase. The human civilization having its origin in the river valleys of Mesopotamia and Egypt will have then made the circuit of the globe far enough to meet that civilization of the whole Orient, namely, of India, China and Japan, which had no share and were not recognized at all in the historic material which yielded the Occidental civilization stretching from Persia to the Golden Gate.

The celebration of the great event must be held at a place and in a manner that will conform to its historic significance. What is that significance? In the first place this nation is thereby united. Hitherto, its western coast has been scantily occupied with population. It was far off under the sunset, isolated by twelve hundred miles of barrens. It was a mere hem of the continent, inhabited by the pioneers of civilization that arrived just in time to claim it. They were the picket line holding on and waiting for the morning to come when they should be reinforced from the army in the rear.

Hitherto the nation has embodied the land and the people east of the Rockies. The Pacific Coast, separated by long stretches of unoccupied and arid land, had but slender connection to the nation. It had its own interest and its own perils. These were but imperfectly understood by the East. It was a sort of backyard to the nation. The nation looked altogether toward the East and its sources in Europe. It was a nation of the Atlantic, but the opening of the canal brings the perception that the nation is a nation of two oceans. Its well-being and its fate are written in terms of them both. As it is to be one nation, with one destiny, the two oceans which determine that destiny must be united into one. That is what the canal will do.

Hitherto the history and development of this nation has been determined by its position on the Atlantic facing Europe. It is not unlikely that its future history will be chiefly determined by its position on the Pacific facing Asia.

In the second place, the significance of the opening of the canal resides in the fact that that canal breaks down the dyke of land which rose to face Columbus when he was seeking India. It was

not America that Columbus wished to find. It was not America that Columbus started out to discover. He wanted a westerly way to India, but the America which he did not want arose unsought in his path and kept him and his successors more than four hundred years away from their goal.

With the opening of the canal the long world-yearning for the Orient finds its satisfaction in the direction of the course of the sun.

The event has, furthermore, its significance in terms of problems which rise out of the portentous Pacific. The civilization we call Occidental, which spread its conquests from Persia and Egypt by way of Greece and Rome to Western Europe, crossed the Atlantic and in four centuries pushed its way across the face of the American continent. It has now reached the Pacific and stands there on its shores face to face with that other civilization, that other world-half hitherto ignored, with which it now has to deal. These two world-halves represent two totally different human points of view. The Eastern world-half, that of India, China and Japan, represents the intensive cultivation of human society from within itself under prostration before the power of nature and the might of form. Man was not strong enough to control his fate. The Western world-half represents aggression and the power of initiation. Man rises above nature, reshapes it to his use, studies its secrets and controls it in terms of its own habits. These two points of view, these two attitudes of mind, these two governing forces in the world's history must now be assimilated to each other. The Orient

And the Villain Still Pursued Her!!!

is waking up. It is becoming conscious of itself and of its power. It cannot be quietly absorbed. By commercial intercourse and by exchange of ideas mutual assimilation must in terms of centuries take place, but meanwhile there will be conflict. The stage is now surely set for conflict. May it be the conflict of patient grinding rather than of violence; but there will be conflict.

San Francisco is the natural place for the celebration of the event of 1915. It occupies the central harbor of the Pacific Coast. It is the chief outpost of Occidentalism—the Byzantium of the ancient world. About its harbor seven hundred thousand people are already assembled. This mass represents within itself those forces of population which are to unite in making the new Occidentalism. All the peoples of Europe are there, and no one predominant—English, Irish, French, Portuguese, German, Slavs, Russians, Scandinavians—and the first layer of population was Spanish. Here the strong and chilly New Englander has joined forces with the warm-blooded son of the South and the European Northman with the Latin blood of the Mediterranean. The bloods and the ideals of all the European races are blending in this city as nowhere else, and out of the blend is emerging the new concept—European man. If one wants to know what Occidental man means in the abstract, he must go to San Francisco to find out quickest and best. He will find him riskful and frank, independent and tolerant, gracious and generous—and altogether human. And it

Where You Can Wear an Overcoat or a Shirtwaist the Year Round.

is this Occidental man which in the final struggle will be pitted against the Oriental man.

The San Franciscan has once for all demonstrated to the full his right to represent the Occident thru his attested courage in facing the allotments of Nature. The city was, four years ago, overwhelmed in earthquake and fire, and now has arisen again, fairer than ever, the best built city of the nation.

If the International Exposition, commemorating the event of 1915, be held in San Francisco, the people who attend it will, making the entirety of the pilgrimage, pass thru the canal whose existence the Exposition celebrates. The canal will be a constituent part of the Exposition. That is as it should be. It would otherwise be such a mistake as to utilize some festival in Hoboken for an occasion of celebrating, we will say, the opening of an East River bridge, or to erect a Bunker Hill Monument at Plymouth. Even if visitors cannot go thru the canal, they can at least cross the country. They can go out by the Santa Fé and see the Grand Canyon of the Colorado and magnificent Southern California and the Yosemite, and return across the Rockies either by the Cheyenne route, the Northern Pacific or the Canadian Pacific. In any case they will have seen their country in its relation to the significance of the present event; they will see it as a nation of two oceans. Every young American, yes, every American, who is to understand the responsibilities of his citizenship and the magnificent heritage thereof should see his land from East to West.

San Francisco is the logical place for the Exposition. Any place off the Pacific Coast would be criminally illogical. It may be that expositions represent a bygone form of advertisement and of celebration, but if an exposition is to be held it really would be a shame and a pity, if not a discredit to the nation, to hold it anywhere else. It would be a discredit, because it would make to appear that the nation fails at this high hour of its fate to know its place, its duty, its peril and its opportunity. San Francisco not only presents an ideal claim—it makes the practical claim of assured efficiency. It can give an exposition such as will do credit to the country and to the event. Its summer climate is cool and fair as that of the Maine coast. Its accommodations for transportation, its hospitality and its hotels are excelled by none. It has 1,237 new hotels and apartment houses. Its first four hotels, the Palace, the St. Francis, the Fairmont and the Bellevue, I think any one who has visited San Francisco will testify, are not excelled in any cities of the world, and close behind them are a dozen others which strictly rank as of the highest

class. San Francisco does not, furthermore, ask for financial aid from outside, not even from the Government. Its citizens have subscribed $7,500,000 and the city has subscribed $5,000,000 and the State another $5,000,000. The Exposition will not disgrace the nation by a financial failure. All that the city asks of the Government is official recognition.

The exposition which San Francisco will devise is to be vastly more than a salesman's show of wares. It proposes to represent the nation's assumption of responsibility in the Pacific. It will deal with world commerce and with the relations of the peoples of the world on the largest scale and in the largest sense. It will turn its attention pre-eminently toward establishing between the peoples who represent the two world-halves, peaceful commerce, peaceful intercourse and peaceful common understanding. It will seek to draw the peoples, the nations and the races together. In congresses attended by men of ideas and learning and influence it will seek to assemble the visions, the philosophy, the religions and the ambitions of all the peoples and establish them in council together.

The time has now arrived when not only the Occidentals should sit together in council, but the Parsee, the Hinduist, the Buddhist, the Confucianist, should be drawn into the accounting and given a hearing. The time has come and the place is ready.

The Pacific was once an ill-discovered or forgotten area where, in its circuit round the world, the day found its secret place, wherein to change its raiment of name and date. But the whole world that looked inward toward the Mediterranean has now been turned wrong side out and the fate of mankind is to be settled in terms of the outer ocean. The Occident and the Orient once stood back to back at the mountains of Turkestan. They now stand face to face at the Pacific, the arena of the world's coming struggle. This is the meaning of the opening of the canal. This is the sense in which it must be celebrated.

Berkeley, Cal.

Two Conventions at St. Louis

BY A TRAVELING CAPITALIST

DURING the last two weeks of November the American Federation of Labor held its annual meeting in St. Louis. The headquarters were at the Planters' Hotel. Chancing into its lobby just after lunch, the writer saw a fine looking body of men, standing around in groups of three or four. There was no loud talking, no foolishness, no boisterousness. Those men gave every sign that labor was serious. This sight prompted us to visit the meeting. Tho the official headquarters were palatial, the Federation gathered in a plain, roomy hall, the Liederkranz. The floor was covered with common deal tables with four wooden chairs for each. At the far end was the platform, over which was the motto of Karl Marx:

WORKMEN OF THE WORLD, UNITE.

YOU HAVE NOTHING TO LOSE BUT YOUR CHAINS.

YOU HAVE A WORLD TO GAIN.

At the opposite side was a gallery for visitors, who on the occasion of our visit were not many—probably a hundred or so. The order was splendid, perhaps the best we ever witnessed in any gathering. In its next morning edition the leading Republican daily reported a "row." If such there were, it must have been before we entered. The delegates sat in their places; there was no standing around. Many were reading newspapers, many were smoking, but from our seat in the gallery we could not hear that hum which is so common in deliberative assemblies, not excepting the Congress of the United States. Evidently the delegates took themselves and their debates quite seriously. The subject under discussion was the sympathetic strike, to which a delegate was on the floor in opposition when we took a seat. His argument was that the American Federation of Labor should not crush those outside it, but should endeavor to win them into the federation. This, he fancied, would be better brought about by winsome means, among which was the sympathetic strike. At times he called the outsiders "scabs." We did not see much strength in that argument. His next, however, was forceful. He pointed out that, in sympathetic strikes, the unions who went out often settled the dispute without the knowledge or consent of the sympathetic strikers, who were thereby left "on the street." He repeated now and then this expression, and always in a tone at once telling and pathetic. Probably the poor fellow had been there. He offered no resolution, but only appealed to the assembly. He had a good voice and agreeable manner, but his grammar would have made Lindley Murray blush. The next speaker supported him. This second talker made the remarkable statement that the American Federation of Labor included only one-seventh of the workingmen of the United States. Six-sevenths, therefore, are outside and beyond control. He labored to show the uselessness of the sympathetic strike. The third speaker that we listened to knew his English well and was a good orator, who argued for the sympathetic strike. Continually from all the speakers came a distinction between international unions and local unions; the latter favoring and the former opposing the motion. The discussion lasted till a later day, when President Gompers took a hand in it and declared that he would lay down the gavel rather than order a sympathetic strike. He even declared in favor of an oral contract in preference to a written. Finally the power which would authorize the Executive Council to order a sympathetic strike was voted down. The local unions if they go out in sympathy do so on their own responsibility. A petition to the United States Congress in favor of cheaper oleomargarine was next passed. We then left the session as orderly as when we entered. Daily we read the two leading newspapers, one Democratic and the other Republican. Some days the Republican journal had not a line on the convention. It did not

publish the resolutions agreed upon the day before adjournment. Whenever it published any matter on this congress of workingmen it insisted upon the rows and troubles. In much the same way the Democratic daily laid stress upon the squabbles, but it published very much of the serious work, and it also gave a very fair synopsis of the resolutions.

On the Sunday which fell during the congress the Federation was lectured by the Catholic archbishop, a Protestant minister and a Jewish rabbi. The address of the last named read very well in Monday's paper. He was capitalistic, but not offensive. The parson was rather on the side of the laboring man. The archbishop spoke on socialism and warned the workingmen, who had been carried to the church in trolley cars, against this bogey. The meeting noticed only the sermon of Archbishop Glennon. It appears that a large number of the American Federation of Labor are Socialists, in fact they are so strong as to be a formidable rival to the Conservatives, as Gompers put it. A few hotheads wished to censure the archbishop by a resolution. The first Socialist to be elected to Congress, Berger, of Milwaukee, pooh-poohed the idea, declaring that the Metropolitan of St. Louis merely re-echoed the stand of his church, and referred him to the condition of laboring men in Ireland, Spain, Portugal and Italy, adding that where Catholic workmen, as in France, Southern Germany, Belgium and Austria, had good wages and short hours it was in spite of the Church: Glennon had said nothing new, nor even old things in new ways.

Like all large bodies, the American Federation of Labor had manifold questions to discuss, and as was to be expected, left much unfinished business; not a bad sign toward progress. A clean slate is pretty sure to spell the beginning of a downward tendency.

The closing days of the meeting witnessed another congress: the convention of the Deep Water Way from the Lakes to the Gulf. The contrasts between the two are striking. The Deep Water men had the use of a city armory, profusely decorated with bunting. Behind the platform was the legend in huge letters: DO YOU STAND PAT FOR FOURTEEN FEET?

On approaching the Liederkranz Hall we had been met by a few delegates and were directed to the visitors' gallery by a collarless, overcoatless, vestless lad of sixteen or seventeen. No taxicabs or automobiles were to be seen, whereas before the armory there were machines by the score—perhaps a hundred. At the Liederkranz we saw one solitary policeman inside, but none outside. At the armory a captain of the police was on the pavement and a dozen or so of St. Louis' "finest" within and without the building. At the American Federation of Labor meeting was a gallery for visitors; at the Deep Water Way convention we asked a policeman if there was such a gallery within. His evasive answer was a strong negative. "Say, cap," were his words, "you jes' go in that doah and jes' set down. For if you stan' up some feller will throw you out, sure." We entered and sat down. At the rear we noticed a row of temporary boxes, which we learned from an allusion of the chairman were for the ladies. The only lady we saw in them was a good old negro mammy, who was peering thru her large spectacles deeply interested in and sitting pat for the fourteen feet. On looking around the assembly, divided off by States, we realized that we had got among the chosen people. As a body they seemed older than the federationists; at least there were more bald pates. But they were not near so orderly, coming in and going out all the time; standing behind in knots, talking and laughing, all the while smoking very much. A rather curious turn was to see a delegate standing on the platform a little behind the chairman and while facing the audience strike a match and light a cigar. It was our first time to behold such a sight. We heard four speakers, of whom three were from Illinois, and all Irish: Dineen, Conway and Dunne. The fourth, a St. Louisan, an old gentleman, repeated a saying made by Senator Benton in 1852. Facing the west, Missouri's greatest son stretched out his arm toward the setting sun and exclaimed: "There, gentlemen, is your East." This venerable speaker, Filley by name, was by far the best orator of the day. All, however, rang the changes

on the Middle West. Rome's commercial supremacy, the last speaker declared, while passing thus in a jump some eleven or twelve centuries, passed to Threadneedle Street, thence to Wall Street and now to Chicago. Happy, expansive supremacy! A single street held it in London and New York. But all the Windy City—the New Rome therefore—enjoys it.

As we had sat in the Liederkranz Hall, we watched in a dreamy sort of way the two legal convicts, out on bond and not yet sentenced, Gompers and Mitchell, and wondered over the strangeness of their status—the honored president and vice-president of a great association and yet under the ban of the law of their country. Gompers sat still with his chin resting upon his uplifted hand and his elbow on the table. The third under the ban, Morrison, may have been present, but he was not pointed out to us. At the armory a leading figure and the head of one of the two Illinois factions was a United States Senator, now on trial at Washington on the charge of securing his seat in the Senate by bribery. However, he was only a delegate and no official of the convention. It was, too, a strange status at the armory. There was, moreover, a greater likeness between the two meetings. Both seek their financial betterment. The Federation looks for this to monthly dues, assessments, strikes, boycotts, closer relations of masters and men, higher wages and such like. The Deep Water Convention, on the other hand, casts longing eyes towards Washington. Here is the marked difference between the two bodies. Governor Dineen stated that Illinois had spent a lot of money and was prepared to spend more, but only in Illinois. But the burden of the other speeches and interviews turned all hopes to Congress. It is the United States which must dig the nine feet or fourteen or fifty feet water way to the Gulf. On this point there seemed to be no difference.

Shortly after the two meetings had adjourned we passed out of St. Louis. We have been wondering ever since whether the American Federation of Labor would not show more sense if it, too, would follow the example of the Deep Water folks. Why do not the workmen imitate the politicians and bourgeoisie? Why do not they look to Washington? Why not? They are not sharp enough to know their own strength.

The Walnut-Gatherer

BY JOHN JAMES PIATT

(*To a Little Boy Out in the Woods.*)

BARE brown feet and quick black eyes,
From whose deeps new stars arise!
Hands stained with happy toil, the gay
Task-work of glad holiday!
Heart of boyhood, leaping thru
Shining worlds created new!
Birth of sunshine, nursed by Joy,
Merry walnut-gathering boy! . . .
What enchantment, while I look
Into Memory's picture-book,
Grows in me, created fast!—
Shut eyes shut me in the Past.
One in me arises, lo!
As to music soft and slow
In my dream, and like to thee—
Was he I, or am I he?

NORTH BEND, OHIO.

The Crisis in Great Britain

BY SYDNEY BROOKS

[This able presentation of the questions before the voters electing the new Parliament appears just as our readers learn the result of the election. In our own comment on the election we take a view more in accord with the Liberal contention than that presented by Mr. Brooks, who, as our readers know, is one of the best known of living English publicists —EDITOR.]

THE supreme issue—and there could hardly be a greater one—before the British people at this moment is the question of the House of Lords; the question, that is, of the place, powers and composition of a second chamber in the British scheme of government. It is an issue that since the return of the Liberals to office in 1906 has been steadily growing in acuteness. The time has now come when it has swallowed up all other problems, dominates the stage of politics, and is to be referred for settlement to the verdict of a general election. Yet one can hardly imagine a question less suited for such an arbitrament or a tribunal less qualified to pronounce on such a question. For here is the most anxious and delicate task to which a democracy can possibly address itself, that of deciding the form and character of an essential part of its organic scheme of government. And it is to be taken in hand and determined, not by the most competent and representative men in the nation, meeting and deliberating in the secluded, unprejudiced freedom of private council, but by the people as a whole, in all the mad tumult of a general election, and amid the welter of partisanship, the crude and incredible exaggerations, the base claptrap, the mendacities, puerilities and distortions, and the blinding passions that accompany an "appeal to the country." Conceive the American Constitution suddenly submitted for amendment in some vital particular to the caprices of a Presidential campaign, and you will have a partial idea of what is now happening in Great Britain. It is a spectacle that fills all moderate-minded Englishmen with mortification and alarm. They feel that it not only exposes them to the amazed derision of the outer world, but throws a sinister doubt on their high claim to be a people with a genius for politics. But there is no help for it. The attempt to settle the constitutional issue by consent, by means of a conference equally representative of the two chief parties, has utterly and disgracefully failed. Nothing, therefore, is left but to fight the matter out with the ordinary weapons of party warfare.

The grievance of the Liberals against the House of Lords is that it is a second chamber permanently controlled by, and permanently, therefore, biased in favor of, their political opponents; that when the Conservatives are in power it practically effaces itself and becomes a merely ratifying chamber, without apparently any will or initiative of its own, always accepting and hardly ever even amending the measures sent up to it; that when the Liberals are in power it at once wakes up, jealously scrutinizes all Liberal bills, and does not hesitate to reject or mutilate them at will; that it is thus open to the Conservatives, whether they are in or out of office, to remain the governing factor in the affairs of the country, and to retrieve in the House of Lords the reverses sustained at the polls or in the House of Commons; that the Liberals are consequently in a position of perpetual inferiority, do not enjoy the same freedom of legislative opportunity as their opponents, and start unfairly, and in many cases fatally, handicapped in the effort to write their views in the statute book; that in three or four directions —in dealing, for instance, with the education question, with the land question, with the reform of the licensing laws, with the abolition of such an anomaly as plural voting — the Liberals have found themselves effectively blocked by the House of Lords, and the mandate conferred upon them by the country rendered of no avail; that the Peers a year ago crowned their work of destruction by throwing out the Budget, thus compelling a dissolution and transferring

the power of the purse from the elected to the hereditary and indissoluble chamber; that, with things as they are, a Liberal vote has not the same value as, counts indeed far less than, a Conservative vote; that while a Conservative Government enjoys unhampered power for giving effect to its legislative proposals, a Liberal Government exists on sufferance, under the incessant menace of the Lords' veto; that the party system is thus in grave danger of breaking down under the injustices and inequalities imposed upon Liberal legislators; that if it does break down it will be replaced, as in Germany, by a fierce division of social classes; and that it is therefore not merely in the interests of Liberalism, but of all parties and of the nation as a whole, that one half of the country should not feel itself overborne and opprest by the other half.

Such are the chief points of the Liberal indictment against the House of Lords, and I do not think a dispassionate observer would deny that in the main the indictment is well founded. He would, indeed, insist that under any scheme of government the upper chamber is rightly and necessarily more conservative in feeling than the lower chamber, and that there is nothing, therefore, unnatural in the House of Lords dealing more harshly with Liberal than with Conservative measures. He would also point out that it has happened more than once that the House of Lords has proved a better judge of national opinion than the Liberal House of Commons. He might further argue that the Liberals enormously exaggerate the extent to which the Peers withstand the "party of progress"; that between 1906 and 1909 the Liberals tried to write 238 acts on the statute book, and that of these only six were rejected by the House of Lords; that of these six there was only one that was not regarded with either active dislike or tepid unconcern by the country at large; and that, taking its record as a whole, it would be difficult to point to a second chamber anywhere that is more responsive to popular opinion than the British House of Lords. But when all deductions and reservations have been made, every fair-minded man would, I believe, agree that the Liberals have a substantial grievance against the House of Lords, and that its action, in particular, in rejecting the Budget was a flagrant violation of the spirit and traditions of the Constitution. How is this grievance to be remedied? The Liberals propose to remedy it, in the first place, by making it impossible for the Lords ever again to throw out a Budget. They intend to pass a law to the effect that any money bill which has passed the House of Commons and is certified by the Speaker to be nothing but a money bill—that is, to contain nothing that is not purely financial—shall become law within a month whether the Peers assent to it or not. On this point there is not much difference of opinion between the two parties. Even the Conservatives admit that the Lords' veto on finance must go and have resigned themselves to its abolition by enactment. The only detail they at all seriously challenge is that which vests in the Speaker the sole and somewhat hazardous responsibility of deciding whether a money bill is really a money bill, or whether it contains non-financial matter. They argue, and not without justice, that such a responsibility may gradually tend to convert the Speaker into a partisan, and they would therefore prefer that the decision should rest with some external authority—the Judicial Committee of the Privy Council, for instance. But otherwise, tho, of course, very reluctantly, they may be said to have acquiesced in the policy of gagging the Lords on finance.

The real battle is joined over the proposals put forward by the Liberals for destroying the Lords' veto not merely on finance, but on everything else. These proposals lay down that any measure which passes the House of Commons in three consecutive sessions and is rejected by the House of Lords in each of these sessions, shall become law on receiving the royal assent, providing that two years have elapsed between its first introduction and its third and final passage thru the House of Commons. This, of course, is the real revolution; and to estimate it aright one must remember that the Liberals also propose to restrict the duration of Parliament to five instead of

seven years—which means, in practice, that in each Parliament there will not be more than four working sessions. The great objection to this scheme is that it places Great Britain on what is virtually a single chamber basis; and Great Britain, one must bear in mind, is a country that lacks altogether those constitutional safeguards which America possesses in almost excessive abundance. There is no written Constitution in Great Britain; there is nothing that corresponds either to the Presidential veto or to the powers of the Supreme Court; Parliament is omnipotent and can do everything that is physically possible; and in Parliament the decisive control of affairs is wielded by the Cabinet, which, owing to the growing inability of the House of Commons to grapple with the enormous and expanding business entrusted to its care, is more and more forced to legislate by executive decree. Every argument, therefore, in favor of a strong second chamber acquires a double force when applied to British conditions. But the Liberals propose to take away from the House of Lords the only power that can make a second chamber effective, the power of rejecting or referring to the people the measures submitted to it. The Lords, under the Liberal scheme, may debate, may criticise, may delay the passage of a bill for two years, may suggest amendments—and the amendments, if accepted by the Government, will be incorporated in the bill; but they may not throw it out or submit it to the judgment of the electorate. A determined minister or a determined faction would thus be able to force thru Parliament any measure, however revolutionary and however much opposed by the opinion of the country. It is said that during the proposed two years' interval public sentiment would declare itself unmistakably for or against the Government's bills, and that a bad bill or an unpopular bill would assuredly be dropped. But I do not think that anybody who has watched the mutability of opinion outside the House of Commons and the rigidity of the party system inside it will place much faith in that plea.

The truth seems to be that the Liberals are seeking a just end by an indefensible route. They are right in their determination to win for themselves the same opportunities for writing their measures on the statute book as the Conservatives possess; they are wrong in trying to give effect to this determination by reducing the House of Lords to impotence. Finding the upper house a sham for all the normal purposes of a second chamber when the Conservatives are in power, they propose to make it a sham whatever party is in power. Having long and rightly complained that the country under a Conservative régime is practically on a single chamber basis, they now propose to put it on a single chamber basis under all régimes. Instead of remedying one of the gravest abuses in the British Constitution their policy is to share in it and profit by it. In this way, undoubtedly, both parties will be placed on an equality; but it will be an equality purchased at the cost of those reasonable safeguards without which the British system of government will be all sail and no ballast. Moderate Englishmen, even those who like myself are Liberals by sympathy, find themselves coerced by their political consciences and by all they have seen or read of government in other lands into opposing such a program. Nor are they less revolted by the means that the Liberals intend to employ for giving effect to it. The Peers, naturally enough, refuse to vote their own legislative extinction. How then is their resistance to be overcome? It can only be overcome by the creation of, or the threat to create, a sufficient number of Peers to carry the Liberal program. King George, therefore, is expected by the Liberals to act as King William IV acted in the crisis of 1832 when the two houses were at loggerheads over the Reform Bill and the country was on the brink of a convulsion. The King in that emergency, under pressure from his ministers, granted permission to Earl Grey "to create such a number of Peers as will be sufficient to ensure the passing of the Reform Bill—first calling up Peers' eldest sons." But are the Liberals justified in resorting to a similar appeal to the royal prerogative under the present circumstances? Is there any really national

emergency today or is there only a party emergency? And what would be the effect upon the country of threatening to create the 500 Peers or so who would be needed to carry the Liberal program? What validity would popular opinion attach to an act of Parliament that was forced upon the statute book by such methods? Whether the peers submitted in time to save their order from being swamped by this army of new men, or whether they stood their ground and dared the Government to proceed to extremities, would not the instincts of most Englishmen be profoundly shocked by the whole transaction? Apart from the undesirability of dragging the King into the political arena and of using, or appearing to use, the reserve powers of the Crown as implements of party coercion, are not the Liberals taking the very course which sooner or later is most certain to lead to a sweeping reaction?

But there is another and not less formidable objection to the Liberal policy. While whittling down the powers of the House of Lords almost to nothing, it leaves its *personnel* and composition absolutely unaffected. It not only ignores but it refuses even to take into consideration the defects and weaknesses which all thinking Englishmen admit in their second chamber. The country, to the best of my belief, recognizes that the House of Lords is (1) too large, (2) overcrowded with members who have neither taste nor aptitude, in some cases not even character, for public life, and who sit and vote in it simply because of the indiscriminate application of the hereditary principle, (3) too much representative of a single class and a special set of interests, (4) too favorable to the Conservative party, and (5) too aloof from the direct and visible operation of public opinion. The moderate minds of the country are alive to the reality of these five comprehensive defects and desire their removal. The Liberals, however, have concentrated on the political emasculation of the House of Lords and have passed by the question of its internal reform, believing that any scheme of reconstruction can only make it stronger, more assertive, and a greater obstacle in the path of Liberalism. When its powers have been cut down by statute, they may then be willing to take up the question of altering its composition; but not until then. The Conservatives, naturally, have pounced upon this omission, and to the Liberal policy of destroying the Lords' veto they oppose the policy of reforming the Lords from within. To my mind this is by far the sounder policy of the two, if—but the proviso is important—it is carried so far as to give the Liberals an equal chance with the Conservatives of obtaining a majority in whatever renovated second chamber is evolved. The Peers and the Conservatives, however, have not yet shown they are willing to make so huge a sacrifice. They have gone so far as to resolve that the right to sit and vote in the House of Lords shall no longer descend from sire to son along with the family title and estates; and they are ready to go further. A House of Lords reduced in point of numbers to between 300 and 400, with, say, one-half its members chosen by the whole body of the Peers from among their own order, with the remainder elected or nominated from outside or sitting in the House by virtue of holding special offices, with all Lords of Parliament, except the ex-officio members, enjoying an equal tenure, and with the veto on finance surrendered but with all other legislative powers preserved intact—it is a House of Lords formed on such principles as these that the Conservatives submit to the country as an alternative to the Liberal program. And the principles themselves are sound enough, though their virtue must largely depend on their application. They furnish at any rate a basis on which a new and better second chamber could be fashioned with a minimum of disturbance to established institutions and habits of thought—a second chamber in which the present disparity between the two parties would be largely redressed, which would be brought into direct and recurring touch with public opinion, which would be strong in ability and experience, but not so strong as to dominate the House of Commons, which would be naturally and properly conservative in tone but free from dependence upon the Conservative party, and which would represent a free variety of

classes and interests. All that is so much to the good. But no scheme of reform can be, or ought to be, acceptable to Liberals which does not give them the same opportunities as the Conservatives possess for obtaining a majority in both chambers. Unless the Conservatives recognize that condition as one that must indispensably be fulfilled, their program of reforming the House of Lords cannot provide an enduring solution of the whole problem; and how that condition is to be fulfilled without sacrificing the hereditary principle altogether and turning the House of Lords into an elective chamber is a question that must one day demand and receive a definite answer.

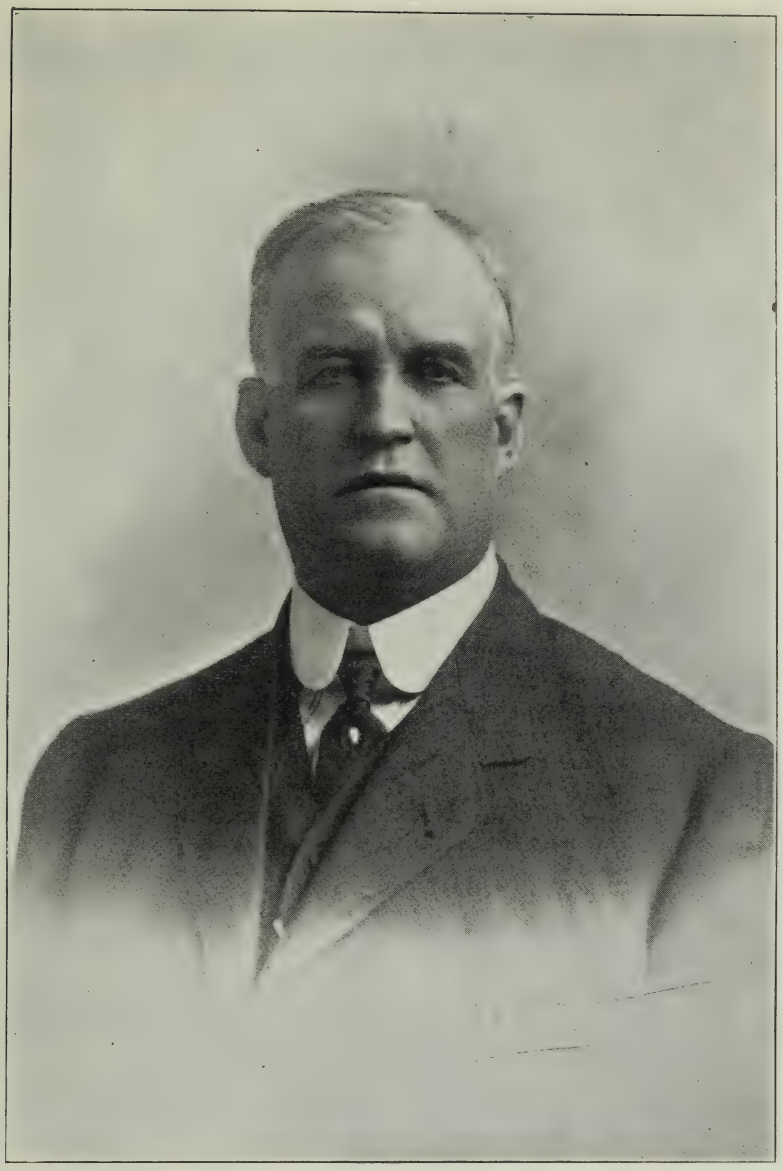
Such, roughly, are the issues. The Liberals, there can be little doubt, will triumph in the impending General Election and will proceed to carry out their policy. But it is much too soon to prophesy its ultimate success. The British Revolution has only just begun; it is destined in all probability for a long while yet to plunge the country into a whirlpool of passionate distraction; and no man can foresee how it will end.

London, England.

The Short Enough Ballot

BY RICHARD S. CHILDS

Secretary of the Short Ballot Organization.



UNDER the title of "The Shortest Ballot," The Independent recently published an article by ex-Gov. Lucius F. C. Garvin, in which he proposes the reduction of the list of elective offices to unicameral legislative bodies. Ideal as this may be, it is a goal we shall hardly expect to reach in this country, and in the propaganda for the Short Ballot movement it need form no essential part of the program. What the Short Ballot advocates want is the "short-enough" ballot; that is to say, a ballot short enough to eliminate blind voting, and bring complete control of the government safely into the hands of the people.

The voter who goes to the polls and casts a ballot for State Treasurer without knowing anything about the candidate and perhaps not even being able to give his name, is voting blindly and is being bossed. To make the ballot short enough so that the voter will be sure to know all the candidates he votes for would eliminate the blind voting and the bossism. It would not eliminate political leadership, nor is that perhaps desirable. It is only necessary to substitute open-eyed acceptance of leadership in place of blind acceptance of leadership, in order to give the people control over their own movements. Open-eyed acceptance of leadership involves no great perils. If the leaders are subject to criticism and questioning, they will be naturally impelled to lead in the right direction. Blind acceptance of leadership involves many perils, for it gives to the leaders opportunity to mislead the people with impunity, and some leaders are certain to yield to the temptation.

Mr. Garvin also overlooks the fact that in this country the chief executives with their veto power have become a part of the legislative machinery, and being thus policy-determining officers must stay on the elective list, unless the nature of the office is completely altered. Judges also are practically legislative officers and a large part of our law is called, quite properly, "judge-made law." If we should get rid of the popular desire to elect judges, we must do it by reducing constitutions to a mere skeleton framework and get ideal legislatures which will pass laws which will not have to be interpreted in an unpopular way.

Such things, while desirable, are so far ahead as to be of only academic interest. Let's content ourselves for the present with trying to get the Short-Enough Ballot.

New York City.

A DEMOCRATIC SENATOR FROM NEW ENGLAND.

A Democratic Senator from one of the six New England States has not been seen in Washington in the thirty years since the oldest member of the present Senate was sworn in; and not since the time of Franklin Pierce has there been a Democratic Senator from Maine. Consequently much more than the usual interest which a new member attracts will center about Charles F. Johnson, whom, it is announced, the Democrats of Maine will elect in January to succeed Eugene Hale.

Had his party not been in a minority, Mr. Johnson would have been heard of by the country long before this time, for he is a big man in a State where the chief crop is big men; and nobody in Maine, whatever his party, questions Mr. Johnson's fitness to succeed Fessenden, Morrill, Hamlin, Blaine, Frye and Hale, whom the Pine Tree Republicans have sent to the Senate in the past fifty-six years.

Mr. Johnson is fifty-two years of age, a graduate of Bowdoin, a leader of the bar, and a man of exceptionally strong and attractive personality. When he was thirty-two he was his party nominee for Governor, and several times he has been Senatorial candidate of the Democratic minority in the Legislature. He has served Waterville as its Mayor, and as its representative in the Legislature, where he was the Democratic leader.

Not only has he made a brilliant record in his twenty-five years of successful law practice, but he is pre-eminently a lawyer whose reputation for absolute integrity is proverbial. So wholesome and frank is his nature, so gracious and kindly his manner, and so genuine and unfailing his courtesy that in all his law work and his political activity he is said never to have made a personal enemy.

He is an orator who convinces by logical argument, and he does not speak without knowing his subject. In the committee room or on the floor of the Senate he will be listened to. His Democracy is of the old school, not of the radical type. In Washington he will uphold the best traditions of New England statesmanship, and his presence in the Senate will be proof that the Maine Democracy made the most of its opportunity when a political landslide placed a Senatorship in its gift for the first time since the Republican party was born.

BOSTON, MASS. JOHN CLAIR MINOT.

The Myth of the Colonial Housewife

BY CAROLINE E. MACGILL

INSTRUCTOR IN ECONOMICS IN THE UNIVERSITY OF WISCONSIN.

TO reform the race, 'tis said, one must begin with the grandmothers. That sounds very proper and scientific, but what is the would-be reformer to do when he finds the ladies of the previous age held up as models of perfection so far above their descendants as to cast a shadow of superiority so far down the halls of time that the women of today are hopelessly enveloped? Even in the matter of that chiefest activity of most women's lives, housekeeping, we are led to believe that we are but pygmies besides our most wonderful ancestresses. The modern goodwife has to have a servant—when she can get one—and she will not dream of living in a house that has not all the modern conveniences, tho those be things far beyond the rosiest dreams of the dame of the olden time. We send out the washing and take in the bread; we eat pickles made by the brand instead of by Great-aunt Eliza's treasured recipe, never known to fail. A department store supplies the entire family wardrobe, even to the stockings more lasting than brass, which obviate all need for the weekly darning. Fireless cookers, electric toasters, vacuum cleaners, even the dishes washed by a public service corporation; what is there left to do? We cannot even spend the surplus time in the care and education of our own children, for every one knows that a child who does not learn the tricks of the world in the technical school of the primary grade will be hopelessly maladjusted to his environment forever, and dear quaint Mr. Darwin said that wasn't good for Tommy.

Yet my neighbor, Mrs. Smith, a most devoted mother and housekeeper, has to go to a sanitarium, diet, and be most solicitous about her health, for she is constantly driven to the very verge of nervous prostration by the strenuousness of her cares. All the women on my street are overworked, and they show it. It is certainly disconcerting, after a hard day's work, to hear pointed remarks about one's general inefficiency, perhaps even laziness, as compared with the energies of the Colonial dames. For there rises inevitably in the mind's eye a phantom seven feet tall, with arms of steel and nerves of caoutchouc, head stuffed with clock-works, and feet of cast iron. None other would be capable of performing those feats of housewifery. "Truly there were giants in those days," sighs the weary lady, as she lights the gas stove, takes the chickens out of the haybox, and puts in the plug of the coffee machine. Hers is no deep, unsatisfied yearning for the wool-cards and spinning-wheels of the past, however poetic they may seem at a safe distance, that causes her to sigh, but the more practical query: "How in the world did they do it?" We are quite willing to leave the soap making to Procter & Gamble, and the cloth making to him who will, but the secret of that hardihood which enabled our grandmothers to cope *successfully* with their tasks—that we would learn.

In that word *successful,* however, lies my text. The answer is own cousin to that of the higher critic who, when asked how Jonah survived his researches into whale anatomy, replied, "Didn't make any." Deeply do I regret my job; we have so few indigenous myths in the United States that it is a matter for sorrow when one of them has to be exploded by the remorseless hand of the investigator. Alas! the time has come when the Colonial housewife myth must join the limbo inhabited by George Washington's cherry tree and the Charter Oak. What-every-woman-knows is the story that once upon a time there lived a woman who had twenty children, cooked viands of wonderful quantity and elaboration, scrubbed everything within an inch of its precious life, made soap, rugs, all the family clothing, candles, butter, beer and cheese, raised hens, saved the feathers for beds, spun and wove her own linen and woolen cloth for blankets and household linen as well as clothing, etc., etc., etc., and at the same time did her duty by Church and

State as a mother in Israel as to fast days and Sundays. 'Tis the American revised version of the labors of Hercules, and is to be subjected to the same laws of historical research and textual criticism.

Like all myths it is a hero-tale, connected with ancestor-worship, and with religion. It may be analyzed into the component parts of most such tales, the elevation of a family by the recital of the prowess of an ancestor, and the gradual passing of the tale into the realm of religion.

Of course, there is some truth in the story, as in all myths. There are probably some women today who could do as much, perhaps more, and the e doubtless were such in the past. One fact, however, must not be forgotten—the comparison of *strata*. We must align our highly cultivated woman of today with her peer two hundred years ago, not with a sturdy "daughter of the plow" whose parents had been brought to New England by the thrifty London company because they were "inured to labor from their youth up." Repugnant as it may be to democracy to thus recognize social differences, sound psychology as well as sociology demands it, for in this overlooked element lies the explanation of the otherwise curious fact that at the same time that we read of these feats of strength, we also know that ill health and extreme delicacy were the fashionable attributes of great ladies. Obviously a woman who did the work that half a score could scarce do today had no time for such follies—nor does her modern descendant. The statement that the average health of women is rising must be interpreted on a strictly caste basis.

But even comparing class with class, few women of that vast majority whose lives are by no means led on beds of flowery ease would be willing to undertake such a proposition as the traditional life of the early New England dame. Has there then been so great a change in American womankind? Or is there some other explanation that may be sought? There has been some lessening of race vigor in the change from country to city life, in which the women have suffered their share, and yet the farmer's wife of today is rarely the picture of health. Indeed, she is the pitiful relic of the old order, trying to carry on an outworn form of life without those aids which alone made it possible. Herein lies the answer to the question propounded above: Could our ancestresses be called to the bar with their granddaughters as judges and juries to try them for their legacy of inhuman energy, they would have but one plea—not guilty. Moreover, they could prove their innocence. The actual truth is that, save in a few instances, these marvelous feats were not performed by a "one-woman-power" household. There are two additional factors entering in before the problem can be solved—second wives and old-maid sisters.

The wife and mother bore her children and brought them up, superintending her house the while, but she did not do the heavy work, nor any of it, if her services were needed some other way. We recommend this fact to the folk who complain that the modern mother does not train her children so well as the "old-fashioned" kind.

Undoubtedly the abode par excellence of the wonder-working housewife was New England. This is fortunate, from a critical and historical point of view, for we have a large body of data by which to obtain light on the conditions of family life in that region. There were some families who lived as their kind do now, attended by many servants, trained and capable. In the country the superfluous daughters of grown families hired out as help to their neighbors until they married or were needed at home again. And many families, both country and city, took bound children, bringing them up for the return their labor would give. In an agricultural community, and in the work of the house, these children were of great assistance. In many cases they became practically one of the family. They were generally children whose parents had been neighbors or friends of those who took them, and thus the state disposed of its orphans, in what is the most recently advocated method of the child-saving experts. Sometimes they were not so well treated, however, and the children's literature of the early and mid-nineteenth century is chiefly concerned with their woes. Many and many a solitary cry

have I enjoyed over the shelf of such lachrymose literature that I devoured somewhere about the age of seven. I doubt if I have seen them since, but my early memories of the trials of "Betsy the Bound-Girl" can never be effaced. That was the day of direct writing and unsparing agony. The harrowing tale of Betsy's wrongs, how she suffered from the cold of the winter when she was compelled to sleep under the kitchen table in midwinter on a "pallet" of straw with only a ragged quilt to cover her, how she was fed on scraps, when the children of the family had the best of everything, and how she was beaten because the scapegrace boy of the family had stolen the cream—all was vividly pictured. The endings were sometimes sad—a lonely grave under a pine tree, with the snow lying upon it, but more often they were savored with poetic justice. Betsy's father, who was supposed to be lost at sea, returned the possessor of vast wealth, and drove up to the door in a coach with six prancing horses, snatched his darling daughter from beneath the uplifted lash of her cruel mistress, and bore her away, amid the regrets of said lady, who wept too late at the thought of the riches that might have been heaped upon her by a grateful parent. In the early 18's my greatgrandfather, a well-to-do man for his time, took such a bound-child, a girl of twelve or thirteen, the daughter of a Scotch couple who had died soon after reaching America. She cared for his little daughters and soon grew an integral part of the family. When my grandmother married, she remained with her in the old home, and was "aunt" to the children that came just as much as their mother's own sister, who was also a member of the *menage*. When she died, full of years and honor, it was one of their dearest who went from the family circle, in no degree whatever an outsider. I myself was well grown before I knew that I had not had three great-aunts.

So much for the labor supply outside those born of the same family. The commonest assistants were the unmarried sisters of either side. It is worth noticing also that most of the large families of earlier days were borne by at least two mothers, and that the number of children decreased with the later wives. That is, the first wife would have six or seven children in quick succession and die, worn out by maternity and hard work. The second wife, a young, vigorous woman, would take up the work and bring up the brood, unbroken by travail, and with some of the older ones very likely at an age when they could be of much help in the simple housekeeping of the time. Three or perhaps four children would be added, generally, it would seem, at longer intervals. Sometimes she, too, died in the struggle, in which case a third soon appeared upon the scene, but with this difference, that the band of assistants was by now a numerous and efficient one, and it was by no means longer a "one-woman-power" household. The work of the Colonial household was heavy, but much of it was of a kind requiring little skill, and was easily done by the younger members. The number of women who actually did the labors attributed to all, who bore and reared at the same time many children, was probably not much larger than at the present. Many of the children also did not live long enough to make their upbringing a tax upon the mother's vitality. The rows of tiny graves in the old New England churchyards spell a tremendously useless waste of maternity, but they must have also spelt a somewhat better chance of survival for the mother, heartless as such a thing sounds.

The most usual type of family, however, consisted of husband, wife, children, and several adult unmarried women, nominally dependents, really earning their bread in the unpaid service of their relatives. Often their relation was of the pleasantest, and their place one of honor and dignity in the family, but also much too often they were a part and yet not a part of the family, paying for their bread in the bitterest of fashions, despised and dishonored, the estate that made the term "old maid" one of deepest reproach, the symbol of a condition hardly to be endured. Not even the reward of recognition has come to these lonely servitors of the race, but they are utterly forgotten, and the results of their labors gone to swell the already full account of their married sisters.

It is probably statistically safe to say

that there are not relatively many more spinsters today than there have been in the past. The unmarried woman of the present generation is more conspicuous, because she demands a chance to live her own life, and is not ashamed of her fate. If we interpret past as well as present we shall find it only a change of habitat. In the days long past the superfluous maidens, from the point of view of marriage, became priestesses. It was a highly honorable occupation; indeed, some authorities hold that it was regarded by the more actively intellectual women as a refuge from the confining life of the housemother. The Christian Church, by its institution of holy widows and deaconesses, supplied the same need, until the "religious" were gathered up into convents, and the honorific nature of single blessedness greatly hightened. The woman who longed for a "career" in the years 600-1600 A. D. went into the Church, where she found one capable of wide activity and influence. There is not time here to relate how these women ruled baronies held direct from the king in feudal days, held courts of justice, led armies, defended castles and ruled kingdoms, to say nothing of carrying on large agricultural operations on the lands of their houses; were patrons of art and learning, and took active part in the society of the age. Not the meek and gentle nun, immured within her cloister, contemplating the humble Maiden-Mother, was such an abbess, but one of the choicest spirits of her sex, often of royal lineage, who chose the life of the convent for its freedom of the world, not its seclusion therefrom. When we discuss the unrest and craving for a "career" said to be characteristic of the modern bachelor girl, we must not stop at the "higher education" and industrial emancipation as ultimate causes, but go back to the Protestant Reformation, which took away from a large part of femininity a chance at a career of religion, and threw them back upon their families without adequate employment for their individualities. The convent nun had no false self-pity; she had a place in the world and she knew it. In fact, if there were any superiority of position, it was hers and not her wedded sister's. Protestantism, as part of the inevitable sacrifice of some one in the impetus it gave to civilization, paid the price of many a woman's peace of mind. For there was nothing for these women to do save to fall back upon the charity of their male relatives, occupy an inconspicuous corner of the fireside, do embroidery and good works if he were rich (thereby reproducing the life of the convent in a very piteous way, distributing not her own bounty, but another's), and turning her hand to humbler deeds if he were of low estate. A distinctly superfluous class is always a despised, unhappy, discontented class. It is curious to note that one of the arguments for the establishment of factories in New England, when such were opposed lest they draw men from that noblest of occupations, agriculture, was that the labor supply would come from the very numerous unmarried women, and would be a positive act of philanthropy, by providing employment that would keep them busy and out of mischief, which the worthy gentlemen seemed to think was necessary. They argued very cogently, for the factories were established, and the labor came, just as they said it would. And with it came a counter-revolution in the affairs of the family, just as it had become nicely settled after two hundred years of the Protestant regime, overturning all its established ways, which it fondly thought had existed *ab urbe condita*, forgetting how really very recent they were.

On the economic side we have a picture of a time when there was a very large and very cheap supply of labor for domestic purposes. Very highly skilled it was also, and equipped with that most valuable of commodities, a lively interest in the welfare of the house it served. Every gentleman of the old school held it to be his duty to care for at least one forlorn female, and as many more as his means would permit. The situation is photographed by the rate of wages paid domestic servants. In a day when there was a sufficient supply of high-class labor to be had for only the cost of its keep, the lower grades, called into use by a process closely analogous to Ricardian rent, could not expect a wage approaching the cost of living of the higher class. This condition, crystallized

into a tradition, as is the way with matters pertaining to that conservator of all things good or bad, the household, remains to this day to depress the wages paid domestic servants, because our grandmothers were able to take advantage of an extremely powerful form of competition.

The myth of the Colonial housewife, therefore, when carefully examined, proves to have many of the characteristics common to all myths, the merging of the deeds of many into a single mighty personality, the easy imputation of supernatural or semi-supernatural powers to the ancestors of the tribe, and the use of these tales to stimulate the younger generation. Instead of doing much less than her foremothers, the modern housewife does infinitely more, and, in spite of improvements and conveniences, at a much greater drain upon her vitality. With no one to "spell" her for even a day of rest, in unremitting toil and the burdens of child-bearing and rearing, in an age when housekeeping does not mean merely the cooking and serving of one course of simply prepared, hearty food, but the preparation of a meal more elaborate than that set before the dominie in the olden time, in an age when washing of clothes comes far oftener and requires infinitely more care and skill, when houses are filled with carpets or rugs whose care is by no means like unto a puncheon or plank floor that could be swashed with a bucket of water and scrubbed with a besom, with hangings, pictures, bric-a-brac, delicate china, silver whose polishing is never done, all of these labors in houses where there are more rooms than many a stately mansion of the olden time, each itself a multiplication of labors—truly, 'tis our grandmothers' turn to say, "How in the world do they do it?"

It is useless to say, "Go back." It is useless to say that the unmarried woman, by her reprehensible refusal to be humbled by her pitiable condition to a point where she is grateful for the obscurity of dependence, is the person responsible for the iniquities of the servant problem and the kitchenette. There are no "good old times" that would be recognized by the persons who lived in them. We live in much the best age of the world yet, and we are building for a better. While we may hold fast to that which is good, we must not forget to press on to the better life to come, to be willing to reorganize, to readjust, to give up even our most cherished notions of making a sponge-cake with milk for its superior richness when we find it better made with water because our chemist says eggs are not soluble in milk, or to have faith in a vacuum cleaner even if we do not see the dirt depart. In short, if we would not see the center and source of our social life becoming an intolerable burden upon those whose task it is to maintain its welfare, we must give up the idea that housekeeping and homemaking are instincts, and recognize that the economic side of these is a business, a profession if you will, and needs organization upon strictly business principles. There must be an understanding balance of investment and output, there must be proper appliances provided—and used—as in any other trade or profession. There must likewise be adequate dignity and reward. "Wot you get for nothink is worth just wot you pay for it," said the old bookseller in the "Divine Fire" to his son. It is an excellent maxim. The spiritual recognition of the dignity and worth of homemaking and its attendant labor will never enter very deeply into the "social mind" until there is made an adequate investment in and for such work in training and tools, and a recognition of its financial value. Until then we are likely to meet the ideal of the myth of the Colonial housewife—sheer labor power—and not that ennobling spiritualizing racial force which we like to think is enshrined in our vision of the American home.

MADISON, WIS.

MUSIC ART AND DRAMA

Operas and Concerts

Gluck and Puccini.

LOVERS of music who are familiar with the history of this art might feel inclined to think, on reading the above two names, that the second was a misprint for Piccini, whose name is always associated with Gluck's; but Puccini is all right. It was more than a century and a quarter ago that Piccini's name was pitted against Gluck's; today, in New York, it is Puccini's. The opera season opened with Gluck's "Armide," sung for the first time in America, and, with the exception of the same composer's "Orfeo," the oldest of all surviving operas; while the season's second novelty is the latest Italian score, which the Metropolitan has had the privilege of producing before any European opera house—Puccini's "Girl of the Golden West."

It is characteristic of the present sole manager of the Metropolitan, Giulio Gatti-Casazza, and his great conductor, Arturo Toscanini, that they applied themselves to the production of these two utterly dissimilar works, the alpha and omega in the operatic alphabet, with the same amount of zeal. The manager provided a scenic outfit for "Armide" so sumptuous that one could forget the foolishly old fashioned libretto—the story of the Saracen princess who falls in love with a coy Crusader, ensnares him with her arts of sorcery, but finally sees him rescued by his companions. The conductor and his singers—the cast included Caruso, Fremstad, Homer, Amato, Alma Gluck, Dinh Gilly, De Segurola—on their part entered into the spirit of this music sufficiently to enable a twentieth century audience to understand why Gluck is called the Wagner of the eighteenth century. The choruses of spirits in the lower world, in particular, have a dramatic directness and vigor astounding in an opera aged one hundred and thirty-three years.

The Germans of that day had little understanding for this kind of dramatic music, and in Paris, too, where Gluck sought refuge from the censures of his unappreciative countrymen, there were many who preferred the old fashioned operas of the Neapolitan school, of which Piccini provided more than a hundred.

Personally, Piccini was a peaceful man, who was dragged unwillingly into the fight with Gluck and his cohorts. Puccini, also, one may feel sure, is most amiably disposed toward "Armide," which he doubtless admires as much as do the manager and the conductor who have just been devoting weeks of hard labor to the problem of adequately staging his own "Girl of the Golden West." In fact, he remarked to a reporter the other day that modern opera is bound to return to the simpler methods prevailing in the days of Gluck. Probably he had in mind Richard Strauss, whose new opera, the "Rose Cavalier," now being staged in Germany and Italy, is said to be almost as simple as an operetta.

Puccini, who crossed the ocean several years ago to witness the launching in this country of his best opera, "Madama Butterfly," has come over again to help at the rehearsals of his latest work. It is his custom to select as subjects for his operas successful plays—a wise precaution. For the second time he has complimented David Belasco by falling in love with one of his productions and setting it to music; and Mr. Belasco has shown his appreciation of this compliment by giving his time, day after day and week after week, to rehearsing the singers in the ways of the California miners of '49. Caruso, for instance, who was hardly in his element as the Crusader in Gluck's "Armide," is certainly quite out of it as impersonator of a California bandit—that is, histrionically,

for the music is in a style he has made his own. The gentle baritone, Amato, also has had to work hard to look and act like a sheriff; and as for Emmy Destinn—could even Mr. Belasco, one wondered, transform her into a dashing Western maiden keeping a bar and riding a wild mustang?

Not content with solving such problems, Mr. Belasco provided suggestions, and more than suggestions, for scenery and costumes, allowing Mr. Gatti-Casazza's painters to copy the scenes used at the very successful production of the play. The costuming of this play has given Mr. Belasco more trouble than any of his other productions, even than "The Darling of the Gods"; for in that case he was able to use old Japanese prints as models; whereas, to get specimens of the attire of the forty-niners he had to send men specially to the old mining towns in California.

In his music Puccini has interwoven fragments of American airs, but for the most part the score is genuinely Italian and Puccinian, altho harmonically the influence of Debussy is not infrequently betrayed in a surprising manner. Among the musical gems in the opera are the "Longing for Home"—solo and chorus—in the first act; the love scene in the second; the storm music; and the hymn to California which ends the last act.

The production of Puccini's opera is to be followed, before Christmas, by Humperdinck's "Children of Kings," in which Geraldine Farrar has the leading part. In the meantime the German singers are being kept busy with the Wagner operas, to which the present management is giving as much attention as Conried and Dippel did. The indications are that Wagner will once more lead in the number of performances.

Orchestras and Pianists

While the Metropolitan Opera House is benefiting financially by the absence of competition, the orchestral field is still overcrowded. Nearly all the orchestral concerts are good, but there are so many that few of them are profitable. However, as long as generous patrons are willing to foot the bills no one has cause for complaint, except the overburdened critic.

The Philharmonic Society, which gives some two-score metropolitan concerts this year, has adopted a new policy, and now, for the first time in its long career, visits other cities. One of the methods by which its conductor, Gustav Mahler, makes his concerts so interesting is by retouching many of the classical scores, as Wagner and Weingartner retouched Beethoven's symphonies.

Some pedantic commentators censure him for this procedure; but there can be no doubt that the composers themselves, whose ideas Mahler makes clearer by his slight changes, would applaud him for it. He knows what he is doing, being as great a master of orchestration as Richard Strauss.

The New York Symphony Orchestra has not a conductor of so high a rank as the Philharmonic, but it is a good band of players, and Walter Damrosch usually makes excellent programs. So does Franz Arens, whose People's Symphony concerts offer good music to the masses at popular prices. The Volpe Orchestra has adopted the excellent policy of putting on each of its programs an American composition. The Boston Symphony once a month gives three concerts in Carnegie Hall and the Brooklyn Academy of Music. Its soloists so far have been Geraldine Farrar, Nellie Melba and Josef Hofmann.

Mr. Hofmann, it is a pleasure to relate, has at last come into his own. As a boy of eleven he played Chopin better than any adult pianist. Then came a breakdown and years of rest. When he returned to the concert halls hardly a trace of his genius seemed to be left. His manner was listless, his playing commonplace. From year to year he gained and now, at the age of thirty-four, he is as wonderful as he was at eleven, and in a much more comprehensive way. He now plays the music of the great romantic and classical masters as no one else but Paderewski can play it, and the public demands recital after recital, while the orchestras vie in their efforts to secure his co-operation.

Of other pianists, Adolphe Borchard and Xaver Scharwenka may be named. Mr. Borchard is best in French music

and in Mozart, while Scharwenka's powers are exhibited in his own compositions and those of Liszt. The last of the great pupils of Liszt, Arthur Friedheim, plays Chopin and Liszt at Mendelssohn Hall on Saturday, December 17. To hear him interpret the great Liszt sonata is an experience not to be forgotten.

Something entirely new in the concert world was the appearance daily, for a week, of the Russian Imperial Balalaika Orchestra, now on tour. The nearest approach to it in our own country is the college mandolin and banjo club. But the Balalaika band is as superior to these as a Yellow Newtown Pippin is to an Oregon crab apple. The leader of this unique orchestra, W. W. Andreiff, took two Russian peasant instruments of the mandolin family, the balalaika and domra, improved them, added shepherd's pipes and a sort of zither, or autoharp, and by combining these diversely he secures many new and exquisite tonal colors. Folksongs chiefly are played, but arrangements of pieces by the great masters also are given, and everything is played with a precision and a subtlety of shading that enchant the most critical listeners.

Bonci and Sembrich.

Alessandro Bonci, famous as an exponent of *bel canto* in the operas of Donizetti, Bellini and Rossini, having found that these composers are being displaced by Puccini, whose operas require less vocal art but more robust vigor, has entered the concert field. He is traveling thruout the country, and his choice of songs, if the recital he gave at Carnegie Hall is a fair specimen, shows excellent taste and a wide range. It is needless to say that he could not effectively present emotional or dramatic songs, like "The Erlking" or "Die Allmacht"; but he succeeded well with two other Schubert songs, "Hark, Hark, the Lark" and "Who Is Sylvia," which he sang in excellent English, a language which, as a matter of course, he also used in two MacDowell songs.

Marcella Sembrich has given many recitals of art-songs; a new thing was her folk-song recital last week. There were no fewer than twenty-nine of these popular melodies culled from nearly all the European countries that are noted for their folkmusic; thirteen languages were represented, and the eminent Polish vocalist sang all of them in their original language. Their reception was so cordial that she will probably repeat them in other cities included in her present tour.

Early Oriental Rugs

Every lover of the beautiful, and every appreciator of beauty as art (whether he knows why or not), who visits New York in the course of the coming month should not fail to see the splendid exhibition of early Oriental rugs which is to remain at the Metropolitan Museum of Art until January 15. It is a loan exhibition, and, inasmuch as private owners are loth to part with such rare and costly fabrics, even for a few weeks, it is not likely that such another opportunity will soon be found in this country for the study of the Oriental weaver's art.

The three greatest markets in the world for modern Oriental rugs are Constantinople, Paris and New York. And the greatest of these is New York. Thousands of rugs from the looms of the East are brought to this port every year, and many of these find their way to the inland cities and towns. Nevertheless, extensive as is this trade in Eastern rugs, there has been comparatively little appreciation on the part of the public of the rugs of the best periods —the old weavings of the fifteenth, sixteenth and seventeenth centuries. This, thinks the directing staff of the Metropolitan Museum, is largely the result of the inadequate illustration in American public museums of the great classic products of textile design in the East. Altho a beginning has been made in the Museum of Fine Arts in Boston and in the Metropolitan Museum of Art, no institution of fine arts in this country has as yet a collection of old rugs in any way equal to the collections in nearly every large European museum.

The gathering of forty-nine pieces serves to show the surprising richness of private collections in this country of the centuries from the fourteenth to the eighteenth. It also serves to show con-

clusively that in harmony of color and for beauty of simplicity in design these old "classic" weavings are as superior to the best modern Oriental rug as that, in turn, is to the average domestic carpet. Each exhibit is worthy of careful study. Excepting only the best old Chinese rugs, of approximately the same period, no other works of the patient artisan of the carpet-loom so completely satisfy the esthetic sense. For those who have learned the elements of their language their charm is potent. Superb in the splendor and variety of their coloring; harmonious in design no less than in color; often revealing a spirited daring of conception, again compacted of meltingly graceful patterns, lines or figures; wrought in the most workmanlike manner (some of the Indian rugs in the exhibition, particularly, are marvels of close weaving, having more than 700 knots to the square inch); exquisite in detail and finish, and having the texture of silkiest fur—assuredly these beautiful rugs belong to the category of the things "from which the soul draws nourishment."

Two Portraits of President Taft

Joáquin Sorolla y Bastida, the Spanish painter, whose pictures aroused unprecedented interest in the several American cities where they were exhibited two years ago this winter, has painted a life-size portrait of President Taft, which is shown this month at the Scott & Fowles gallery, No. 590 Fifth avenue. It is told of the artist that he does not like to paint "rulers," yet when he received a request from the wife of one of the President's brothers to make a portrait of Mr. Taft he considered it a command which he dared not disobey. He prepared for his task with trepidation, for he knows little English and dislikes French, which he supposed would be the only other language spoken by the President. To his surprise he found that Mrs. Taft could carry on an animated conversation with him in his own tongue and that the President himself knew enough Spanish to join in occasionally. Mr. Taft's friendly geniality put the little painter at his ease. The portrait is an exceedingly interesting and a thoroly workmanlike piece of painting, and, barring a slightly too-florid color, is a fairly good presentment of the President's physical appearance. It does not succeed in revealing the soul of the man. It must be conceded that Sorolla is not a great portrait painter—not a strong delineator of individual character. He is at his best only when painting out of doors, with the light of day irradiating his subject.

A miniature portrait of President Taft by Alyn Williams, president of the Royal Society of Miniature Painters of London, which has been presented to the National Gallery at Washington and is at present on exhibition at Knoedler's along with some thirty other portrait miniatures by the same hand, is not only one of the most beautiful miniatures seen hereabouts in a long time but is also an excellent likeness. This little miniature is, indeed, far more satisfactory both as a delineation of the outward features and as a revealment of the noble character informing them than is Sorolla's life-size oil painting.

Pictures by Mr. and Mrs. George Hitchcock

Some thirty-five oil paintings by George Hitchcock (an American who is semi-cosmopolitan in his art, with French methods dominating) and thirteen water-colors by Mrs. Hitchcock (who is known in the art world as Cecil Jay), on exhibition at the Knoedler galleries since December 1, will be shown at the Chicago Art Institute Museum in January, and probably in other Western cities later on. They are worth going a bit out of one's way to see. Mr. Hitchcock's Dutch gardens are aglow with brilliant sunshine and the joy of life. In two of the new pictures, the "Ste. Genevieve" and "The Flight Into Egypt," he discloses a hitherto unrevealed mastery of the color harmonies in the lower tones of gray. These are noble and beautiful pictures. Mrs. Hitchcock's dainty little water-colors of young mothers and little maidens and babes of the Low Countries' peasant class possess a gemlike brilliance and the charm of beautiful miniatures.

ANDREYEV'S "ANATHEMA" AS PRESENTED AT THE ARTISTIC THEATER IN MOSCOW.
The last scene, in which David is stoned by those whose poverty and sickness he cannot relieve, while Anathema, seated on the wall behind him, watches cynically the victim of his machinations.

Drama

For those in search of the unusual and exotic the presentation of Andreyev's "Anathema" at the Lipzin Theater on the Bowery affords a rare treat. The East Side takes even its plays seriously and this modern allegory has displaced the customary melodrama which was running there, and is being well attended and earnestly discussed. The acting is so zealous and sincere that one overlooks the inadequacies of the stage setting even in such spectacular scenes as the Prolog and Epilog at the Gate of Heaven. If the play is produced in English upon the large stage of a Broadway house, as it is likely to be, it may lose in feeling as much as it will gain in appearance. And in no American theater is it likely to be put on with so much taste as it was in the Artistic Theater at Moscow, one of the scenes of which we reproduce here.

The play is as well worth reading as seeing, perhaps better to one of vivid imagination. It is now accessible in Mr. Bernstein's translation* and is to be recommended to clubs devoted to the reading of modern drama because it affords unlimited scope for discussion and interpretation. This Slavonic Devil is as utterly unlike the German Devil with whom "Faust" has made us familiar as the Viennese Devil who appeared last year under the escort of Ferenc Molnar. The Accursed One according to Andreyev is an erratic, unstable, ambitious, and clever creature, or rather being, alternately boastful and cringing, always plotting and ever defeated. This play is one of his defeats, very like Job in form. Anathema after a conference with the Guardian of the Gate goes down to earth to destroy the immortal soul of a poor Jew, David Lezier. He makes use of riches instead of misfortunes for this purpose, informing him that his long lost brother who had gone to America has left him a bequest of $2,000,000. David turns his back upon the associates of his days of poverty, lives in a fine city house, while his son and daughter strive to enter society. Finding that all this is vanity, David tries charity and lavishes his millions on the poor. All races flock to him and crowd into his house, bringing their blind, lame and even their dead for

*ANATHEMA. A Tragedy in Seven Scenes. *By Leonid Andreyev.* Authorized Translation by Herman Bernstein. New York: The Macmillan Company. $1.25.

him to heal and restore. David, penniless, flees from his burning house to the wilderness, pursued by the disappointed mob, who stone him when they find he will do nothing more for them. Anathema appears again at the Gate of Heaven, boasting of David's ruin, but he is told by the mysterious Guardian that David, tho apparently destroyed, has really gained immortality. He then returns to earth to deceive the people as to who caused David's death, and to get them to raise a monument to his memory.

The interpretation thereof, the question whether David represents the Son of David or the Race of David, or the Russian revolutionary party, or Tolstoy, or something altogether different, may be safely left to the ingenious intellects of the Andreyev clubs. It may be noted that as it was presented in Yiddish on the Bowery Anathema looked suspiciously like a Christian clergyman.

"Electra," which had its première in the Athenian Theater 2,323 years ago, is revived by the Coburn players, who have been giving it on summer lawns, but now have taken to shelter for the winter. It is a good performance. The rimed version of Euripides' verse is well delivered; the acting, or rather the posing, for there is little action, is dignified and impressive if not classical; and the movements and grouping of the choruses are pleasing to look upon. It should be seen as part of one's education, but neither the genius of author nor the art of the actors can make human to us moderns the perverted morality and savage instincts of the Greeks.

"The Gamblers" is a tense and realistic play of modern politics and finance, somewhat like "The Lion and the Mouse," by the same author, Charles Klein. But Mr. Klein has improved in technique. In skilful construction this play will compare with one of Bernstein's or Bataille's. It is like the French too, in that its ingenious casuistry leads the audience to applaud any kind of successful crime if committed with a tender-hearted motive. But it is not French in its ethics. Why not play it on alternate nights with Bourget's great play, "A Divorce," as a kind of dramatic debate on the marriage question? Formerly a marriage was the conventional happy ending to a play. But times change. Now the popular thing in America seems to be to hold out a divorce as the happy ending.

THE COBURN PLAYERS IN THE "ELECTRA" OF EURIPIDES.
The translation used is that by Gilbert Murray. Orestes (Mr. Coburn) and Pylades (David Kirkland), the strangers, accept the hospitality of The Peasant (J. Malcolm Dunn) and Electra (Mrs. Coburn).

See "Paid in Full" for another example. "The Gamblers" is admirably acted in all its roles. George Nash's peculiar voice is as effectively used as in "The Harvest Moon" of last year.

The theme of "The Concert" is the embarrassment and trouble brought upon a music teacher by the devotion of his lady pupils. Its delicate situations are passed off in a lively and inoffensive manner, its satire is pertinent and all the characters interesting. Gabor Arany, as portrayed by Mr. Leo Ditrichstein, is as genuine in his way as that other and very different "Music Master" that Mr. Belasco has given us.

This is a season of revivals; owing, say the authors, to the timidity of the managers, owing, according to the managers, to the dearth of original plays. "The Importance of Being Earnest" by Oscar Wilde has lost little of its flavor from being kept in cold storage, altho it differs markedly from other plays of the season in having no recourse to the telephone and in using a dog cart instead of an automobile. Wilde was the precursor of Shaw in the art of inverting proverbial philosophy and the play is crowded full of the witty things one resolves to quote but never can remember afterward.

No visitor to New York who wants to be sure of seeing a good play invariably well acted will be disappointed at anything produced at the New Theater. Consequently we are at a loss to account for the severe criticism in some quarters that has followed the production of "The Merry Wives of Windsor" at that most admirable playhouse. To be sure, the humor and wit of "The Merry Wives" is a bit archaic, where not too broad, and the old comedy scarcely has the same appeal to this generation that it did to that of our great-great-great ancestors. But "if one likes that sort of thing, it is just the sort of thing one will like." As it is difficult to conceive "The Merry Wives of Windsor" better staged or better acted, it logically follows that if it does not please, Shakespeare is to be blamed and not the New Theater.

New York City.

Soul Music

BY LOVICK P. WINTER

There's soothing melody and sweet
In Vesper winds that gently blow;
But he who scans their metric feet
A spirit-melody must know.

The murmuring brook hath tuneful tongue;
There's music, too, in mountain streams;
But he who hears the streamlet's song,
Hath heard its cadence in his dreams.

The lullaby of peace and rest
Is softly crooned by summer rain;
But he whom thus the clouds have blest,
Hath listened to diviner strain.

There's harmony in the circling spheres
Which round the sun unceasing roll:
This pæan grand alone he hears
Who hath true harmony of soul.

Old Ocean's anthem, deep, sublime,
Resounds in every surging sea:
Who listens, hears on shores of Time
The beatings of Eternity!

Tignall, Ga.

Literature

Eight Great Statesmen

With laudable zeal, the members of the Hamilton family strive to keep alive the memory of their illustrious ancestor, and each generation makes some contribution to the already monumental collection of lives, letters, papers and documents. The last work,[1] by a grandson, Allan McLane Hamilton, differs from its predecessors in laying stress upon the intimate rather than the public life of the great statesman, and its chief virtue lies in the fact that it contains much hitherto unpublished and throws light upon details which have been slurred over by other writers. For example, Hamilton's origin is made clearer than ever before; and the charge of illegitimacy is met by a full and satisfactory explanation of the legal difficulties which prevented his mother from securing a divorce from the rich Jew to whom she was first married and which caused her to live in a state of informal wedlock with James Hamilton, the father of Alexander. The courtship and marriage of the doughty champion of nationalism, his habits as a lawyer, and his home life, are lighted up by the publication of his more personal letters, which effectively quash the indictment of "excessive gravity," brought by the English author, Oliver. There are many pages of this record, so full of intimacy and delicacy, which will be long cherished by those who care for memoirs and delight in coming into full view of the commonplaces of a great life. On larger matters of historical importance, so full of bitterness and controversy, our author is frankly a partisan. Indeed, it must be admitted that he is hardly qualified by a wide historical outlook and a constructive sympathy with Hamilton's enemies to enlighten his public upon such themes as Federalist-Jeffersonian politics, and the unhappy Burr affair. Take, for instance our author's treatment of the charge made by Gouverneur Morris that Hamilton detested democracy, and had little to do with the construction of the Constitution. The author meets the former article by making general statements of a question-begging character and by quoting from one of Hamilton's letters that "I never proposed either a President or Senator for life" (p. 51). Now, as to the general statements, there is no use quarreling; but there is no doubt about Hamilton's belief in government by "the rich and well-born," to use his own phrase; and as for the "mass of the people," he said, "they seldom judge or determine right," altho he knew that it was impossible to exclude them from all share in the government. These remarks he made behind closed doors in the Federal Convention of 1789, and as was his wont, he was more free with his views on such occasions than when speaking or writing for the great general public. In the matter of a life term for Senators, he said on the occasion just mentioned that they should "remain in office during life." With regard to Hamilton's share in the actual construction of the Constitution Morris is unquestionably right, as is evidenced by the plain record of the convention and the rejection of his federal schemes. As to the Burr controversy, there are two sides; and had Burr fallen instead of Hamilton another story might have been left to posterity. But enough. This is a good book for those who know their American history, a bad book for the mere casual reader already confirmed in his hero worship.

Any one making a farther search for a quiet hour with great men will do well to turn to Andrew D. White's essays on seven great statesmen—Sarpi, Grotius, Thomasius, Turgot, Stein, Cavour and Bismarck.[2] It is true that this author, like the rest of mankind, has his decided likes and dislikes; and it is sometimes charged (not without warrant) that, in the fashion of any good advocate, he warps his facts to make a strong case. Nevertheless, he is not of the family of any about whom he writes; and, leaving

[1] Life of Alexander Hamilton. *By Allan McLane Hamilton.* New York: Charles Scribner's Sons. $3.50.

[2] Seven Great Statesmen. *By Andrew D. White.* New York: The Century Co. $2.50.

aside his personal tendencies, anything that a man of such varied attainments and wide experiences may say about the abiding characters of history has a value of its own. Of Sarpi, the sixteenth century champion of the secular state, historian, and veritable hammer of ecclesiastical dominion; of Grotius, who so advanced the cause of universal peace in an age of almost universal war, and is now coming into his own; of Thomasius, enemy of witchcraft and inhumanity in criminal law, who so nobly aided the cause of toleration and right reason; of Turgot, the French minister who fain would have saved the monarchy from revolution by timely changes in an outworn system; of Stein, the reformer who helped mightily to strike away the feudal foundations of Prussia early in the nineteenth century and to prepare her for the great task of unifying Germany—of these men Mr. White writes in the fulness of historical knowledge and ripeness of wisdom. He describes their work as one who frankly and zealously places a high value upon it—they all deserve, in his opinion, a firm place in the new Plutarch of men who have waged war against the tyranny of authority and unreason. Of Cavour, the founder of modern Italy, and Bismarck, the empire builder, Mr. White writes with more intimate feeling. The latter he knew in person, and to the written records that any one may read he adds personal turns which could not have been drawn from any printed page. The former he never met, but he knows well the Italian materials with which Cavour worked. There is no room here to say more than this: Mr. White's book will find its way to the shelf of every serious student of modern history; and it will prove a great solace to the liberals everywhere—even one who can laugh with both Shaw and Chesterton.

Studies in Old Testament Religion

It is now generally acknowledged that Hebrew religious conceptions and institutions grew out of a common stock of ideas, rites and customs which Israel at an early period shared with other Semitic tribes and nations. Whatever divine leadership may be claimed for the course of development which the religion of Israel took, there is no denying that it bears the earmarks of its ancestry, and its growth and meaning are more fully understood when studied in relation to other Semitic types. In fact, comparative study does not belittle the characteristic elements of the Hebrew religion, but makes them more conspicuous. Most writers who have taken in hand the task of showing the relation between the religion of Israel and kindred types have limited their endeavors to pointing out traits which indicated Israel's dependence on older sources, but Professor Berry, in his new volume on *The Old Testament Among the Semitic Religions,*[1] discusses the features they have in common and emphasizes those superior qualities and ideals which appear in the Old Testament and distinguish it from the records of other Semitic religions. The work is scholarly and careful, perhaps too cautious in accepting fully conclusions toward which the facts clearly point. Professor Berry accounts for similarities by both borrowing and inheritance, but insists that in all important points, as the conceptions of God, sin, sacrifice and salvation, the independent development of the Hebrew religion carried its teachings to a higher spiritual plane or transformed them altogether. One is inclined to think that the uniqueness of the Old Testament is sometimes over-emphasized, but even so, the result is much nearer the truth than Winckler's assertion that "Judaism must have received not only its impulse, but also its entire system," in Babylonia. In discussing some of the Hebrew teachings the author could have avoided a certain confusion and simplified matters a good deal by taking into account the various stages of development instead of treating the whole as one consistent body of truth or custom.

More theological and less comparative are these studies in *Israel's Ideal,*[2] by the author of "Sermons in Syntax." Mr.

[1] The Old Testament Among the Semitic Religions. *By George Ricker Berry, Ph.D., D.D.,* Professor of Semitic Languages, Colgate University. Philadelphia: The Griffith & Rowland Press. $1.

[2] Israel's Ideal, or Studies in Old Testament Theology. *By Rev. John Adams, B.D.,* Inverkeilor, Author of "Sermons in Syntax," "Sermons in Accents," etc. Imported by Charles Scribner's Sons, New York. $1.50.

Adams tries to look at everything in the Hebrew religion from the standpoint of Semitic heathenism, for he regards primitive Semitic religions as a kind of "hinterland" of the Old Testament, and believes the latter can be best interpreted thru a knowledge of the former. Yet it must be said that the best chapters of his book are those which discuss subjects least connected with other Semitic religions, such as Old Testament prophecy and the character of Jehovah, the God of Israel. The author's occasional use of apt and telling imagery makes very attractive reading of what would otherwise be rather dry. Too often this freshness of style is replaced by more precise but less interesting doctrinal discussions.

Of quite a different character is Professor Smith's study of the Hebrew *Religion in the Making*.[3] The author is not a specialist in Old Testament, altho trained for the ministry, but has been an instructor in sociology for nearly twenty years. His work as a Bible class teacher, however, has led him to examine the Bible carefully from the standpoint of his own specialty, and the results are here set forth. The comparative method is, of course, used, but Professor Smith has not confined himself to ancient or Semitic religions, gathering material from all available sources to illustrate and account for the various developments in the Old Testament religion. The work is well done, altho it would have been better had Professor Smith taken into account oftener the assured results in regard to the chronological arrangement of his literary sources. It is interesting to note that this sociological study of the data confirms the critical view of the date of the Levitical code. Professor Smith concludes that the great legacy of permanent worth which the Hebrews have left to the world consists of their idea of God, their standard of righteousness, the idealization of sacrifice, and the institution of the Sabbath. No mean contribution for one small and despised nation! The book is clearly written and always interesting in its subject matter. Unlike the two preceding, it has no technical language nor untranslated foreign words and phrases, but like them it is based on a comprehensive study of the best literature of the subject.

[3] RELIGION IN THE MAKING, A STUDY IN BIBLICAL SOCIOLOGY. *By Samuel G. Smith, D.D., Ph.D., LL.D.*, Head Professor of the Department of Sociology and Anthropology in the University of Minnesota. The Macmillan Company. $1.25 net.

Shelburne Essays

MOST of the criticism of the day, or the writing about books classed as criticism, is vitiated for lack of a point of view. The critics do not know their own minds and naturally they make a muddle of it when they attempt to interpret the minds of others. Their views of life and literature look like the blurred picture one gets when he tries to photograph the landscape from a car window.

Mr. More's superiority over most critics seems to us to lie chiefly in the possession of a fixed standpoint. His stability of character and rigorous self-training has given him a personal philosophy, which, however, he does not impose upon others, but uses inoffensively as a *point de repère*. His mind is rooted deep in ancient Greece and India, yet he makes no display of archeology, not even when reproving an author for shallow modernism. On account of his consistency and individuality his critiques become more valuable in such a collection as the *Shelburne Essays** than when published anonymously and separately. The editorial "we" even when used in the *Nation* is less impressive than "I" when backed up by other volumes like the one in hand.

Of the twelve essays in this volume that on "Criticism" interested us most. It is a justification of his profession, more explicit tho not more effective than the whole seven Shelburnes. One sentence in it we should like to see painted on the walls of the classical lecture rooms of our universities:

> "The aim of culture is not to merge the present in a sterile dream of the past, but to hold the past as a living force in the present."

In this as in many other points Mr. More's thought is closely allied to Bergson's. He himself recognizes this and is inclined to turn a friendly eye in the direction of the French philosopher. But

*SHELBURNE ESSAYS. *By Paul Elmer More.* Seventh Series. New York: G. P. Putnam's Sons. $1.25.

why does he call Bergson's works "un-co-ordinated?" It seems to us, on the contrary, that Bergson is distinguished by his single-minded devotion to the idea which possessed him in his youth, and that his few books have all been devoted to the development of his theory of duration. Even *Le Rire,* which might at the time have been thought a sport, is now seen to fit into its appointed niche in his cosmic philosophy. But if we get to quarreling with Mr. More over details on which we do not agree with him we shall take more space than we have used in commending his work as a whole.

Europe Since 1815. By Charles Downer Hazen. New York: Henry Holt & Co. $3.

In a series under the editorship of Professor Haskins, of Harvard, now appears a volume on *Europe Since 1815,* by the professor of history in Smith College. "Needless to say," confesses the historian, "only the broader lines of the evolution of so crowded a century can be traced in a single volume." However, there is room within Professor Hazen's eight hundred pages for an enlightening account of the most important events in the political history of Europe, including England, since the fall of Bonaparte. The method has been "to bring down more or less together the histories of those countries which have so intimately and significantly interacted upon each other — Austria, Prussia, France and Italy—that the evolution of one cannot be even approximately understood apart from a knowledge of the current evolution of the others." Next, Professor Hazen returns to his starting point, 1815, and traces the histories of England, Russia, Turkey, etc., "separately, gaining the advantage of being able to show their continuous development." The value of the resultant work, which is largely secondary (almost inevitably so, considering the extent of the field), can be tested only by the book's use in the classroom or on the editorial table. Without so testing it one cannot fairly measure it against the familiar and rather more detailed Seignobos. But Professor Hazen's material seems to be well handled here; his chapters are not deficient in coherence; his style, which is innocent of distracting distinction, is, withal, marked by clearness and simplicity. Fourteen excellent maps, in color, a full index and a bibliography add to this book's practical value.

Italian Fantasies. By Israel Zangwill. New York: The Macmillan Co. $2.

I, too, have crossed the Alps, and Hannibal himself had no such baggage of dreams and memories, such fife and drum of lyrics, such horns of ivory, such emblazoned standards and streamered gonfalons, flying and fluttering, such phalanxes of heroes, such visions of cities to spoil and riches to rifle—palace and temple, bust and picture, tapestry and mosaic.

Israel Zangwill, in winged words like these, prefaces his *Italian Fantasies.* He kisses the hem of Italy's blue robe "starred with white cities," and in a mood compounded of worship and whimsy he sings along the white roads, stops to rest at the wayside inns, wanders thru churches and chapels at once admiring and distrustful of the dominant religion. A mind at play is always a delight, and the sense of leisure, of discoursiveness, of a frolic in holiday mood, runs thru the fantasies like a dancing sprite:

"All haloes are proleptic even from childhood. Those poor martyrs, what they suffered at the hands of painters without a gleam of humor! . . .

"To see this Heaven is to be reconciled to earth. . . . This it is that preserves the self-respect of the blackest of us, this capacity of ours for seeing our neighbor's sins, which is the chief bulwark of public virtue."

Quotation is a temptation to the reviewer of this joyous book. Zangwill has the courage to admit that there is an "icy Italy" and an "ugly Italy" as well as the dream-country of beauty and delight. And he warns the land of Mazzini and Cavour against "Nationalism," which he calls a disease.

"For Italy, which has won back territory and liberty, to continue at fever heat would be sickness, not health. Even too much self-admonition to do noble things for national reasons rather than for their own sakes is a morbid self-consciousness. To make history too consciously is to make histrionics. . . ."

One chapter bears the startling title "The Earth the Center of the Universe, or the Absurdity of Astronomy," in which he supports the thesis that man is the true

goal of creation. "Wherever McGregor sits is the head of the table," or, as the author characteristically expresses it, "Can a man take thought by adding a cubit to his stature?" Indeed Mr. Zangwill is always ready to champion Will and Emotion, which he insists "have too meekly contented themselves with a minority report," against the aggression and bullying ambition of Reason, the third partner in the firm. He denies that Science can explain the universe since it is unable to explain the explainer. "In this way Herbert Spencer explained everything—except Herbert Spencer."

Literary Notes

....The Yukon is the scene of H. A. Cody's *Frontiersman,* a novel newly issued thru Geo. H. Doran Co. ($1.20). We commend the tale to all admirers of Ralph Connor's fiction.

....Highly spiced and of many constituents assembled from Broadway, the High Seas and "high-life" is the new novel by Lilian Bell: *Angela's Guest* (Duffield. $1.50). The illustrations are by Mr. Wenzell.

....The full text of the protocols of the North Atlantic Coast Fisheries Tribunal of Arbitration and the award of the Court have just been published in English by Van Langenhuysen Brothers, at The Hague.

....*The Conservation of Water* is the title given to a new volume by John L. Mathews (Small, Maynard. $2). The photographic illustrations add to the interest of a volume which deserves fuller notice than we can extend to it at this holiday season.

....Expressive of militant hostility to the drink evil is the sheaf of papers gathered up by Rev. Jenkin Lloyd Jones as *On the Firing Line* (Unity Publishing Co., Chicago. 50 cents). These vigorous documents promise enlightenment to the experienced social workers.

....It takes Rheta Child Dorr 339 pages, including the index, to tell *What Eight Million Women Want.* Her book interprets the collective aspiration of woman, and is a detailed statement of what womanhood militant is doing and thinking in the world today. (Small, Maynard. $2.)

....Emerson Hough returns to the more or less historical novel in his *Purchase Price,* published by the Bobbs-Merrill Co. ($1.50.) Love, slavery and politics furnish the complication; a more or less cosmopolitan Washington, and certain Southern and Western States, the scene. Some of the illustrations by M. Leone Bracker deserve praise.

....The author of "The Blue Lagoon" and "The Pools of Silence" is to the fore with a romance of the Second Empire: *The Drums of War* (Duffield. $1.20). Mr. Stacpoole uses much sprightliness in his representation of the various Parisians who throng his scene. We would remind him that the name of the author of "Undine" is usually spelled Fouqué.

....*Love and the Year* is the poem which gives its name to the volume of verse by Grace Griswold, newly published by Duffield & Co. (60 cents). The quality of these lyrics—interspersed with a few sonnets and "legends" and one performance entitled "Christian (?) Science"—is, in spite of the absence of marked originality, altogether delightful; and the spirit always endearing.

....Neither Worthington C. Ford nor Lindsay Swift breaks ground in the contribution which he makes to the Beacon Biographies. The one tells the story of George Washington, the other that of Benjamin Franklin. Obviously only a sketch can be given within the hundred and fifty pages or thereabouts available. In both cases it is a good sketch, and resembles its original. (Small, Maynard. 50 cents each.)

....Two kinds of writing about education are represented in the sketch of *Education in the United States since the Civil War,* by President Charles F. Thwing (Houghton, Mifflin. $1.25), and the more theoretical work of Dr. H. H. Horne; *Idealism in Education, or First Principles in the Making of Men and Women* (Macmillan. $1.25). The latter volume presents in tabloid form the principles of heredity as they affect education; the rôle of environment; the philosophy of "man-making" —and certain psychological phases of the impressive subject.

....Rev. Dr. Julian Richter, an expert on Christian missions, has translated, with careful revision and adaptation to American readers his *History of Protestant Missions in the Near East* (New York: Fleming H. Revell Co. $2.50). After a study of the Mohammedan world and the Eastern Churches, Dr. Richter surveys the history and present condition of Protestant missionary endeavor in Turkey, Armenia, Syria, Persia, Egypt and Abyssinia, with special attention to that which has been accomplished thru the efforts of American Churches.

....It was recently observed by one of the literary journals that, while in France journalism is, very frequently, the path that leads to public office, only one Englishman, Lord Morley, had passed from proofs to portfolio. But, within a half-century, of the ten premiers who have held office, only three, Palmerston, Campbell-Bannerman and Asquith, have not been authors. And an ex-premier has just made a fresh contribution in *Chatham: His Early Life and Connections*—the ex-premier being, this time, Lord Rosebery. (Harpers. $3.)

....Fritz Reuter's is one of the recently celebrated centenaries Like De Morgan, this Plattdeutsch romancer delayed to a surprisingly late date his literary début. At forty-five, he must have seemed to himself and to other men a complete failure. Yet in his twelve

years of fruitfulness he made glad almost as many hearts as his greater successors among continental novelists have depressed. His heyday was rudely interrupted by the Franco-Prussian War; and Reuter never "came back." For tho he was a patriot, Reuter was no exponent of German imperialism—or of Pan-Germanism. In English, we have translations of his "Ut mine Stomtid" (*Seedtime and Harvest*) and "Ut de Franzosentid" (*In the Year '13*); but it may be doubted whether we reread these simple tales.

....*The River and I* tells the story of a four-thousand-mile trip by John G. Neihardt, the Nebraska poet. He tells his story well, and exercise, adventure and thrilling experience mingle and commingle in his tale. "The River" is the Missouri.

....Another volume in somewhat similar vein is *The Mississippi River,* altho this book is not the record of a personal journey upon the bosom of the "Father of Waters." The author, Julius Chambers, seeks rather to indicate the river's place in romance, religion, diplomacy, peace, war and in literature. The result has been a worthy volume in the "American Waterways" series.

.....Religious books we have always with us, but a note of difference is struck by Dr. Timothy Richard in his *New Testament of Higher Buddhism,* imported by Scribner's ($2). Praiseworthy, no less, is the little symposium, *Early Ideals of Righteousness,* imported by the same house, and discussing ideals Hebrew, Greek and Roman ($1). The authors are Prof. R. H. Kennett, Mrs. Adam and Prof. H. M. Gwatkin. The United Press (Philadelphia) are the American publishers of a third volume of distinction; to Dr. J. P. Lilley's *Victory of the Gospel, A Survey of World-Wide Evangelism* ($1.50) has been awarded a $500 prize in an open competition wherein over 100 missionary workers were entered; that sum being one-half the prize offered in the contest originated by *The Christian.*

....A look at the bookshelves marked "Juvenile" suggests that it will not be long before all our Young Hopefuls are full-fledged folklorists. There is no apparent limit to their fields of fancy. The latest annexation is olden Norway: a volume of *Norse Fairy Tales* has been published by the Lippincotts, selected and adapted from the Dasent translation, with more than 100 illustrations by R. L. and H. J. Knowles ($1.75). The Rand-McNally Co. are the publishers of another interesting reprint for children: *The Pied Piper,* vigorously done in colors ($1.25). Finally, from Dutton we receive a whole row of fairy tales: *Mother Goose, Old Mother Goose Nursery Rhymes, Grimm's Fairy Tales,* and Hans Andersen's; together with *Robinson Crusoe* and *Swiss Family Robinson.* These are illustrated in colors and in line by various hands, and make a brave appearance. Each volume is edited, with an introduction, by Walter Jerrold; the whole series is called the Children's Classics, and is published at $1.25.

Pebbles

THE *Globe* is in receipt of an advance copy of a speech Gifford Pinchot is to deliver in Detroit next Friday night, with instructions to hold the same until it is released. It will be held longer than that.—*Atchison Globe.*

ONE item in the election expenses of a defeated candidate for the Legislature in Pennsylvania is a paper of tacks. Probably to be sprinkled where they will do the most good before the successful rival takes his seat.—*N. Y. Evening Sun.*

"Now," said the suffraget orator, sweeping the audience with her eagle eye, "I see Mr. Dobbs sitting down there in the third row—a man who has condescended to come here tonight and listen to our arguments. He has heard what I have had to say, and I think we should like to hear from him, and get a man's view of our cause. Mr. Dobbs, tell us what you think of the suffragets."

"Oh, I c-c-couldn't, m-m-ma'am," stammered Dobbs. "I rur-really c-couldn't. Thuthere are l-l-lul-ladies pup-present."—*Harper's Weekly.*

AND these, according to the examination papers in one room, are what Andrew Carnegie is, was, and did:

Invented the mower and reaper.
Member of the President's Cabinet.
A British spy.
Went to France to get help for the U. S.
Best after-dinner speaker in America.
A steel magnet.
Invented wireless telegraphy
General in the Spanish-American war.
Head of the Steel Trust.

Everybody's Magazine.

"THE most amusing story of an American in France that I ever heard," said a recently appointed attache to the French Embassy, is this:

"'A well-known French actor became involved in a discussion with an American, grew heated, drew his card from his pocket, threw it on the table with a tragic air, and stalked out.

"'The American regarded the card for some moments, then took out his fountain pen, wrote "Admit bearer" above the engraved line, and went off to the theater.'"—*Brooklyn Life.*

CHAUNCEY M. DEPEW, at a dinner in Washington, was praising the wit of women.

"Against this wit," he said, "we men are powerless. Even when all the right and logic of an argument is on our side, woman, with all her wit, will, nine times out of ten, put us to shame.

"Thus, a man once found that his wife had bought a few puffs of false hair. This displeased him. He hid in the hall one day, and, just as the lady was fixing the false puffs upon her brow, he darted in upon her.

"'Mary,' he said reproachfully, 'why do you put the hair of another woman on your head?'

"'Why,' his wife answered, 'do you put the skin of another calf on your hands?'"

The Independent

Entered at New York Post Office as Second Class Matter
Publisher, Clarence W. Bowen
130 Fulton Street - - - New York

A WEEKLY MAGAZINE. FOUNDED IN 1848.

One Year, $3.00. Single Copies, 10 Cents.

Single copies over six months old 25 cents. Postage to any foreign country in the Universal Postal Union, $1.75 a year extra; to Canada, $1.00 extra. Subscriptions will be received for other periodicals, and clubbing rates will be granted as low as offered by any responsible agency.

Order for the change of an address should be received two weeks before change is to take effect. The old as well as the new address should be given.

For the convenience of our subscribers we will send on receipt of publisher's price any book reviewed or advertised in our columns.

Volumes of The Independent are completed at the end of December and June, and a full index is furnished free on application. Neat binders holding in book form thirteen current issues will be furnished for 45 cents.

If the numbers comprising any semi-annual volume are returned to us prepaid in good condition with $1.50 we will bind the volume in handsome and substantial half buckram and deliver it free anywhere in the United States.

We are always glad to receive articles for examination, but writers desiring the return of their manuscripts, if not accepted, should send a stamped and addressed envelope. We cannot, however, even so, hold ourselves responsible for their return. Authors should preserve a copy.

Advertising rates will be furnished on application.

The Ballinger Investigation and the Coal Lands

WE cannot approve the assertion of a majority of the committee engaged in the Ballinger-Pinchot investigation, that the testimony did not "exhibit Mr. Ballinger as being anything but a competent and honorable gentleman, honestly and faithfully performing the duties of his high office, with an eye single to the public interest." It is true, as we said at the close of the inquiry, that there was no evidence that he had been corrupt, nor any proof that he had wrongfully diverted the public land, or power sites, or coal deposits into private hands. It was not shown that he had improperly served private interests by his official action. But there was much in his conduct and associations to excite suspicion that he had not been moved solely by a desire to promote the interests of all the people; and a great many will believe, despite the report of the committee's majority, that he was restrained from serving private interests (to the disadvantage and injury of the public) only by the complaints and protests which caused the dismissal from office of the men who afterward appeared before the committee as his accusers. The testimony indicated, it seems to us, that when he became Secretary of the Interior he was not in sympathy with that conservation policy which had been supported by President Roosevelt, was accepted and heartily advocated by President Taft, and has commended itself to a great majority of the American people.

There was sufficient evidence that he was not strong enough and broad enough for the office which he held. From the beginning he was an object of distrust and suspicion. He has been a heavy load for the Administration to carry. It has suffered discredit because of his connection with it and on account of the President's attitude toward him during the long controversy. Now that seven of the twelve members of the committee, the partisan majority of it, have spoken so favorably of him and of his conduct, he should resign from the Cabinet. In no other way can he so effectively serve the interests of his party and show his grateful appreciation of Mr. Taft's support. He can better afford to go now than he could before the report was presented, and he should go at once. If he persists in remaining, he will simply be a millstone hanging from the Administration's neck. If he shall go, Mr. Taft will have an opportunity to strengthen his Cabinet by appointing in his place a thoroly competent man whom the people will respect and trust.

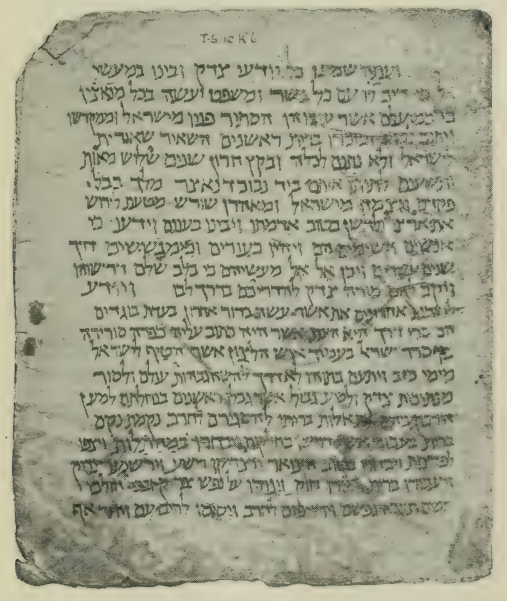
It will be noticed that the majority members of the committee, while seeking to vindicate Secretary Ballinger, are not in accord with him as to the right policy for a disposition of coal lands. In his annual report, published the day after the appearance of the report of the committee, he favored the leasing of the Government's oil and gas lands, but pointed out what seemed to him to be reasons why this policy, with respect to coal lands, would be objectionable, especially in the States, altho he admitted that it might be enforced in Alaska "with less complication." The President, last week, in his message, referred to Mr. Ballinger's objections, but overruled them, saying: "After full consideration, I favor a leasing system, and recommend it." Leasing is emphatically approved by the

committee's majority, whose report says, concerning the future of the enormous deposits of coal in Alaska:

"Your committee believes that it would be the hight of unwisdom to permit these great coal fields to be monopolized or gathered into the private ownership of a few for speculative purposes. As they increase in value the increment should inure to the benefit of all the people. To bring about this result and at the same time put an end to the unreasonable condition now existing, your committee recommends that the Government refuse to sell these lands, but that, retaining their ownership, it shall grant leases at fair royalties for periods limited, but long enough and covering areas large enough to justify the necessary investments upon sound business principles, and thus secure the opening and operation of sufficient mines to meet the necessities of Alaskan consumption, afford relief from the present outrageous prices paid by consumers, and at the same time afford some revenue to the Government. We recommend legislation to that end, and that pending such legislation the existing withdrawal from entry of the Alaska coal lands be continued."

This indicates that the Republican majority in Congress, which may be said to be represented by the seven men who sign the report, will support a bill providing for the leasing of these coal lands. The decision of the Democratic members of the committee, and that of Mr. Madison, insurgent Republican, were given to the press three months ago, and they also are in favor of leases. As for the President, every one knows what course he desires Congress to take. He recommends:

"That the coal deposits of the Government be leased after advertisement inviting competitive bids, for terms not exceeding fifty years, with a minimum rental and royalties upon the coal mined, to be readjusted every ten or twelve years, and with conditions as to maintenance which will secure proper mining, and as to assignment which will prevent combinations to monopolize control of the coal in any one district or market."



A bill providing for such leases should be passed at the present session of Congress. Controversy excited by the committee's majority and minority reports concerning Mr. Ballinger should not be permitted to prevent the prompt passage of bills to allow utilization of these great deposits of coal under proper conditions. All the coal lands in Alaska, except certain tracts the entries or applications for which are under examination, on charges of fraud, have been withdrawn and tied up since 1906. The committee recommends that the notorious Cunningham claims, covering 5,280 acres, be referred to the highest court of the District of Columbia for adjudication. Builders and operators of railroads in Alaska are now compelled to import coal, at a cost of $12 a ton, altho there are millions of tons within a short distance of their railroad tracks. But this coal, so near at hand, is not available. It has been withdrawn from entry or sale. In all, there are now so withheld from use and development, in the States and Territories, 91,000,000 acres of coal, oil, phosphate or power site land. This vast area awaits the enactment of just and reasonable laws to promote and regulate the use of the natural wealth in it. There can be no decent excuse for failure to enact the needed laws before the end of the present session.

A New Discovery in Early Christian History

So interesting, and perhaps so important, is the discovery of a new document of the first century that we hasten to direct to it the attention of Chrisian as well as Jewish scholars. Its interpretation is yet a matter of question, but it is bound to attract a great deal of study, and very likely to throw a new light on the beginnings of the history of the Christian Church.

Some years ago the University of Cambridge, England, came into possession of an immense mass of Hebrew manuscripts from the *genizah* or storehouse of discarded writings of a very ancient synagog in Cairo. From them was published some years ago, by Dr. Schechter, now at the head of the Jewish Theological Seminary in this city, the Hebrew original of the Book of Ecclesiasticus, which greatly interested biblical scholars. From this same collection Dr. Schechter has just issued another volume under the title of "Documents of Jewish Sectaries: Fragments of a Zadokite Work." It is composed of portions of an address by a teacher of a sect of believers who, after the destruction of

Jerusalem, had settled in Damascus, forming there a community and adhering very strictly to the Mosaic law, but certainly not after the fashion of the dominant school of the Pharisees. These were, according to Dr. Schechter, simply a sect of Jews, hostile to the Pharisees, something like what are known as the Dositheans. But in a study of the document appearing in *The Athenæum* Dr. G. Margoliouth, a most competent scholar of the British Museum, declares that they were a very early Jewish-*Christian* sect who adhered closely to the ritual law, like that great company of believing priests of whom we are told in Acts, and

FACSIMILE OF THE MS.
From "Documents of Jewish Sectaries," Vol. I. (Cambridge University Press.)

the other believers, who were "zealous of the Law."

This document is not historical, but hortatory. It is given partly to insisting on the careful observance of the Sabbath, on the avoidance of blood—a fish must be split to let its blood escape—and of things offered to idols—for nothing must be even sold to Gentiles for their sacrifices. When we add that another principal prohibition is of fornication we recall that these were the very things on which the Hebrew Christians were strenuous and which the first Council at Jerusalem agreed upon to satisfy those who were zealous of the law. The document has also much to say about the "New Covenant" into which these believers at Damascus had entered. It begins with an address to "all ye who have entered into the Covenant." They have entered into the New Covenant, a "covenant of God," and are seeking "the perfection of holiness." It is also a "covenant of repentance," and its members are spoken of as "all the men who entered into the New Covenant in the land of Damascus." It is "the covenant and the pledge of faith which they have affirmed in the land of Damascus; and this is the New Covenant." Now the New Covenant is much in evidence in the Christian Scriptures, translated "new testament." We have "the cup in the new testament," the "ministers of the new testament," "a better testament," and "the Mediator of the new testament." This is cerainly significant.

While these Damascus sectaries were careful to observe the ritual law they made much of that purity of life so marked a quality of the early Christian teaching. Not only was fornication strictly forbidden, but divorce as well as polygamy also, "for the foundation of the creation is, 'Male and female created He them.'" David's polygamy was excused, because the Law was hidden until the time of Josiah. Those who had entered into the New Covenant had made this pledge:

> "To love every one his neighbor as himself, and to strengthen the hand of the needy and the stranger, and to seek every one the peace of his neighbor; and that no man shall commit treason against his nearest of kin [incest], separating himself from fornication according to the Law; to admonish every one his neighbor according to the Law, and not to bear a grudge from day to day, and to separate from all the contaminations according to their laws—and no man shall defile his holy spirit, even as God did separate them. All they who walk in these things in the perfection of holiness according to all the instructions, the Covenant of God stands fast to them to preserve them to a thousand generations."

This sounds like a page from our New Testament addrest to those whom Paul speaks of as "they that be perfect."

These points of similarity we have selected from the reading of the text of this document. But Dr. Margoliouth

rests his proof that this is a Hebrew-Christian document on a more remarkable characteristics. These priests, sons of Zadok, Levites and other covenanters held in honor one who had appeared as a Messiah, an Anointed One. It is said that God "thru his Anointed made them know His Holy Spirit"; he is called God's "holy Anointed One," "the Anointed from Aaron and Israel," and again, "in the end of the wickedness there will arise the Anointed from Aaron." There is also another personage mentioned, according to Dr. Margoliouth, but the same one, according to Dr. Schechter, who is designated as the Teacher of Righteousness. It is said that God "raised for them a Teacher of Righteousness"; "there will arise the Teacher of Righteousness in the end of the days"; he is "the Prince of all the Congregation, and when he shall arise he will destroy all the children of Seth." He was no longer living, for we are told of "the day when there was gathered in the Only Teacher." The "men of the Only One" "will listen to the voice of the Teacher of Righteousness." Whether the Anointed One is the same as the Teacher of Righteousness, the Only One, may perhaps be gathered from the passage which says, "From the day when there was gathered in [that is, died] the Only One until there will arise the Anointed from Aaron and from Israel." This seems to distinguish between the two. Dr. Margoliouth identifies these two with John the Baptist and Jesus. But they do not quite agree with the Christian Scriptures, for both appear to be expected to rise again, and both are of the family of Aaron, which is true only of John, who came from the priestly "course of Abia."

If we have here the reference to John the Baptist and Jesus, and the coming resurrection of both—for John himself was the resurrected Elias—there follows the question, Who is the great enemy of the perfected ones, spoken of as "the man of scoffing who dropped to Israel waters of deceitfulness"? He is denounced bitterly. He has made his followers "to turn away from the paths of righteousness and to remove the bound which the forefathers have set." He is a "Belial let loose against Israel." His followers "entered into the New Covenant in the land of Damascus, but they turned and committed treason and turned away from the spring of living waters." The enemies had "walked with the man of lies forty years." Now, this "man of lies," "man of scoffing," who has deceived and led away so many, is, according to Dr. Margoliouth, none other than the Apostle Paul, who must have been bitterly hated by those who held fast to the ritual law. There is evidence enough of their hatred in the Bible, and Paul was ready to pray that they might be wholly "cut off" who troubled his believers. They were of the sects whom Paul denounced as taking their names from Cephas or Christ.

We have no space here to develop many other interesting points in this remarkable and puzzling document. In all probability it belongs to the latter part of the first century of the Christian era, from which we have almost no genuine sources except in the New Testament. If we can find here a document which opens to us the teachings of a class of Christians who must at first have been the most numerous, who followed not Paul, but regarded him as no better than Belial, we have a document of the most extreme importance for Church history, the most important since the discovery of the "Teaching of the Apostles." We shall all of us, Jews and Christians, be greatly indebted to Dr. Schechter for bringing it to our knowledge. It will be the basis of much study.

Mr. Carnegie's Greatest Gift

We are much gratified to make the early announcement that Andrew Carnegie this week dedicates $10,000,000 to the cause of international peace. Like the Carnegie Institution and the Carnegie Foundation, this new Carnegie Peace Fund is put into the absolute control of a board of distinguished trustees, all citizens of the United States, with Elihu Root, the greatest Peace Secretary of State this country has ever produced, as its president. As long as capital bears interest this fund will yield its $500,000 a year, and when war ceases as wars

inevitably must, when the nations learn the better way, the trustees may devote the income to new methods of benefiting mankind. Says Mr. Carnegie:

"The trustees will please, then, consider what is the next most degrading evil or evils whose banishment—or what new elevating element or elements if introduced or fathered, or both combined—would most advance the progress, elevation and happiness of man, and so on from century to century without end, my trustees of each age shall determine how they can best aid man in his upward march to higher and higher stages of development unceasingly, for now we know that man was created not with an instinct for his own degradation, but imbued with the desire and power of improvement to which, perchance, there may be no limit short of perfection even here in this life upon earth.

"Let my trustees, therefore, ask themselves from time to time, from age to age, how can they best help man in his glorious ascent onward and upward and to this end devote this fund."

This is the noblest and crowning benefaction of Mr. Carnegie's career. As a measure of practical idealism it surpasses all his vast donations of previous years, and as a far-visioned act of world-statesmanship it will have a profound effect thruout Christendom to the remotest ends of the earth.

This great gift is most opportune. The time is now ripe for action. Before the Czar convoked the first Hague Conference in the last year of the last century universal peace existed only in the dreams of the poets, the prophets and the philosophers. Since then it has passed to the realities of practical statesmanship. We have now actually begun to organize the world, and the peace movement hereafter is to be nothing but the process of substituting law for war. The "Union" of the nations based on the analogy of the United States at this very moment exists. It exists by the fact of the Hague Court and the recurring Hague Conferences, the Hague Court being the prophecy of the judicial branch of the coming world constitution and the Hague Conferences being the promise of the Parliament of Man. The international executive is not yet clearly in evidence.

It is to foster this movement for world organization that the trustees of the "Carnegie Peace Fund" must devote their efforts if they are to seize the great opportunities before them. Public opinion is ready and awaits only to be led. The statesmen of the world will follow. Accordingly investigations into the morals, economics and eugenics of war and of armed peace must be made. The people must be educated by books, pamphlets and lectures. The press must be cultivated. More important still, statesmen must be made to commit themselves. President Taft's recent announcement that he did not see why nations should reserve questions of honor from arbitration, and Secretary Knox's prophecy that "the nations of the world shall realize a federation as real and vital as that now subsisting between the component parts of a single state," should be followed by equally important declarations from other responsible heads of state. Then the peace societies and the peace advocates, whose labors of love have hitherto borne the brunt of the peace propaganda, should be rewarded for their fidelity to the cause. The most effective of them should be subsidized, so that they can render even greater service in the future than in the past. The churches, the chambers of commerce, the labor unions, and all other organizations friendly to the cause should be assisted to promulgate peace ideas. Even the officers and men in the armies and navies of the world should be made familiar with what is proposed to be done, for no finer or more responsive men are to be found anywhere readier to lead and serve in a just and righteous cause.

We do not now propose to go into further details as to how the trustees can make their resources most effective. They are on the whole a conservative board—many are new in the peace movement—and they will go slow at first, as is proper. Certainly no greater opportunity has ever before come to thirty-five men to serve humanity.

We are especially glad that this great fund has been given by an American to Americans for the world. It seems the destiny of the United States to lead in the peace movement. The United States is the world in miniature. It is a demonstration that all the peoples of the earth can live in peace under one form of government, and its chief value to civili-

zation is a demonstration of what this form of government is. We have settled more disputes by arbitration than any other nation. No two men in all history have done more to spread the gospel of peace than the great Pennsylvanians, William Penn and Benjamin Franklin. David Low Dodge, of New York, in 1815 founded the first peace society of the world. That old Connecticut blacksmith-philanthropist Elihu Burritt, and half a dozen others from Massachusetts and New York, went up and down this country three generations ago, and even went over to Europe, organizing peace societies and prophesying that some day we should have an international court—"the highest tribunal this side the bar of Eternal Justice."

In 1900 the United States Congress passed a resolution calling upon the President to negotiate arbitration treaties with any sister nation similarly disposed. This was the first time in history that a national parliament put itself on record in favor of universal arbitration, and long before a single arbitration treaty was in existence.

Mr. Frederick W. Holls, an American delegate to the First Hague Conference, probably had more to do with the establishment of the Hague Court than any other man. The United States and Mexico took the first case to that court that ever came before it. The United States Minister at Venezuela, Mr. Bowen, sent the second case to The Hague, which brought all the great nations of the world before its bar, and established it in the estimation of civilization. Richard Bartholdt, of Missouri, was the first man to stand up in any national parliament of the world and suggest turning the Hague Conferences into an international parliament. Elihu Root instructed the American delegation at the Second Hague Conference to introduce a proposition that would create a judicial court for the world, modeled on the greatest national court in existence—the United States Supreme Court. Secretary Knox is completing the final detail of this court and he declares it will shortly be constituted. Gen. Horace Porter, of the American delegation at the Second Hague Conference, carried thru a proposition bearing his name, which constitutes the first and only step yet taken by the world toward obligatory arbitration. Theodore Roosevelt has been crowned with the Nobel Peace Prize for his part in settling the greatest war of this generation. He is the first man to represent a great nation who has dared to suggest publicly a League of Peace. Mr. Taft is the first head of a state to declare he is willing for nations to arbitrate questions of honor.

Last May the Congress of the United States, thanks largely to Representatives Foster, Bennet and Bartholdt, for the first time in history officially appointed a Peace Commission to study this whole great peace question.

Mr. Edwin Ginn, the eminent Boston publisher and philanthropist, is the first citizen of the world to dedicate a million dollars to the cause of peace. Only this month his "International Foundation for the Promotion of International Organization and International Peace" has been formally given to the world. And now comes Andrew Carnegie with his Peace Fund, "to abolish war, the foulest blot on our civilization." In no nation in the world is the peace movement so advanced as in the United States, and in no nation are there so many men and women today consecrating their lives to the sacred cause.

Blessed are the peacemakers, for they shall be called the children of God.

The Nobel Men of 1910

THIS year, as in former years, the Nobel prizes have been worthily awarded, but in almost complete disregard of the founder's will that they should be given for the most important work done in science, literature and promotion of peace "during the preceding year." With the exception of Kossel none of the awards would come under that requirement. The peace prize goes to no man, but to an artificial personality, presumably soulless, and the chemical, physical and literary prizes go to men of sixty-three, seventy-three and eighty respectively who long ago established their reputations. Otto Wallach, who gets the chemical prize, was born at Königsberg in 1847. He was a brilliant youth and gained his doctorate at the University of Göttingen at the age of twenty-two. At

that time a prize of $40,000 would have been most welcome if the Nobel Foundation had been in existence. But who knows, it might have spoiled him. Not receiving such a boost, he had to work his way up the academic ladder round by round; privat docent at Bonn in 1873, professor at the same, 1876, back to Göttingen as full professor of chemistry 1889, where he has since remained.

The same is true of Professor Van der Waals, who now receives the Nobel prize in physics thirty-seven years after he earned it by the epoch-making doctor's dissertation he presented to the University of Leyden on "The Continuity of Gaseous and Liquid States." His name is one of the most familiar to all students of chemistry, for they found it on one of the earliest pages of their text-book in connection with an equation reading—

$$p(V-4b)=RT$$

The —4b part of it is due to Van der Waals, who thus corrected Boyle's law of gases. According to Boyle's law, volume and pressure are inversely proportional. Doubling the pressure of a gas compresses it into half the space, and so on. A gas that obeyed the law was naturally called a "perfect gas." But it was found that some gases—carbon dioxid, for example—were very imperfect, judged by this, while on the contrary, hydrogen was "more than perfect." Such superexcellence is not allowable in chemistry any more than in ethics, so the case had to be investigated, and it was Van der Waals who discovered that the deviations from Boyle's law were due in the first example to the mutual attraction of the molecules as they neared the liquefying point, and to the size of the molecules in the second example.

Professor Albert Kossel, of Heidelberg, to whom the Nobel Prize for this year in medicine is given, is one of the world's great physiological chemists. In recent years it has come to be realized that the solution of many of the problems of the animal body must come from chemistry, and men have devoted themselves to learning all possible about the chemical physiology of the tissues. The proteins particularly were full of mysteries and gradually these are yielding before the persistent genial work of great modern chemists. Among the most successful of these is Professor Kossel, noted a decade ago for work on the relation of nuclein to mucus, on the saponification of the fatty acid esters, and on protagon. He was a student of Hoppe-Seyler, and succeeded him as the editor of the *Zeitschrift für Physiologische Chemie*. He became the director of the Physiological Institute at Berlin under Du Bois Reymond. From here he accepted the position of Professor of Physiology at Marburg when the Prussian Government was making this one of the strong universities of the Empire, in order to show by contrast with the neighboring University of Giessen how much better for education it was for Prussia to be in power than one of the smaller allied States. From Marburg he accepted the position of Professor of Physiology at Heidelberg as successor to the distinguished Kühne. The work done by him that has attracted attention in recent years and for which the Nobel Prize is now conferred on him, has been with regard to the cleavage products of proteins more especially the bases formed by the action of alkalies. Very recent work has been on tests for ornithin, a protein cleavage product. He has published the synthesis of agmatin, a base formed from arginin by splitting off CO_2 by a reaction between cyanamid and tetramethylendiamin. The hope lies very near that such studies in organic and physiological chemistry as those of Kossel and Emil Fischer, who received the Nobel Prize a few years ago, may mean much for the solution of the mysteries of vital activity—hence the Nobel Prize is given in this case, as was intended by its founder, almost more as an encouragement for promising work well begun than for actual achievement acknowledged to be greatly significant.

The liveliest contest is that over the awarding of the prize in literature, because it is more difficult to estimate the value of the work of an author than of a scientist and because more people think that they are competent to do it. The prize is given on December 11, the founder's birthday. On December 12, if not before, the champions of the various candidates marshal their forces and begin the siege of the Swedish Academy. Italian is pitted against Norwegian, Spaniard against Pole, and a new

Franco-German war fought every year on the literary field.

The academy itself is divided by temperament and taste. There is a conservative and a radical faction, which accounts for the surprising fluctuations of official opinion as to what constitutes "idealistic literature." The conservatives are responsible for the selection of such eminently respectable but not highly original writers as the Parnassian poet, Sully-Prudhomme, the Roman antiquarian Mommsen, and the academic philosopher, Eucken. The radicals push the claims of such men as the Belgian symbolist, Materlinck; the French satirist, Anatole France; the Belgian poet, Verhaeron, and Swedish nationalist, Verner von Heidenstam. Doubtless also the Futurists, the Neo-Pagans, the Nietzscheites, the Late Decadents, the Modernists, the Social Democrats, and all the newer literary coteries, put forward their claimants, and perhaps have their advocates in the academy itself.

Last year the radicals presented a popular candidate, Selma Lagerlöf, who gained almost the unanimous vote of the academicians. This year, apparently, the conservatives got the upper hand, for the prize goes to Paul Heyse, the German novelist and novelletist. It is a safe and sane choice. The chief objection that could be raised is that he needs no additional laurels.

Even in America with all our indifference to foreign literature we know Heyse in his three fields of distinction, the short story, the novel and the drama. We probably got up "L'Arrabiata," or one of his other tales of Italian or German life, for our college entrance examination. His most famous novel, "The Children of the World," first published in 1873, has long been popular in English. Back in the early nineties Prof. William Lyon Phelps prescribed it for his Yale students in fiction, the course that proved so popular that it had to be nipped in the bud. And Heyse's biblical drama, "Mary of Magdala," the prototype of Maeterlinck's, has been played in this country by Mrs. Fiske in 1903.

Paul Johan Ludwig Heyse was born in Berlin in 1830, but has been a leader of the Munich literary movement. During his sixty years of uninterrupted literary activity poems, novels, short stories, fairy tales, dramas and translations have streamed from his pen. He may properly be classed as an idealist, altho he has always been a realist in his method, for his writings show a purpose which has become more pronounced in recent years. "Der neue Merlin," published in 1892, was directed against naturalism, and "Ueber allen Gipfeln," 1895, was an attack on Nietzscheism.

The Peace Prize this year goes to the Berne Peace Bureau (Bureau international de la Paix). Tho the other Nobel prizes have always gone to individuals, this is the second time that the Nobel Committee of the Norwegian Parliament has failed to find the proper person and has awarded the prize to an institution. In 1904 it was given to the Institute of International Law (Institut de Droit International), founded in 1873, and consisting of sixty "membres effectifs" and sixty "membres associés." The Berne Bureau was founded in 1891 by the Third International Congress, at Rome. Its chief office is at 12 Kanonenweg, Berne, Switzerland. Dr. Albert Gobat, a Nobel prize winner in 1902, is its secretary. It has an American branch office at 619 F street, N. W., Washington, D. C., with Mrs. Belva A. Lockwood as honorary secretary. The bureau is really the clearing house of the principal pacific organizations of the world. It is directed by a commission of thirty-five members from all nations, and includes such well-known peace workers as La Fontaine, de Costa, Darby Fried, Quidde and the Nobel peace laureates, Bajer, von Suttner, Ducommun, Moneta and Passy. The representatives from the United States are Prof. Samuel T. Dutton, of New York; Mrs. Belva A. Lockwood, of Washington, and Mr. Edwin D. Mead and Dr. Benjamin F. Trueblood, of Boston. The bureau consists of institutions, associations and individuals. It aims to supply peace associations and individuals with literature and to facilitate relations between them, to prepare programs for congresses and conferences, and to carry out their decisions, to classify and preserve archives of peace gatherings, and in general maintain an up-to-date bibliography and library of peace publications.

There is as much lobbying for the

peace prize as for the literary, and the committee of the Norwegian Storthing evidently has difficulty in finding every year a person who has conspicuously served as a world's peacemaker. It is rumored that the prize was offered to Tolstoy more than once, but he refused it, saying that it should go to the Doukhobors, who were living the doctrines of which he was merely the teacher.

Trust Prosecutions

"It seems to me," said the President in his message, "that the existing legislation with reference to the regulation of corporations and the restraint of their business has reached a point where we can stop for a while and witness the effect of the vigorous execution of the laws on the statute books." The Department of Justice has not been idle. Two or three weeks ago it attacked the Sugar Trust in the courts. Last week it procured the indictment of the sixteen companies or firms which have combined to control the output of bathtubs and other articles made of enameled iron. With these companies thirty-two of their officers are accused, and conviction may place them in jail. Mr. Wickersham complained loudly of the lenient treatment of the Window Glass Trust defendants by a Federal judge in Pittsburg. This similar criminal case will be tried in Detroit. It is understood that the Government will soon proceed against the great electrical supply companies, alleging that they are in unlawful combination by means of an agreement concerning patents and otherwise. It has procured in the memorable suit against the anthracite railroad companies a decision which, altho it declares that no actual combination of these companies exists, strikes down the Temple Iron Company, a corporation which they controlled and owned, which had been used by them to gain certain ends desired by all of them, and which has been available for use in other ways. New indictments were found last week against the millionaire speculators who were indicted some months ago for undertaking unlawfully, the Department of Justice asserts, to control the price of cotton. In Savannah the jail sentences of two

Altho Congress is advised that it may be well to "stop for a while" so far as restrictive legislation is concerned, there is no halt in the enforcement of the law. millionaire officers of the Turpentine Trust have been confirmed.

It may be noted that the new attacks are made upon combinations which the people have reason to dislike, both on account of the effect of their operations upon the cost of living and because of their methods. Not content with gains due to a suppression of competition, the Sugar Trust robbed the Government of millions by means of false weighing machines. The cotton speculators are held responsible for increasing the cost of clothing. The Bathtub Trust taxed the public by raising prices, which were exacted by means of compacts which wholesale and retail dealers were forced to sign. It is plain that in its recent endeavors to enforce the Sherman act with vigor the Government has the hearty support of a vast majority of the people, mainly because they are convinced that the accused corporations and men have greedily and unlawfully increased the cost of living.

This activity has been shown while the appeals in the Standard Oil and Tobacco Trust cases were pending, as if the Government were confident that the final decision (now soon to be announced) would be in accord with the decisions of the courts below. It seems to us that it is by no means certain that the coming decision will sustain the position taken by the Government and its prosecutors. If the highest court should fully confirm the action and the interpretation of the lower courts, the question whether the Sherman act should be amended would straightway become prominent. If, on the other hand, the Government should be defeated in the court of last resort, additional legislation for the regulation and restraint of great incorporated combinations would be demanded and enacted. The Sherman act is not a statute of ideal perfection. In certain ways it might be improved. If it should prove to be ineffective, the people would demand legislation not less severe in its place, or, perhaps, the enactment of a Federal incorporation law, imposing conditions and providing for supervision

would be approved. They will insist upon the restraint of what are called Trusts, and upon the punishment of Trust-makers who rob them by suppressing competition.

An Unfortunate Incident

The Japanese are a proud and sensitive people, and it is unfortunate that the officers of the Japanese squadron which has been visiting our Pacific ports feel that they were insulted at Pasadena. The landlord of a hotel there invited them to attend a ball to be given in their honor. Then, to his dismay, he found that none of the young women of Pasadena "society" whom he desired to invite would dance with Japanese. They even exprest their aversion in words which were not wisely chosen and which could not fail to offend the naval visitors. Therefore the landlord informed the Japanese officers that there could be no ball. Whereupon they canceled the invitations for a ball which was to have been given in return on Rear-Admiral Yashiro's flagship, and thereafter excluded visitors. All this is not a *casus belli,* but it has made enemies of those who should be our friends. The treatment of the Japanese officers was neither wise, just nor decent. Do not the people of Pasadena remember the elaborate entertainments and generous hospitality with which our officers and sailors were greeted at Japanese ports when our battleship fleet visited them, on its way around the world? Nothing that could be done was left undone by the Japanese Government and Japanese society. This slight or insult at Pasadena was a poor return for that kind reception in Japan. We hope that Rear-Admiral Yashiro and his associates will not measure the politeness and good will of the American people by this exhibition of bad manners at Pasadena.

Canadian Reciprocity

While the self-evident arguments for reciprocity of trade with Canada are being presented on both sides of the border, and the two Governments are negotiating the matter, the political opposition to it is exprest in the London *Times* in a long letter by its Canadian correspondent. The objection is this: Western Canada is rapidly filling up with farmers from the States, and in numbers that exceed all other immigration. They like American institutions, celebrate the Fourth of July, and have no veneration for Kings and Lords. Will they be loyal to Great Britain? Is there not danger that they will seek one of these days to annex Canada to the United States? Will not reciprocity increase the dependence of Canada on the United States and weaken its dependence on Great Britain? With American capital flowing in, and free trading across the border, will not Canada become a dependency of the States rather than of the Mother Country? This danger the *Times* presents thru its correspondent, with the desire that reciprocity be denied, and that instead a system of preferential tariff with Great Britain and her colonies be maintained, which will hold Canada close to the British Empire. The objection to that is, that Canada's interests tie her to this country, just as the interests of New York are tied by its very contiguity to those of Pennsylvania. There ought to be no tariff wall between us.

Restricting Immigration

We are all very much gratified at the increase of over twenty per cent. in the population of the country in the last ten years, as shown by the Census, that is, all but the Congressional Immigration Commission. They have published a report to the effect that population is increasing too fast, that the people are crowding on each other, and that there should be a stringent reduction in the number of those who come to us from other countries. They tell us that few people come here now to escape oppression, but only to better their condition, and so sentimental considerations should not lead us to keep open doors. The commission suggests that the number arriving at a single port be limited, that an educational test be applied, that unmarried young laborers be excluded, and that the amount of money the immigrant brings be increased. And all this scheme to keep the census down is proposed at the same time that we are told so often that the natural increase of population by

births is falling to the danger point, and that it is chiefly immigration that keeps us from French stagnancy. Really, we hold with the sentimentalists who are glad to have immigrants come to benefit themselves, and believe that their coming is a benefit to us also. The one suggestion of the commissioners' report that we approve is, that effort be made to divert immigration to agriculture. Those who go into farming are, as a rule, the most successful, and we need more food products to reduce the cost of living.

Some College Statistics

The publication of Harvard's new Quinquennial Catalogue shows the distribution of Harvard men according to their occupations. Of the 32,192 men who figure therein, more than 5,300 are lawyers, 3,500 are teachers, almost as many are physicians, 1,716 are in some way connected with finance, over 1,600 are manufacturers, over 1,000 ministers, 695 dentists, 574 farmers, 498 journalists, etc. We might continue with these statistics, but that a recent issue of *Science* contains some that impress us as being more interesting. This reports upon the "success" of Harvard graduates of the class of 1894 as demonstrated, not by the appearance of their names in "Who's Who in America," but by the vote of three judges, one of them being Dean Briggs: each of the judges determining for himself his definition of "success." Twenty-three members of the class received at least two votes out of the possible three. Their college records were then compared with those of twenty-three classmates, chosen blindfold. It was found that the former category had received between three and four times as many "A's" as the latter, the figures being 196 and 56. This seems a body blow at the lightly declared doctrine that it "really doesn't matter" whether the American college student studies or doesn't study, the essential thing being his spending four years in a university town and its adjacent metropolis.

We have had as far off as Macao, the Portuguese port of China, another example of the danger to the state of keeping an army and navy. The Governor of Macao had acknowledged the republic, but that did not satisfy the soldiers and sailors whose duty it was to protect the existing government. But like the people of Portugal, they hated the religious orders, and when the Governor was suspected of protecting them they rebelled and forced his resignation, and drove out the monks and nuns. American journals which so severely rebuke the Portuguese for their acts ought to give some adequate reason for the popular hatred of the religious orders. One of the best of these journals says it is because the devil is in the people, but that does not seem definite enough.

Some may say that the Brazilian Government showed by its prompt bombardment and complete subjection of the mutinous marines that it had learned something from experience and desired thus to emphasize its regret for its lenient treatment of the warship mutineers three weeks ago. But it is one thing to attack a battalion of mutineers who are on an island or a frail scout ship, and decidedly another thing to excite the wrath of sailors and competent gunners controlling more than half of the nation's navy, including two of the world's most powerful dreadnoughts, when they have the capital city at their mercy.

Not even Madame Curie, the discoverer of radium, can be admitted to the French Academy of Sciences, and it is the Academy of Moral Sciences which decides that she is ineligible. That is where moral science, or the constitution of the Academy, or something, goes ridiculously astray.

If the jailer in Columbus, Ga., who was shot by a mob in defending a negro prisoner, should die he would die a martyr and deserve a monument. He warned the mob, and when they advanced he fired and wounded two of them, when the rest fled. That is the way to stop lynching.

Insurance

Life Insurance in the West

At the fourth annual meeting of the Association of Life Insurance Presidents held in Chicago last week, Mr. Paul Morton, president of the Equitable Life Assurance Society, made an interesting and significant address on the development of life insurance in the West. He spoke in part as follows:

"American life insurance never stood so well, never was so safe or surrounded by so many safeguards, and never afforded the public so much for its money as it does today. The expense of management is being curtailed. Economies of all kinds have been introduced, and dividends to policyholders are being increased. The chief ambition of the Association of Life Insurance Presidents is to emphasize the fact that these great life insurance companies belong to the people, and that nothing in the way of regulation, taxation or legislation can be done to injure them which the policyholders will not have to pay for themselves.

"Fifty years ago life insurance in the United States averaged $5.25 per capita. Ten years ago it had risen to $99 per capita, and today it is estimated as amounting to about $150 per capita. Fifty years ago the total outstanding life insurance carried by all old-line life insurance companies doing business in the United States was less than that now carried by Illinois companies alone. Within fifty years the volume of life insurance business has increased from $165,000,000 to $13,700,000,000, almost one hundred fold, though in that time the population of the United States has increased less than three-fold.

"Western people will be glad to know that as a general proposition the Eastern life insurance companies are making an effort to invest their reserve funds in those sections of the country which produce the premiums. I know of one large life insurance company which five years ago had real estate mortgages in only eleven different States, but which today has them in thirty-one different States. I know of one company which has six millions less in mortgage loans in New York City than it had five years ago, and which during that time has increased its mortgage loans in other States about $18,000,000.

Mr. Morton gave reasons why the meeting of insurance presidents is being held in Chicago, saying that the center of life insurance is rapidly moving westward in this country. Mr. Morton also said the meeting is being held out of respect to the wonderful valley of the Mississippi, which agriculturally, commercially, industrially, financially and prospectively is greater than all the far-famed valleys of history, and yet it is only in the vestibule of its infancy, so far as production and wealth are concerned, and is destined to have more political power, more prosperity, more happiness and greater influence in the affairs of the world than any other similar area on the face of the globe.

"We are also here because of the very happy investments that life insurance companies have made in the Middle West. We want those who live here to understand that while the estimated reserve held for policyholders residing in the Mississippi Valley amounts to about $583,000,000, the life insurance companies have invested in this same territory over $726,000,000; in other words, we are not, as many are led to believe, draining this section of the country of its money in life insurance premiums and taking it East to invest, but on the contrary we have actually invested over $143,000,000 more in this territory than the total reserves for this same territory amount to, and when I speak of the Mississippi Valley in this connection I mean only the Middle States."

Perhaps the Chinese have the right idea, after all, when they pay their doctors only as long as they continue well. Just so soon as a Chinaman falls sick his physician's pay ceases until he gets well again. China is said to be a very healthy country. At any rate, the doctors there use all their skill and every effort otherwise to get their patients cured and on a paying basis. Quite in contrast with the Chinese conditions are the conditions set forth in the recent report of the Secretary of the State Board of Health of Kentucky, from which it appears that there were 139,717 cases of sickness in that State during a single year, which, with proper care and regulation, would have been prevented. Of these cases, 13,337 resulted fatally. The secretary estimates that each case cost nearly $100 for the care of the sick and loss of time. He also estimates the average value of preventable lost life at $1,700. It is doubtful if such a showing could have been made in China under their system.

Financial

Secretary MacVeagh's Report

For a long time the Monetary Commission has been collecting information about currency systems. It has made no report. No one expects that any action for the needed thoro reform of our currency system will be taken during the current session of Congress. Indeed, it is well understood that nothing will be done. At the next regular session, beginning a year hence, there will be a Democratic House working against a Republican Senate for political advantage in the approaching Presidential campaign, and we fear there will not be much room for non-partisan and judicial consideration of a currency reform project. Secretary MacVeagh is justly impatient. From the remarks on this subject in his annual report we quote the following:

"As long as we continue under our present system we are liable to panics; and the vast devastations of panics reach Republicans as well as Democrats, and all parts of the country alike. Panics are no longer necessary and no longer respectable. They are avoidable; but not under our system. Our system can fairly be called a panic-breeding system; whereas, every other great national banking and currency system is panic-preventing. It is for the Government to say whether it will have panics in the future or whether it will not. It is a mere matter of choice. We can continue to have panics or we can stop having panics, exactly as we prefer. It will not cost a penny to prevent them; and it has cost us untold millions and untold suffering every time we have had one. We have no system of reserves. Our banking system destroys our reserves. It concentrates in New York what are pretended to be reserves and then forces the New York banks to lend and abolish them. Now, a reserve is necessary to the very idea of banking; but our system instead of building up a reserve destroys it as fast as it inclines to accumulate."

We regret that the Secretary himself did not express his opinion as to what ought to be done. His views would have much weight and would tend to direct the attention of Congress to this very subject. There is much in the report about the notable reforms in the customs service at New York, where "the amount of laxity and dishonesty that has crept into the import business thru undervaluations is astonishing, not to say appalling." Demoralization was due largely to politics, but in this respect there has been improvement, "as the chief political authorities have recognized the impossibility of putting this service where it belongs without elimination of political influence from its management and operation." He complains that Senator Aldrich's talk about saving $300,000,000 has given a wrong impression, because only about $300,000,000 of the ordinary expenditures are amenable to any reduction whatever. Provision for civil service retirement pensions is needed, he says; all non-political offices should be placed in the classified service, and the national banks should be authorized to establish branches at foreign commercial ports.

....British Consols fell last week to 78½, the lowest price since 1831.

....The Girard National Bank of Philadelphia, whose last semi-annual dividend was 7 per cent., has added $500,000 to surplus, making the total surplus of the bank $4,000,000.

....Last week 200 pay-as-you-enter cars were ordered by the city railways of Chicago, making over 2,500 in operation in that city. Orders were also received for Baltimore and for Reading. In all more than sixty traction companies in the United States are using these cars.

....Louis Graveraet Kaufman, the new president of the Chatham National Bank, was born and educated in Marquette, Michigan, and was closely identified with the banking business in his native city until he came to New York. In 1901 he was elected vice-president, and in 1906 president, of the First National Bank of Marquette. The Chatham Bank was organized in 1851 and now has total resources of $12,139,576. On June 10 the total resources were $10,851,554, and on September 1 they were $11,864,082. Under the presidency of Mr. Kaufman the Chatham will continue to be a high-grade commercial bank, as it has been for nearly sixty years.

The Independent

VOL. LXIX NEW YORK, THURSDAY, DECEMBER 22, 1910 No. 3238

Survey of the World

Jingoism at Washington

In compliance with a House resolution Secretary of War Dickinson prepared a report on the state of the army, showing that the United States is, under existing conditions, in no position to repel invasion by a first-class power. This report was suppressed by order of the President, but it was printed, in whole or in part, by the alarmist press. Representative Tawney, chairman of the House Appropriations Committee, is said to have appealed to the President to have the report moderated, fearing that its sensational character would create a demand for an increased military force, necessitating heavy appropriations. On December 15 Mr. Tawney accused the interested departments and jingo Congressmen of conspiracy to create a furore for military and naval expansion in "Hobsonizing" the entire country. Mr. Tawney adds:

"These advocates of militarism ignore entirely the chief weapons of defense that we have—our great natural resources and the spontaneity with which the patriotism of our people would be aroused in the event of an assault of any kind from any foreign foe. They likewise ignore our geographical isolation."

At the banquet of the American Society for Judicial Settlement of International Disputes, in Washington, on the evening of the seventeenth, Mr. Taft said, in part:

"The people of this country will never consent to the maintenance of a standing army which military experts will pronounce sufficiently large to cope in battle with the standing army of the greater Powers should they get by our navy, avoid our harbor defenses and descend upon our coasts."

——A non-partisan movement in the House of Representatives favors the appointment of Mr. Tawney, who was defeated for renomination, as the next governor of the Panama Canal Zone. Representative Burleson, of Texas, senior Democratic Member of the House Committee on Appropriations, declares that Mr. Tawney's defeat was a calamity, "not so much to his district or to his State as to the country at large."

What Congress Is Doing

On December 17 the sub-committee of the Senate Committee on Privileges and Elections reported to the full committee that it found no evidence that Senator Lorimer had resorted to bribery or fraud to secure his election by the Illinois Legislature. On December 20 the full committee met; it was anticipated that the report would be adopted. ——So many requests for copies of the President's last annual message have been received by members of Congress that the Joint Committee on Printing has decided to print an additional edition. ——Altho Secretary MacVeagh sent to Congress no estimates for public buildings for the present session, such estimates will be submitted this week in accordance with a resolution introduced by Mr Tawney, chairman of the House Committee on Appropriations. The resolution will call for estimates on all public building projects, including the purchase of sites or the construction of buildings authorized by Congress, upon which money can be actually expended in 1912. The Administration's "economy program" is further endangered by the favorable report upon a bill seeking to add nearly fifty millions to the annual pension roll. By the terms of this bill the pension of a veteran of sixty-two is increased from $12 to $15 a month; of seventy from $15 to $25 a month, and of

seventy-five from $20 to $36 a month. An intermediate grade yields veterans of sixty-five or over $20 a month.——Champ Clark, who is likely to become Speaker of the Sixty-second Congress, has declared himself in favor of selecting House committees by a Committee on Committees. He also announces that the Democratic members-elect will meet in caucus on January 19, 1911, to select the Democratic members of the Ways and Means Committee. "As far back as the Fifty-second Congress," he continues,

> "Representative Springer, a Democrat, introduced separate bills for separate schedules and even for particular items, derisively denominated 'Springer's popgun bills,' and several years before Judge Springer was chairman of the Ways and Means Committee Mr. McKenzie of Kentucky achieved both renown and the sobriquet of Quinine Jim by securing the passage of a bill putting quinine on the free list and touching no other item."

The Post-Office

Postmaster-General Hitchcock shows in his annual report a reduction in the deficit of his department amounting to eleven and one-half millions. To meet the remaining deficit, he advocates making magazines pay a higher rate for their advertising pages. He has also proposed placing the low-grade postmasterships under civil service rules.——Twenty-two arrests were made in Philadelphia and in various Pennsylvania and New Jersey towns in a single day, December 16, in the post-office crusade against "get-rich-quick" frauds. One of the more important arrests was that of former officials of the Chain Shoe Store Company, a concern which the postal inspectors describe as a rival of the National Public Utilities Company, of which Governor-elect Tener, of Pennsylvania, was formerly president. The shoe store company officials are held in $1,000 bail for a further hearing on January 6. This company professed to be aiming at the control of shoe stores and factories in various parts of the country, and was formed in 1909 with a capitalization of $2,000,000 authorized, issued in shares of $1 par value. The Pine Heights Land Company, was another of the concerns raided at Philadelphia, while at Scranton, Pa., the operators of the so-called Correspondence Institute of America were arrested upon complaint of over 200 students the country over, who claim to have been defrauded by the "Institute," whose enrollment within the last few years has reached almost 70,000, altho only 80 have been "graduated."

New York State

Official returns of last month's election show that tho Secretary of State-elect Lazansky defeated the Republican candidate by only 1,873 votes, Mr. Dix had 67,401 votes over his opponent, Henry L. Stimson. The $2,500,000 State bond issue for the improvement and extension of the Palisades Park was carried by 63,370, the whole number of votes cast being 1,084,061. The amendment to the State Constitution providing for the election of two additional judges of the Court of Appeals and increasing the judges' salaries was defeated by the narrow margin of 292 votes, the blank ballots cast numbering 428,537.——The Governor-elect has declared that in his first message there will be an appeal for direct nominations stronger and clearer than the declaration in the Democratic platform. Mr. Dix has named as Superintendent of Public Works Charles E. Tremain, a nomination regarded as of good omen for the new Administration. The Governor-elect is meeting with difficulty, however, in finding fit men who will accept other State posts, tho he repeats his statement that it is his intention to conduct the affairs of the commonwealth as he would expect a business man to run his private business. Thus far Mr. Dix has declined to be quoted on the Senatorial situation. Tammany is said to back William F. Sheehan, formerly of Buffalo, but for sixteen years a resident of Manhattan. Mr. Sheehan's principal recommendation appears to be his work "for the party" last summer and fall. He is a former Assemblyman from Buffalo, was Speaker of the Democratic Assembly, and was, in 1891, elected Lieutenant-Governor on the ticket headed by the late Roswell P. Flower. Mr. Sheehan's candidacy has all along been opposed by Mayor Gaynor, who favors Edward M. Shepard, and who says he believes that Mr. Murphy's influ-

ence will ultimately be thrown Mr. Shepard's way. Daniel F. Cohalan, ex-Judge D. Cady Herrick and Justice Gerard also remain in the field, but the Shepard candidacy, tho it arouses little popular enthusiasm, is favored by the best elements in the party, and seems to be gaining among members of the Legislature.——On December 15 the National Democratic Club held a dinner at which were seated two Democratic Governors (Sanders, of Louisiana, and Crothers, of Maryland), and two Governors-elect (Messrs. Dix and Foss). Enthusiasm greeted the reading of a letter from Dr. Wilson, in part as follows:

"Some part of what we must do is clear. . . . In the first place, we must insist at every stage upon discovering what the facts are and what inference can be justly based upon them. We must do this by thoro debate in our legislative bodies and out of them; public debate, debate extended to all classes of society, the complete uncovering of the elements we have to deal with. . . .

"A frank, genuine, responsible representation of the people is the basis of every just government. This is the problem which not only our people themselves and our parties have to solve in the electoral machinery which they conduct and use, but it is the problem which our State legislatures have also to solve in the choice of Senators of the United States, and they should solve it with a very sensitive regard for their obvious duty as spokesmen, not masters, of the people they represent.

"There must be added, if the common interest is to be served, fearless leadership, . . . with a genuine desire to personify common impulse rather than seek a private end."

Other letters and speeches exprest variations on the same theme. Norman E. Mack, as toastmaster, reminded the 800 diners that:

"On November 8 last it was up to the people and they made good. [Applause.] But victory came because the people were voting men out of office and not because they were voting us in. They'll vote us out too unless we make good our pledges."

Mrs. Eddy's Will

The severely simple funeral of Mrs. Eddy, on December 8, has been followed by discussion as to her will. It had been reported that this left practically all of a $1,500,000 estate to the "Christian Science" organization, and that the board of directors would decide as to the form the bequest shall take. The will was drawn six years ago, at Concord, N. H. On its filing it caused much discussion thru the bequest of the so-called "Crown of Diamonds" to Augusta E. Stetson. The codicil in which the gift is conveyed was drawn in 1904, years before Mrs. Stetson's expulsion from the organization. A second surprise was the clause directing that the indebtedness of the Second Church of Christ, Scientist, at Sixty-eighth street and Central Park West, New York, should be cancelled out of the estate. The sum named was "not to exceed $175,000." The Mother Church in Boston is the residuary legatee after the various other bequests have been paid.

American Universities

An appeal for an eleven-million-dollar endowment for Columbia University is one feature of President Butler's recent report. Unprecedented generosity has been extended during the present year, yet

"Sums that are literally stupendous in amount are urgently needed, to care for the work already in progress, to say nothing of putting into execution large and important projects that have been carefully matured with a view to wider and more efficient public service."

The total of gifts for 1910 amounts to $2,357,979. At Barnard College, the Columbia "Annex," Miss Virginia Gildersleeve, a former student, tutor and instructor in English, has recently been chosen Dean.——New York University's needs, according to Acting Chancellor J. H. MacCracken's report, are internal reorganization and a ten-million-dollar endowment. If this latter item is secured, "under such conditions that academic freedom shall be preserved to the federated schools, and the educational opportunities of its students increased and rendered less expensive to the student, "the Acting Chancellor would favor federation, altho he holds that New York can maintain two universities.——President Nichols announces a gift in the form of railway securities worth $400,000 which the trustees of Dartmouth receive from Edward Tuck, of the class of 1862. Mr. Tuck is a member of the banking firm of Munro & Co., and lives in Paris. He desires that the income of his gift be applied

"to the improvement of the existing scale of salaries of the faculty of the college, . . . ac-

cording to the relative importance and value of service rendered in the different chairs, with due regard to the length of service and to personal distinction."

This benefaction will be added to the Amos Tuck endowment fund, established in 1899 in memory of the donor's father, Amos Tuck, 1836, a former trustee of the college: a fund at various times increased, and now amounting to one million dollars.——Mrs. Edward H. Harriman, of New York, has offered $100,000 to endow a chair in forest management in the Yale Forest School as a memorial to her husband, who was greatly interested in the subject of forestry. Students of the Yale Forest School did their first practical field work at Mr. Harriman's Arden estate about eight years ago. The school itself was founded some two years earlier by members of the Pinchot family.——Dr. George Edgar Vincent, dean of the faculties of arts, literature and science, and professor of sociology at the University of Chicago, has been chosen president of the University of Minnesota. He will succeed President Northrop, at a salary of $10,000, on April 1. Dr. Vincent is now in his forty-seventh year, and a graduate of Yale.——"Some definite schemes for co-operation with Harvard and with Boston University have been suggested during the last year," says the annual report of President Richard C. MacLaurin, of the Massachusetts Institute of Technology, "and some of the suggestions have received the earnest attention of the executive committee; but no scheme of this nature can be carried out until the question of the future site of the institute has been definitely settled." His report shows that the institute has a deficit of $23,598.87, with the prospect that it will be greater next year. The Kilauea observatory, for the investigation of earthquakes, under the auspices of the Institute, will be established early in 1911. Prof. Thomas A. Jaggar, Jr., in charge of the department of geology at the Institute of Technology, intends to visit the islands for the purpose of establishing the observatory, which is to stand on the edge of the crater Kilauea.——Prof. Henry Van Dyke has resigned somewhat suddenly the Murray Professorship of English Literature at Princeton University. He is regarded in some quarters as a candidate for the presidency, to succeed Dr. Wilson. It is stated at Princeton that the bequest of Isaac C. Wyman, of Salem, Mass., will amount to at least four million dollars.

Demands of Canadian Farmers

Nearly a thousand prosperous Canadian farmers assembled in Ottawa on the 15th to prepare resolutions and a memorial for presentation to Premier Laurier on the following day. A majority of these farmers had come from the Western Provinces on a special train, but a considerable number were from the Eastern and older parts of the Dominion. On the 16th they met the Premier and the Ministers in the hall of the House of Commons. Their memorial, a paper of 6,000 words, asked for Government ownership and operation of terminal grain elevators, Government control of the chilled meat industry, a reduction of railroad rates, and Government construction and operation of a railroad to Hudson Bay. It also set forth the following demands concerning tariff duties and reciprocity:

"(1) Reciprocal free trade between the United States and Canada in all horticultural, agricultural and animal products, spraying materials, fertilizers, fuel, illuminating and lubricating oils, cement, fish and lumber.

"(2) Reciprocal free trade between the two countries in all agricultural implements, machinery, vehicles and parts thereof.

"(3) An immediate lowering of the duties on all British imports to one-half the rates under the general tariff, whatever these may be. Any trade advantages given to the United States in reciprocal trade relations to be extended to Great Britain.

"(4) Such further reduction of the remaining preferential tariff as will insure the establishment of complete free trade between the Dominion and the mother country within ten years.

"(5) That the farmers of this country are willing to face direct taxation in such form as may be advisable to make up the revenue lost under new tariff relations."

Replying to the farmers, Sir Wilfrid Laurier said that, as they had started a campaign of education with regard to Government ownership of railways and elevators, he might eventually be educated to believe in it, altho he could not easily be persuaded to advocate Government operation. Government ownership of elevators would not, however, give

the grain growers what they wanted; they should ask for the enlargement of existing canals or the construction of new ones. Turning to the tariff, he said:

"As to freer trade relations with the United States we are one with you, and I am happy to say that at this moment we are in negotiation with our neighbor for this very object. But I must say that this is not so easy to obtain as you may realize. There is in this country, in some sections at least, a strong opposition to any change in the trade relations between the two countries. I do not share these views and my colleagues do not either. I think if we can improve our trade relations by having a freer exchange of all farm products the country will be greatly benefited. To bring about any change in regard to manufactured products would be a more difficult matter. You say that in this very session we should commence to amend the tariff. I suggest to you that it would hardly be advisable for the Parliament of Canada to attempt to revise the tariff while negotiations are pending with our neighbors. I will say no more, but the Government is ready to respond fully to advances made to us for reciprocity. I will say this, however, that whatever we do with our neighbors, nothing shall in any way impair our British preferences. That is a part of our policy."

Countries South of Us

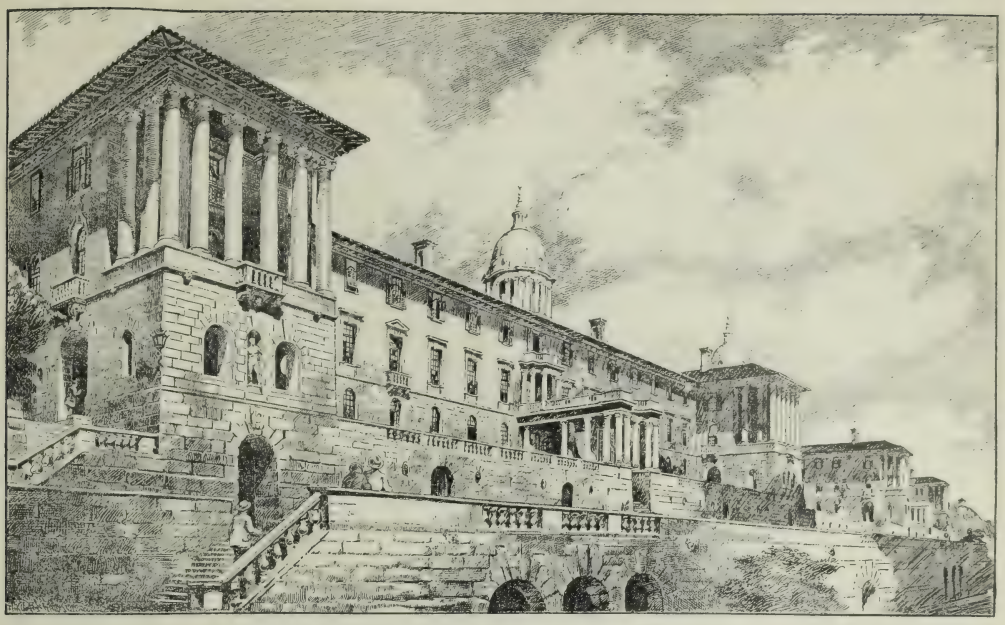
It is now reported that during the recent battle between the Brazilian Government forces and the marines on Cobras Island, in the harbor of Rio Janeiro, 200 persons on the mainland were killed or injured, that 300 of the marines lost their lives or were wounded, and that the Government's losses were 100 killed or wounded. The sailors of the two new dreadnoughts, who rebelled some weeks ago and were pardoned, are now in prison, and new crews will be placed on both ships. Other vessels of Brazil's navy have been sent to sea under command of Government officials and with sealed orders.——An island in the center of Ilopango Lagoon, Salvador, and not far from the capital of that republic, went down into the water on the night of the 17th, and nearly all of the inhabitants, about 170 in number, were drowned. The sinking of the island followed a series of earthquake shocks which were felt thruout Salvador. At midnight, persons on the shore of the lagoon or lake heard guns fired on the island. Then they saw a great bonfire there. One boatload of women and children came to the mainland. While the watchers on the mainland were talking of sending boats for those who were still on the island, there was another shock, and then the bonfire could no longer be seen. A few hours later, daylight showed that the island had disappeared. Seventy families were lost.——In Peru, the insurgents last week captured Abancay, the capital of the province of Apurimac. Many on each side were killed in the battle. The Government has sent troops to the province.——The Mexican revolutionists in Chihuahua have not been subdued. Conflicting reports have been sent from that northern State, but it is known that in a battle at Cerro Prieto, on the 12th, seventy rebels were killed. It is asserted that by the order of General Navarro, commander of the Government's troops, no prisoners were taken, and that many rebels who surrendered or had been wounded were killed with bayonets. This is denied by representatives of the Government. It is reported that the Government's forces were defeated at La Junta on the 17th and suffered great losses. On the 18th, Minister Creel asserted in a message sent to Washington that Navarro had won a victory at Padernales, that he was pursuing what remained of the rebel forces, and that there was complete peace elsewhere in the republic.

The Philippine Islands

In a report concerning his visit of five weeks to the Philippines, Secretary Dickinson speaks sympathetically of the aspirations of the Filipino people for independence. The public expression is very general in favor of independence, but many of the conservative and more substantial men of the islands would regard a grant of it with consternation. As to the fitness of the people for self-government, he says:

"There are very many highly educated Filipinos—many men of talent, ability and brilliancy—but the percentage in comparison with those who are wholly untrained in an understanding of, and the exercise of, political rights under a republican form of government is so small, and under the best and most rapid development possible under existing conditions will for a long period continue so small, that it is a delusion if the the present

policy of control of the islands by the American people shall continue, to encourage the Filipino people in the hope that the administration of the islands will be turned over to them within the time of the present generation."



Peace, law and order prevail, he continues; ladrones or robber bands have been almost if not entirely suppressed, and the head-hunting tribes have taken to peaceful pursuits. There is a deep and widespread interest in education. Practically all of the lepers have been segregated on one island, where there are now 3,000. The financial condition of the islands is very satisfactory, and there is a surplus of $6,394,793. The railroads are well constructed and well maintained. He favors a pension fund for superannuated employees of the insular Government, an increase of $5,000,000 in the appropriation for public improvements, and more liberal laws concerning mineral claims, mining exploration and the sale of land. He would have $250,000 appropriated to enable the War Department to develop coal deposits on the island of Batan.

The English Elections

As we go to press the Government is one ahead and there are only three more seats to be filled, so it is safe to conclude that the new Parliament will have substantially the same composition as the old. Regarded as a referendum, the election was not a success, for nothing is settled by it except that the Liberals are to remain in power, but even this is conditional upon their keeping on good terms with their Irish and Labor allies. The Unionists talk of compromise, and in all probability the Veto Bill will be passed by the House of Lords; in fact, Mr. Balfour last week admitted that this was likely to be the result of the election. The leaders of both parties are anxious not to involve the King in the controversy, so there is no likelihood that the Liberals will be forced to the extreme measure of calling upon the sovereign to create enough new peers to overrule the Conservative majority. The Unionist organs ridicule such a proposal, claiming that the elevation of 500 Liberals to the peerage would degrade the Upper House and that the new peers would be ostracized socially. Mr. Lloyd-George replied to the sneer by saying that if it came to a pinch he did not despair of finding in the Liberal party 500 men as intelligent as those now in the House of Lords, men fit to sit side by side with, say, Lord Willoughby de Broke. It depended on whether they were looking for legislators or swells.

Portugal

The Provisional Government of Portugal is having a hard time straightening up the finances which, thru the extravagances of the monarchial regime, are in a very tangled condition. Arrears of taxes amounting to some $4,000,000 are to be collected in small instalments. Efforts will be made to recover the loans made by the Bank of Portugal to various government officials and the royal family amounting to three or four million dollars. Another embarrassing question is that of the settlement of the dowry of the Queen Dowager Maria Pia, who is a princess of the House of Savoy. According to the marriage contracts, she is entitled to annuity of $60,000 if she resides in Portugal and half that sum if she leaves the country of her own free will. The Provisional Government is willing to pay half the annuity but the Italian Government insists upon the full amount since the queen was exiled.—— The strike of the railroad men of Portugal which threatened seriously to disturb the new Government has fortunately been settled. The Minister of the Interior has arbitrated between the company and the employees and appeased the strikers by appealing to their patriotism and by promises of labor legislation under the republican administration. The Provisional Government concedes the right to strike to all classes of labor except Government employees. Strikers must give notice of intention to strike. Twelve days' notice is required for employees engaged in the supply of water, light or other services of first necessity, and eight days for men employed on railways or in maritime export.——The authorities of the Portuguese colony of Macao, near Hongkong, had a revolution of their own to contend with, but order was restored after a change of governors. The demands of the mutinous soldiers and sailors were granted in

THE CAPITOL AT PRETORIA.

full.——The Republican Government of Portugal has been recognized by Great Britain, France, Spain and Italy. Considerable dissatisfaction has been aroused in Portugal because the United States still withholds such recognition.

The Capital of South Africa

The convention which drew up the constitution for the Union of South Africa settled its most difficult questions, such as those relating to language, representation and native races, with comparative ease, but the unimportant question of the location of the capital was the subject of heated rivalry, which threatened to break up the convention. It was settled by a compromise, Capetown being made the legislative capital and Pretoria the administrative capital. The designing of the Government buildings at Pretoria has been entrusted to Herbert Baker, the architect of many South African buildings, among them the new cathedrals of Capetown and Pretoria, and Groote Schuur, Cecil Rhodes's residence on Table Mountain, adapted from the primitive Dutch homestead. We borrow from the South African number of the London *Times* (November 5) Mr. Baker's sketch for the buildings at Pretoria. They will be placed on Meintjes Kop, a high ridge overlooking the city and commanding a fine view of the surrounding mountains. Mr. Baker proposes the erection of two blocks of administrative offices on the edge of the shelf, connected by a semicircular colonnade running around the hollow behind them, which may be terraced like a great Greek amphitheater and used for outdoor national celebrations.

Parliamentarism in China

The Chinese Senate, or Assembly of Provincial Representatives, continues to take itself very seriously. It is gradually assuming all of the functions of a legislative body with full parliamentary powers, and the Government does not dare to dissolve it. The Senate called upon the Government to veto the Hunan loan on the ground that the proposed issue of bonds, altho asked for by the Hunan officials, had not been approved by the local assembly. A message from the Government in reply stated that, as the loan had already been approved by the Emperor, it was not open to further discussion. Whereupon the Senate charged the Councillors of State with having disregarded the rights of the people in influencing the Throne and demanded that the Council-

lors appear in person before the Senate to give an account of their action. The Councillors, however, did not comply and the Senate did not insist. A week later the Senate again came into conflict with the Government over two minor matters of provincial administration, the question of the salt tax in Yunnan and of police education in Kwangsi, measures passed by the Senate and rejected by the Council of State. At this the Senate unanimously declared its lack of confidence in the Council. The Senate proposes to take the preparation of a constitution into its own hands, altho this task is expressly excluded from its powers by the edict of convocation. The Senate favors doing away with the cue, which was imposed upon the Chinese at the time of the Manchu conquest and has become a fixed national custom. A resolution was passed asking the Throne to compel students, soldiers, sailors and officials. including diplomats abroad, to cut off their cues. The budget now before the Senate is objected to because nearly a third of it is to be devoted to the development of an army and navy. The loan of $50,000,000, which was to have been obtained from American financiers, is now held up because they have announced their intention of allowing English, French and German capital to participate. The Government is willing to borrow from the United States, but not from European countries, and it also objects to the appointment of a financial adviser to control the expenditure of the money. The concession of the Government that the first National Assembly be held in 1913 does not satisfy the Senate, which wants a representative government within a year. The annexation of Korea by Japan has alarmed the Chinese, and the Viceroy of Manchuria has memorialized the Throne to the effect that the only way to save Manchuria from the Japanese and Russians is to convene the National Assembly, increase the army and open the province freely to the trade and travel of all nationalities. So far the Regent stands by the Grand Council of State and refuses to call for its resignation at the demand of the Senate. An Imperial edict expressly denies that the Councillors are ministers responsible to the Senate.

Foreign Notes

Lord Hardinge, who last month succeeded Lord Minto as Viceroy of India, has already a difficult problem on his hands. Riots have broken out in Calcutta over the approaching religious festival of the Mohammedans, at which cows are sacrificed. The Hindus, angered at this attack upon a sacred animal, petitioned the authorities to prevent the sacrilege, but the Government refused to interfere, so the Hindus took the matter into their own hands and rescued a cow from a stable where it had been kept for the killing. The Mohammedan and Hindu mobs fought in the streets all night, but next day the troops put them down, tho only with the greatest difficulty.——The Spanish Federation of Labor has decided against a general strike in all industries in support of the metal workers of Barcelona. The prevalence of strikes in Spain is alleged as one of the reasons for the very extensive emigration to America which threatens the depopulation of Andalusia.——In the Spanish Cortes the conflict between the Government and the Carlists over the "padlock" bill restricting the religious orders has become intense. The Carlists have resorted to filibustering tactics, offering seventy amendments to a single clause and making long speeches on each amendment. When the Republican deputies interrupted their speakers the Carlists threatened to withdraw, and the Chamber broke up in a tumult. Premier Canalejas has declared his determination to make the session continuous until the bill is passed.——The German Government regards the loyalty of Alsace-Lorraine as sufficiently established so that the annexed provinces may be allowed a measure of self-government. The Bundesrat has drawn up a constitution for the provinces which will come before the Reichstag after the Christmas recess. It provides for two chambers and a governor appointed by the Kaiser. Of the two chambers of legislation, the higher will consist of thirty-six members, one-half of whom would be *ex-officio* or selected by chambers of commerce, agriculture and labor, and the other half appointed by the Kaiser upon the nomination of the Bundesrat.

Apostrophe to Milton

BY JOHN GREENLEAF WHITTIER

[I find this poem of Whittier's in a scrap-book kept by his older sister, which contains about fifty more of the first efforts of his muse, very few of which were ever collected. These verses appeared in the *Haverhill Gazette* of June, 1827, when Whittier was a student in the Academy, and are not to be found in any published volume.—S. T. PICKARD.]

HAIL, deathless thoughts of other days!
Thrice welcome to my own!
Hail, high and spirit-rousing lays,
Whose magic power has thrown
A charm around the poet's way,
A vision fraught with joy,
An emanation of that ray
No night can e'er destroy!

Thy wasting tide, oblivious Time,
Hath power o'er earthly things;
But Fancy's pure and sunny clime—
Her free imaginings—
Her thoughts that fire the raptured soul,
And light the darkest hour,
They know not of thy dread control—
They live beyond thy power.

The column's sculptured form may fall,
The monument decay,
And chill oblivion's moveless pall
On earthly grandeur lay;
But there are thoughts that cannot die,
And dreams that never fade,
Whose high, unsullied purity
Not Time itself can shade.

They raise the heart above the low
And dull concerns of earth,
They cross the spirit with a glow
That hastens Fancy's birth;
They wake to sound the airy lyre,
They bear its strains along,
And beams of their celestial fire
Illume the path of song.

6th month, 1827.

The Year in Finance and Trade

BY FRANK D. ROOT

[Mr. Root, a member of the staff of THE INDEPENDENT, has for years devoted much attention to the general course of financial and industrial affairs. All the details of the record of American financial and commercial activity during the current year cannot, of course, be set forth within the limits of this brief article, nor can there be any elaborate analysis. His aim has been merely to touch upon the leading points in the record, and to direct attention to a part of the statistical evidence which deserves to be considered.—EDITOR.]

FOLLOWING the slow recovery, in 1908, from panic depression, a normal measure of prosperity was restored in the second half of 1909. The crops ware large, there was great activity in the building industry, growth of traffic and larger profits enabled several railroad companies to increase their dividends, at the pig iron furnaces the production record was broken in the closing months, and the Steel Corporation's net earnings grew from $23,000,000 in the first quarter to $41,000,000 in the fourth. In 1908 the market prices of leading active securities were increased by from 20 to 50 points. In 1909 there were considerable additions to these advanced prices. The year 1910 has been less satisfactory. In this brief review only the leading indications of the general movement, and only the most important of the events and opinions which have determined its course, can be considered. If we turn to the securities market we find large losses, which in most cases (for the active list) exceed the gains of 1909. The average loss for representative active stocks has been in the neighborhood of 20 points. In the following table are shown the gains of 1908 and 1909, with the losses of the present year, up to the end of last week:

MOVEMENT OF SECURITIES.

While transactions and prices on the Stock Exchange are not the only evidence which should be considered, the course of these prices, so closely related to the great railway companies and the manufacturing industries, must be taken into account in any inquiry as to the causes and character of the general trade movement. And in accounting for changes in market values, which may either indicate or cause changes in the condition of industries, due weight must be given to the views (not invariably just and wise) of the capitalists whose influence is dominant in corporation finance.

This year our industries and trade have been affected more or less by the controversy of the railway companies with the Government concerning a proposed increase of freight rates, following an increase of wages amounting, it is estimated, to more than $100,000,000 a year; by the attitude of corporations and their controlling capitalists toward projected or completed legislation for the regulation of railways, and toward the enforcement of laws against combina-

tions in restraint of trade; by popular denunciation of the recent revision of the tariff, accompanied by a widespread belief that this revision increased the cost of living; by local elections (in March, April and September) that foreshadowed Republican defeat at the general elections in November; by the extent of that defeat, with some thinking as to the effect of it; by the success of Republican insurgents in the Middle West; by court decisions concerning Trusts and railways; by decisions of the Interstate Commerce Commission relating to railway rates; by the crops, and by other factors.

At the beginning of the year, the railway companies foresaw trouble on account of a general demand for higher wages. They also disliked the new railroad bill, which the President approved and supported. Their attitude and that of capitalists associated with them tended to depress the securities market and to affect certain industries directly. There began to be signs of a slackening of trade. In March, a Republican plurality of 14,250 in the Fourteenth Massachusetts District was displaced by a Democratic plurality of 5,640, and this change was due mainly to a belief in that district that tariff revision had increased the cost of living. The election of Mr. Foss there was followed in April by a similar change in the Rochester district of New York, where a Republican plurality of 10,000 was displaced by a Democratic plurality of 5,440. These local political revolutions pointed to Republican defeat in November. A few months later, the sweeping Democratic victory in Maine convinced many that the Republicans must lose their majority in the House. When political changes are impending, manufacturers and investors are inclined to proceed with caution. In April, gold exports ($33,000,000) and gloomy reports about the condition of the growing wheat had a depressing effect.

Arbitration had caused a general increase of railroad wages. Mediation, under the Erdman act, in the case of the Baltimore & Ohio road, followed by arbitration, had led to an increase which was afterward used by many other roads as a measure for the increase which their employees should receive. To meet the additional expenditure they proposed to increase their freight charges and passenger commutation rates. At the end of April and in the first week of May their higher freight tariffs were filed with the commission. Shippers at once protested. The pending railroad bill (soon to be enacted) gave the commission power to suspend such increases. At the end of May the Government procured, in Missouri, an injunction restraining the roads from increasing rates. It also brought suit against them, alleging that they had combined, as to the proposed rate increase, in violation of the Anti-Trust law. A few days later the companies agreed to withhold their new tariffs, and the Government withdrew its suit. The question has been before the commission since that time. Delay in the settlement of the controversy, and uncertainty as to the nature of the commission's decision, have continued to affect railroad securities and certain industries which depend in part upon sales to railroads. This is true of the iron and steel industry. Since April the pig iron output has steadily declined, and in November it was only 1,909,780 tons. Having risen in 1909 from 1,797,560 in January to 2,635,680 in December, it has now fallen almost to the figures of two years ago. The following table shows what has been done at the furnaces :

PIG IRON, TONS.

1905	22,992,380
1906	25,307,191
1907	25,781,361
1908	15,936,018
1909	25,795,471
1910—	
January	2,608,605
February	2,397,254
March	2,617,949
April	2,483,763
May	2,390,180
June	2,265,478
July	2,148,442
August	2,106,847
September	2,056,275
October	2,093,121
November	1,909,780
Eleven months	25,077,694

The Steel Corporation's net earnings were kept at a high level for nine months of the year, but a considerable reduction for the last quarter is expected. Unfilled orders on hand have fallen from 5,929,-

021 tons, at the beginning of the year, to only 2,780,413 tons on November 30. Press dispatches say that 25 per cent. of the steel mill employees in Pittsburg and the neighboring steel districts are now out of work, and that a majority of the remaining employees are working but little more than half time. The Corporation's quarterly net earnings are shown below:

	1908.	1909.	1910.
First	$18,229,015	$22,921,268	$37,616,876
Second	20,265,756	29,340,491	40,170,960
Third	27,106,274	38,246,907	37,305,187
Fourth	26,225,485	40,982,746	.....
	$91,826,530	$131,491,412	.....

In June, several new suits against Trusts were begun. Stocks declined in the closing days, following the commission's decision, on the 29th, in the Pacific Coast cases, ordering a large reduction of rates. There was some anxiety about the crops in July, and also concerning the embarrassment of the Pearson railroad syndicate, but the market was relieved when this syndicate's holdings of Rock Island and Gould road stocks were taken over by prominent New York bankers. In September, the harvesting of great crops was assured, altho spring wheat was to show a loss of nearly 60,000,000 bushels. The size of the crops, according to the Government's final report, is shown below, new high records having been made for corn, oats and tobacco:

Crops.

	1910.	1909.
Corn	3,125,713,000	2,772,376,000
Wheat	695,443,000	737,189,000
Oats	1,126,765,000	1,007,353,000
Barley	162,227,000	170,284,000
Rye	33,239,000	32,239,000
Buckwheat	17,239,000	17,348,000
Flaxseed	14,116,000	25,856,000
Rice	24,510,000	24,368,000
Potatoes	338,511,000	376,537,000
Hay	60,978,000	64,938,000
Tobacco	984,349,000	949,357,000
Cotton	11,426,000	10,088,000

Stock Exchange transactions were at a low level in September, amounting to only 7,673,000 shares. Railroad capitalists were encouraged by the report of a referee, who held that the order of the Minnesota commission for reduced rates in that State was confiscatory and unconstitutional; also by the resolutions of 350,000 organized railroad employees in support of the proposed general increase of freight rates. There was more activity on the Stock Exchange in the following months. Below are the figures for recent years and for eleven months of 1910:

Stock Exchange Transactions.

	Shares, number.	Bonds, Par value.
1906	284,298,010	$674,452,850
1907	196,438,824	526,170,450
1908	197,206,346	1,082,161,120
1909	214,632,194	1,317,291,000
1910—		
January	24,538,500	$86,822,500
February	16,012,626	64,170,500
March	14,988,179	75,773,700
April	14,089,639	51,287,500
May	11,918,978	41,919,500
June	16,292,870	48,291,000
July	14,254,713	38,099,950
August	10,392,788	31,182,000
September	7,673,529	46,030,200
October	13,452,381	56,970,000
November	10,713,469	41,989,000
Eleven months	154,327,672	$582,535,850

Mr. Roosevelt began in August his fight for the temporary chairmanship of the New York Republican convention, and also his series of speeches in various parts of the country. These addresses, especially the one in which he defined and advocated the "new nationalism," were much disliked by many corporation capitalists, whose published views about his activity and doctrines did not tend to promote investment or industrial progress. In the campaign following Mr. Roosevelt's victory in the Republican convention at Saratoga, many of them hoped that the election would, as they said, check his radicalism and that of a considerable element in his party. Some advance in Stock Exchange prices during October was explained by them as a discounting of the approaching "victory for conservatism." Others thought that defeat of the Republican party, and a loss of that party's majority in the house, would not be favorable in its effect upon trade and the industries, because a division of Congress would prevent legislation and cause uncertainty for two years to come. On the day following the election—when it was known that there was to be a Democratic majority of more than sixty in the House—stocks sharply declined. Some manufacturers perceived that there must soon

be further revision of the tariff, and that duties must be reduced. There were additional signs of reaction in general trade. On November 28, the securities market was depressed by a published interview with James J. Hill, who spoke in a most pessimistic way, predicting that a host of men would be out of work next year. The hearings before the commission concerning the increase of freight rates were still in progress and there was much public interest in the assertion of the shippers' counsel, Mr. Brandeis, that the railroads could save $300,000,000 a year by adopting improved methods of doing their work. In support of this he offered the testimony of experts in efficiency. The railroad companies believed, however, that they had reason to expect a grant of a large part, if not all, of the proposed increase. In December the promotion of Chairman Knapp and the expiration of Mr. Cockrell's term left two vacancies in the commission. The appointments made to fill these vacancies are said to be regarded with much satisfaction by the shippers' organizations that oppose the increase. This rate controversy, like the long pending appeal to the Supreme Court in the Standard Oil and Tobacco Trust cases, has exerted an unfortunate influence upon general business, and will continue to do so for some time to come. Near the end of the year the Government brought suit against the Sugar Trust, under the Sherman act, and a decision of the Supreme Court, in the cases of men indicted on account of their connection with the Sugar Trust's closing of Segal's refinery in Philadelphia, was regarded as an important one because it would facilitate the successful prosecution of Trust offenders who have relied upon the statute of limitations for protection. On the other hand, a decision in the Trust suit against the anthracite railroads was for the most part in their favor, and it served to increase slightly the market price of their shares. The general situation was not perceptibly affected by the President's message and the annual department reports. In the second half of the year the reports of railroad net earnings showed an increasing loss in comparison with those of 1909. Gross earnings more than held their own, but additional expenses of operation, due, it is asserted, almost wholly to the higher wages, cut down the net. Thus, in October, while gross earnings (for 232,162 miles of road) were larger by about $2,500,000, an increase of $13,500,000 in operating expenses made the net earnings only $91,451,000, or less by $11,000,000 than those of October, 1909, which were $102,480,000. Immigration has slightly increased during the year. For ten months the net gain of aliens was 742,706, against 704,798 in the corresponding months of 1909. There was a net loss of 41,000 in 1908. Failures for eleven months were 11,524, with $184,719,000 of liabilities, against 11,793 and liabilities amounting to $138,478,000 in the corresponding months of last year. Foreign trade was increased. Exports (for eleven months) rose from $1,555,720,931 to $1,636,990,585, and imports from $1,336,776,480 to $1,425,770,028. In some past years there has been a stringent money market in New York during the autumn, owing to demands for moving the crops. Such conditions did not appear this year. Rates for loans on call since July have ranged between 1½ and 4 per cent., and such have been the rates from the beginning, a few days excepted. The banks have enjoyed prosperity, and the number of bank failures has been very small. Profits of the 7,000 national banks (for the fiscal year ending with June) were $154,000,000, out of which they paid in dividends $105,000,000, or more than 10 per cent. on their capital. With a broad and solid foundation of great agricultural harvests and sound and prosperous banking institutions, the just settlement of important questions now pending should give the country prosperity in the coming year.

NEW YORK, December 19, 1910.

Poems by the Emperor of Japan

Sakurabana
Chirishi bakari mo
Sabishiki wo
Tou hito sae zo
Nakunari ni keri.

The cherry-flowers have fallen.—That alone
Makes all seem sad, and fills my aching heart
With deep-felt loneliness. And, lonelier still,
Now that the cherry-flow'rs are gone, my friends
Come never more to cheer my solitude.

Hate mo naki
Haru no hiro no ni
Hanatareshi
Koma no kokoro ya
Tanoshi Karuran.

Let loose upon the moorland's wide expanse,
Some bright fresh day in spring-time, how the colts
Must feel the joy of living.

Magokoro wo
Utsuseru fude no
Ato mireba
Mukashi no hito ni
Au kokochi seri.

When I behold the written page whereon
Some sage of old hath wrought with cunning pen,
And left his mind enmirrored, then, methinks,
I fain would meet that penman face to face;
For true heart-converse.

Unaigo mo
Haha no fertakaro
Hanare tari,
Sumire hana saku
Nobe ni asobite.

Lured by the bright hues of the meadow-lands,
Yon child, the apple of his parents' eyes,
Hath left his mother's lap and wanders far
To seek the violets lurking in the grass.

Furu ame ni
Ike no mikasa ya
Masari ken,
Tsutsumi ni idete
Kawazu naku nari.

The rain it rains. The water in the pond
Must now, methinks, be level with the banks.
I hear the frogs croaking for joy of heart.

Yoso in mada
Kokoro no chiranu
Asaborake
Shizuka ni hana wa
Mirubekarikeri.

At early dawn, ere yet the busy day
Have torn the heart this way and that, 'tis well,
With meditative mind and pensive brain,
To view the peaceful glories of the flowers.

Poems by the Empress of Japan

Kaku bakari
Sayakeki tsaki no
Kagami ni mo
Hito no kokoro wa
Utsurazarikeri.

So bright the flawless mirror of the moon!
And yet it mirrors not the mind of man.

Shitashimishi
Tonari zo oshiki,
Nii muro ni
Utsuru kadode wa
Ureshi keredomo.

'Tis sad to part from neighbors whom we love,
E'en tho the joy attract us of a house
That's newly built and clean.

Yatsukaho no
Tariho no ne ni
Itatsukishi
Hito no chikara mo
Miyuru aki kaua.

Oh, Autumn Season! Thou does even show,
In the great ears of fully ripened corn,
How hard the farmers labored in the spring.

Tabiyakata
Tachi okurekeri,
Sode hikite
Todomuru kora wa
Ayeshirau ma ni.

My start this morning from the hostelry
Was much delayed, by reason of the babes
Who pulled my sleeve and coaxed me to remain.

Kamigaki ni
Namida tamukete
Ogamu rashi,
Kaeru wo machishi
Oya mo tsuma ko mo.

Parents and wives, and children fatherless,
This day they'll worship, bowing at the shrine
With sacrifice of many a heartfelt tear
Those whose return they've waited for so long.

Ikani shite
Hi wo okururan,
Kuni no tame
Hone wo kudakishi
Masurao no tomo!

Brave band of heroes! for your Fatherland
Scarred, maimed, disabled, tell me how you pass
Your slow, inactive days.

TOKYO, JAPAN.

The Vital Requisite of Reform in Our Banking System

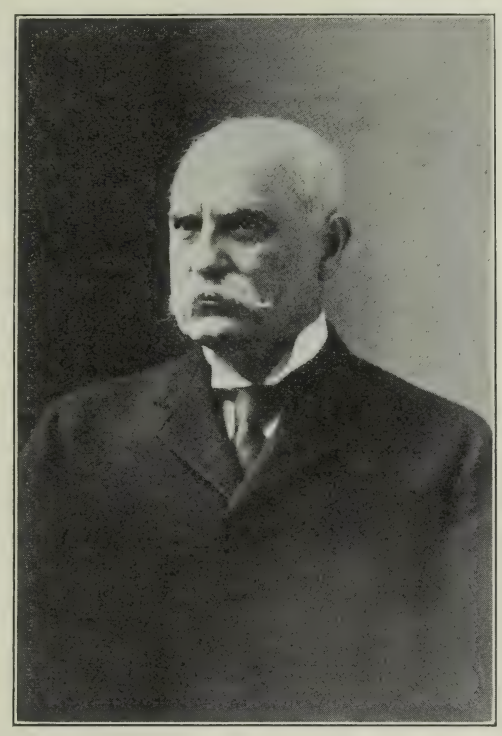
BY NELSON W. ALDRICH

[For years the senior Senator from Rhode Island has been the authority in Congress on finance. He is chairman of the Senate Committee on Finance and also the chairman of the Monetary Commission. It is understood that when his term expires this year he will devote all his time to the work of the Monetary Commission.—EDITOR.]

THE Federal Government, by the enactment of laws establishing a national banking system, and by the adoption of an intricate scheme of governmental control of its machinery, has undertaken to safeguard the interests of the Government and of the people in this most important agency for our national development.

Unfortunately many of the methods prescribed by law for the management and control of our national banks have become obsolete, and the failure of many others to effect the purpose for which they were designed has resulted in widespread loss to the people in every section of this country. In actual operation the rigid provisions with reference to the holding and use of reserves, and those preventing legitimate expansion of credit in time of need, have been found to be very detrimental to the public interests. The National Government having thus assumed control of the organization of credit, it is manifestly incumbent upon it to enter at the earliest possible moment upon a revision of our national banking legislation, such as will make our methods and practices more responsive to the demands of our modern business life. Our present national banking system not only fails completely under stress and in the presence of unusual demands upon its resources, but under ordinary conditions it has been found inadequate and unresponsive.

There can be no better illustration of the structural weakness and practical defects of our national banking system than is shown by the relative growth of national banks and State banks and trust companies in the past twenty-five years. Within this period the number of national banks has increased 4,268, while the number of State banks and trust companies has increased 11,085. The capital and surplus of the State banks and trust companies increased in the same time from $175,000,000 to $1,283,000,000. In many important communities practically all of the banking business is carried on by State banks and trust companies.



From this statement it is evident that the State banks and trust companies are better organized to respond in competition to the business demands of the communities in which they are located. This relative growth also demonstrates the fact that, if we are to have a comprehensive reorganization of credit, we must within safe limits so liberalize legal banking requirements as to character, supervision and inspection as will secure practical coördination in each of the several classes of banking institutions of the country. The Government must at least give to the national banks a status and advantage which will enable them to compete in every line of banking activity with institutions chartered by the States.

The differences between the organization of national banking in this country and the organization of credit in other commercial nations are even more radical and fundamental. For instance, elsewhere reserves are concentrated and used in any direction where needed, and the resources of all are available for the relief of any. In this country reserves are scattered, and in times of trouble are not available either for purposes of assistance or defense. We have, practically, in this country a vast number of isolated units each working within a limited circle for their own selfish interests. The intelligent managers of these individual banks generally recognize the necessity of greater coöperation and of organization, but are powerless to effect either, on account of the restrictions and limitations imposed by our laws.

I have only alluded to a few of the

many particulars in which our national banking methods are out of line with those in use everywhere else; but if we admit, as it seems to me that we must, that the existing system is fatally defective in many respects, it is difficult to see how any plan of reform can be approved by thoughtful students of the question that does not involve a more complete organization, a more thorough association and coöperation of the banks of the country.

The evolution which has taken place in the functions of clearing house associations may well furnish an indication of the tendencies and results which may be useful in determining the character of an organization which will be most effective.

HON. NELSON W. ALDRICH.
Copyright by Clinediast, Washington.

Clearing houses were first organized to facilitate the exchange of checks and drafts and the settlement of balances arising out of this exchange. The necessity of co-operation in other respects has led to an enlargement and extension of these functions until they now include concerted action upon all questions affecting the interest of the members of the association or the welfare of the community in which it is located. But its influence and beneficial effects are largely confined to a very limited geographical area.

There must, of course, be differences of opinion on certain points as to the character, extent and power of a new organization. Perhaps the greatest difference will be found to exist upon the question of whether the new organization is to be confined to scattered districts thruout the country, varying in character and responsibility, each acting independently, or whether there should be associations or organizations covering a larger area or the entire country. It is perfectly clear to me that at least any organization which shall receive general approval must fully recognize the rights and independence of existing national banks. Any new scheme of coöperation and association must be superimposed on existing banks, and must not in any respect assume either the business or the functions of any of these banks.

If we are to give the banks of the country and of every section an opportunity, which can only be afforded by the general Government, for association and cooperation, the result must be of such a nature as will be mutually beneficial to all the banks and clearly in the interests of the people of the country as a whole. It must be an organization that will, as far as possible, insure reasonableness and steadiness of rates of discount thruout the country, that will prevent the possibility of bank suspensions in the future, that will extend to a bank in any part of the country, under proper circumstances, facilities which will enable it to afford relief at all times to those who are entitled to credit. It must provide against any possible disruption of domestic exchanges. It must be an organization which will have both the power and the purpose to maintain at all times, under all circumstances, the credit of the great people whose interest it is bound to serve.

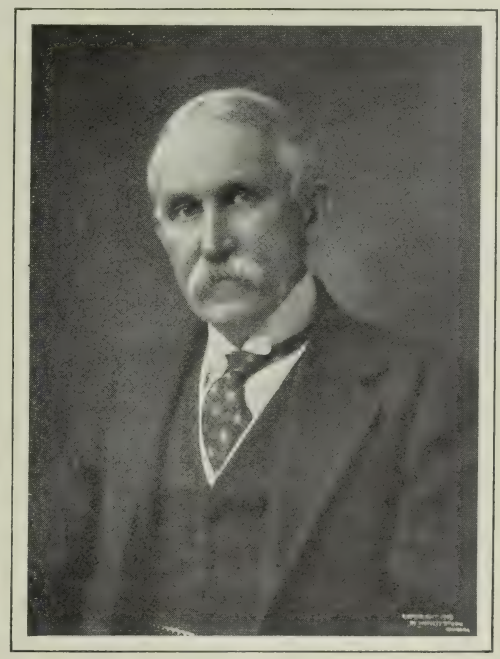
WASHINGTON, D. C.

Departmental Economy

BY FRANKLIN MAC VEAGH

[The following authorized statement by the Secretary of the Treasury is a digest of some of the statistics and material compiled by him for his annual report to Congress. It is of much timeliness, therefore, at the present moment.—EDITOR.]

EARNEST efforts to secure departmental economy have marked the present Administration. With exceeding care on the part of the heads of departments the estimates have been compiled, under the immediate attention of the President. There could scarcely be more scrutiny given to the work of the estimates than was given last year and has been given this year by the President and the members of his Cabinet. They are an exhaustive endeavor to reduce the requirements, not only in the gross but in every detail, to the lowest point consistent with proper administration.



The Treasury Department has been vigorously engaged in the work of increasing its efficiency and diminishing the relative expense of operation. It has made considerable progress, but has not nearly reached the end. At least 400 positions have been abolished—and so far without causing individual suffering, as we have been able to take care of practically all of the displaced employees, except in the case of the Mint at Philadelphia and in other offices outside of Washington and New York, where, in the nature of the case, there were no opportunities for transfer. We have transferred those who were displaced to other positions becoming vacant in the normal way, the vacancies having been allowed to accumulate by temporary appointments. Whether it will be possible to continue to take care, in this way, of employees whose positions we are abolishing, I do not know. But this is clear, that any successful effort to improve the administration operations of a large department like the Treasury, is immediately handicapped and might well be discouraged entirely by the absence of a just method of retirement.

Working out these economies brings constantly to mind the hopelessness of ever arriving at a complete state of efficiency without a way of retiring clerks in a just and humane manner. I have no doubt that this very discouraging feature has in the past stood in the way of many attempts to improve the efficiency and economize the expense of operation in the departments. Indeed, there is no practical way to put the Government service properly on its feet without a fair and just method of civil service retirement. Unless Congress gives the Executive this necessary method of improving the service, the country must accept a service which is not fully satisfactory and which cannot be made so.

Fortunately a retiring provision can be made—and this is mathematically demonstrable—without the expense of one dollar to the Government. The contributory system of retiring allowances is not only the only system which has any chance whatever of being adopted, but it fortunately is the best system by far for the men and women of the service; and it is therefore the part of wisdom for all the friends of this movement to concentrate upon this method. All of the executive departments which have thus far been consulted stand ready to carry out such a law without asking any addition whatever to their ordinary appropriations. The objection, therefore, that we might be introducing another pension roll has no justification. The contributory allowance is an entirely different matter from a straight pension and eliminates the objection altogether. It is a contribution of the employee, not a contribution of the Government, and is in no sense an estoppel of any argument in favor of increased pay; while a straight pension paid by the Government would always be taken as an additional salary and would perpetually have a tendency to estop any argument for increased compensation. Also, under a pension system a man must not only live beyond the retiring age, but he must continue always in the service until that period in order to receive any pension at all; while, un-

der the contributory system, in all the accidents of life he gets what belongs to him of the savings of the system.

Following this there should be the elimination of political influences from management and operation. Any one who comes close to the practical administration of the Federal Government—or of any government—soon becomes aware that everything ultimate or final in the excellence of administration must wait upon the complete inclusion of all non-political offices in the classified service, and that progress, meanwhile, will materially depend upon the broadening of that service. The frequent Presidential extensions of the classified service have practically exhausted the exclusive opportunities of the President, and the enlargement will hereafter be a matter for the cooperation of Congress; but there is no reason why the purely administrative offices which require confirmation should be differentiated in respect to the classified service from like offices which do not require confirmation. And not only should these purely administrative officials — the auditors of the Treasury Department, for example —be included in the classified service, but the workings of the system itself should be restudied and advanced, both as to the way in which people enter the service and as to the way in which they are promoted and demoted and generally managed after they are in.

HON. FRANKLIN MACVEAGH.

Among the changes in the Treasury Department in Washington to secure greater efficiency and economy has been the elimination of the issue division in the Treasurer's office, stopping the double printing of the Government notes, first in the Bureau of Engraving and Printing and again in the Treasury building, and the unnecessary counting of these notes. A businesslike handling of all the paper has been established, and the printing, under greatly improved methods, is a large part of the completed improvement. We have established the cancellation, at all the subtreasuries, of notes sent from them to Washington for redemption, so that they are now sent by registered mail, as merchandise, without value, instead of being sent by express, as money. The office of Auditor for the Post-Office Department has been greatly simplified and rendered more efficient, at a largely reduced cost. The reorganization of the Chief Clerk's office is adding greatly to the facilities of the Department and increasing its economies.

These are simply practical economies, in an effort to bring the work of the Department as near as possible to an efficient basis; but in considering efficiency and economy it must not be overlooked that these are not represented exclusively by reduction in appropriations. Economy and efficiency do not mean that in every case where there is a change the change shall be a reduction of cost. There are undoubtedly many instances where the interests of efficiency in government require increases. The popular impression as to the extent of possible economies in the administration, in the executive departments, is singularly exaggerated, and this misconception is harmful. When the public expects that the Government can save $300,000,000 a year, such small, laborious savings as can be made in the executive depart-

ments hardly seem worth while. And it is astonishing that under such circumstances interest in the comparatively small savings can be maintained. These savings can only be disappointing to the public with such figures as $300,000,000 in mind, and they cannot receive any popular credit, for they can only seem to be small triflings with great things. And yet, even these savings can only be produced by laborious, painstaking and persistent devotion.

The entire ordinary expenditures of the Government last year were less than $600,000,000, and a great part of those expenditures is not reducible at all, by any methods of economy; for example, the interest on the national debt, and the pensions. So that there is probably not very much more than $300,000,000 left on which to save $300,000,000. Now, to save $300,000,000 when the whole amount amenable to economy is $300,000,000 is not easy. I appeal to the sense of proportion of the American public, for it is very important to have these impressions corrected, in order that there may be some encouragement given to these men scattered thru the departments who want to bring about all the improvement possible.

There can be very important savings, undoubtedly. When you can save on a particular thing, or in a combination of things, $100,000 a year, that is very well worth doing, even if it is not a million, or ten millions, or a hundred millions; and there are plenty of ways still open to us of saving very considerable sums. One important way, in the Treasury Department, would be by the elimination of a large number of customs ports that are of no use under the sun, and of some of the assay offices and mints which perform no service whatever. There is also a list of custom houses which the Treasury Department would be much better off without. Most of the assay offices are superfluous, and even the three supposedly active mints, at Philadelphia, Denver and San Francisco, cannot be kept fully employed. The expense of the mint at New Orleans has been greatly cut down, but what is left of it is not justified. To do these things, however, the consent of the Congress is first necessary.

Another lucrative opportunity for economy is in public buildings, which are unfortunately beyond the control of the Treasury Department, except in so far as it can reduce the cost of operating the Supervising Architect's office — a subject which has been engaging the Department's attention—a small matter compared with the amounts expended on public buildings. I am by no means opposed to a liberal public building policy, and it is my hope to see, during this administration, another distinct advance in the artistic character of all the buildings, small and large, which the Government erects. The Government has the opportunity, and it is its duty, to aid the architectural standards thruout the country; but this does not mean that all public buildings should be expensive, or that they should be authorized except from consideration of the Government's actual needs. They ought not to be put up simply to gratify a local community. The authorization of a public building should be made from the point of view of the Government, and not from the point of view of a locality. If this were observed it would cause a very decided reduction in our yearly expenditures.

The efforts which have thus far been made in the direction of departmental economy have caused a material reduction in the yearly expenditures. The total ordinary estimates for 1912—the fiscal year beginning July 1, 1911—are $630,494,013.12. The estimate for the Panama Canal is $56,920,847.69, making the grand total $687,414,860.81. The total appropriations for the current year were $721,313,900.48, so that the estimates for next year are $33,899,039.67 less than the appropriations for this year. The decrease of $21,000,000 in the estimates for rivers and harbors, and the reduction in the Interior Department of $20,000,000 due to the appropriation last year of that amount for an issue of bonds for reclamation projects, have been offset in part by an increase of $19,000,000 in the Panama estimates and of $6,299,000 to meet the requirements of public building legislation. It leaves, therefore, over $18,000,000 of actual savings in the executive departments proper, as compared with the appropriations for the current year. The ordi-

nary appropriations for last year were about $10,000,000 greater than for this year. Hence, for two successive years not only the former habitual large annual increase has been completely arrested, but estimates in largely reduced figures have been submitted to Congress. There has been a saving of the regular annual increase and actual and very material reductions made instead.

There is one more very desirable means to effect reasonable economy which has been urged upon Congress: co-ordination of appropriation bills among themselves, and of revenue estimates and other estimates with appropriation bills, and an organized co-operation between the executive and legislative departments, to secure some of the advantages of the budget system. The movement has not as yet gone far. Each executive department has thus far held down and reduced its own estimates, under the direction and inspiration of the President, and the results on this line which have been achieved have been phenomenal. As long as the system remains as it is, with the responsibilities for estimates and appropriations divided into as many atoms as there are executive departments and independent establishments and appropriating committees of Congress, there can be no permanent reform in this matter. The question of the expenditures of a great government like ours is too large and too complex to be scientifically handled by anything but an organized responsibility. There must eventually be formed some kind of a budget board, or budget committee, representative of the two departments of Government, which shall make the necessary studies and recommendations.

We have been making very material progress, but there is much yet that can be accomplished, and much again which will be accomplished when obstructions are removed and facilities afforded.

WASHINGTON, D. C.

Palestine Under the New Turkish Regime

BY RICHARD GOTTHEIL, Ph D.

[Dr. Gottheil has a chair of Oriental languages in Columbia University and is one of our best known scholars in Semitic languages, particularly in Arabic and Syriac. He has long been familiar with Egypt and Palestine, and for the last year has had charge of the American School of Archeology in Jerusalem. A series of letters he has written for the New York *Sun* on political and sociological conditions in the nearer East have attracted much attention.—EDITOR.]

TO speak of Palestine and something that is new in one and the same breath must seem to many to be a plain contradiction of terms. We are so accustomed to associate with it all that is old and venerable that we find it difficult to imagine that it can have any future different from its past. Many of us would not want the change, even tho it were possible or likely. We are of the same spirit as an Englishwoman in Constantinople, who answered my criticism that the charm of life in Turkey was so often spoiled by the apparent indolence of many of the inhabitants: "It is so picturesque to see these men, young and old, sitting around in the cafés, listlessly enjoying existence: it is so restful; why should you want to change it?"

This is sheer egoism. But a similar egoism is apt to color our view of the future of Palestine. To most of us it is a land of holy reminiscences, connected with the history of our faith—a place of ruins, of stones that speak of the past. We forget that the people who are there must live; that conditions, political and economic, have changed and are changing today; and that the Palestinians—if they are to live in a modern world—must cease to be objects of religious interest only and the country must become some-

thing more than a field for antiquarian and archeological research. Our modern world has no place for the idle—however picturesque as they may be.

Palestine and Palestinians have suffered in the past from too much religion—of the wrong sort. This has come about not only thru *our* peculiar needs, but thru the circumstances in which *they* were placed. Under the Hamidian rule, the interests of the population were few, painfully few. No one was allowed to busy himself with politics. That was all reserved for the Palace at Constantinople; any one outside the charmed circle there that did so busy himself was *ipso facto* suspect and anathema. Common interests in city affairs, in literature, in art—even in acts of mercy and charity—were entirely wanting. In matters of religion only the field was wide open. And, as man has a bellicose strain in his very nature, it has caused the deplorable divisions and stripes that have, for so long a time, been rife among both Jews and Christians in the Holy Land, and which have embittered the relations between the two bodies and between them and the Mohammedans.

The proclamation of the Constitution and the endeavor upon the part of the Young Turks to create a common sentiment for an "Ottoman" empire and an "Ottoman" people were calculated to supply this want. Even at the best, it would have been too much to expect it to succeed at once. Three things make its consummation difficult. In the first place, there is the ancient rivalry between Arab and Turk. To the Arab the Turk is still merely the conqueror, who by his military prowess keeps himself in the ascendancy. There is no love lost between the two elements, and, for some time to come, there can be none. During the first blush of success the Young Turks rather accentuated than diminished this discord. They were inclined to make "Ottoman" synchronize with "Turkish." The Turkish language was to be forced into the whole administration and into the school curriculum. The Arabic-speaking population of Palestine resented this as an attack upon their peculiar cultus.

In the second place, there is the racial rivalry among the members of one and the same religious body. Greeks, Armenians, Abyssinians, Arabs, French and Germans, tho they are all Christians, remain attached to their racial Church, without any thought that they are merely parts of one great body. And just so Sefardic Jews, Ashkenazim, Bochariot, Persian, Georgian, live the lives of their separate communities and have not yet learned the lesson that the strength of the individual parts lies in the strength of the whole. The clergy of the Greek Orthodox Church, being Greeks by race, have been at war for some years with their own Arab parishioners; during last winter actual fighting went on between the factions for several days.

Finally, there is the interference of outside Powers, who mask poorly their political rivalry behind the Church form that they affect. So long as the capitulations lend a hand to the exercise of this rivalry, it will be difficult to establish the necessary communal feeling and interest. The many thousands that live under the egis of the foreign consuls form an element of discord and of difficulty which no modern state would or could tolerate.

In spite of all this, I have the hope that the enlarged sphere of interest which is still wanting will come in time. I saw a faint glimmer of its coming at the election for the municipality in Jerusalem last winter. This election, which was as up-to-date in its intrigues as any held in this country, forced an alignment of interests that had never before stood shoulder to shoulder. It taught a lesson that was not lost upon many of those who took part in it. The mentality of the people is also commencing to undergo a change, even if the expression of this change is at times peculiar. A friend of mine, having had occasion to pass thru the custom house at Haifa, and having acquitted himself creditably of all his duties toward that harsh tormentor, found himself face to face with the director, who with open palm demanded "bakshish." My friend knew only a few words of Turkish and less of Arabic. But he uttered the magic word "Dastur" (Constitution), whereon the official drew himself up to his full hight, saluted and went his way quietly. His knowledge of the "Dastur" was

probably not deep, but the idea had penetrated into his head that "Dastur" meant "no bakshish" and "no favoritism."

Apart from such precursors of the dawn, however, very little has been accomplished to mend either the mental attitude or the manner of doing things in Palestine. Where necessary improvements are made, they are made in the same slipshod manner as of old; the evident desire being to patch up gaping wounds. Constitution and Parliament have not yet introduced the thoroness of the West. As was done at Constantinople when Emperor William visited it in 1898, so was done in Jerusalem at the coming of his son, Prince Eitel Fritz, last spring. Roads were mended quickly (and poorly), wooden fences were erected to cover up ruined buildings, and the whitewasher's brush was remarkably busy. On the very day before the arrival of the prince, a low wall inside the Jaffa gate was hurriedly taken down and rebuilt—to last for a couple of years at best or to be renewed when another prince comes that way.

Or, take the case of the water supply of Jerusalem. No one questions the crying need of this improvement. During the last year two excellent projects have been before the municipality, one almost as good as the other. But one of the projects happens to have (or appears to have) French support, the other is a German undertaking. The councillors are torn by conflicting emotions; or, perhaps, by more worldly considerations. *"Ma lêsh"*—what does it matter? Nothing is being done; as nothing was done in the past.

I have referred above to one of the serious drawbacks to the development of Palestine—the one-sided religious interests that dominate there. The other serious drawback is the economic condition of the country. Under the old regime not only was nothing done to better it; the authorities put a spoke into every wheel that endeavored to turn. The fertility of Palestine as an agricultural country has been much in dispute. It is true that the hill country of Judea is a land of rocks; yet it is surprising to see how much will grow there between the very stones. The Jordan Valley, the plains of Sharon and Esdraelon, Galilee, and especially the wheat-producing countries on the other side of the Jordan, are rich and fertile. And there are mineral deposits in places that are well worth exploiting. Only last winter a concession was granted to an Italian syndicate to work the phosphate deposits near Jericho and Es-Salt.

What the land needs is irrigation. What the peasant needs is instruction in the use of better implements and in what is called "intensive" agriculture. And what the country needs is a better system of roads. The present Turkish Government is aware of this requirement—which is common to the whole empire—and has engaged French engineers for the purpose of repairing the old and building new ones in European Turkey and in Asia Minor.

More important, of course, in these days of the "iron road" is the question of railroads and harbors. At present there are only three lines in Syria and Palestine: that of Beirut-Damascus, with a branch line from Rayak to Baalbec and Aleppo; the Hijaz road, with a branch line from Dera'a to Haifa; and the short railroad from Jaffa to Jerusalem. Of all three the only one of real importance for the opening up of the country is the Hijaz road. The Beirut-Damascus line is a mountain railroad, and its capacity is limited. The Jaffa-Jerusalem line is restricted to the service of Jerusalem. The Hijaz road runs down the backbone of Eastern Palestine, which it connects with the Mediterranean. There are other roads projected, which will undoubtedly be built in the near future—*e. g.*, the railroad connecting Haifa with Nablûs and Jerusalem; another between Dera'a and Jericho, connecting the lower Jordan Valley with the Mediterranean; a third running south and linking up Haifa, Jaffa, Gaza and Egypt; a fourth to the north, prolonging the Rayak-Aleppo line until it connects with the Bagdad line and in this manner with Constantinople. When these—and probably others—will have been built, agricultural labor will be worth its while, its products reaching their natural market with ease and expedition. The Hijaz and Haifa roads have already demonstrated this. During last winter cereals were dear in Damascus, because a great deal more than usual went the way of the railroads. Haifa, also, seems destined to become *the* port

of Palestine. It is beautifully situated, is healthy and has a naturally good harbor, which is now being enlarged. It is the terminus of the railroad that connects Eastern Palestine with the sea. The harbor at Beirut was built too small, and I am told that it is almost impossible to build a good harbor at Jaffa.

The prime question, however, is whether there is a population sufficiently enlightened to make use of the new opportunities that are opening up. As far as leaders are concerned, the answer must be in the negative. The Arabs are essentially conservative and stable; they will not willingly change their mode of life and of work, unless the necessities of existence compel them to follow in the footprints of others.

These "others" are, for the moment, the Jews and the Germans. What the latter can accomplish, the Wurtemberger Templars have shown in their beautiful settlements near Jerusalem, Jaffa and Haifa. They are real agriculturists, who have brought with them and have preserved those ideals of thrift and of hard work for which their fatherland is famous. They are actively assisted by their home government. By an agile *volte face,* such as diplomacy has seldom seen, Germany, after having been the bosom friend of Abdul Hamid, became the "honest broker" for the Young Turks. That is a bit of diplomatic history that must be written elsewhere. But it is to the point to note that German interests are everywhere to the fore in Palestine. German commerce is rapidly increasing its volume with Palestine, and the splendid churches and hostelries which have recently been built in Jerusalem indicate also a bid for the religious leadership of the Christian populations. In most things Germany is supplanting the French and pushing the Austrians to the wall. But the Germans do not come there as permanent settlers in any large numbers. They are not driven thither by want, or by anything more than religious enthusiasm—which itself seems to be on the wane. Even where they now are, they are beginning to feel that there is an element stronger than they. The Jerusalem correspondent of the semi-official German daily at Constantinople, the *Ottomanische Lloyd,* has voiced this fear several times in connection with the German colonists at Jaffa.

I refer to the Jews. A gradual transformation in the relative number of the population of Palestine is going on. The Jews have that which the Germans lack. They are driven thither both by desire and by want. It is true that the Jews that go to Palestine are not always of the most desirable; not always of that kind which produces nation builders; too often of the old style "dyers in Palestine," who fill the cities already overfilled with a poverty-stricken proletariat. But there is another class—whether they call themselves Zionists or not, who are the real "builders of Zion," who come there to live and work for Palestine; who feel the call of the soil, and who bring to the ancient land the hopes and the culture of the modern Western world. I see the signs of this in the colonies, where the colonists are striving, valiantly and daringly, with the many problems that stare them in the face. I see it in the new quarter of Jerusalem (Zikron Moshe), the only one in which an attempt has been made to approximate European standards of hygiene, salubrity and order. I see it in the new Jewish quarter of Jaffa, with its pretty homes and its Hebrew "Gymnasium." I see it in the Jewish "Technicum" that is building at Haifa. I see it in the agricultural experimental station that is to be erected, financed and fathered here in America.

In a word, the immigrant Jews from Eastern Europe, who have kept some of their ancient ideals as leaven in their modern makeup, are destined to be the leaders in a new Palestine. It would be rash to speculate upon the form that this new Palestine will take on; what measure of self-government will be accorded to it. But it must be under the egis of Turkey, and with the Jews as Ottoman subjects. The Mohammedan state system allows the greatest possible freedom to the individual. It remains to be seen whether the leaders at Constantinople are informed with this same spirit and whether they are prepared to extend this freedom in order to secure the coöperation of an industrious and thankful people.

New York City.

A New Theory of Shakespeare

BY ANDREW LANG

THE number of people who have lost their belief in William Shakespeare (so he signed himself), of Stratford-on-Avon, as author of the plays and poems called "Shakespearian," is rapidly increasing. Many of them know nothing about the question. They are told that the belief in the actor's authorship is as extinct as the belief in a single Homer, author of the Iliad, and they choose to be in the new fashion. As a matter of fact, the faith in one Homer is rapidly gaining ground, while the belief in William Shakespeare's authorship—in the main—of the plays and poems is held by almost all noted scholars in English literature. The heretics are often lawyers, and people of sturdy common sense who cannot believe that a young man from a little country town, and later an actor, could possibly possess Shakespeare's vast treasures of general information, or Latin enough to have read the Roman classics. Thus Mark Twain, a genius in his way, was, I understand, an unbeliever. Mark was a typical young man from the country, with no classical schooling, and his works do not lead us to infer that he had read Ovid or Plautus. But Mark lived in another age than that of the Elizabethans, when men with any schooling at all had been at a school where little but Latin was taught; and when all English books were packed full of Roman lore.

Among other men who, tho not professed scholars in English literature, have read it widely, is Mr. Greenwood, M. P., a barrister, who valiantly assails all "Stratfordians," as he calls them, in his "The Shakespeare Problem Restated." Mr. Greenwood makes no attempt to prove that Bacon was the simon pure: he has no belief in the ciphers and cryptograms of the Baconians. But he maintains that some courtier, who was also a transcendant dramatic genius, a scholar, and deeply learned in law, acted as follows: In 1593-94 he published "Venus and Adonis," and "Lucrece," signing himself "William Shakespeare," not "William Shakspere." This signature was a mere pen-name, but as a man signing himself "William Shakspere" was certainly, at the date, a member of a company of actors, and as the identity of Christian and close similarity of surname was certain to lead to the belief that the poet was the actor, while the poet really was an eminent courtier and lawyer or student of law, it is not at all clear why the poet chose his pen-name as he did. Mr. Greenwood thinks that "William Shakespeare" was an excellent pseudonym. In fact, no man, at the time, could have chosen a worse. An author cannot but have known that his identity would be lost in that of the actor, unless the actor were a man so dull and illiterate that nobody who knew him could fail to expose the error. But nobody did expose it, whence I should infer that the actor was not, as Mr. Greenwood thinks, a very illiterate man and no reader of books. All who knew him must have said, in that case, "Thou art not the author."

After 1594 Mr. Greenwood's unknown wit and courtier published nothing. Plays came out, in 1598, under the names "William Shakespeare" and "W. Shakspere," and others went on appearing, in quarto, by "Shakespeare" and "Shake-speare." Most of them are still published as Shakespeare's, others are rejected from his works, but Mr. Greenwood's unknown genius is never said to have remonstrated, nor is the actor known to have done so. The actor, about 1610-1611, went home to Stratford, and died in 1616. In 1623, his friends, Hemynge and Condell, actors, signed the preface to Shakespeare's collected plays—the First Folio. It is strangely incorrect in the text; Mr. Greenwood suggests that his unknown courtier-author may have been too busy to correct and revise it, and so handed it over to Ben Jonson as editor! If so, Ben sadly neglected his duties.

Ben also, Mr. Greenwood thinks, wrote the Preface which Shakespeare's friends, the two actors, signed. Moreover, Ben, knowing that the unknown man was Mr. Greenwood's courtier, deliberately dedicated his verses of praise "to the memory of my beloved, Mr. William Shakespeare," and averred that *he* was the author, "the Swan of Avon." Mr. Greenwood thinks that this impudent and cynical lie was no worse than adherence to a promise not to betray the secret of the unknown. When Ben, in these lines, spoke of Shakespeare's "small Latin and less Greek," Ben was mocking his dead friend, the actor; not alluding to his living patron and paymaster, the unknown author, who was an accomplished scholar.

Finally, when Ben, after 1626, solemnly addressed "to posterity" his last reflections on the character and genius of his friend, and the actors' friend, Shakespeare—"I loved the man"—and yet censured what he deemed to be "ridiculous" in the man's writings, what was Ben doing? Was he lying "to posterity," in a literary bequest, a legacy to be published, as it was published, after his own death?

Mr. Greenwood does not venture to say that Ben was here again, in circumstances so solemn, deliberately lying. He only raises futile doubts and difficulties by contrasting some expressions in Ben's professed panegyrical verses of 1623, with the "candour" (as Ben says) of his prose censures of Shakespeare's "laughable things." There is no way of escape. Ben either believed, as the actor-friends of Shakespeare believed, that Shakespeare was the author; or, for no conceivable reason, he lied about the man he loved, "and do honour his memory on this side idolatry as much as any."

It is open to Mr. Greenwood to say that the players and Ben were mistaken in their belief about Shakespeare's authorship; but it is not open to any man to say that Ben lied, or that, while Shakespeare's intimates believed in his authorship, Shakespeare can have been an ignorant and uncultivated man.

Perhaps no plain man, without a great dose of prejudice, can fail to perceive that Mr. Greenwood's theory of Ben Jonson's conduct offers something as near a moral impossibility as anything can be. There is a schoolboy maxim, "tell a lie, tell a good one, and stick to it." Are we to guess that the courtier-author who, on Mr. Greenwood's conjecture, wrote the plays and employed Ben to edit them in 1623, also employed him to assert, falsely, that Shakespeare was the author; and that, in writing his bequest to posterity, Ben, having "told a lie and told a good one," "stuck to it?" Ben was "a tall man of his hands," a duellist who had killed his man, and, in his lifetime it would have been unlucky to profess the theories of Mr. Greenwood.

One of the standing puzzles in this affair is, why did Shakespeare wholly neglect the publication of his works? The common reply is that it was very unusual for playwrights to publish their books of the play (indeed they seldom do so now), that, when once a play was in print, any company could act it—or, at all events, that any company might risk acting it;—that therefore companies which possessed original manuscripts of plays did their best to keep them unprinted; that Ben himself was much derided for publishing (with learned notes) what he called his "works" in 1616; and these considerations do seem to show reason why Shakespeare never printed his plays. But he also never collected and corrected his manuscripts, as a whole; he made no kind of provision for the publication and perpetuity of his immortal dramas. Conceivably, with him, once retired to his own lands, it was a case of "tomorrow, and tomorrow, and tomorrow." He may have fancied that "tomorrow" he would send for his manuscripts, and do to them what so terribly needed doing. He was not exactly a very old man when he died at fifty-two, and says that he was in perfect health when he made his will in that year. He delayed too long the undertaking of a large and laborious task.

We know nothing about this matter; nor do we know when the unknown courtier of Mr. Greenwood's theory died, perhaps a younger man and earlier cut off than Shakespeare. Shakespeare, whose "earliest heir of invention" is of 1593—"Venus and Adonis"—was twenty-nine years old in 1593. He was not precociously a poet; consider the precocity of Keats and Shelley. Mr. Green-

wood's unknown author of "Venus and Adonis" may have been only twenty-one when he wrote that juvenile work. We have no knowledge, but Mr. Greenwood's supreme genius, the greatest of humorists, was as careless of his manuscripts and of his fame as Shakespeare was; if Shakespeare were the author. He never set his own name on any book; the theory is that he signed two books with the name of an ignorant actor. He died, *when* we know not, perhaps when he had done his work, and when the actor left the stage, about 1611. He, alas, may have been cut off just when he was meditating a complete edition of his works. This courtier, if he be the author, was content to take old plays by various hands, plays in the possession of Shakespeare's company, and to rewrite parts and leave other parts standing, full of wild anachronisms, horse-play, and the filth and clotted ignorance of "Troilus and Cressida." Certainly this polished courtier and legist and accomplished scholar was a greater puzzle than the actor-author, with his "small Latin and less Greek." Another courtier, an older man, Harry Killigrew, was so great a painter that a contemporary describes him as "in oils a Holbein." He never signed his portraits—few artists then did—we know nothing of them; thus indifferent to fame were courtiers and gentlemen of genius in the times of great Elizabeth. Mr. Greenwood's courtier, clearly, was such another as Harry Killigrew, but did Harry sign his works with the name of a man who notoriously could not paint?

Where Mr. Greenwood shines most, I think, is not on any discovery or hypothesis of his own, for his concealed courtier-poet is not a credible person, his cynically lying Ben Jonson is a bad dream and a theorist at a loss. Mr. Greenwood conceives his unknown as "a busy man," who had not time to edit his own works, so employed Ben. He had a passion for educating the people thru the theater, and so, being much occupied in affairs, he caught at nearly a dozen plays of a few years' standing, and rammed into them philosophical passages vastly instructive. The author seems to me to have been a humorist too well versed in human nature to expect many fruits of philosophy from the populace at whom he generally mocks. His "Coriolanus" cannot wholly please a modern Liberal Member of Parliament. No, Mr. Greenwood carries us into no new world of light. But tho my sympathies are with his learned opponents, I am as much averse as he to their habit of saying that "doubtless" this, that, or the other statement is true, when the whole affair is as dubious as anything can possibly be.

On a minute point of no importance, I must differ from Mr. Greenwood. He thinks that the hideous engraving of Shakespeare's Stratford monument, which he reproduces from Dugdale's "Warwickshire" (1656) represents an older bust than that now extant, at Stratford, unless Hollas, the engraver, "was a fraud," and Dugdale "was so untrustworthy as to accept it." But I am informed by Sir George Trevelyan that the other engraving in Dugdale of a Stratford monument is as incorrect as that of the bust. Any one who knows the nature of Jacobean work, and compares the whole monument, as in Dugdale, with a photograph of that at Stratford, must see that the actual monument is in good Jacobean style, while in Dugdale's print it is in no style at all. The Latin verses on the monument compare Shakespeare in art to Virgil; which is odd, as Virgil was not a dramatist, but is paralleled, if the Virgil in Jonson's *Poetaster* (1601) be meant, as "Judge Webb and many others have thought," for "the *true author* of the Shakespearian plays." Of course, if Ben, in 1601, thought that the *"true author"* was not his beloved friend, he changed his mind later. The lines of Jonson apply admirably to Virgil himself, who, as Jonson says, and as the late Mr. Frederic Myers was wont to prove in practice, can be quoted with effect on every occasion.

London, England.

Our Phenomenal Harvest

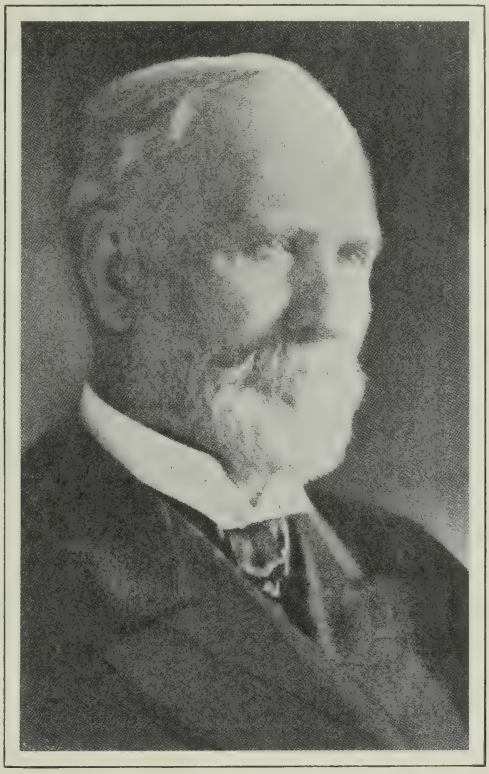
BY JAMES WILSON, LL.D.

[The following article by the Secretary of Agriculture is from the latest material and statistics gathered for the Department of Agriculture's annual report to Congress. It should be of great interest to the American people.—EDITOR.]

YEAR after year it has been the pleasant privilege of the Agricultural Department to report prosperity. Sometimes it has been due to weather unusually favorable, sometimes to higher prices, but usually the advance in farmers' prosperity has been in spite of various drawbacks. This country is so large in extent and has such varied climate, soil and crops, that no nation-wide calamity can befall its farmers. Combined with this strong position the nation may now begin to derive increased confidence in its agriculture because of the improvements that are permeating the whole country in consequence of a grand movement sustained by the National Department of Agriculture and the various State agencies.

Nothing short of omniscience can grasp the value of the farm products of the United States for this year. At no time in the world's history has any country produced farm products within one year with a value reaching almost nine billion dollars—$8,926,000,000—which is the value of the agricultural products of this country for 1910. The amount is larger than the value of our products in 1909 by $305,000,000, an amount of increase over a previous year which is small, however, for the more recent years of our history.

The value of our farm products from 1899 to the present has been progressive without interruption. If the value of that year (1899) be regarded as 100, the value of our agricultural products in 1900 was 106.4; that of 1901 was 112.7; of 1902 was 119.1; of 1903 was 124.8; of 1904 was 129.8; of 1905 was 133. The year 1906 was an extraordinary one for agriculture, both in quantity and in value of production. The value increased in that year to 143.4; and in 1907 the value of our agricultural products rose to 158.7; in 1908 to 167.3; in 1909 to 182.8; and in 1910 to 189.2; almost doubling the value of the crops of eleven years before.



During this period of unexampled agricultural production, a period during which the farmers of this country have steadily advanced in prosperity, in wealth, and in economic independence, in intelligence and a knowledge of agriculture, the total value of our farm products is $79,000,000,000.

Our corn crop alone, for 1910, amounting to over 3,000,000,000 bushels, furnishes a national asset worth $1,500,000,000. The corn production this year —3,121,381,000 bushels—exceeds that of even the great agricultural year 1906, and is greater than the average crop of the preceding five years by 14 per cent. A notable feature of the crop this year is the growing importance of the South. It has been manifested in a small way thru recent years, but now the increased magnitude of the crop in that section, both absolute and relative to the national production, forces itself upon the attention. Twenty years ago the South Atlantic States produced only 6.2 per cent. of the national corn crop. This year they produced 9.1 per cent., a relative increase of about one-half. The relative increase of the South Central States was even greater, being 14.8 per cent. of the national crop in 1889, and 23.4 per cent. in 1910. Then the South produced hardly more than one-fifth of the national crop. Now it produces one-third. The power which this increased production gives to Southern farmers, with respect to independence, release from buying feeding stuffs, in producing meat, and maintaining dairy and other domestic animals, can be well understood.

It is true that the cash value of the corn crop this year falls below the value of the crop of 1909 and also of the crop of 1908, but it can hardly be reckoned at less than $1,500,000,000—a sum sufficient to cancel the interest-bearing debt of the United States, buy all of the gold

and silver mined in all of the countries of the earth in 1909, and still leave pocket money for the farmers.

This corn crop is a national asset in more than one sense. It is not merely wealth in existence for the time being, but it is of perpetual recurrence. Year after year, thruout the ages, a stupendous amount of corn, of incredible value, can be produced. The entire cotton crop, including seed, is worth, this year, only three-fifths of the value of the corn crop. The wheat crop is worth only two-fifths of the corn. The hay crop is worth less than one-half of the value of the corn crop. All of the cereals, except corn, are together worth only three-fourths as much. The great allied iron and steel industries had, in the latest census year for which results have been published, 1904, a production worth only 60 per cent. of the value of this year's corn crop.

HON. JAMES WILSON.
Secretary of Agriculture.

Cotton is another industry which has been making great progress. For many years it was fourth in value among the crops, being exceeded, usually, by corn, wheat and hay; but in those days the price of cotton was very low. The crop this year may be worth, in lint and seed, a round $900,000,000 at the farm, which is more than the corn crop was worth in any year prior to 1901, and more than the wheat or hay crop was ever worth. Apparently, the crop this year, including seed, is worth $129,000,000 more than the crop of last year—and that crop was far above any previous crop in value. This, however, is due to the price of cotton, as, from commercial sources, it is evident that the cotton production of this year will be considerably short of being a record-breaker in weight.

The next place in precedence, as to value, goes for this year to hay, which has often contended with wheat. It is a short crop this year, but the value is about $720,000,000—an amount which has been exceeded but once, in 1907, when the crop was worth $744,000,000. The value of the hay crop this year is much above that of the larger crop values of preceding years, illustrating the principle that a somewhat deficient crop is usually worth more in the aggregate than an abundant one. The value of the crop this year is 13 per cent. above the average of the preceding five years, while the quantity of the hay crop—60,160,000 tons—has been exceeded a dozen times. In weight it is 5 per cent. below the average crop of the last five years. The feeding value of the hay crop, however, is greater than its weight implies, for alfalfa has entered into the production of this crop in recent years and has now become a crop of large proportions.

The wheat crop this year is only 691,767,000 bushels, or substantially the average of the last five years, but the value is $625,000,000, which is 7.6 per cent. above the average of the five years. The quantity of this year's wheat crop has been exceeded four times, but the value only once, in 1909. Wheat, as well as corn and hay, has undergone perceptible change in relative geographic distribution over the States.

Oats are fifth in the order of value, a position they have long occupied. The value this year is probably over $380,000,000, and has been exceeded in this respect only by the crop of 1909. For the second time in the history of the country the crop exceeds a billion bushels—the precise estimate standing at 1,096,396,000 bushels—at least 90,000,000 bushels more than the great crop of 1909. It is 22 per cent. greater than the average of the last five years.

The next in order of value is the potato crop, which was exceeded in only two or three former years. The value is 1 per cent. greater than the average value of the five previous years. The quantity is 8 per cent. greater than the five years' average. With the exception of the crop of 1909, which was in a degree an overproduction, the crop of potatoes this year was the largest ever grown in this country. The preliminary estimate of the Department is 328,787,000 bushels.

Then follow in order sugar—the combined value of the production of sugar, with molasses and subsidiary products, being about $97,000,000, or $4,000,000 below the high-water mark of 1909; tobacco—its 967,150,000 pounds are 26 per cent. above the average of the five preceding years, and the value, say, $95,000,000, is about the same as the record crop of 1909, or fully a million dollars more than any crop of tobacco previous to 1909; barley—with 158,138,000 bushels; flaxseed—the estimated quantity, 15,000,000 bushels, falling far below the production of recent years, but the high price of flaxseed per bushel placing its value at $33,000,000, which would be the record amount were it not for the crop of 1909; rye—32,088,000 bushels, being worth at the farm $23,000,000; rice—a little over a billion pounds of rough, but the price has declined so that the crop of this year is hardly worth $16,000,000; hops—with indications that the crop will be the smallest in a dozen years or more.

In no previous year has the production of cereal crops equaled the 5,140,896,000 bushels produced in 1910. It is 13 per cent. above the average production of the five preceding years. In value, however, the cereals of this year fall below that of 1908 and 1909, principally on account of the decline of the farm price of corn. The value of this year's cereal crop is $2,710,000,000, about $230,000,000 below that of 1909 and $50,000,000 below that of 1908. The only crop that reached its highest value this year is cotton.

In the case of farm products there has been an almost unbroken balance of trade in favor of the United States as far back as inquiry has been made. Except for two years, 1898 and 1901, the highest balance of trade in favor of this country in farm products was $488,004,797 for 1908, the year which seems to mark the culminating point in the course of the balance of trade in farm products. In 1909 the balance declined to $274,210,152, and in 1910 to $198,090,925. It may be that in 1910 there was not that national surplus of agricultural products to export which the country had offered to other nations of the world in years preceding; but however this may be, it is a fact recognized in the export trade that the prices of farm products in the fiscal year 1910 were high enough to prevent that free export movement which before existed. The value of exports of farm products reached the enormous amount of $1,017,396,404 in 1908, from which it declined to $871,107,067 in 1910.

In absolute instead of relative value the imports of farm products have constantly increased till they reached the enormous total of $687,486,188 in 1910, among the more prominent imports for that year being packing-house products, mostly hides and skins, $130,140,313; sugar and molasses, $107,716,367; coffee, $69,194,353; silk, wool, vegetable fibers, tobacco and fruits.

For many years previous to 1897, or a little later, the prices of farm products received by farmers were even less than the cost of production. In the upward price movement which began about 1897 the prices received by the farmer have advanced in greater degree than those received by all the other classes of producers—which was merely a matter of justice to the farmer to equalize the reward of his efforts with the rewards received in other lines of production. But, while the price received by the farmer is one thing, the price paid by the consumer is far different. The distribution

of farm products from the farms to the consumers is elaborately organized, considerably involved and complicated, and burdened with costly features. In the North Atlantic States the consumer's price of beef was 31.4 per cent. higher than the wholesale price received by the great slaughtering houses; 38 per cent. higher in the South Atlantic States; 39.4 in the Western States. The percentage of increase is usually lower in the large cities, and higher in the case of beef that is cheap at wholesale than of high-priced beef. So that it was a safe inference that the poorer people paid nearly twice the gross profit that the more well-to-do people paid. It is established by a careful investigation made by the Agricultural Department last June, in seventy-eight cities, that the consumer paid for milk an increase of 100.8 per cent. above the price received by dairymen—in other words, that the producer's price was fully doubled. The Industrial Commission found an increase of 135.3 per cent. for cabbage bought by the head; 100 per cent. for oranges bought by the crate—400.4 per cent. for oranges bought by the dozen; 111.1 per cent, for strawberries bought by the quart; 200 per cent. for watermelons bought singly. The import price of coffee in the fiscal year 1910 was 8 cents a pound. It rose in price to the consumer from 150 to 337.5 per cent. So with tea of the same fiscal year; its import price was 16 cents per pound, cost the consumer an advance of 212.5 to 337.5 per cent.

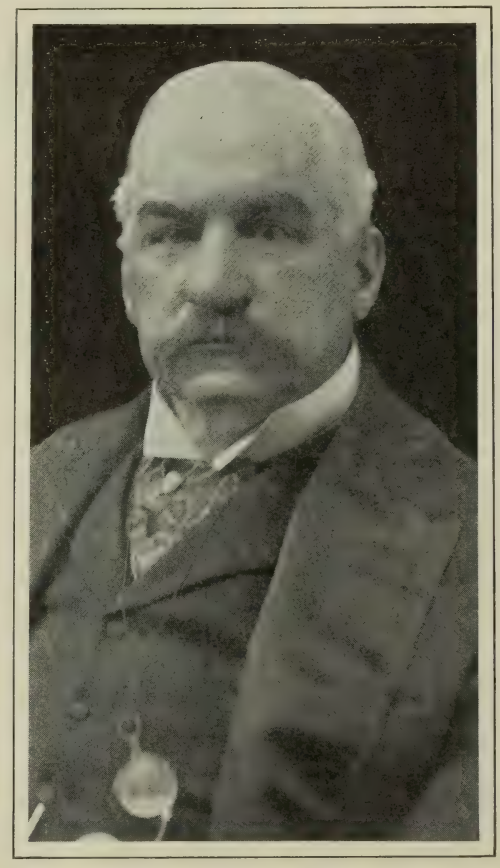
It is plain that the farmer is not getting an exorbitant price for his products, and, generally speaking, the railroad adds a percentage to the producer's price which is not large. The cost of distribution from the time of delivery at destination by the railroad to delivery to the customer is the feature of the problem of high prices which must present itself to the consumer for treatment.

Why do not consumers buy directly from the farmers? A distribution of farm products in this simple way has already begun in England, where coöperative organizations of farmers are selling by direct consignment to coöperative organizations of consumers in the cities. Farmers' coöperative selling associations are numerous in this country, but coöperative buying asociations in our cities and towns are few. It is apparent that the consumer has much to do to work out his own salvation with regard to the high prices that he pays.

It is true that our population has increased rapidly in the past—one-third every ten years until 1880, and afterward one-fourth to one-fifth. Our expanding farm area has easily provided sustenance for the increasing numbers, but with the filling up of the unoccupied spaces some have begun to fear that in the future we shall be unable to provide all our food from our own fields; when our economic independence will be gone. But the great question is this: Are the products of our agricultural lands increasing or decreasing in quantity? Is the yield per acre of our fields keeping pace with the normal increase of population by births?

Dividing the period from 1866 to 1909 into four decades and a short period of four years, the yield of corn, per acre, is shown to have decreased 2.3 per cent. from the first to the second, and 8.2 per cent. from the second to the third, then to have increased 7.7 per cent., then 7.1 per cent. For wheat an even better showing is made—a continuous increase in yield per acre; 3.4, 3.3, 6.3, and for the last period 9.6 per cent. For the first decade the yield of cotton declined, but later has been a continuous increase. From careful statistics of the ten leading crops it is evident that the yields per acre of our crops are now increasing, and if the facts were assembled for the States in detail it would be found that the percentage of increase in yield in many of them is greater than the normal increase in population, and we cannot look for any other result than that the yields per acre of all our crops will increase at an even faster rate in the future, in view of the intense interest with which our people are turning their attention toward agricultural improvement.

If there are forces at work which, if unchecked, and made more prevalent, would in the future compel us to bid against the world for food, the counteracting forces have already been set in motion, with promise of increasing effect.



WASHINGTON, D. C.

The House of Morgan

BY JOHN MOODY

[Mr. Moody is well known in financial circles as a student and economist of wide experience. He is the author of many works on finance; was the founder of Moody's Manual and is the editor of *Moody's Magazine*.—EDITOR.]

THE recently announced changes in the firm of J. P. Morgan & Co. have focused renewed public attention upon this great banking house and the personnel of the many men who make up the partnership. For any notable change in the composition of the firm which is admittedly the largest private banking house in America and rates as the third most important financial firm in the civilized world, is naturally of very keen interest to the general public on both sides of the Atlantic.

MR. J. PIERPONT MORGAN.

But when we say that the House of Morgan is the largest private banking concern in America we have not nearly stated its real prominence. For the Morgan House is a great deal more than a mere private banking firm. Broadly speaking, it is the great controlling center of corporate activity in the United States. Directly or indirectly the House of Morgan and its close associates practically control the financial destinies of America. Since the death of Mr. Harriman and the recession somewhat into the background of the so-called "Harriman group of financiers," the Morgan interests have stood out as the one dominating force in the American railroad situation. Probably it is not saying too much to assert that no really vital and far-reaching financial plan could be today put thru in connection with railroad control or development in this country without at least the acquiescence, if not the co-operation, of J. P. Morgan & Co.

And further, while this seems a sweeping statement to make, it does not indicate the full scope of the Morgan influence in finances. For the Morgan growth in financial power during the past decade or more has not been confined merely to the railroad field. The rise of the great industrial trusts, which has been such a striking feature in the United States since the Spanish War, has been closely identified with the firm of J. P. Morgan & Co. The formation and successful business growth of the United States Steel Corporation is one of the monumental achievements of the Morgan House. The creation of the International Harvester Company, known as the "Harvester Trust," which, during its five or six years of existence, has presented an astonishing record of vitality and success, is also a product of the Morgans. The great International

Mercantile Marine Company, which is a combination of all the important Atlantic transportation lines, with the exception of the Cunard line and the German companies, was formed and financed, and is still controlled by, the House of Morgan.

In addition to these notable aggregations of capital in the industrial field, the Morgan House has been responsible for the formation and financial welfare of a very large number of other industrial trusts. Further than this, in the public utility field the Morgan House has in modern times been a notable figure. The great General Electric Company, which is not only the largest manufacturer of electrical implements and electrical machinery in the United States, but is also a powerful holding company controlling numerous trolley lines and electric light plants, has for many years been fully under the control of the House of Morgan. The American Telephone and Telegraph Co., the vast holding corporation which dominates the telephone business from the Atlantic to the Pacific and now controls the Western Union Telegraph Co., is now a Morgan aggregation. And if we will turn to other fields, such as those involving the development of natural resources, we will find that the Morgan personality is everywhere met with. In the opening up of the mineral resources of Alaska, the Morgan House is found to be the chief factor with which all others must recokon; in the financing of Government debts, including not only those of the United States but of many foreign countries, the American branch of the Morgan firm has seemed to be a powerful factor always, while the London and Paris houses of this great or-

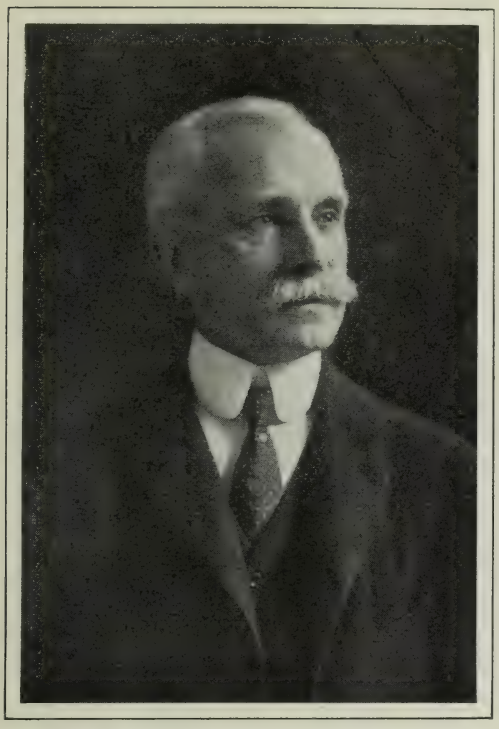
Brown Bros., New York.

MESSRS. CHARLES STEELE, JAMES J. HILL AND GEORGE F. BAKER.

ganization are recognized all over the civilized world as powerful centers for invested capital and as interests to be given first consideration whenever Government loans are to be underwritten or financed.

But within recent years there has been a further significant development in the power of the Morgan House which carries greater meaning than all the facts of New York City is roughly indicated by the fact that their total deposits at the present time aggregate more than $2,200,000,000.

An analysis of this banking situation in New York City will, however, divulge some interesting facts. Thus, it will be found that of the total resources of all the hundred and odd banks and trust companies, three great national institu-



MR. THOMAS W. LAMONT.

which have been enumerated above. For the House of Morgan, or the Morgan group of financiers, are not only the fiscal agents and financial representatives of the great corporate aggregations in this country, but even in greater measure it can be stated that they are now the representatives and dominating factors in the control of money and credit in this country.

In the city of New York there exist today considerably more than 100 national and state banks and trust companies. The deposits and resources of these many institutions run into enormous amounts. The aggregate banking power of the banks and trust companies tions appear to dominate the whole. The National City Bank, the First National Bank and the National Bank of Commerce themselves alone represent aggregate deposits of nearly $350,000,000 and total resources far exceeding this amount.

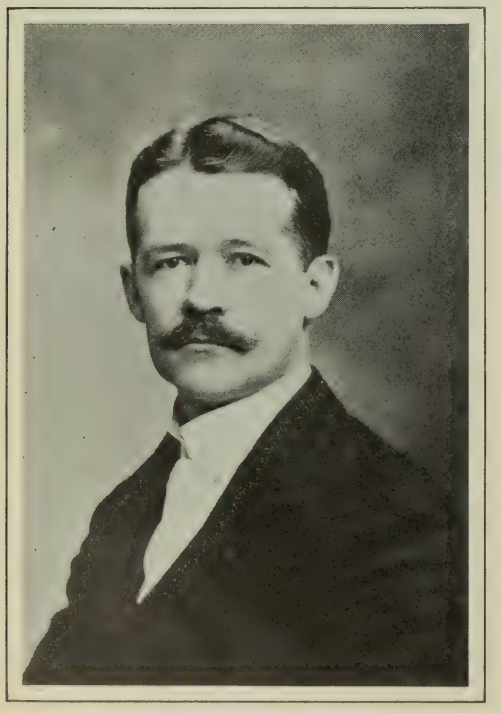
If we should eliminate these three institutions which are known in the Street as "The Big Three," we would find that the remaining national banking institutions are not such a big factor after all. But if we take a step further and examine the trust company exhibits of the city of New York, we shall find that, as in the case of the national banks, the bulk of the total resources is represented by only

MR. EDWARD P. STOTESBURY.

three or four institutions. The Bankers' Trust Company, the Guaranty Trust Company, the Farmers' Loan and Trust Company and the United States Trust Company appear to represent, in a dominating way, the backbone of the trust company business in New York City.

A few years ago it was generally understood that there were two groups of large banks and trust companies in New York City—the "Standard Oil" or Rockefeller group, and the "Morgan group." The Standard Oil group, so called, was represented chiefly by the National City Bank; the Morgan group chiefly by the First National Bank and the Bankers' Trust Company.

But since the panic of 1907 and the death of Mr. E. H. Harriman, very significant changes have taken place in the control of New York banking interests. Today there is but one powerful banking group and that is the so-called "Morgan group." While it cannot be claimed that the Morgan interests entirely dominate the policy of the National City Bank, they have within the past year or two become extremely important factors in that institution. Further than this, they have clearly strengthened their dominance in the First National Bank and in the National Bank of Commerce; and it is on all sides a well known fact that in the trust company field they have now become the one influence of unlimited power. The Bankers' Trust Company and the Guaranty Trust Company, the two largest and most important institutions of this type in the United States, are purely Morgan companies. The influence of the House of Morgan in the other large trust companies, such as the United States Trust Company and the Farmers' Loan and Trust Company, has grown steadily during recent years.



To say, therefore, that the House of Morgan and its associates now dominate the banking and credit resources of America's financial center is not stretching the truth. For it must not be overlooked that the control of these great Wall Street institutions involves, directly or indirectly, the control of a large number of smaller banking institutions, both in New York and other cities.

MR. HENRY P. DAVISON.

There is one other great field of finance which is conspicuously identified with the Morgan name today. This is the life insurance field. Up to the death of Mr. Harriman the control of life insurance interests in a large way in New York City was divided between the Morgan and the Harriman interests. The Morgan house has for many years been the dominating influence in the New York Life Insurance Company, but only within the past year or eighteen months has it come into control of the Equitable Life Assurance Society. Today Mr. Morgan is well known as the financial high priest of life insurance and his firm and its associates clearly possess the dominating power regarding the handling of the hundreds of millions of dollars of invested reserves and resources of the enormously wealthy insurance organizations in this city. It is little wonder, therefore, that there should be great public interest regarding the individuality of the men who are today recognized as at the forefront of this enormous concentration of financial power.

The growth of the House of Morgan from its relatively small beginning of nearly forty years ago is an extremely interesting story. Mr. J. P. Morgan himself has, from the formation of the firm of Drexel, Morgan & Co. in 1871, been the real active head of the business and the one personality which has dominated the policy of the firm from the beginning. In the earlier days Mr. Morgan was but a minor partner, in a financial sense, but the record of the firm during all the years which followed has fully demonstrated that J. Pierpont Morgan's minor position was even then entirely confined to his financial interest. For it was he and not the Drexels or the other partners who set the pace or planned the path which the Morgan House was to follow for the ensuing forty years.

MR. GEORGE W. PERKINS.

This is not to say that Mr. Morgan has always been all the brains of the concern. He is not all the brains of the concern today. But he has probably always been the one man who has had the discernment to select men of brains to cooperate with him and help create the situations which have, during these long years, nearly always developed into vast opportunities of profit.

Leaving aside the Drexels, who were able men but chiefly valuable because of their wealth and business connections, the most conspicuous personality in the Morgan firm prior to 1900 was Charles H. Coster. Mr. Coster was not only an enormous worker and a wonderful master of detail, but he was clearly a creative business genius of the highest order. The spectacular rise of the Morgan House in the '90s was largely the result of the panic of 1893 and the ensuing depression. The railroads of the United States in the main went bankrupt in those years. It devolved upon the Morgan House to reorganize many of these great railroad systems. Mr. Morgan personally probably never devised a reorganization scheme in his life. The man who was the great planner of the reorganizations for the Morgan firm was Charles H. Coster. Probably the schemes for lifting from bankruptcy all the great properties like the Erie, the Reading, the Southern and the Northern Pacific were mainly the work of this remarkable man. Mr. Coster was, therefore, not merely a genius for detail, as the "Street" commonly says, but he was the real origina-

tor and planner of the unusual financial constructive work which was accomplished by the Morgans during the closing decade of the last century.

In the early part of 1900 Charles H. Coster died and this incident marked the end of one notable era in the history of the Morgan firm, as well as the beginning of a still more remarkable period. With Coster dead the House of Morgan was in a sense like a ship without a pilot. Mr. Morgan, therefore, turned in various directions to find some one to take the place of his dead lieutenant. At this period he selected two men. First Mr. Charles Steele, a well known lawyer and man of recognized ability, and secondly, George W. Perkins, one of the young vice presidents of the New York Life Insurance Company.

The entry of Mr. Perkins into the firm of Morgan will always be associated with the formation of the United States Steel Corporation, which up to recent times has generally been pointed to as the most notable achievement of the House of Morgan. The opinion has frequently been expressed in Wall Street that had Charles H. Coster lived the Morgan firm would never have undertaken so tremendous a proposition as the formation of the Steel Trust. Coster was notably a cautious man and had been commonly referred to as Morgan's great balance wheel. He would probably have attempted to hold Mr. Morgan back in his scheme for the consolidation of the great steel interests of the country on such a plan as was carried through in the year 1901.

Whether this theory of Coster's timidity is sound or not, the fact remains that the Steel Trust was formed shortly after the entry of Mr. Perkins into the firm and was a pronounced success, despite the fact that almost unsurmountable obstacles had to be overcome. For the Steel Trust was formed on an astonishing basis of over-capitalization. Mr. Morgan had a few years earlier gone moderately into the industrial trust-forming business and at the opening of 1901 controlled the National Tube Co., the Federal Steel Co., and had important interests in other of the steel and iron combinations. The threat of the Carnegie interests to go into direct competition with Mr. Morgan's companies was the thing which brought this scheme for a gigantic Steel Trust to a head. Mr. Morgan paid a price for the Carnegie Works which no doubt would have staggered Mr. Coster. But Morgan, with his unerring judgment, clearly saw that the only way out of a bad situation was to buy Carnegie out, even at the latter's own fabulous figures.

MR. J. PIERPONT MORGAN, JR.

The details in the carrying out of this great combination developed largely on the shoulders of Mr. Perkins. The financial fathering of this combination during its ten years' career has fallen largely on the shoulders of Mr. Perkins. The record of this greatest of the world's trusts in financial growth, in expansion in earning power and in increase of control of natural resources, is clearly a tribute of the highest kind to the acumen and ability of George W. Perkins.

After ten years of close identification with the Morgan House and as the active representative of its interests in the industrial field, Mr. Perkins now withdraws. His personality is identified with other matters than those of the Steel Trust. During his ten-year period the International Harvester Co. was formed, with Mr. Perkins as the Morgan repre-

sentative in that company. The International Mercantile Marine combination was also formed, but it is not clear that Mr. Perkins has been the chief Morgan factor in this concern. However, viewing the matter as a whole, it may be safely said that Mr. Perkins's connection with the Morgan House has been closely identified with the entry into the domination of the big industrial trust interests by the Morgan people.

Since the panic of 1907 a further new era has begun for the Morgan House. While already conspicuously dominant in railroad and industrial enterprises, the firm had not yet become the one powerful factor in the banking and credit field. The entry of Henry P. Davison into the firm a year or more ago marked the shifting of position of the Morgan House from that of a sharer in New York banking control to the position of practically exclusive banking control. Mr. Henry P. Davison was a young man of unusual ability who had worked his way up in a comparitively short period of time from a subordinate position in one of the smaller banks of the city until as an officer of the Liberty National Bank he some years ago came under the direct notice of Mr. Morgan. From that day he became a forceful factor in the Morgan banks and at the time of his entry into the Morgan firm in 1909 was vice-president of the Bankers' Trust Co., the most successful of the younger trust companies in New York City.

It will be noted that all the progress made in increasing dominance of banking interests by the Morgan firm has taken place since Mr. Davison's entry into the firm. The greater influence in the National City Bank has occurred since then; taking over the control of the Guaranty Trust Co. and the Morton Trust Co. was an incident of the past year; acquisition of the controlling stock from Thomas F. Ryan of the Equitable Life Assurance Society has occurred since Mr. Davison has become a factor.

Viewing the situation broadly, it can probably now be said that the coming years in the Morgan firm will be characterized more largely by expansion in the control of banking institutions and financial credit, than by any further expansion in the railroad and industrial fields. As the death of Charles H. Coster to an extent marked the close of the period when the Morgans were acquiring control of the great railroad interests of the country, the retirement of George W. Perkins may also, broadly stated, mark the end of the aggressive work on the part of the Morgans for the control of industrial activities. This theory is further confirmed by the fact that with the retirement of Mr. Perkins and Mr. Whitney, new partners, who have in the past exclusively represented banking interests and whose experience is entirely along banking lines, have been taken into the firm. Mr. Porter is well known as the successful president of the Chemical National Bank, one of the strongest and most successful commercial banks in the United States, and Mr. Lamont has worked his way up to prominence entirely thru an active business experience in trust company matters.

The firm of J. P. Morgan & Co. now consists of J. P. Morgan, J. P. Morgan, Jr., Edward P. Stotesbury, Charles Steele, Henry P. Davison, Temple Bowdoin, Arthur E. Newbold, William P. Hamilton, William H. Porter, and T. W. Lamont.

New York City.

The Sunset Fire

BY WILLIAM H. HAYNE

Above the blue horizon-line,
The fire of sunset seems divine—
And yet it fades to ashes gray,
Dropped from the embers of the day.

Augusta, Ga.

Christmas at Castle Cranky

As Told by Nannie, Aged Thirteen

[This is the blessed season of peace and good-will. If, among our many readers, there is even one today estranged from family and friends; if this story of forgiveness and reconciliation, well told by Mrs. Frances Wilson Starmer, should touch and soften the heart of such a one, or should reunite but one unhappy family, it will not have been published in vain.—EDITOR.]

OF course, you know we were not really invited to spend Christmas at Castle Cranky—that's just a name we have for Aunt Eudora's house. The invitations read like this:

"MY DEAR BROTHER:—It is unfortunate that family differences have separated us for a number of years; but now as the season of peace and goodwill on earth approaches, I feel drawn to my kindred. I trust you will be willing to let bygones be forgotten, and accept my offer of reconciliation. I cordially invite you and all your family to dine with me on Christmas Day; and I hope you will meet some others of our name who will consent to join in this attempt to heal the dissensions of the past. Certainly it is time we should make an effort to become once more a united family. I am sure you will agree with me that among blood relations the most important thing is to be united.

Dear William, I have passed my fifty-seventh year, and I confess I shrink from the fate of a lonely old woman. Use your influence with the others, *Will,* that we may all clasp hands again before we die.

Hoping to see you, I am,

Very sincerely,

Your Sister,

EUDORA HAWLEY.

Maplehurst, Hawleyville.

December the Nineteenth."

There are lots of long words in that, but I can say it all because I've read it over so many times, and I have a good memory. That was papa's invitation, and they were all about the same, only some of them said "Dear Sister" or "Dear Cousin" instead of "Dear Brother." For you see Aunt Eudora had quarreled with all her relations—oh, ever so many years ago!—and never had anything to do with them since.

Papa says he doesn't remember what she did quarrel with him for, unless it was the color of his hair. She always felt that there shouldn't have been any red hair in the family; for all the Hawleys had been tall and dark-haired and handsome, ever since there were any Hawleys. Papa's hair was red when he was young—it is pretty gray now—and he is not tall, and *he* says he never was handsome; but I think he is one of the nicest looking men in Hawleyville.

I may as well tell you right now that everybody in this story has the same name, except Mary and Bob and Dicky Landers—and their mother, but she was a Hawley before she maried Mary's and Bob's and Dicky's papa. She is my Aunt Catherine, you know, and she was the youngest of the Hawley family, except poor Uncle Jack, who went away a long time ago and died in the Far West. It seems he was Aunt Eudora's pet when they were young, before she quarreled with him and all the rest. Everybody seems to understand what the trouble was about Uncle Jack—they always call him "poor Jack" when they speak of him—but nobody knows why she quarreled with beautiful Aunt Catherine. If you ask Aunt Catherine, she only laughs and says, "Oh, some nonsense"; and sometimes she gets red in the face, and if you say any more she gets offended.

Anyhow, for one reason or another, Aunt Eudora had trouble with them all, even the Colonel, who is the oldest brother and the very greatest man in Hawleyville. He owns the factory, and he belongs to the Legislature, and he has been to war. Of course, he is my uncle, too, and I'm sure he is always nice to us; but, some way, we never call him anything but Colonel Hawley, just like other people. Aunt Catherine says that Aunt Eudora quarreled with him when he got the largest share of grandfather's property. Grandfather only left Aunt Eudora the homestead and the hill pasture, which was nothing but woods and ledges of rocks when grandfather died.

But after a while it turned out that those rocks were good building stone,

and Aunt Eudora had quarries opened; and then they found a great vein of feldspar. And now Aunt Eudora is the richest person in all these parts. Even Colonel Hawley hasn't anywhere near so much money.

She tore down the old family homestead, where they were all born and brought up; and all of the relations, that she hadn't quarreled with already, then quarreled with her for that. But she didn't care; she went right along and built a splendid great house, all stone out of her own quarries and timber out of her own woods. And up to last Christmas Day not one of her own relations had ever set foot in that house. She named it "Maplehurst," but we call it "Castle Cranky." It was my brother Jack who first gave it the name, just for a joke; and everyboy took it up, you know. For she *is* so cranky; and the house stands on high ground and looms up grand from any way you look.

So when papa got that invitation for us all to eat our Christmas dinner at Castle Cranky, you could have knocked him down with a feather! He spoke right up and said we shouldn't go—and he spoke almost crossly. If you could say Papa was ever cross, it certainly was that time.

But Mama talked it over with him and got him to think better of it.

"After all, she *is* only a poor lonely old rich woman; and she's your sister, Will. I'm sure she has exprest herself very handsomely," said Mama, looking over the letter.

"Especially as she was the one that quarreled with us all in the first place!" snorts Papa.

"Well, my dear, the one that begins a quarrel is certainly the proper one to end it," says Mama.

And of course Mama carried the day, as she always does. But I *think*, and Mama thinks, it was that little bit at the end of the letter, about Aunt Eudora dreading the fate of a lonely old woman, and about clasping hands before they died, that touched Papa's heart. It must be sad to live all alone up there in that big stone house, even if you weren't so very old.

And oh, but I was glad we were to go! I did so want to see the inside of Castle Cranky. Aunt Eudora has been abroad, living in Germany years and years; and it was the talk that she had brought back such beautiful things that her house was like a—a duke's palace. you know. Augusta Jones went there once with her Papa on business, and she said there were velvet curtains at the windows and velvet carpets on the very *floors*.

When I found we were going I ran right up to my room and wrote to my sister Alida at Bryn Mawr, and to Brother Jack, who is married and lives in New York, and told them to be sure and be home for Christmas. For I like to write, you know, and always write letters whenever I can. And I felt sure they'd both be delighted to think of dining at Castle Cranky.

But, do you know, they didn't either of them come. Jack wrote back that I was a good little kid, and he was sending me a box full of jolly things for Christmas. And they would like to be with us, but honestly they were expected to spend Christmas with Amy's people. Amy is Jack's wife. As for Castle Cranky, he wouldn't go and dine there for a whole barrel of plunks.

And Alida wrote that she hoped Mama would not mind, but she had accepted an invitation to go home for Christmas with her room-mate, who came from Virginia, and she had always wanted to see one Christmas at the South. And she hoped Mama would like the sofa cushion she was sending, and not to tell Papa about the blue slippers until Christmas morning; and to kiss the bald spot on top of Papa's head for her; and something mysterious about her Christmas gift to me—it turned out to be the identical new book I wanted most, dear Alida! And a lot of hugs and kisses for Mama and me. And not a word about Aunt Eudora or Castle Cranky.

Alida always says that when she cannot speak well of a person she will say nothing; and I suppose she was keeping to that rule.

Not by any means that there isn't anything good to be said for Aunt Eudora Hawley; if Alida meant that, she was 'way off. Why, that very winter—such a hard, cold winter, if you didn't have a good fire and plenty of

warm clothes and enough to eat—the Salvation Army people, who come down on the trolley once a week to see what they can get in Hawleyville for the city poor, they were just *tearful* when they spoke of Miss Hawley, and what she had done for their poor people. They said she was a color-bearer, and one of the first in the vanguard of God Almighty's heavy artillery—or something like that. Those are pretty serious words, and I shouldn't want to repeat them if it was anybody but the Salvation people. Papa has the greatest respect for them, and even Jack says they are the straight goods and what they say *goes*.

As for Hawleyville, most everybody is pretty comfortable; but Aunt Eudora did find some people that were sick and actually in *want*, and too proud to tell. And the boy worked in Colonel Hawley's factory, too. And she took care of them and never let any one know, because they were the kind that do not ask charity; but they rose up and called her blessed, and so it got out.

Of course, Colonel Hawley would have helped those deserving people if he had only known about them; but how could he when he didn't know? But it seems he met Aunt Eudora once, when she had been to visit these people—met her right face to face—and she didn't so much as look at him! Just sailed along and stepped into her carriage like a duchess and drove off. It certainly must have been *too* aggravating.

For all that, the Colonel got an invitation that read just like Papa's—only there was one thing in Papa's letter that wasn't in any of the others: that about her being a lonely old woman. So the Colonel called at our house to consult with Papa and Mama. When he came in, so big and stately, with a fur-lined overcoat and a gold-headed cane, and his gray moustache all frost, we were in the library around the fire and having no end of a cosy time together, Papa and Mama and me. And when Mama took his overcoat and I took his cane, and Papa pulled up the biggest armchair for him, he sort of smiled and sort of sighed, and said:

"You are very comfortable here by this bright hearth, with your wife and little daughter, William."

There isn't any wife or little daughter at Colonel Hawley's fine house on High street—I mean there wasn't then; for the Colonel is an old bachelor—or I mean to say, he was. But I *won't* get ahead of the story, if I can help it. Things began to happen so fast that it's hard work remembering which came first.

Anyhow, after the Colonel had said he was glad to see us looking so well, and his health was good, thank you, and it was fine seasonable weather for Christmas week, he pulled out his invitation and said:

"I have something here to show you, William."

And Papa took up his from the library table and said:

"I reckon I have the same thing to show you, Colonel."

So then they consulted. Colonel Hawley felt just as Papa did, at first; he didn't want to go. But after he had read Aunt Eudora's letter to Papa, and saw that at the end, he looked kind of thoughtful, and he said:

"She *is* getting along, rather." But then he caught himself up and said, briskly: "Not that fifty-seven is old. Why, she is three years younger than I am."

"Four," said Papa.

"Yes—you are right," says the Colonel, after a minute, counting it up in his head, I suppose. "You are right, William. Well, well, we are *all* getting along, William."

"And I shouldn't wonder," says Papa, "if it is about time we all began to think of 'healing the dissensions of the past.' If Eudora is ready to hold out the right hand of fellowship at last, I reckon the rest of us ought to follow suit."

The Colonel sat pulling at his gray mustache and didn't say anything for quite a few minutes. Then he spoke in a strange kind of a tone—I don't know whether he was sad or angry.

"I could forgive her all," he said, "if I could forget her treatment of poor Jack."

Papa didn't say a word.

"If I could forget—forget," says the Colonel again, in such a queer way it almost scared me. "If I could——"

"Forget it!" says Papa, real sternly. "Forget it, Edmund; it is long past."

It was the first time I ever heard Papa call the Colonel by his name—or anybody else. You wouldn't know he had any name but "Colonel" if you didn't see it in the papers—about his doings at the Legislature, you know; "the Hon. Edmund Hawley" or "Colonel Edmund Hawley of Hawleyville." And yet he is Papa's own brother, and everybody calls Papa "William" or "Will" or "Bill."

"Will," said the Colonel, and I could see then he wasn't angry, but sad—"Will, is anything ever past?"

I was just aching to know what it all was about poor Uncle Jack. But Mama just then said we'd better go and get the Colonel some of our currant cake and a cup of coffee. And we went, and Papa and the Colonel talked it over by themselves.

Well, the Colonel made up his mind to let bygones be forgotten, whatever the bygones were, and go to Aunt Eudora's Christmas dinner. And Cousin Tom Hawley and Cousin Blake Hawley, who lives in West Hawleyville—Papa's cousins they are, and Aunt Eudora's, of course; and they were the relations that quarreled with her about the homestead—they were going too, it appeared, with all their families. There was a cousin, Laura Hawley, married and gone away, years and years; nobody knew whether she would be there or not. And there was one more—Aunt Catherine Landers.

She lives in the city, and we went to her house, Mama and I, when we were in town for our Christmas shopping. And the first thing I said, when Mary came to the door, was:

"Oh, Mary! are you going to Castle Cranky for Christmas Day?"

And Mary said, almost crying:

"Oh, dear, we want to, awfully, but Mama says we can't. Did you get an invitation, too?"

"Papa did, for us all," I said. "And *we* are going. Just think of it, Mary! I dare say we shall eat off gold plates. Gold spoons, anyway. And perhaps there will be patty de foy graw!"

"Oh!" said Mary, laughing. "How absurd you are, Nannie."

Mary is only two years older than I am, and she needn't laugh at me. In all the novels I ever read, if they have anything to eat it is either an omelet or patty de foy graw. And I have always wanted to try them both. So Mama made an omelet for me, and it was pretty good. But she doesn't know how to make patty de foy graw. Mary said:

"Bob thinks there will be a turkey at each end of the table, and a goose in the middle. But I think there will be a German Christmas tree in the middle, Aunt Eudora stayed so long in Germany. Oh, I do wish mother would go and take us!"

Mary and I had stayed behind in the hall, to talk; but we went in where Mama was with Aunt Catharine, and Mama was just saying, in her soft, pretty voice:

"She is getting old, Catherine dear, and she longs for her kindred—that is what she wrote to Will. She is very lonely, Kate."

Aunt Catherine was leaning her elbow on the chimney piece and gazing into the glowing coals, you know, like a heroine in a book—only it was a gas-log, and wasn't glowing in the middle of the day. But Aunt Catherine would make a good heroine, for she's tall and handsome as any Hawley of them all, and she looked *sweet* that day, in her long black dress and white lace.

She looked at the picture of Uncle Richard that hangs up over the chimney piece in that room, and she turned her wedding ring around and around on her finger, and then she said:

"I am lonely, too."

Well, you can see how it turned out. They all began the same way, saying they wouldn't go; and they all ended by going. Before we left, Aunt Catherine had given in, and Bob and Mary were just as wild as I was, looking forward to Christmas Day at Castle Cranky. Even little Dicky was jumping and dancing around, because Bob jumped and Mary danced for joy.

It seemed as if I never could wait for that Christmas Day to come, and when it did arrive at last, I could hardly believe it was us, driving up the maple avenue to Aunt Eudora's house. I kept pinching myself to make sure it wasn't all a dream.

And we were let in by a butler—a *butler!* He took us up a great white

stairway, with palms growing all up and down the sides; and velvet isn't any *name* for the carpet on those stairs! Your feet went down into it, just like green moss, and never made a sound.

Before I had half looked at the stairway and the palms and the moss-green carpet, we were going into a splendid room—I couldn't begin to tell you! Like something you could dream about. And a lot of people in lovely clothes were there already, and the butler—the *butler!*—was saying:

"Mr. and Mrs. William Hawley and Miss Anna Hawley!"

I was almost scared at first, it was all so grand; but then I saw that all the people there were just our own cousins and uncles and aunts—Colonel Hawley, and Aunt Catherine, and Mary and Bob and Dicky, and all the rest; the only one I didn't know was the stout lady in black satin and gold eyeglasses.

And Aunt Eudora—I'd seen her two or three times, but not very near; but I knew her right off. She did look old—older than Papa, tho she isn't—but she *was* just like a *Duchess,* in a long trailing dress, green velvet with creamy soft lace all up around her neck and all down around her hands. But for all she walked so straight and held her head up so queenly, I thought her voice was just a little shaky when she spoke to us.

I'm sure we all felt pretty queer for a minute or two. But Papa is always equal to the occasion. He just took both of Aunt Eudora's hands and kissed her without any fuss, and said, in his offhand, jolly way:

"Now, this is what I call sisterly, Eudora. It's good to see us all together again, and here's wishing you a merry Christmas."

And then he kissed her again on the other cheek, and they both laughed, and in three minutes they were acting just as if they had only had a little tiff and made it up again—like Bob and Mary and me, sometimes. And all the others took the same tone, as soon as Papa began to joke with them and wish them all merry Christmas. I could see well enough they hadn't been quite easy before.

Only Aunt Catherine still seemed a little uncomfortable, I thought.

But I really couldn't watch the grown-ups any longer, for there were Cousin Blake Hawley's boys and Cousin Tom Hawley's girls, and Mary and Bob and Dicky, and me, and all of us just bursting with excitement and joy. We had all got together by this time, and were giggling and whispering to each other in a corner. We just couldn't keep still.

And then it was that Aunt Eudora came over to us, and oh! so kindly she said it:

"Come, children, and see what I have here for my nieces and nephews and my little cousins."

She went and pulled the curtains back from a wide doorway with an arch, and we all crowded after her. Some of us tiptoed, and some of us rushed, and some of us *pushed,* I'm afraid—but we *all* screamed, when we saw what was in that room!

A great glittering tree that went up to the very ceiling, and was hung with the loveliest things I ever saw on a Christmas tree; we found out afterward that they came from Germany, just as Mary said. And there was a big table just loaded and piled up with boxes and packages, all tied with holly ribbons and name cards on them all.

Aunt Eudora said:

"Now, which is the oldest among you, children?"

And it was Gilbert Hawley; he was sixteen that winter. So she told him he could take charge of distributing the presents; and the next oldest—that was Mary Landers—could assist him. Mary tossed her head a little, for she feels almost grown up sometimes, and she says she doesn't like Gilbert Hawley; but oh, she forgot all those airs in a minute or two!

Aunt Eudora said for us to enjoy ourselves and we could make all the noise we liked; and then she went back to the other room and drew the curtains —and the fun began.

Oh, such presents! There were three packages for each of us! And when we got to untying them and throwing the white wrapping papers around, the place looked like a snowstorm. And Gilbert was calling out every minute somebody else's name, and we were all just *wild!* Noise! You never heard such a noise!

We kept it up ever so long, too, and nobody stopped us. We were giving three cheers, and three times three, for Aunt Eudora and Castle Cranky, when the butler—the *butler!*—came and drew the curtains and said:

"Young people, dinner is served."

He was almost laughing, too. So we all trooped out after him, and by this time we didn't care a thing for the butler—not even the *butler!* He took us to the dining-room, and the grown-ups were already at the table, but there were places for all of us, even for little Dicky, a high chair beside his mother, and Aunt Eudora on the other side.

It was the most wonderful dining-room you could ever set eyes on, and the most splendid table, all silver and gold and china, and the loveliest flowers—and everything; just as if Aunt Eudora had expected Emperor William or President Taft to dinner. And it was all just for us! Instead of one German Christmas tree there were *four,* and all of them lit up with little red and white candles. As for the good things to eat, there was no end to them. Turkeys and geese and most everything. Cakes and goodies—oh!

But there wasn't any patty de foy graw.

We all noticed that there was an extra plate, and Aunt Eudora said:

"I expected one more guest, you see; but I fear I am to be disappointed."

Of course everybody wondered who that other guest could be, but nobody asked.

When we had all eaten as much as we could hold—at least, *I* had, and Bob, who sat next to me, said the same—somebody, I think it was Cousin Tom Hawley, said we ought to have some speeches on such a happy occasion.

That seemed to cast a damper, for a minute or two; tho, for my part, I did want to hear the speeches. And we had them. Aunt Eudora herself stood up, smiling so nicely at us all, and said how glad she was to see her brothers and sisters and kinsmen at her board, on this day of peace and good will; and she hoped there would be many more such days, when they should meet together as a united family. She thanked them all for coming to her so kindly, and she wished them all a merry, merry Christmas.

"Hear, hear!" shouts Cousin Tom Hawley, and they all clapped hands; and Aunt Eudora sat down laughing.

Then Colonel Hawley stood up, and he did make a beautiful speech. He said it warmed his heart to find his dear sister so kindly disposed to them all, after so many sad years of coldness and separation. He asked them all to look back to the days when they were children in their father's house, and to the later years when they grew up together in happy companionship; and to forget and bury forever the memory of all that had come between in after life. Oh, it was beautiful! And pretty soon the ladies began to wipe their eyes, and the men looked as if they'd like to; and all at once Aunt Catherine rose up and stretched out her arms to Aunt Eudora, and burst out crying.

"Eudora, Eudora!" she said. "Forgive me!"

Then Aunt Eudora rose up and folded both arms around Aunt Catherine, and they both cried. And I was hunting for my handkerchief, and so was Mary.

It was a terrible moment. But Papa jumped into the breach, as usual, and saved the day.

"Let's everybody forgive everybody else!" he says, at the top of his voice. "And let's all quit crying and go to forgetting. This is Christmas Day—here's hoping all our days are going to be like it, from now on, the rest of our lives. And, Edmund, you shut up!"

So then everybody got to laughing again, and pretty soon it was jolly as ever; more so, because they all felt kind of tender and affectionate to each other now, if they hadn't before. It was a regular kind of a Christmas feeling; you know what I mean.

But such a lot of excitement, and having my feelings all worked up so, does pall on me after a while, don't you know. And when we left the table I didn't go back to the Christmas tree room with the rest. I wandered off by myself, and found a glass door that led down some steps into a room full of flowers—a lovely room with a marble floor and a glass

roof, and oranges and palm trees, and vines growing up the sides, and a fountain in the middle.

There was a seat in behind the palm trees, and I sat down there for a minute to watch the fountain play—it had a ball in it, dancing on top of the water—and I think I fell asleep. Anyway, the first I knew I heard somebody talking close by—and it was Colonel Hawley.

He was talking to the lady with the gold eyeglasses—Cousin Laura Hawley, that was who she was, only her name was Mrs. Van Gelder now. It seems she was Aunt Eudora's dearest friend when they were girls, and they had never quarreled, for a wonder. But she lived 'way off somewhere. When I heard the Colonel talking to her, just the other side of the palm trees, I thought I ought to get up and let them know I was there. But then it did not seem very polite to jump out on them like that. And, besides, I didn't know Cousin Laura Van Hawley—Gelder, I mean; if I must tell you the truth, I was afraid she might scold me.

So I kept still, and of course I heard all they said; but some of it was dreadful, and some of it I didn't understand; and of course I could not repeat it, anyway. I found out what it was about poor Uncle Jack, tho. But I am never going to tell.

(Here follows the conversation that Nannie could not repeat.)

"Perhaps you did know her better than most of us, of her immediate family," said Colonel Hawley. "Perhaps better than any of us, Laura."

"I did; I know her better now," said Mrs. Van Gelder, warmly. "I know she has been more sinned against than sinning in all these family troubles."

"They are ended," said the Colonel, gravely. "But—there are some things—"

He stopped and sighed.

"You are thinking—?" the lady prompted.

"I am thinking of poor Jack," he said.

"It is time to stop thinking of him," she retorted, curtly. "You sacrificed yourself for him, Edmund. You gave up all a man's best hopes in life for him. You gave up to him the woman you loved—and he was utterly unworthy of her."

"Laura!"

"I know it, Edmund; I knew it then," she answered him. "I am sure Eudora knew it, too; and Will—I have always thought Will suspected the truth. You stood aside and let Jack have Emily Woods, when you might have had her. You know she cared most for you in the first place."

The man was silent, but his face was drawn, and the hand that pulled at his gray moustache was trembling.

"You all thought too much of Jack," the lady went on, relentlessly. "Because he was the youngest, and was handsome and dashing and debonair, you thought he was perfection. But Eudora found him out. When he took his young wife and went off so suddenly you all thought she had quarreled with him and driven him away because she was incensed at his marrying Emily, the penniless little school teacher—and she let you think so. She has let you think so all these long hard years."

"Then what *was* the row?" the Colonel asked, in wonder, forgetting his stately speech and ceasing to tug at his gray moustache as he stared at this uncompromising cousin.

"I shall tell you," she replied. "It is time you knew the truth. Eudora learned—no matter how; *I* knew it long before—that her idolized brother Jack was a gambler, and worse. She learned that he had taken money from his father's cashbox to gamble with; and she caught him trying to repeat the theft. *That* was the cause of the row, Edmund Hawley. And your father knew it, too, before he died. That was why his will left nothing to Jack. You have all blamed Eudora for that, also."

The Colonel, stunned, could only look at her in silence.

"And you think she has been so hard with Kate—so she has, poor Eudora. She is a Hawley, and we are none of us too forgiving by nature," said Mrs. Van Gelder. "But she has softened at last, you see."

"And the trouble with Catherine? We none of us know what came between *her* and Eudora," said the Colonel, still bewildered.

"I can tell you that, too," answered Laura Hawley—that was. "Edmund, it

was Eudora and not Kate who should have married Richard Landers—she was engaged to him. But you remember how beautiful and captivating Kate was when she came home from school. She was enough to turn any man's head—if he hadn't any more stability than Dick Landers. But what is going on in the drawing room?" Cousin Laura said, interrupting herself. "Somebody has come, I think."

"We will go and see, if you like," said the Colonel, heavily. "It is perhaps the guest who did not arrive in time for dinner."

"Oh—that other guest!" exclaimed the lady. "Come, Edmund, come!"

She fairly dragged him out of the conservatory in her eager haste.

(Nannie resumes.)

But there was one thing Mrs. Van Gelder said just before they went off in such a hurry that almost put me out of patience. Uncle Dick Landers wasn't a bit good-looking or tall or dark—and if Aunt Eudora thought my papa's hair was too red, what *could* she have thought of his! I am sure Mrs. Van—I mean Cousin Laura—was 'way off, if she imagined Aunt Eudora would ever have looked at him.

But I wanted to see who had come, too; so I followed after the Colonel and Cousin Van—I mean Mrs. Laura—as quick as ever I could. And there was a real pretty lady, not a bit old—but of course she wasn't young, either—dressed in soft gray, with violets in her hat. And the minute he set eyes on her, Colonel Hawley almost gave a jump, and I heard him say, in a quick sort of choked-up voice:

"Emily! It is Emily!"

"Yes, it is Emily," says Cousin Laura Van.

And Mary Landers whispered to me that it was our Aunt Emily, Uncle Jack's widow, all the way from Denver, Colorado; and she had come to stay with Aunt Eudora.

So she stayed about a month; and then, do you know, she went and got married to Colonel Hawley! And so the Colonel is not an old bachelor any more.

But the queerest thing happened when we were all getting ready to go home. It was awfully late, and I was so sleepy; but I never did have such a perfectly splendid Christmas. Aunt Eudora was putting on Dicky's coat—she's taken a great fancy to Dicky—and all at once she snatched him to her, and kissed him all over his *hair!* And she whispered to him:

"Oh, your dear red head, my darling! Oh, Richard, Richard!"

Well, of course Dicky is a dear little red-head; but I shouldn't have supposed Aunt Eudora would like him for *that.* And they *never* call him Richard.

South Glastonbury, Conn.

Bethlehem

BY M. WOOLSEY STRYKER

President Hamilton College.

While deep skies glisten,
While shepherds listen,
With music shaken
The heavens waken.
Angelic warning
Ushers the morning,
That Love's joy telleth,
Where'er man dwelleth.
Birth like none other,
Maiden and mother;
Such the dear story,
Such the strange glory.
Royal and lowly,
Wonderful, holy!
But all is faded;
To see as they did.

Now Time is weary,
And waiteth dreary;
Heareth no winging
Of seraphs singing.
Lord and Anointed,
Undisappointed
We still would greet Thee,
Still haste to meet Thee,
Still hold unbroken
Thine ancient token.

Poor tho my heart be,
Bare as the manger,
There let Thy part be,
Heavenly stranger!

Clinton, N. Y.

There Is No Death

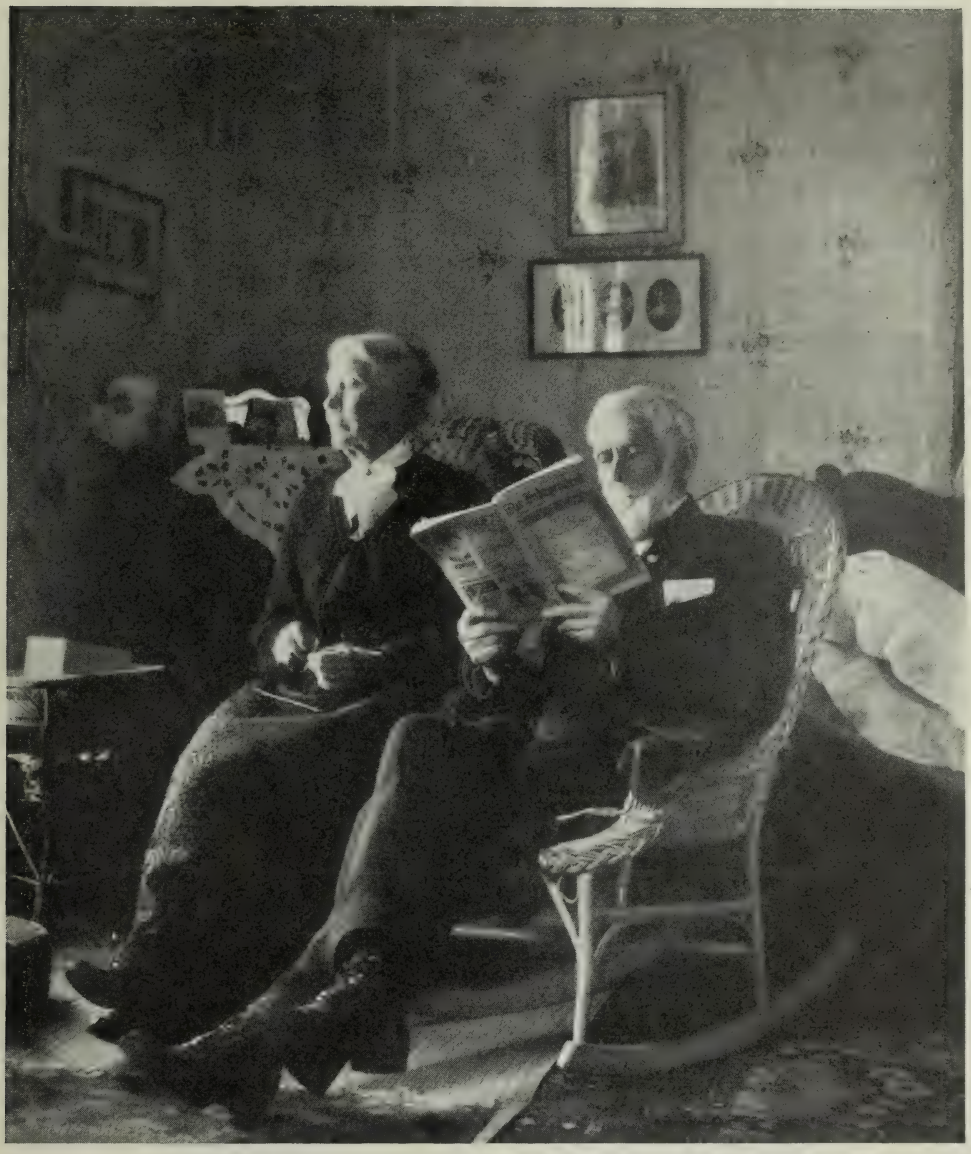
BY LEO TOLSTOY

[This letter by Tolstoy was written to Alexis Bakunin, nephew of Michael Bakunin, and has never before been published. Bakunin was leaving for Canada with the Dukhobors and had written to Tolstoy on a question of religion. Count Tolstoy was a great admirer of the Dukhobors and sharply distinguished the Christian religion from the Church as organized in Russia. The translation is by Samuel N. Harper.—EDITOR.]

I RECEIVED your letter and am very glad that I can answer your question.

It is my conviction, the result not of reason, but of the experience of a long life, that the essence of human life is spiritual. Man is a spirit, a part of the Deity, confined within certain limits recognized by us as matter; and the life of the spirit is not subject to any constraint, the less to any suffering. It is always growing, widening the limits within which it is confined. It is human nature to yield to frauds, to an illusion as to the essence of life within those bounds which limit it, that is, within matter. And under the influence of this illusion we look on material suffering, especially on illness and death, as misfortunes, when in fact all suffering—always unavoidable, just as death itself—only breaks down the limitations which constrain the spirit, destroy that illusory materialistic attitude and restore us to that peculiarly human understanding of life in a spiritual and not in a material being. The more material the suffering, the nearer that which seems the greatest suffering—death, the more easily and inevitably is man freed from it in the spirit. Recognizing life in the spirit man, it is true, does not receive those keen delights which the material, the animal life gives; but he feels his full freedom, his invulnerability and indestructibility; he feels his union with God, with the fundamental, the essence of all. Death then does not exist, or is only deliverance and regeneration, and he who experienced this state will not exchange it for any material enjoyments. I say this because I experienced it with unusual force and clearness in time of sickness. While recovering I experienced two opposite feelings, the joy of a reviving animal and regret for the loss, the dulling of the clearness of that spiritual consciousness which was present in time of sickness. But in spite of all the temptations of a worldly life which came so forcibly with the recovery of health, I know truly that my illness was a great blessing. It gave me what my own reason and the opinions of others could not give me; that which it gave me I shall never lose, I shall take away with me. But apart from sickness, in recalling my whole life I see clearly that everything, and much which tormented me, was a true blessing; for it got me away from looking for the material and pushed me to gain the true, the spiritual well-being. There is much in the popular idea of illness, fevers and all that: they are not from men's will—God has paid a visit.

There is no worse condition for reaching the true well-being than that very one which men desire for themselves and others—health, riches, fame.



May God grant that you feel the beneficence of suffering and of the approach to material inevitable death. It is true that for this one must believe in one's spiritual nature—a part of God, not subject to any change or diminution, still less to suffering or destruction. But judging from your letter I think you must believe in this, or if you do not yet believe, that you will come to this faith.

May God help you, that God which is within you.

O Twilight! spirit that dost render birth
To dim enchantments—melting heaven to earth—
Leaving on craggy hills and running streams,
A softness like the atmosphere of dreams.

Literature

And Yet the Essay

As the popularity of the essay wanes, year by year and month by month, an increasing proportion of the essays which are written at all seem to be "literary" in theme. In other words, only the thoroly bookish writer makes use of this somewhat bookish genre. The author of *The Love of Books and Reading*,[1] for example, boldly treats such subjects as appealed to a Bacon and a Montaigne in finely leisured days. His chapters on the Art of Reading, or the Rewards of Reading, or the Love of Poets, constitute, as it were, little anthologies of tributes to literary influences, and will be welcomed by every true hearted book lover. They aim at little in the way of original opinion, and reveal nothing of original research. Yet they are none the less stimulating for that. Inspired by a genuine enthusiasm for good reading, this book may well prove an inspiration of such enthusiasm on the part of others. Above all, the modest manner in which a labor of love is performed must endear Dr. Kuhns's book to us.

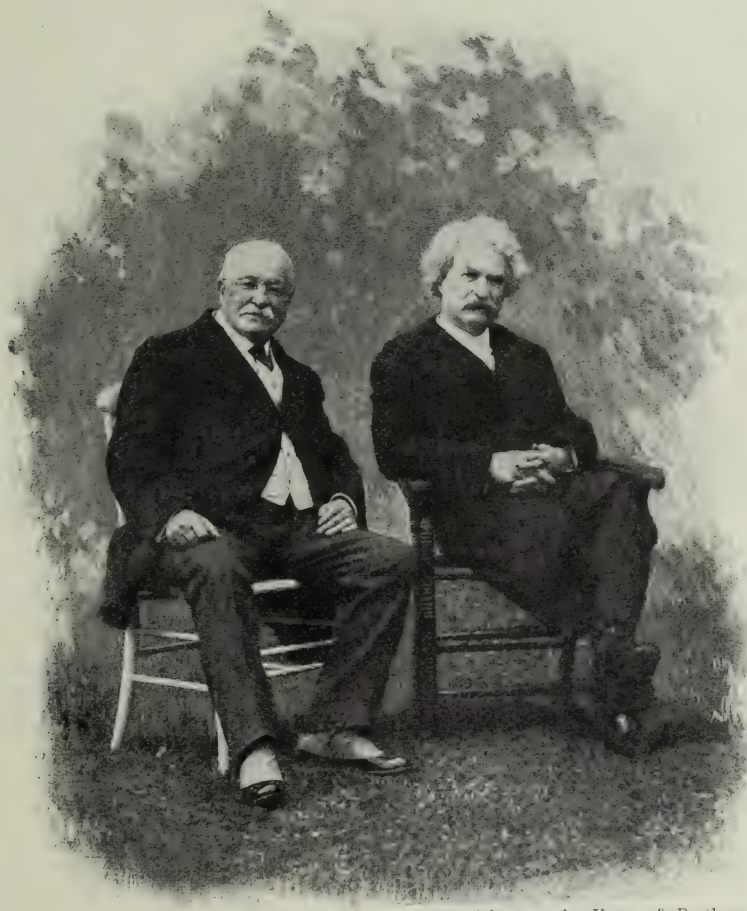
Essays on themes more abstract, even, than Books and Reading—on such themes as Friendship and Chastity and Knowledge—are, according to the rhetoricians, nowadays, taboo. Everything worth saying about these important topics was long since said, critics tell us. If that is so, may it not be time to phrase it all over again in the language and from the standpoint of the age? Something of the sort must be Dr. Eliot's opinion; for the great educator has gathered together in book form a number of papers, some of them read before educational institutions, in which the proportions of things are once more dwelt upon—with less of originality than of refreshing saneness.[2] Here one finds reproduced the account of the Religion of the Future, about which we heard so much at one time from the press, religious and secular: a controversy we do not care to reopen. Here one finds, furthermore, Dr. Eliot's always practicable creed of service. His idealism may not be ours, yet it is idealism, at least. The educator speaks out in the lines:

"It is a happy thing to have in youth what are called animal spirits—a very descriptive phrase; but animal spirits do not last even in animals; they belong to the kitten or puppy stage. It is a wholesome thing to enjoy, for a time, or for a time each day all through life, sports and active bodily exercise. These are legitimate enjoyments, but, if made the main object of life, they tire."

They tire others than the sportsman. Obvious as such a message as the above may seem to some of our readers, it is one that we can afford to hear repeated in this essentially youthful America.

Of course one is tempted to linger over certain other of Dr. Eliot's lay sermons. That on the Happy Life has its importance for other auditors than the students of Phillips Exeter, for whom it was originally composed. So has the account of John Gilley—Maine farmer and fisherman. So, too, the essay on Great Riches. These be tracts for the times.

Not so much may be said for each and all of Professor Wilkinson's fifty-four "little essays" *de omnibus rebus et quibusdam aliis*.[3] Professor Wilkinson frequently reveals himself, in spite of occasional piquancy, a sententious prophet of the obvious. As regards expression, he is none the less sophomoric for generally failing to attain perfect spontaneity. Passing over short papers of no great distinction on certain literary and religious subjects, one notes that he, too, like the other essayists named, is unafraid of old-fashioned themes: Hating, Forgiving, Being Sorry, Lying. Leaving the question of style out of account, one may say of Professor Wilkinson's essays what he himself writes of Matthew Arnold's letters: they are



"now a little condescending, and now a little supercilious, in tone."

[2] The Durable Satisfactions of Life. *By Chas. W. Eliot.* New York: T. Y. Crowell & Co. $1.

[3] The Good of Life and Other Little Essays. *By William Cleaver Wilkinson.* New York: Funk & Wagnalls Co. $1.25.

It is pleasant to turn from the highly seasoned but not always digestible brewage of Professor Wilkinson to the genial little volume, *My Mark Twain.*[4] That which is in both senses of the phrase the better part of this generously illustrated book is made up of Mr. Howells's recollections of the great American. To these charming chapters has been appended a series of Mr. Howells's critiques of Mark Twain's work, from a review of "The Innocents Abroad" down to discussions of An Italian's Views of Mark Twain, and a study of The American Joke. The reminiscences which precede these critical pages constitute a truly delightful tribute to friendship and a friend. The fact that the contrast between the sharers of that friendship was ever a striking one only adds to the value of both record and tribute. The "personal note" is here present—and that partially accounts for our pleasure in reading *My Mark Twain.* Now, in one sense the personal note is missing from another of our group of essays—Dr. Dowden's *Essays Modern and Elizabethan*[5]—for the titles here evoke no living characters except in so far as Pater and Ibsen and Heine and Goethe and Cowper are "living." In a larger sense the personal note is not lacking, after all, for here are the reading-reactions of an impressionable scholar, or a scholarly interpreter, or whatever fine phrases you may wish to coin for a critic who is always sane, always well

qualified to speak on any subject he chooses, and almost always interesting. The Elizabethan essays here treat of Shakespeare as Self-Revealed, Shakespeare as a Man of Science (a warning for Baconians), Elizabethan Romances and Masques, and Elizabethan Psychology.

Objectively less literary, but in no sense of the word less "literature" than Professor Dowden's studies, is the volume by Dr. Jacks, editor of the *Hibbert Journal, Mad Shepherds and Other Human Studies.*[6] Here are described and set into contrasted action a group of provincial Englishmen including, besides the "Mad" Shepherd, an extraordinary shoemaker, one or more farmers contributory of humor, a rector, and a rector's wife who was formerly an actress and always a richly human and lovable figure. Since we may call almost anything that defies formal classification an "essay," we may well close the chapter in praising the simplicity, the sympathy, and the convincing truth of these pages. A strong feeling for life and appreciation of character could alone make possible this most enjoyable book, that is distinguished by as keen a power of observation as Mr. Galsworthy himself commands. By it we are reminded that, in spite of the generalizations with which this rapid survey of recent essay writing was introduced, not all modern essays are written by those who spend their days and nights alike sitting in the ingle-nook. The true essayist gazes at the world thru his study windows; he is, none the less, a sharer in the life and mental turmoil of the world without.

Monypenny's Life of Disraeli

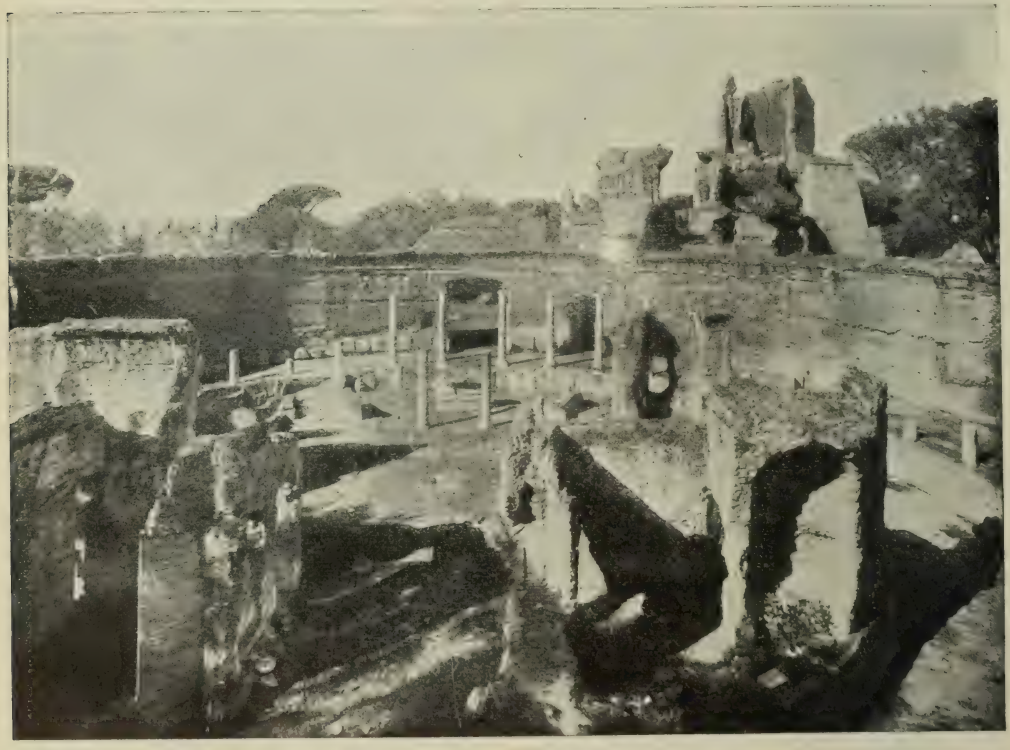
Admirers of Disraeli who have had to wait unusually long for a biography based on Disraeli's correspondence, will be inclined to regret that the three volumes of Mr. Monypenny's work were not published at the same time.* Disraeli was born in 1804, and the first volume carries the story of his life only to 1837, when, after many failures he finally succeeded in securing a seat in the House of Commons for Maidstone. Disraeli, for reasons not clearly explained, did not go to either Oxford or Cambridge. His father, who had inherited his fortune, was in easy circumstances for a man of his tastes and pursuits; and there was no religious obstacle in the way of Disraeli's entering the university, for altho he was born a Jew, and his father to the end of his life continued in the Jewish faith, Disraeli was baptized into the Established Church when he was thirteen years of age, so that the religious tests imposed at the universities at this time would not have served to exclude Disraeli from either Oxford or Cambridge.

Even the keenest of Disraeli's admirers—those who like to dwell on his success in building up the Conservative party after the split over Peel's free trade policy in 1846, and on the popularity and splendor of later years—must concede that the period from 1821 to 1837 forms the least likeable portion of Disraeli's remarkable career. He was not the kind of youth to take to the law or to desire to practice it in the privacy of a solicitor's office. He was too much

*THE LIFE OF BENJAMIN DISRAELI, EARL OF BEACONSFIELD. *By William Flavell Monypenny.* Vol. I. 1804-37. With portraits and illustrations. New York: The Macmillan Company. Pp. ix-401. $3.

of a genius, and from the first too bent on making a name for himself in literature and politics to be content with the seclusion of a law office, no matter how high the standing of the firm. Disraeli consequently did not finish his articles, and was not admitted to the solicitor branch of the profession. Later on, in 1827, he entered Lincoln's Inn with a view to being called to the bar. But the barrister branch of the legal profession, although it would have offered greater opportunity for a man of Disraeli's parts than the attorney end attracted Disraeli little more than the law office in the city; and in 1832 he took his name off the Lincoln's Inn books, and finally abandoned all idea of a career in the law. Before this time, while he was still an articled clerk, and before he was of age, he had dabbled in finance. He had speculated heavily in mining stock, and thereby incurred debts which embarrassed him for thirty years. Between his abandonment of the solicitor's branch of the legal profession in 1825 and his election for Maidstone in 1837, while he undoubtedly made a reputation as a novelist, he was an adventurer in politics, and to some extent an adventurer also in society.

Lytton Bulwer introduced Disraeli to London society in 1832. It was then that he began his career as a dandy; and it was in 1832, at the last election held on the medieval franchise on which the old House of Commons was elected that he first came forward as a Parliamentary candidate. This first attempt was at High Wycombe. He was easily defeated there; and before he was elected at Maidstone in 1837 he made six other full or half attempts to capture a seat in the House of Commons. He was, as Mr. Monypenny's quotations from his speeches make abundantly clear, a full-fledged Tory when he contested High Wycombe for the second time at the general election that followed the Reform Act of 1832. His Toryism is obvious in his declaration that the foreign policy of the Grey Administration "must lead to an ultimate loss of the sovereignty of the seas, the destruction of our commerce, and finally of our country." Almost from the time of the American Revolution it has been the creed of English Tories that none but Tories can manage Britain's foreign affairs; and equally long it has been the Tory creed that England is going to the dogs whenever any but a Conservative Government is in power.



A DRAWING BY ARTHUR RACKHAM.
"The Rheingold and the Valkyrie"
(Doubleday, Page & Co.)

In the years from 1832 to 1837, however, Disraeli's chief concern was to get into the House of Commons, and political principles did not weigh over much with him, as can be seen from his letters in 1834. In November a general election was imminent, and Disraeli turned for help to the Earl of Durham, the greatest radical ever developed within the British peerage, and the statesman to whom Canada owes her democratic form of government. He wrote asking for Durham's help to a seat in the House of Commons, and also in disparagement of the Tories who had just come into power. Durham was sympathetic, but could do nothing; and eleven days later Disraeli wrote his sister that the Duke of Wellington and Lyndhurst, the Lord Chancellor in the new Tory Government, were pulling wires to secure his return for Wycombe, as a supporter of Peel's

Government. By 1835 Disraeli was of the Carlton Club, and thereby had attached himself to the Tory party, and it was as a Tory that he was elected for Maidstone. In those days Disraeli was more intent on bringing himself into political prominence than he was on working for any political principles. Mr. Monypenny concedes that he was a political time-server and adventurer, and that notoriety was to him as the breath of his nostrils; and it is because the first volume must leave that impression that admirers of Disraeli will be desirous that the interval before the publication of the two succeeding volumes should be as short as possible. Self assurance, egoism, vanity, and showiness almost infantile in its manifestations, are so characteristic of Disraeli of this period that American students of English politics who know the Disraeli of his later career cannot fail to be eager for the publication of the succeeding volumes. They will desire to learn how a man of these characteristics, a man who could write the Runnymede letters, with their cheap and vulgar abuse of contemporary statesmen, an adventurer who was perpetually dodging money-lenders and sheriff's officers, could develop into the leader of the aristocratic party in English politics, and the most valued of Queen Victoria's later prime ministers.

No writer of political biography ever had a more difficult task than Mr. Monypenny. Most of his difficulties lay in the early years of Disraeli's career, and Mr. Monypenny has surmounted them in this first volume in a way that cannot fail to be satisfactory to Disraeli's admirers, and that will ensure a welcome for his succeeding volumes even from students of English politics who can see little in Disraeli's career that is commendable. The test for Mr. Monypenny thus came early in his task, and his success with the first volume makes it obvious that no mistake was made by the trustees who had Disraeli's papers so long in charge when at last these were handed over to Mr. Monypenny, and he was entrusted with the preparation of the long over-due biography.

RUINS AT TIVOLI (HADRIANS VILLA).

L'AMI DES HUMBLES.
Leon L'Hermitte.

The Boston Museum of Fine Arts, Giving a descriptive and critical account of its treasures, which represent the arts and crafts from remote antiquity to the present time. By Julia de Wolf Addison. Illustrated. Boston: L. C. Page & Co.

The new building of the Boston Museum of Fine Arts which was opened last season has stimulated fresh interest in the fine collections which it holds and displays so advantageously. The arrangement of the various departments is calculated to assist the visitor in tracing the development of the arts in different countries. In Mrs. Addison's descriptive volume the reader will find an efficient helper to a comprehensive understanding of the Museum and its treasures. The author's large experience and enthusiasm are fully matched by her discriminating taste and accurate knowledge. One is almost overwhelmed with the wealth of information brought forward at the suggestion of some old Persian rug or rare piece of porcelain. The hundred and more pages devoted to the picture galleries constitute a tolerably good sketch of modern painting, illuminated as they are with many biographical notes and interesting anecdotes, while almost as much may be said for the entertaining chapters on textiles and pottery, Egyptian and classical antiquities, and particularly oriental art, in which the Boston Museum takes a very high rank. In a book designed for popular reading such discussions as that of the disputed Velasquez might better have been replaced with material of less local interest, but excellence of proportion is not one of the characteristics of this volume. A careful reading of the book would result not only in a good preparation to enjoy the rich treasures of the Museum, but also in acquiring a serviceable introduction to the history of the arts and crafts. Such a work as Mrs. Addison's would, however, be of small value to any one not actually visiting the Museum, without the collaboration of the illustrator. As it is, more than fifty treasures of the Huntington Avenue institution are reproduced.

A History of Verona. By A. M. Allen. Edited by Edward Armstrong. With twenty Illustrations and three Maps. New York: G. P. Putnam's Sons. $3.50.

The story of Verona, like that of so many of the old towns of Upper Italy, emerging from the Roman civilization, overwhelmed by the Gothic darkness, is the story of a small republic, or commonwealth, based on trade, which brought commodities from the four quarters of a rich valley, whose levels of plowed land were the envy of its castled hills. As the castled hills developed hunters of wild beasts and eventually became the choice home of wilder men, the comfortable commonwealth below, at the confluence of many valleys and many golden streams, was forced to pay toll to savagery, to furnish it bread and wine and the spices of a rich table. Out of the commonwealth grew the armed guild strong enough of hand to protect itself and to maintain order until it forgot itself in the occupations of trade, when some mailed hand or frontlet of brass assumed the business of saving the commonwealth. In the process the commonwealth disappeared. The armed league from the castled hills took charge of the effects. A miniature empire succeeded. A bigger empire from beyond the Alps dropped in casually to help, and the disorder of the twelfth and thirteenth centuries reddened both castled hills and fertile plains with slaughter such as has for six centuries made the heart sick, and peopled Dante's strange world under those wonderful hills with devils which even the herd of swine that ran down to the ancient Judean sea would have declined to swallow. This series of changes thru which Verona ran—its Roman origin, its commune, its guilds, its Ezzilinos, its Scaligeri, and with it all its marvelous development of art, is well handled by the author, who follows the complicated details of commercial law rising out of the necessities of a mercantile community with as much lucidity as that which he displays in following the devious maneuverings of imperial armies. It is the history of a colony, a commune, a little front-yard empire, a tyranny, and a slaughter-house of all the humanities, and it is worth studying, now that trade is again under the sweat of the gauntleted brow.

Literary Notes

....Björnson's famous play "A Lesson in Marriage" is brought out by Brandeis Publishing Co., New York. The translator is Miss Grace Isabel Colbron. This is the first English version of the play.

....Among the publications of the Neale Co. (Washington) appears *A Texas Pioneer,* a narrative of overland staging and frontier scrapes, told in the first person by August Santleben, and edited by F. D. Affleck ($2).

....The charm of Ruth McEnery Stuart's fiction is not missing from her *Little Mary Ellen,* a tale that is printed as a volume in itself by the Bobbs-Merrill Company. The little book is decorated by Ruth Sypherd Clements.

....The humorous poem in which Wallace Irwin has celebrated Colonel Roosevelt, and which originally appeared periodically, is now published, with the illustration by H. L. Blumenthal, by B. W. Huebsch (*The Teddysee;* seventy-five cents).

....*The Life and Times of the Rt. Hon. Cecil John Rhodes* have now been put into two stout volumes by the Hon. Sir Lewis Michell, Member of the Executive Council, Cape Colony. The book is published with illustrations, by Mitchell Kennerley. ($7.50.)

....Christmas would not be Christmas without a new picture book from Arthur Rackham. This time it is Margaret Armour's translation of *The Rheingold and The Valkyrie* (Doubleday, Page. $5). It is a handsome volume, offering full play for the exercise of Mr. Rackman's now delicate, now grotesque imagination.

....An offering of the Neale Co. (Washington) is "a novel without a hero" by Victor Mapes: *The Gilded Way* ($1.50). The "Way" is a certain thorofare of Manhattan, and Oliver Westervelt is Mr. Mapes's idea of the 'millionaire libertine." Mr. Mapes is the author of "Partners Three," "Don Cæsar's Return," "Captain Barrington," and other fiction.

....The Mohawk Valley has always been celebrated for its beauty, and the region is not lacking in historic interest and legends of Indian and pioneer. Mary Riggs Diefendorf has brought them together in an illustrated book, published by Putnams, *The Historic Mohawk,* which ought to be of interest to the descendants of the sturdy Dutch and Palatine settlers along the Mohawk River.

....An interesting form of university extension is the travel class which sails for Egypt and Palestine on January 28 under the direction of Prof. Thomas G. Soares, of the University of Chicago. The ministers and teachers who mostly compose the party will have daily lectures thruout the two months' tour and may receive credit from the University of Chicago for their studies.

....The October number of *The Journal of Race Development,* published by Clark University, contains nine important articles, among them a somewhat revolutionary conception of the future of missionary work by President G.

Stanley Hall, a survey of present conditions in Arabia by S. M. Zwemer and an account of recent changes in Korea by George Trumbull Ladd.

....On December 9 Atlanta celebrated the birthday of the late Joel Chandler Harris. An effort was also made by the Uncle Remus Memorial Association to increase its fund of $8,000, about one-third of the amount desired to purchase Snap Bean Farm, Mr. Harris's home. Mr. Carnegie has offered to give the final $5,000 of the $25,000 desired to provide a memorial to the Southern writer.

....Winthrop Packard's *Florida Trails*—a delightful volume by an articulate nature-lover—should form an ideal Christmas gift to almost any one: a consolation for those who can not follow the trails "as seen from Jacksonville to Key West and from November to April," an invitation for those who can. The photographs reproduced here are of singular beauty (Small, Maynard. $3).

....G. P. Putnam's Sons are the publishers of Elizabeth W. Champney's *Romance of Imperial Rome,* profusely illustrated, beautifully paged, and issued at $3.50. Earlier in her "Romance" series we had "Roman Villas"; the new volume treats of Sulpicia—the Sirens—the Loves of Horace—British heroes—the flight of Apollo—and other romantic matters. The story-teller's method is intimate. She quotes Tibullus and Augustus and Caracalla in their own words.

....*The Folly of Building Temples of Peace with Untempered Mortar.* By John Bigelow. A vigorous, allusive, and very elaborate argument of 100 pages, to the effect that we can never have international peace as long as as there is a tariff on imports, and that the true way for a state to raise revenue is to become a joint stockholder in the corporations it creates, the stock being given it in return for the franchise granted. The veteran author's remedy is certainly novel and we especially recommend it to tariff reformers. (New York: B. W. Huebsch. $1.)

....Professor Cattell's calculations of the magnitude and distribution, of the investigators of this country, which we discussed editorially in our issue of November 24, are published in full in the new edition of his *American Men of Science* (New York Science Press). It is the most thorogoing effort that has been made to apply mathematical methods to the evolution of contemporary genius and the results are very interesting to educators, sociologists and psychologists. As a directory giving the names, addresses and fields of labor of all the men in America who are doing scientific work, it is an indispensable reference book.

....Is America learning the art of play-reading? A most recent report of the circulation department of the New York Public Library lists among the books in demand, excluding fiction, Maeterlinck's "Blue Bird," Ibsen's plays, and Rostand's "L'Aiglon" and "Chantecler." The inclusion of Ibsen seems to suggest that not every one of these readers was simply priming himself—or rather herself—for matinees at the New Theater. "The Piper," Josephine Preston Peabody's prize play, which, after production at Stratford-on-Avon, toured the English "provinces," has, it is announced, gone into its eighth impression (Houghton, Mifflin Co.).

....Additions to philosophical literature in America are the translation of Bergson's "Essai sur les données immédiates de la conscience," under the title *Time and Free Will: An Essay on the Immediate Data of Consciousness:* and F. C. S. Schiller's *Riddles of the Sphinx: A Study in the Philosophy of Humanism.* The volumes are both published by Macmillan, at $2.75 and $3, respectively. Bergson's translator is the youthful scholar, F. L. Pogson, whose untimely death we now have one more reason for regretting. Both of these important volumes will be discussed at length in the articles on contemporary philosophers which is to be a leading feature of THE INDEPENDENT for 1911.

....Among the minor publications of Paul Elder may be noted the following: *Slumber Sea Chanteys,* the words of which are by Lucia Chase Bell and Rita Bell James, the music by Carrie Stone Freeman, and the margin and other illustrations by Rita Bell James; *Ebisu, the Luck God,* a bit of pure fun; *Love and Friendship,* new epigrams, by Lillyan Shaffner, with decorated borders; *The Potato Child and Others,* three tender Christmas stories the title of which is derived from a doll made of a healthy potato, by Mrs. Charles J. Woodbury, with frontispiece after a bas-relief by Elizabeth Ferrea; *Patience and Her Garden,* a whimsical parable for women, by Ida Smith Decker, and an *Impressions Calendar for 1911,* derived from various sources.

....The twelfth volume of Lord Acton's Cambridge Modern History, edited by Dr. Ward, Dr. Prothero, and Stanley Leathes, is entitled *The Latest Age* (Macmillan; $4). The preface opens with these cheering words: "Our task is now approaching its conclusion." The project of this monumental work dates from March, 1898. The first volume appeared four years and a half later. The present formidable volume extends with the index to more than one thousand pages, and has chapters on Modern Europe and Great Britain (Stanley Leathes), American Foreign Relations during the Civil War (J. Westlake), the Home Rule Movement (R. Dunlop), the French Republic (E. Bourgeois), the German Empire (H. Oncken), Austria-Hungary (L. Eisenmann), United Italy (Thomas Okey), Reaction and Revolution in Russia, and the Reform Movement in Russia (B. Pares), the Near-East (William Miller), Egypt (F. M. Sandwith), India (P. E. Roberts), the Far East (Sir R. K. Douglas), Japan, etc., etc.

....Fiction issued by the Neale Publishing Co. (Washington) includes *The Sowing of Swords,* with subtitle: "The Soul of the 'Sixties," by Hannah Parting, "of New England" ($1.50). This volume, too, is "edited": the editor this time is Elizabeth A. Meriwether. Mrs. Meriwether writes that the manuscript

was given to her, more than a quarter of a century ago, in New Orleans, by a dying woman, a stranger to Mrs. Meriwether. The story was submitted to a Chicago publisher, who advised against its publication at that time. "The passions of the war have not yet died out," he said, "and Reconstruction measures have embittered those passions. . . . Take your book home and lay it on a high shelf for twenty years; then take it down and give it to the world." "I followed his advice," adds Mrs. Meriwether. "I went home and put the manuscript on the highest shelf." The publishers modestly tell us that not since Jane Eyre's day has a woman's character been more ruthlessly dissected.

. . . .Lucien Price, writing in a Boston newspaper, tells something of the history of Meredith's MSS., one single lot of which brought $9,730. Whether the legend of the author's subsisting on oatmeal during the year that he was writing "Evan Harrington" be true or not, certainly the indifference to reward which gave these manuscripts their post-mortem value began in a period of the author's life when such a reward might have improved their quality. There are even some who say that "Evan Harrington" betrays that the oatmeal was eaten dry, writes our Boston cynic. Most of the items in the recent sale at Sotheby's seem to have represented the rejected first-drafts of his later works. In the case of "The Amazing Marriage," the whole framework of the story seems to have been radically altered before publication. But the irony of the whole business is that certain persons should be enriched today by the sale of fiction which now exists in thousands of printed copies, but which its author himself long peddled in vain.

. . . .The reactionary side of Tolstoy's teachings is brought out in a contribution to the Chicago *Dial* by Amalie K. Boguslawsky: "Tolstoy's Attitude toward the Woman Problem." His revolutionary volume, "What to Do" deals, she writes, "uncompromisingly with the woman problem." He says: "As stated in the Bible, a law was given to the man and the woman—to the man, the law of labor; to the woman, the law of bearing children. Although we, with our science, *avons changé tout ça*, the law for the man, as for the woman, remains unalterable." He adds: "Women form public opinion, and woman are especially powerful in our day." Here the theory. But Countess Tolstoy's words are singularly pertinent. "When I married Count Tolstoy," she has written, "I had modest ideas: that is I was willing to be second; he made me advance to first place. Since then he has desired to make me third. *Eh bien, non!* I shall hold to second." With the tragedy of the end before us, let us remember that the Countess Tolstoy was, according to the world's usual standards, a faithful helpmeet:

"Until her daughters were old enough to assume that duty, she was her husband's amanuensis; and she has always been the guardian angel who has protected him from the evil that might result in some cases from the extreme application of his theories." 'In her conduct and bearing toward her husband and his literary productions,' says her brother, Mr. Behrs, 'she always reminds me of a religious worshipper and zealous guardian of some sacred fount.' "

MRS. STRONG—John! Do you hear me?
Mr. Strong (meekly)—Yes, love.
Mrs. Strong—There is a little corner torn off your pay check this week. What did you spend it for.—*Puck.*

ALTHO the Christmas-tide is near
And hearts with joy are thrilled,
He sheds a salt, self-pitying tear.
His heart with pain is filled.

The news has come to him today—
(Could there be worse mishap?)—
His fiancée has run away
To wed another chap!

But there is more to hurt his pride
And make him feel a cur—
The knowledge that last Christmas-tide
He bought a ring for her!

A diamond ring—oh, luckless man!—
That cost two hundred net.
'Twas bought on "easy-payments" plan—
He's paying for it yet!

—*Young's Magazine.*

LORD CHESTERFIELD'S SON'S LETTER TO HIS FATHER.

I recommend to you, dear pater, to avoid being a fop. It is one thing to be polite, and it is another to be manly. Be natural. If you have no respect for a man, don't make him think you have. Hypocrisy is prevalent enough without adding to it by pretending to be that which we are not. When you are angry, don't deceive people by concealing it, but get it out of your system. Good breeding & good manners are very pretty decorations, but imitations are bad. If one has them not, why pretend? Let your manners & conduct show what you *are,* not what you are not. Deceit is a prolific worker of troubles, and instead of adding to it, we should strive to lessen it. You once wrote to me, "Determine to keep your countenance as unmoved & unembarast as possible." Why? Is not the expressiveness & mirror-like accuracy of the countenance its greatest charm? Then why destroy it by concealing our emotions? Surely you would not make people better by having them conceal their defects—for, what is *outside* is but a manifestation of what is *inside,* and if we take care of our inside, the outside will take care of itself. You will go down in history as the philosopher of deception. I would rather it be the philosopher of truth. I want my life, as well as my countenance & behavior, to show what I am—not merely what I appear to be. I do not aspire to be a cotillion leader, nor a dancing-master, nor a parlor parrot for painted ladies to admire; but, "as you know me all, a plain, blunt man," true to myself & true to my friends.—*The Caldron.*

The Independent

Entered at New York Post Office as Second Class Matter
Publisher, Clarence W. Bowen
130 Fulton Street - - - New York

A WEEKLY MAGAZINE. FOUNDED IN 1848.

One Year, $3.00. Single Copies, 10 Cents.

Single copies over six months old 25 cents. Postage to any foreign country in the Universal Postal Union, $1.75 a year extra; to Canada, $1.00 extra. Subscriptions will be received for other periodicals, and clubbing rates will be granted as low as offered by any responsible agency.

Order for the change of an address should be received two weeks before change is to take effect. The old as well as the new address should be given.

For the convenience of our subscribers we will send on receipt of publisher's price any book reviewed or advertised in our columns.

Volumes of The Independent are completed at the end of December and June, and a full index is furnished free on application. Neat binders holding in book form thirteen current issues will be furnished for 45 cents.

If the numbers comprising any semi-annual volume are returned to us prepaid in good condition with $1.50 we will bind the volume in handsome and substantial half buckram and deliver it free anywhere in the United States.

We are always glad to receive articles for examination, but writers desiring the return of their manuscripts, if not accepted, should send a stamped and addressed envelope. We cannot, however, even so, hold ourselves responsible for their return. Authors should preserve a copy.

Advertising rates will be furnished on application.

A War Scare for the Christmas Season

THINK of it—a war scare, a cry for soldiers and armament, now in this twentieth century after the birth of the Prince of Peace, and just as we are listening to hear the angels proclaim the birth at Bethlehem with the song of peace on earth and good will to men! It ought to be incredible, but into the heavenly melody breaks the harsh complaint that we do not have fighting men enough, that we must greatly strengthen our army, build new fortifications, and set the teeth of our artillery snarling and barking across the two oceans. That is the discord with which our American capital would drown the harmony of Bethlehem!

We are sorry for President Taft, a man of peace, in this matter. He is somewhat unfortunate in his inability to control his selected advisers. He cannot agree with Secretary Ballinger on the sale of coal lands, and now he very wisely hesitates to follow Secretary Dickinson, of the War Department, and General Wood, in their big demands for the increase of the army, altho he did accept their advice for the fortification of the Panama Canal. Usually a Cabinet officer who cannot agree with his chief will see it his duty either to keep silent or to resign, but Mr. Taft is a very merciful chief.

Secretary Dickinson, in a confidential document which he sent to the House of Representatives, not knowing that the House has no secret sessions and can receive no confidential documents, told what was meant to be an alarming story of the unpreparedness of our country for a war suddenly declared against us. We would have, he said, no defense against any first-class Power which should send against us an army of 200,000 soldiers. We have not as many soldiers as that all told, both regular army and militia. We ought to have 450,000 at least to resist sudden invasion and to man our defenses, besides the fortifications and armaments needed for the Panama Canal.

As to the Panama Canal, we need no fortifications, and have good hopes that Congress will not vote for them. We might put a hundred millions into fortifications and man them with 10,000 men at another big annual expense taken from the pockets of the people, and it would not suffice to make the Canal as absolutely secure as it can be made by international agreement, such as has protected the Suez Canal thru a terrible war and now for many years. That demand may be dismissed; there remains the danger of invasion by some first-class Power to be considered.

If there is actual danger of such invasion we ought to provide against it at any cost; but there is no such possible danger. If we are now unprotected, it is all the better, because there is no danger of invasion, and we had better save our money and pay up our war debts and the pensions of old wars.

It is now one hundred years, lacking two, since any nation has declared war against the United States and invaded our shores. During this time we have grown from a feeble nation to one of the first class in numbers and wealth, and also in the strength of our navy. Meanwhile the world has got new knowledge as to ways to settle international difficulties. They are settled now by arbitration, not by war. Under present

conditions, any dispute we might have with any other nation would be settled without war. The only use for such an army as Secretary Dickinson asks for would be in case of an attack by a first-class nation which refused arbitration and passionately assailed our shores.

But this is so absolutely unlikely as to be practically impossible. It is conceivable, in terms, but unbelievable. We are living in a new century, under new ideals, not the ideals of war, and these men do not know it yet. It is time they waked up. There is a huge hole in the earth in Arizona which geologists tell us was made by a mighty mass of meteorites that fell from the sky many ages ago. It is conceivable that such another may fall on New York and blot out its buildings and people, but we do not insure ourselves against the risk. It is conceivable that Great Britain or Japan may stir up a quarrel, break the treaties of arbitration with us, and attempt to invade our Atlantic or Pacific coast, but neither will do it or can do it; it is incredible, and there is no other Power that can.

It is common sense that we want to apply to this question. And common sense must take into consideration not merely the past, but the present; not only the ages of war, but the new era of peace. Let not this Christmas season find our lawmakers deaf to the voices of the new era. America has led in the arts of peace and in the policy of arbitration; let it dare to have faith in the fraternity of man and the federation of the world. Thus best would we celebrate the most blissful day in all earth's years.

The Elements of "It"

UNDER the suggestive designation, "It," Mr. Lincoln Steffens has written a vigorous description of the American "Money Power." By this choice of a name he has directed attention upon the protean and apparently inscrutable nature of "high finance." That it is inscrutable in fact, or even quite so indefinable as Mr. Steffens intimates, we are by no means convinced.

"It" reaches far and touches every individual life. A man's house may be his castle against his government, but not against "It." The law gives to every enfranchised man his one inviolable vote, but "It," without so much as a violation of the code of good manners, can confront him with the certainty of bankruptcy and destitution if he uses his vote against "It's" political machine.

The naïve assumption of "the average intelligent man" is that politics is controlled by business, that business is at the mercy of banking, and that banking is controlled by a few financial despots who "own," and because they own, "everything." How fallacious this assumption is Mr. Steffens makes clear.

Ownership, the legal title to fabulous wealth is, beyond question, the substantial foundation upon which control is built. If natural resources, including forests and water powers, iron, coal and copper, were owned by the people in their public capacity, and if the great funds of loanable capital also were owned by the people and handled thru their agent, a national bank, the control that "It" exercises over our entire economic, moral and political life could no longer exist. Nevertheless, "It" could never have acquired its present power if it had possessed and used no other means of control than the actual ownership vested in a relatively small group of multimillionaires.

The productive plants and the railway systems of the United States are, in fact, owned in the main by millions of unknown stockholders. The men that control them do not, as a rule, own a majority of the shares. More often than not they control interests in which they have comparatively small actual holdings. In exceptional cases, which Mr. Steffens cites, individuals have controlled important properties in which they had no ownership whatever.

In one way or another, then, "control" is obtained and exercised on the basis of a relatively small actual ownership. That is the cardinal fact to be explained in any adequate account of "It." How is the trick done?

Mr. Steffens adduces one device, namely, the voting of proxies. Often a group of men is able to obtain complete control of a property thru no more costly means than the soliciting and gathering

in of proxies from indifferent, "easy" and perhaps stupid stockholders. In any case, a big start toward control may be obtained in this way, so that the block of stock which must be purchased in open market to make up a voting majority is not a formidable factor in the scheme.

Conceding that this abuse of proxy voting offers a partial explanation of control, it is by no means final. Proxy voting is only one manifestation of psychological and economic forces which, in combination, constitute the "Money Power."

In the last analysis control rests upon the economic law of marginal productivity. The price of wheat is not determined by the cost per bushel to the man who cultivates exceptionally fertile land. It is fixt by the marginal productivity of the poorest soil that "demand" brings under cultivation.

Now it is only an application of this principle that we see when the private banker, instead of loaning merely the bona fide capital which he owns, uses it as a reserve against transactions three or four times the amount of his actual property; or when the speculator, instead of paying ten thousand dollars for actual stocks, buys "margins" on a hundred or two hundred thousand dollars worth of stock.

In like manner "control" in the financial world is obtained not at all by buying an unnecessary amount of ownership in the properties to be controlled; it is obtained by buying a certain marginal product, and thereby making the money available go enormously farther. That marginal product is not stocks, *but human conduct.*

Not to go into too much detail the big despots of industry and politics obtain their power by spending control funds not chiefly on actual property, but chiefly in putting the owners of actual property under obligations or under irresistible pressure. A million dollars would buy a million dollars' worth of stocks, market value. A million dollars can be so used as to command the voting rights of a billion dollars' worth of stocks.

Of course there must be yet other elements of "It" in order that these so far named may be effective, but they are neither mysterious nor concealed. How can men by tens and hundreds of thousands be thus put under obligation or pressure? Primarily and chiefly because in their own attempts to get something for nothing, in a small way, as the despots are getting something for nothing in a big way, *they have made themselves vulnerable.* From the farmer who sells his vote for five dollars to the merchant who winks at the graft of the alderman who permits illegal obstruction of the sidewalk; from the push-cart man whose vote is at the disposal of the district leader who looks after his license, to the railway president who is rigging a legislature for a franchise, men can be controlled by the judicious expenditure of a very little money.

Here is the inmost secret of "It," and it is not esoteric in the least. The big grafter grafts because a million little grafters graft. The financial despot rules because ten millions of lesser business men stupider and less daring than he, are trying, as he is, to get something for nothing, and are a little more afraid than he is of being "held up" or "shown up."

The Rank of Civilized Nations

THE annual awarding of five prizes of $40,000 each to the men who have done most for the advancement of medicine, physics, chemistry, literature and peace is of interest as showing which nations are the leaders in modern civilization. For the production of great men may be taken as a measure of civilization, and the judges in this case, the Nobel committees of the Swedish academies, and, for the peace prize, of the Norwegian Storthing, are as competent and impartial a tribunal as we are likely to get.

In the ten years of the Nobel Foundation the prizes have been bestowed upon 56 individuals, not counting the two peace societies. Their racial distribution is as follows: Germany, 15; France, 10; England, 7; Holland, Russia, Italy and Switzerland, 4 each; Sweden, 3; Denmark, Spain and United States, 2 each; Austria, Belgium and Norway, 1 each.

Here is another indication of the ambitious designs of Germany. She is bent on producing the biggest men as well as

the biggest ships. Her expansion policy is not confined to geography, but she aims at leadership in all fields of science, art and literature. She has received Nobel prizes for everything except peace. Yet that is the field in which other nations, especially England, are most anxious for Germany to excel.

France, in spite of her diminished population, still bravely challenges her ancient rival; might indeed be held to equal her if we add to her ten those from Russia and Switzerland, whom she has served as foster-mother.

But what shall we say of the United States, put into the same class with Spain and Denmark, and below Russia and Holland? As Americans, of course, our first impulse is to dispute the decision of the umpire, and claim that Europe has never been properly appreciative of our scientific and literary achievements. But the Nobel committees receive nominations from distinguished men of all countries and they expend a sum almost equal to the prizes in the investigation of the relative merits of the candidates. In their awards they have shown a catholic, if somewhat capricious taste, and an intention to disregard national lines. But after making all the allowances that our patriotism or partiality inspire, we cannot make out a case that is very satisfactory even to ourselves.

We ought at least to beat the Dutch. But this year's awards add another to the honors of the Netherlands, twice as many as we have now. If the prizes went in proportion to the population we should have to have sixty-four Nobel prizes to match the Dutch four, and that is more than the total number. Holland has about the same population as Illinois. Illinois has indeed one Nobel prize man, Michelson, of the University of Chicago, tho he was born in Germany. And our only other Nobel man, Roosevelt, is not he of Dutch blood? But, never mind, we will not let anybody rob us of Michelson and Roosevelt.

Let us come to close quarters on this question. The four Dutchmen are Lorentz, Zeeman, Van't Hoff and Van der Waals, all physicists. Now, what four physicists have we to match against them? Michelson, by decision of the Nobel committee, is in the same class; that leaves three. One other name we could with confidence bring forward as worthy to rank with the best in this field, Willard Gibbs, of Yale. He died in 1903, three years after the Nobel Foundation began its work. He should have received a prize, might have, if he had been less modest or his friends more energetic. Of our living physicists we will not venture to pick out the three who should precede these Dutchmen, for even if we should find names that undeniably stand as high it would merely put the United States on a par with the Netherlands, not where we aspire to be, in the class with Germany, France and England. Out of the seventeen other Nobel prizes in physics and chemistry eight have been for discoveries in radio-activity, a rich unpromised land recently opened to science. But American scientists have not entered it. With the exception of Boltwood, of Yale, and McCoy, of Chicago, both young men hardly ripe for Nobel prizes, we have few workers in this field.

There is not space here to go thru the whole list in this way. Perhaps it is fortunate, for while it is easy to say that we have not received our deserts, it is not easy to suggest American names which should displace any considerable number, even from our point of view, of the fifty-four foreigners. The reader who wishes to try it will find the list on page 1338 of Volume 67 of THE INDEPENDENT, to which must be added the five names given last week.

And now to knock the last bit of conceit out of us comes Professor Cattell, calculating in *Science* that our men of genius are getting relatively fewer. But he is equally pessimistic about the whole world; there is some consolation in that.

"The increase in the number of scientific men of standing is only about one-half so large as the increase in the population of the country.

"It is sometimes urged that our men of genius are drawn into medicine, law and business owing to the large financial rewards of these pursuits. Any one acquainted personally with some of those who earn or get the largest money returns will probably doubt whether they are in fact men of genius superior to our scientific men. The hundred physicians who have the largest incomes selected from the hundred thousand physi

cians of the country, and the hundred multi-millionaires selected from the million men of business, do not obviously surpass in ability or character the hundred leading scientific men selected from five thousand.

"It is indeed probable that the conditions existing in this country are paralleled in Great Britain, Germany and France. In no country does there seem to be a group of younger men of genius, ready to fill the places of the great men of the last generation. This holds not only for science but also for other forms of activity. There is no living peer of Lincoln, Bismarck or Cavour. An Academy of Letters is just now being planned in Great Britain, and its proposed membership is trivial compared with what it might have been in the middle of the Victorian era. It may be argued that we suffer from an illusion of perspective, that many a newspaper writer is the equal of the men of letters of the past, that our young doctors of philosophy would discover laws of motion if Newton had not anticipated them. But it would appear to be a sufficient answer to write the names of Kipling, Barrie, Shaw, Wells and Chesterton beside the names of Carlyle, Ruskin, Mill, Spencer, Tennyson, Browning, George Eliot, Meredith, Dickens and Thackeray, or the names of the leading British, German or French scientific men now active with the corresponding list for forty years ago."

The British Elections

THE British elections are concluded and for the third time the Conservatives are beaten, and actually are not so well off as in the last Parliament.. Never before in modern times has a party carried three successive Parliaments. The country declares a third time for the Liberals and their more radical helpers, Mr. Redmond's Irish contingent and the Laborites. The Conservatives cry out that it is again "a draw," but the previous election was no draw, nor is this. It is no draw when the Ministry has over a hundred majority. It is no draw when just one question was before the electorate, whether they would annul the power of the House of Lords to defeat forever Liberal legislation, and the people have spoken thus decisively.

It is amusing enough to observe the bewilderment and fright of the so-salled Unionists at their overwhelming defeat, when they were so certain that they would greatly reduce the majority against them. This is what *The Spectator* said on the eve of the election, and when Mr. Balfour had accepted its demand that his party should throw overboard protectionism and seek a referendum of the people:

"No reasonable man can, we think, assert that at this moment the Liberals are in a better position than they were eleven months ago. The most they can possibly expect is to do as well as then; but clearly they will not do as well. And for this reason. All the signs and omens show that there has been in the last ten days a very large defection of moderate Liberals and of Free-trade Unionists—men who in January supported the Liberals on the ground that the Lords ought not to have thrown out the Budget. . . . After Mr. Balfour's pledge that votes given for tariff reformers at this election will not be used to pass tariff reform without another and direct appeal to the people, some two hundred or three hundred voters will, on an average, leave the Liberals in each constituency. But note that there are no signs whatever that there has been a corresponding defection from the Unionist side."

Two or three hundred in each constituency would have made a great difference. But they did not materialize. *The Spectator* continued its prophecy:

"The Unionists are perfectly certain to keep the great bulk of the constituencies which they hold by small majorities, while, on the other hand, they will, save in exceptional circumstances, carry the great mass of the constituencies where last January the Liberal majorities were below, say, five hundred. They may of course do a great deal better than this, but considering the way things are going we should be very much surprised if they did worse. This should mean that at the least Mr. Asquith's mixed majority of Socialists and Nationalists will be reduced to thirty or forty. . . . But tho the teeth and claws of the tiger will be cut if the Unionists win only thirty seats, we want, and hope for, a great deal more than that."

But instead of reducing Mr. Asquith's majority to 30 or 40 or less, it has not been reduced at all, but actually increased. What now can the Unionists do; even more important, what can and will the overwhelming Liberal majority do? For answer we may turn again to *The Spectator* just before the election:

'Remember that it will not be necessary for the Government to secure as large a majority as they have at present. They may lose a very considerable number of seats and yet have quite enough Parliamentary support to place the Constitution at their disposal, for we may dismiss as idle the notion that the King could resist, even if he so desired. . . . The King will be bound by the decision of the people, whatever it may be. . . . For good or ill, the British people are going to rule themselves, and they will not brook being told that they cannot do what they want because the King may conceivably think otherwise."

That is good sense, and the Liberals can now afford to accept the decision of the people so plainly told, and proceed to take from the Lords the power finally and permanently to veto all Liberal legislation. That will be done first by another bill to that effect, and if the Lords refuse to accept this measure of suicide the King will have, if so asked by Mr. Asquith, to swamp the House of Lords with a few hundred Liberal peers. It would only be for a few years that they would serve, for they will be introduced into the ship for the express purpose of scuttling the unseaworthy craft and speedily removing therefrom its present crew. Then a new House of Lords can and will be created, for it ought to be radically reformed by dropping every man whose right depends on birth, and by having, as in other countries, all chosen by direct or indirect election. Then a real second chamber can be trusted to represent the people. As it is, none represent the people, not even the bishops. Herein is the fatal flaw in every proposal emanating from the Lords for the reform of their chamber. Every plan provides that the aristocracy shall elect half the membership. Great Britain is not now deciding against a co-ordinate second chamber, but against such a chamber as this being held co-ordinate, a chamber which is but a hereditary club of six hundred rich landholders

Of course, there will be a cry for another conference, like that futile conference of eight men who could not agree. That will be pled for only for delay. It could not agree to accept the demands of the Liberals. Its purpose would be only to stave off the crisis and save what can be saved of hereditary right. We may hope that Mr. Asquith will proceed with his program as promised, and without delay. The British Constitution needs amending, and the people have spoken for it.

But before the Government takes up the task of reorganizing the House of Lords it will be necessary for it to attend to legislation that has too long been delayed by their veto. That means local self-government for Ireland, and we presume and hope, for England, Scotland and Wales as well. Also, disestablishment for Wales must follow, and another Education Act which will put the public school on an undenominational basis, revoking the special rights of the Anglican Church. There is great work in store for the new Parliament, great reforms to democratize Great Britain, and we do not fear the laughable demonstration of the Ulster Orangemen who are drilling and buying arms.

The Passing of the Novel

An admiring reader includes in his illustrated "Book of Paris"* an imaginary interview with Anatole France. He makes believe, at one point, that he has remarked to M. France (to the great man's pleasure): "In the form of those books—*i. e.,* the Bergeret series—you have gone a step beyond the novel," generously adding:

> 'The novel is a splendid form, . . . but even the novel truckles to romance. It has too sharp a beginning, too definite an ending; it is too much a whole to be capable of entire usefulness. . . . Life is not like that. . . . Everywhere there are ragged ends hanging loose."

In the four books of the "Histoire Contemporaine," Mr. Washburn continues, "you have let them hang," achieving thereby "a wider and truer unity than was ever reached in a novel." And Mr. Washburn, who is the imaginary interviewer, obligingly informs us that to this speech M. France replied: "That was indeed what I tried to do."

Now the "interviewer's" admiration of M. France is scarcely keener than our own, and yet we for our part find it most difficult to accept with the interviewer's naïve enthusiasm that lack of constructive power which is only too characteristic of the witty Frenchman. As Mr. Washburn justly remarks, "The novel is a splendid form . . . and much has certainly been done thru it." We do not question Anatole France's ability to write books more diverting and more meaty than any but the very best novels ever written—this without adhering strictly to the novel-form: he has long done that. What we do conceive is that his is a dangerous experiment, marking a growing tendency: the breakdown of the *genre.* And while a France is above *genres,* if

*The Book of Paris. *By Claude C. Washburn.* Illustrated by Lester G. Hornby. Boston: Houghton-Mifflin Co. $3.50.

you will, a Galsworthy, or, say, a Washburn, is, for ultimate success, dependent upon them.

This is not, however, wholly a matter of French authors and American dilettanti. Some time since there appeared in the London *Athenæum* an article on "The Present Position of Fiction"—with distressing conclusions. Along with the doubling of the stream of English-made fiction in the last two decades, there has been what the critic calls "degeneration, leading to the dissolution of death." For all the literary forms are in a state of flux, as they have been ever since creation. And in the novel, we have been the witnesses of a gradual change, but of no general development. The so-called "serialization" of fiction is blamed for the more insidious of these changes. "Serialization," to be sure, gave to the world most of the great Victorians' work, from "Pickwick" down—or up. But serialization implies to the *Athenæum* a writing down to the requirements of a given editor, or class of editors: not simply serial publication. As one cynic has phrased it, authors write nowadays what they think the editor thinks the proprietor thinks the public thinks nice.

In this age of lost standards—or low standards—more than one literary form is threatened; tho more than one literary form will, we fancy, survive. Momentarily, however, we ask for a drama, and Mr. Shaw offers us a conversation. One suspects that Mr. Shaw writes "A Debate in One Sitting" only because he has found himself pretty much incapable of producing good plays, according to the old-fashioned recipes, with "talk" (but not necessarily ideas) kept within limits. It is a not dissimilar disability that best explains the anarchy in the novel-mart. For even if Mr. Washburn in his "interview" correctly holds his favorite to have gone "one step beyond the novel," does he not take that step because he lacks the final architectonic power—just as the *Athenæum's* "serialized" novelists lack M. France's splendid acumen and stinging wit? The recent passing of a Tolstoy, the recent emergence of an Arnold Bennett or a William De Morgan: these are events that prove this report of the novel's "passing" to be as "grossly exaggerated" as the premature report of Mark Twain's death.

Producer and Consumer

It is well to remember that the economic mystery which "the average reader" is supposed to be "up against" when he reads market reports and editorial interpretations of them, may have been created for him in large part by the "average" writer. As "producer" and "consumer" this average writer and average reader are fair average samples of producers and consumers in general. Both suffer from an under consumption of goods and an over production of values. The writer should offer and the reader should get more information. The reader should demand and the writer should supply less intellectual inflation. The producer should offer and the consumer should get more utility. The consumer should demand and the producer should supply fewer green trading stamps.

"Who or what are 'producers' and consumers that they should harass one another and disturb the peace? One would think that consumers had never put the kettle on, and that producers never ate; or at least that producers never bought and that consumers never sold. These are the questions and the comments of the "while you wait" philosopher, who toils not tho he spins, and is somehow fed from on high tho he repudiates Providence. Rightly enough, the embattled foes give no heed to his inexpensive instruction. They know that they are not one another, and that there really is something wrong with the world.

"Everybody consumes and everybody produces." Yes, of course, but when and which way does he get pinched? That is the question. Does the price of eggs so worry him that the hum of his factory wheels can't soothe him, or does the mortgage so weigh on his farm and his spirits that no cheapening of churns and patent milkers can cheer him?

If we had a few well made intellectual habits we should now and then discover the obvious thing as easily as Alice did in Wonderland. It would occur to us, for instance, as not so remarkable, after

all, that "producers" are in evidence when prices are falling and "consumers" when prices are rising. After that we might surmise that perhaps this points to some maladjustment of economic relations incident to a complicated, roundabout way of producing that we may consume, and of consuming that we may produce.

The while-you-wait philosopher is always a half a century or more behind the occasion. That is why his goods are ready for delivery. In the present instance he is thinking about a nice old world in which the farmer ate the pork and potatoes which he had raised. Let that same farmer produce milk for the city market, and with the money that he gets for it buy steak for his table that has come from the refrigerator cars of Armour or Swift, and things begin to be different.

And this is how they begin to be different. It is still necessary to eat material food, containing proteids and carbohydrates. It is still necessary to wear material clothing made from cotton, wool and hides. It is still necessary to build material houses and to use material tools. And so on. Consumption, in other words, is still cribbed, cabined and confined by corporeal conditions. Not so production. The producer no longer has to consume what he himself produces. He only has to sell. He, therefore, seeks to expand the volume and to diminish the weight of his product. For this purpose the stuff that never was on sea or land becomes invaluable. The product turned out is one part commodity and nine parts psychology. The consumer can't eat the psychology, but he buys it, because he wants to, or because he has to.

Right here begins the differentiation of which we have been in quest. The consumer that we read about is he who buys psychology with commodity because he has to. The producer that we read about is he who sells psychology because he wants to. These two classes stand over against each other, distinct and hostile, and are not by any hocus pocus of economic theory to be identified. An alternative class with which each *is* identified we never hear about. The consumer who would not buy psychology if he could help himself is the unknown and unsung producer of those actual commodities on which we live. For these he receives a marginal wage or a marginal profit. The producer who sells psychology to both consumers that want it and consumers that have to buy it is, in his turn, the non-advertised consumer of the toil and substance of them all, but particularly of the "suckers" who buy his psychology because they think they want it.

Arbitration with Great Britain

The recently formed American Society for Judicial Settlement of International Disputes held its first meeting at Washington last week. Not since the great Peace and Arbitration Congress of 1907, in New York City, has there been so many distinguished men called together to discuss universal peace. Most of the papers during the three days' session dwelt on the Arbitral Court of Justice created at the Second Hague Conference, but not yet in operation, owing to the inability of the conference to devise a method of selecting the judges. We have not space to discuss these addresses, tho most of them were of the highest excellence and many will have wide effect on public opinion at home and abroad. We wish only to call attention to a remarkable utterance in the speech of President Taft, delivered Saturday evening, at the banquet concluding the session. Said he:

> "If we can negotiate and put through a positive agreement with some other nation to abide by the adjudication of an international arbitral court in every issue which cannot be settled by negotiations, no matter what it involves, whether honor, territory or money, we shall have made a long step forward by demonstrating that it is possible for two nations, at least, to establish between them the same system of due process of law that exists between individuals under a government."

This is the most advanced declaration ever made by a head of a sovereign state in favor of arbitration. Tho the President, as he uttered this sentence, looked significantly at the French Ambassador, who sat next him, the inference was quite general that Mr. Taft had Great Britain in mind. There seems to be no doubt that England is ready to negotiate an arbitration treaty with us whenever we are ready. Of course, we shall have to make the advances, for it was our Senate that refused to ratify the famous Olney-

Pauncefote treaty of 1897 by only three votes of the required two-thirds majority. Much water has passed under the bridge since then. The Senate, like the human body, is supposed to change its complexion every seventh year. It is therefore the plain duty of President Taft to consult at once the co-ordinate branch of the treaty-making power of our Government, and if he has reason to think the Senate will ratify an arbitration treaty with Great Britain in which *all* disputes will hereafter be settled by law instead of war, to take up again the negotiations with our great mother country. England is surely sympathetic and ready. President Taft is prepared to take the lead. Will the American people let the Senate again block the way?

Amendments to the Constitution

One amendment to the Constitution is before State legislatures, and a second is not unlikely to follow. We are looking to the legislatures of the States to take up and approve the proposed amendment for the income tax. Eight States have approved it, and five, namely, Massachusetts, Rhode Island, New York, Virginia and Louisiana, have disapproved. The last elections are likely to have changed the minds of some of these States, and it is not improbable that three-fourths of the States will signify their approval. The other amendment is yet before the Senate Committee, but is being favorably considered. It will allow the States to choose their United States Senators in any way they choose, either by direct vote of the people or indirectly by the legislatures as at present. There is a real call for both these amendments, and it is forty years since any amendment has been added.

Demand for Parcels Post

We note that our agricultural papers, we believe without exception, are emphatically demanding a parcels post. One of them insists that the recent elections have brought us nearer that desired object than ever before, because it places another party in control, and one that has pledged itself to this reform. Probably the enormous loss suffered by all classes of people during the recent strike in New York will also help us materially. It is interesting, at least, if not decidedly provoking, to read on a wagon in the streets of New York, "Parcel Agency for the Imperial German Mail." That is, the German Government secures for its citizens, here in New York, a service that our own people cannot possibly obtain from Congress. There is an international parcels post, in other words, that overlooks and tantalizes us. During a single year considerably over 1,000,000 pounds are dispatched from the United States to foreign countries, and about as many more pounds received in return. Over half of these go to Great Britain, Mexico and Germany. During the coming winter the people must be ready to insist that the next session of Congress be notable for practical work for the public good, instead of being exhausted on party squabbling and political skirmishing. We understand that Mr. Taft is fully in accord with the desire of the people for an express service, safe against strikes and adequate to our growing popular needs. There is no satisfactory reason why a package from a farmer's garden that could be carried in England for twelve cents should cost in the United States eighty cents, or why a ten-pound package, costing in England twenty cents for carriage, should in the United States cost eight times that, or $1.60. In England it pays the Government to carry at the lower rate; in the United States the Government could find compensation in a sum very much lower than that demanded by the carriers at the present time. There is no question about the popularity of the propesed reform; and as a matter of revenue it might be regulated in a way satisfactory to both the Government and the people.

A Program for National Health

The annual conferences which have recently been held, considering charities, children and similar problems of a social sort, have outlined programs for national health, emphatically more hopeful than any before issued. The Fifteenth Illinois Conference of Charities gives us a legislative and educational program of this sort: (1) Study by the State Government or National Government of the causes of mental

breakdown. (2) Elimination of inherited weaknesses thru regulation of marriage, or sometimes absolute prohibition; sterilization of those unable or unwilling to abide by laws regulating marriage, and segregation of the hopelessly defective. (3) Safeguarding motherhood, especially by relieving the wives of the poor of much of the severity of their present work and its attending worry. (4) The establishment of hospitals for alcoholism, so as to avoid the mingling of alcoholic and insane patients. (5) A more systematic fight against excessive drinking. (6) Every person legally detained for any cause to be examined for so-called blood diseases; if found infected, to be treated until free from infection, such diseases to be dealt with as our other dangerous infectious diseases. (7) Hospitals in every large city to provide early treatment of psychopathic diseases, admission being voluntary and with little legal formality. (8) The conference would provide for a more protracted supervision of insane persons, epileptic and feeble-minded, to provide against relapse. The conference goes farther in this sweeping reform, and urges public instruction in our schools on sexual hygiene, and the social evil and its consequences. It would forestall the poisonous influences of ignorant and vulgar associations. It believes that our primary schools are the proper place for this sort of instruction. It believes also that there should be public instruction in the higher departments on rearing children, as well as home welfare. Abnormal children it would turn over in part to the physician instead of the teacher. There is no question but that national health must become the overruling topic of education and legislation alike, and that right soon.

Harvard's Living Alumni

The new directory of the living Harvard alumni includes 32,192 names of graduates scattered all over the world, but chiefly in this country. This vast number indicates what is the enormous influence such a body of presumably educated men may and doubtless do have. Of these over 12,000 are in Massachusetts, and such a number ought to be able to make Massachusetts a model social and political community. We say this because it is fairly to be expected that where the educated citizens lead the people will follow. And yet we are not clear that the 5,361 graduates of Harvard in Boston really direct, with graduates of other institutions, the politics of the city, however they may control its business. We imagine that the 36 alumni of Harvard in Japan and the 53 in China have a larger proportionate influence than Boston's 5,361 As to the professions, Harvard, which was founded to supply a learned ministry, has a little over 1,000 living clergymen, more than 1,600 manufacturers, 1,716 financiers, 3,337 doctors, 3,554 teachers, and 5,300 lawyers.

Mrs. Sage's Model Village

The world may begin to think better of Russell Sage. He knew how to make money and to save money. He gave all his millions absolutely to Mrs. Sage, doubtless knowing what use she would make of them. We have a right to think of him as a man who was eager as long as he could live to heap up wealth to the limit, that it might be put to the very best use after his death. That was idealism under the guise of materialistic parsimony. That wealth is being most wisely used. One of the departments of the Russell Sage Foundation is engaged in the creation of a model village in Long Island nine miles from New York for the use of those of moderate means employed in the city. It is being created at a cost of $2,750,000, and will have the advantage of the experience of the best English model villages. Provision will be made for families, with gardens; and for single persons in a large apartment house, where one or two rooms, without kitchens, can be engaged by either sex, the meals being had at the restaurant in the building. This is not a charity, but will be conducted on business principles, an experiment which it is hoped will improve the conditions of the working people and be followed by others. In this we have much to learn from England.

The Baltimore Ordinance

The Baltimore City Solicitor says it is perfectly constitutional for the city by ordinance to segregate the ne-

groes, in order that no negroes shall buy property in white streets to improve their condition. The Constitution is evaded by balancing the rule with another that no white man shall purchase in negro streets. It is a trick and evasion, and ought not to be accepted as constitutional by any fair court. It is a rule to prevent improvement, to keep one race down, on the ground that to allow the movement upward of negroes would diminish the value of property. Well, what if it does? Are not men more than wealth? Are we not finding of late that legislation has been directed to the protection of property when the protection of manhood is even more important? And just now, again, when we are complaining so much of the cost of living is it wholly bad to have the rent value of a house reduced? All these restrictions are simply vicious, but cannot long be effective.

Great Britain and Germany

One of the important results of the last British election, in which for the third time the Liberals have been in power, is the control of foreign relations by that party. Hitherto the Conservatives have been predominant in foreign affairs, as they have been regarded as representing the nation thru the House of Lords, and for the larger part of the time in the House of Commons. But now the power of the Lords is being reduced, and the second chamber is sure to be reformed, so that not more, at the worst, than half of its members will be of the hereditary and thus Conservative rank. The Liberals are taking courage as to foreign relations as well as domestic affairs, and their chief policy is likely to be in behalf of peace and the limitation of armaments. Reports come from both Berlin and Vienna to the effect that correspondence is being carried on, initiated by Great Britain, for improving the relations with Germany and removing all occasions for jealousy. Chancellor Bethmann-Hollweg acknowledged a few days ago, in the German Reichstag, that there is such a correspondence going on, and its purpose can be nothing else than the establishment of a common agreement and policy as to matters that might arouse feeling, and we must believe that some agreement as to the limitation of armaments must be included. For years the fear of Germany has frightened the world, and the removal of that fear would be a blessing to all the world.

Racial Aristocracy

In discussing the reasons why the East fears and hates the West, the London *Spectator* dwells on one reason which we have had frequent occasion to discuss and which, we believe, is greater than any other—the arrogance of the West in its dealings with natives of the East. It says:

> "In the first place, Europeans, and more especially our countrymen, hardly understand the exasperation which is produced by the claim of the white intruders to be considered, not as friends or advisers, or even equal enemies, but as natural rulers gifted by heaven with the right to guide and control, and, we may add, tax, all black, brown, or yellow peoples with whom they are brought in contact. The whites claim, and have for a century exacted, the position of an aristocracy among races of other colors. The white man in an Asiatic State never accepts any other position than that of first, and that by right, not of his creed, nor even of his knowledge, but of some inherent and, as it were, divinely granted superiority. He never consents to any lower position, and is, in fact, unable even to think of himself in any other."

If true of the English, it is pre-eminently true of Americans in the East, as our native prejudice against negroes is added. Notice the late refusal of women on the Pacific Coast to dance at a ball given by the officers of the Japanese fleet.

French Thrift

The French farmer rarely cultivates more than two or three acres of land, for which he pays from $500 to $1,000 rent annually. The buildings must be of his own construction, and he must know the art of soil making thru and thru. He cannot fall back on commercial fertilizers to any extent, for that method of farming would soon swamp him. His family and those attached to it average eight persons, men and women. A little farm of this sort is made to yield over 100 tons of produce in a year. In other words, there is not an acre of land in France or Belgium that can be cultivated at all that is not made to furnish not only food enough to sustain a family, but enough over to buy the necessaries

of life. The keynote to all this is that this sort of farmer knows how to *make* soil, not to stimulate it merely, but to make it. He does not waste a single weed or bunch of leaves, and he burns nothing that can be fermented into manure. Will America come to this sort of tillage? It looks now as if we were well on the road. We are learning to make great use of glass in our gardens. The Florida farmer, who is up to the times, gets four to five crops from his land, altho that is not quite up to the French farmer with his seven crops. The old idea of resting soil is proved to be nonsense, for, rightly replacing the elements used up in our crops, the garden can be at work every day of the year. Our world is capable of taking good care of an enormous population, and it probably will have this to do. With war abolished and disease mastered, and national health the subject of education, the death rate can be reduced one-half. These are not dreams and visionary conceptions, but a statement of actual facts. We shall learn to assign not more than five acres to a good sized family, for liberal support and considerable contribution of produce to the support of those who do not own land at all. Five crops from ten acres equals one crop from fifty acres, but they mean five times the crop from fifty acres. Better than that, intensive farming raises each crop to double the average per acre, or more. It is all based on the principle that right tillage makes richer land, while only wrong tillage wears out land. This is what the open-eyed land tiller sees ahead —doubled population, better fed than the present population, and crops brought up to such a maximum of production that the United States can take care of half the population now on the whole globe. Nobody till very recently had a dream of the possibilities of farming. So much for agricultural colleges and science. Instead of a race racing westward after fresh soil, we are learning to make our own soil, and to fatten it as we fatten our pigs—fat and fatter.

It is forty years since the Franco-German war, and only now does the German Government think it safe to allow Alsace and Lorraine to receive the right for a very much restricted system of self-government. The Kaiser will appoint the governor and half the members of the upper house. The lower house will be elected by general suffrage, but to make sure that it will be conservatively inclined the right of suffrage begins at the age of 25 with one vote, and two votes at the age of 35, and three at the age of 45. All this shows much less faith than we showed when we readmitted the seceding States immediately after the Civil War, or than the British Government showed when it gave a constitution with equal rights to South African Boers and Britishers.

It was a visitor from Richmond in El Paso, Tex. He was told that Ed Lawson was in prison for an atrocious murder, but would soon be released. "But," he asked, "won't they hang him for the murder?" "Hang him?" was the reply. "Hang him in El Paso? I have been living here for twenty odd years and I never knew them to hang a man in El Paso for murder. They'll hang a man for horse-stealing, but not for murder. There was just one man hanged during that time for murder and he was a Mexican, and I believe he was innocent."

When in our issue of December 8 we spoke of Union Seminary as having a larger number of students for the ministry than any other theological seminary, we failed to have in mind the Southern Baptist Thelogical Seminary in Louisville, Ky., which has over three hundred students. That is the only Baptist seminary in the South, and almost the only one of any denomination. If one counts in the summer students, the women and the Scandinavian department at Morgan Park, Chicago University would lead all the rest.

Another most amazing scientific discovery is announced, that of an invention by which one can see right thru the walls of a house, or can watch while at home the performance at a theater, by a sort of Röntgen ray eye. We will wait before we give the story full credit.

Insurance

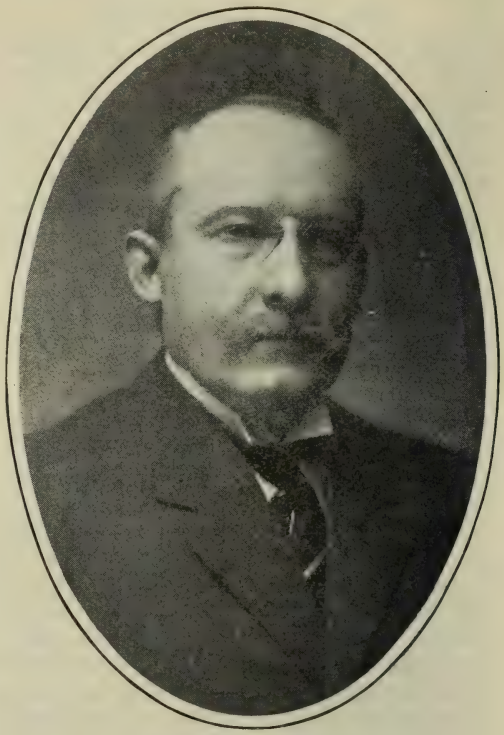
Not Yet Mutualized

THE annual meeting of the Equitable Life Assurance Society was held on Wednesday, December 7. It was expected that some announcement would be made by or on behalf of Mr. J. P. Morgan, in which his purposes in respect to the majority stock he owns would be indicated, or that some plan having for its object the mutualization of the society would be made known. The meeting, however, passed without incident; directors whose terms had expired were re-elected.

The conclusion, therefore, is that, assuming Mr. Morgan's intent on taking over the majority stock from Mr. Ryan was to effect mutualization of the society, he has in his efforts to do this encountered legal and material difficulties which may be overcome only by legislation. Altho the problems involved are not insurmountable, an equitable process of adjustment which shall conserve the interests of all concerned will alone be acceptable, and these interests are not those alone of the half-million policyholders of the Equitable, but include the rights of the holders of its minority stock, the number of whom is considerable.

The Equitable Life Assurance Society is one of the three largest life insurance companies in the world. Its business is world-wide. Including each sovereign State and the Dominion of Canada, it does business under possibly as many more governing powers the world over, and must comply with the spirit as with the letter of every law of each of these governments. It is evident, therefore, that mutualization in this instance, to be effective, must be complete; there must be no loophole left in the transaction thru which any policyholder with a grievance, or any stockholder charging infringements of his vested interests, may walk.

That Mr. Morgan has given serious consideration to the subject is believed. Governor Hughes, before his appointment to the Supreme Court, gave several conferences to Mr. Hotchkiss, Superintendent of Insurance, and Mr. Morgan's representatives, on the subject. Referring to this in his last report to the Legislature, Mr. Hotchkiss says: "The matter is still in conference between Mr. Morgan and his associates on the one hand, and the department on the other. While the legal problems are somewhat difficult and legislation may ultimately become necessary, the department feels sure that a plan which can have its approval, in that it will forever protect the policyholders of this great company, will ultimately be formulated."



Much has been written in recent years on the advantages of stock over mutual management, and the reverse, in life insurance companies, and the arguments on both sides have usually been marvels of judicial presentment and special pleading. If permanency of interest, and safety, and assurance to policyholders, are the chief requirements of a life insurance company, then these results are to be obtained in fullest measure only under mutual management, judiciously supervised by responsible and enlightened government. The mutualization of this great corporation should be accomplished without undue loss of time.

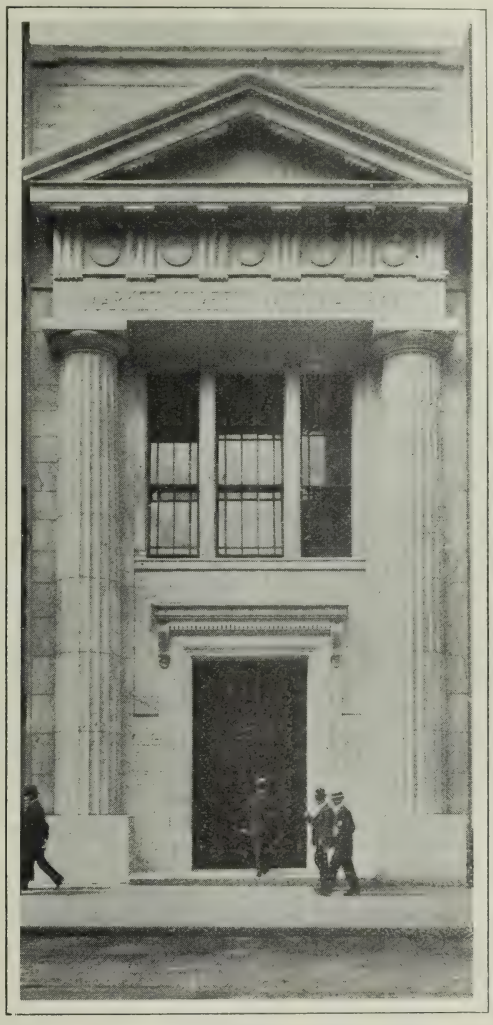
We continue to encourage the belief that the Equitable has been rescued from the dominion of stock speculation by Mr. Morgan. For this service, which cannot be measured in dollars, the policyholders can afford to recompense him in fullest measure. THE INDEPENDENT has repeatedly urged the mutualization of the Equitable, and it is now hoped that Mr. Morgan, having once put his hand to the plow, will not be turned backward until the much desired end is attained. The desired end is the elimination of stock control for policyholders' control. The company itself should buy the Morgan stock, as well as the stock of the minority stockholders, and then make the Equitable Life a policyholders' or purely mutual company.

Financial

Fourth National Bank

THE reconstructed building of the Fourth National Bank, which extends on Nassau street, from Pine to Cedar streets, was thrown open to the public on Saturday afternoon last. The bank's capital is $5,000,000. Its surplus exceeds $5,000,000, its undivided profits are $635,000, and its total resources are more than $45,200,000. The new president, James G. Cannon, who was born in Delhi, N. Y., in 1858, entered the service of the Fifth Avenue Bank as a messenger boy in 1876, when he was eighteen years old. He rose from one position to another until he became cashier, and in 1890 resigned to become vice-president of the Fourth National Bank. Mr. Cannon succeeds as president J. Edward Simmons, who was likewise president of the Chamber of Commerce. Mr. Cannon is a director of the Bankers' Trust Company, Fifth Avenue Bank, Franklin Savings Bank, Metropolitan Trust Company and other financial and commercial institutions. He is chairman of the board of directors of the H. W. Johns-Manville Company and president of the board of trustees of the Hahnemann Hospital of the City of New York, and author of "Clearing Houses—Their History, Methods and Administration."

JAMES G. CANNON,
President Fourth National Bank, New York.



CHARLES S. CALWELL,
President Corn Exchange National Bank, Philadelphia.

....The youngest bank president in Philadelphia is Charles S. Calwell, recently elected to the presidency of the Corn Exchange National Bank. Mr. Calwell was born in Philadelphia in 1871, and at the age of twenty entered the Corn Exchange as an assistant to the receiving teller, and has occupied the positions of cashier and vice-president. His promotion is due to his natural apti-

tude for banking. The Corn Exchange has a capital of $1,000,000, surplus and net profits of $1,532,398, and total resources of $23,957,610.

Useful Bond Tables

On the pages immediately following we publish complete and trustworthy tables relating to all the bonds reported in the regular daily lists of the New York Stock Exchange. These comprehensive tables have been prepared for us by Francis Emory Fitch, the well-known compiler and publisher of standard quotation statements and other Stock Exchange records. They show the title of each bond; its rate of interest; the year of its maturity; the dates of interest payments; income (or annual return, irrespective of maturity); yield (or approximate annual return, if the bond be held until maturity); the highest and lowest prices, with dates, in recent years; and prices at latest sales, with dates. Other useful information is included. The average investor who finds in these tables certain issues which are commended by their income figures, and which, altho not prominent in the market, may be of excellent quality, should seek the advice of bankers who are familiar with the history and condition of securities of this kind.

MARKET STREET NATIONAL BANK, Philadelphia.

....Charles H. Imhoff, who recently resigned as vice-president of the Chatham National Bank, has been elected vice-president of the Mercantile National Bank, of the City of New York. Mr. Imhoff was with the First National Bank of Lincoln, Neb., from 1880 until 1886. He was cashier of the Union Savings Bank of Lincoln until 1898, when he moved to New York and became vice-president of the Ninth National Bank, and later had charge of the bond department of Harriman & Co., from which firm he resigned to accept the vice-presidency of the Chatham. The Mercantile Bank, of which Willis G. Nash is president, is over sixty years old and has a capital and surplus of $5,000,000.

....One of the most recently constructed banking houses is the Market Street National Bank, of Philadelphia. The building, occupied solely by the bank, stands upon the site used by the Market Street Bank since its organization in 1887. The capital is $1,000,000. The officers are James F. Sullivan, president; George H. Earle, Jr., and George D. McCreary, vice-presidents; William P. Sinnett, cashier.

....Reports published in Germany show that the United States in 1909 produced 59 per cent., and consumed nearly 38 per cent., of the world's output of copper.

This List contains all of the Bonds reported on the regular daily New York Stock Exchange Lists.
Prices include interest to date of sale. Prices ex-interest are distinguished by an x.
Under INCOME will be found the annual return of the investment, irrespective of maturity.
Under YIELD is given the approximate annual return if held till maturity.

The Independent

VOL. LXIX NEW YORK, THURSDAY, DECEMBER 29, 1910 No. 3239

Survey of the World

Senatorial Contests

At almost the same moment William F. Sheehan publicly announced his candidacy for Mr. Depew's seat in the United States Senate and "Fingy" Conners, of Buffalo, formerly Democratic State Chairman, declared in his favor. "I could do no less for a Buffalonian," he said. With the news of Mr. Sheehan's public candidacy Washington heard that Mr. Sheehan had been "picked" by Tammany as the new Senator from New York. It is conceded that Mr. Murphy controls enough votes at Albany to elect his own man, and he apparently prefers Mr. Sheehan as one who could be depended upon to use Federal patronage, in the event of the Democrats controlling the Presidency, 1912-1916, in the interests of his backers.——Before the Board of Trade of Montreal, Governor-elect Dix, of New York has declared himself strongly in favor of reciprocity between the United States and Canada. "It will be to the advantage of both countries," he says.——The battle against James Smith, Jr., as a candidate for the United States Senate from New Jersey, grows more bitter. At Newark has been formed the Direct Primary League, whose purpose is to secure for the people of the State the election by the Legislature of the man whom party opinion, as exprest at the primaries, has favored, Mr. Martine. On December 23 Dr. Woodrow Wilson announced in a public statement:

"It must now be determined whether the present members of the [New Jersey] legislature are representatives of the people or puppets of a bi-partisan machine. I believe in organization. But when organization is used for the elevation of individuals whose interests are opposed to the people, I must resist it. . . . Before I consented to allow my name to go before the State Democratic Convention for the nomination as Governor, I asked the gentleman who was acting as Mr. Smith's spokesman if Mr. Smith would desire to return to the Senate in case the Democrats should win a majority in the State Legislature. I was assured that he would not. . . . Immediately after the election Mr. Smith came to see me and said that that had been his feeling, . . . but that he [now] hoped that the Legislature would offer him the seat."

Dr. Wilson has called to Princeton the members of the Legislature from Essex County, who invited Mr. Smith to become a candidate for the Senatorship, and has argued against that candidacy. One of the Essex legislators, James P. Mylod, has retracted, declaring in favor of James E. Martine, the choice of the primaries. There have been other desertions, but former Senator Smith's grip upon the State machine is confessedly powerful. In a reply to Dr. Wilson's letter, Mr Smith charges the Governor-elect with being intoxicated with power and popularity, and challenges him to name the "spokesman" who gave assurance that he (Smith) would not be a Senatorial candidate.——Col. William A. Gaston has withdrawn as a Democratic candidate for the Massachusetts Senatorship held by Mr. Lodge. A wide breach yawns between Colonel Gaston, who represents "the interests," and Governor-elect Foss, who is denominated by his enemies as "the political chameleon." Colonel Gaston says that he has withdrawn his candidacy "because Mr. Foss has made it impossible for a Democrat to be elected."

Political Corruption

The committee report exonerating Senator Lorimer, of Illinois, from charges of bribery, signed by all the Republican members of the committee except Senator Beveridge, and by all the Democrats except Senator

Frazier (Tennessee), was submitted to the Senate on December 20. Voting upon the report has been postponed. Senator Beveridge is expected to lead the insurgent attack upon the majority report. Pressure brought to bear upon Senators to acquiesce in shelving the whole subject has been firmly resisted, and there is an undercurrent of dissatisfaction with the report itself and the examination of witnesses which preceded it. Senator Frazier states that in his judgment the evidence established the fact that four members of the Illinois Legislature who had voted for Lorimer were bribed to do so, and that they were bribed by three other members of the Legislature who had voted for Lorimer.——Over 300 Adams County (Ohio) voters have been disfranchised after pleading guilty to selling their votes at the November election. Furthermore, a special grand jury has returned over 400 new indictments charging boodling, bringing the total indictments in the election investigation up to 758. Before the chapter is closed, it is expected that 1,500 voters, one-fourth of the county electors, will be indicted. The investigation has invaded even the schools and churches. A preacher stands accused of having sold his vote for $10. One man worth $50,000 sold his vote and the votes of his son and son-in-law for $7.50, below the average price. Pressure is being brought to prevent the grand jury from indicting men higher up, but it is declared that the men who furnished the money and the workers who did the actual buying must suffer as well as those who sold their votes. In Cincinnati as well testimony has been offered proving corruption at the November elections. The defeated Democratic candidates say they will be seated by the General Assembly when they take the testimony collected to Columbus. Prosecutor Hunt declares that all the grand juries in Hamilton County are controlled by the Cox organization.

Crimes and Disasters

Shortly before 2 o'clock Christmas morning the Llewellyn Iron Works, at Los Angeles, Cal., were partially destroyed by dynamite exploded from outside the building. A night watchman was slightly injured; otherwise the only damage done was to property. The works have had labor troubles, and the explosion is attributed to the Metal Workers' Union or its sympathizers. Following the Los Angeles *Times* outrage, the crime has aroused public indignation.——On the morning of December 24 six persons were killed and several injured in a collision of express trains on the Pennsylvania Railroad at Nevada, Ohio.——An explosion of leaking Pintsch gas used for the illumination of railway coaches in the yards of the New York Central Railroad, at Lexington avenue and Fiftieth street, New York City, killed ten persons and injured more than a hundred on the morning of December 20. The Municipal Explosives Commission, after an investigation, reports that the danger arose from bringing the gas in tank cars thru tunnels to the Grand Central yards, and recommends that hereafter cars be charged with the gas at the Mott Haven yards.——The coroner's jury which has investigated the cause of the fatal Newark factory fire of three weeks ago, has rendered a verdict that the evidence in the case shows that the laws had been complied with by the owner. The jury states that there are many other firetraps in Newark, and that the situation demands "immediate and drastic treatment."——On Christmas evening, Riverdale, Pa., a village of 300 inhabitants, situated near Monongahela, was burned to the ground.——Before a committee of the New York Legislature, Henry Evans, president of the Continental Fire Insurance Company, stated that the fire waste of the United States was from two hundred to two hundred and fifty millions annually, and exprest it as his opinion that the figure might be reduced to $75,000,000. On the same day a leather factory fire in Philadelphia cost the lives of thirteen firemen and a policeman, the factory being an antiquated structure, the weakness of whose flooring, that supported a great weight, was responsible for the loss of life. A public subscription is being taken for the families of the victims. The fire was set by a discharged employee, a Polish leather worker, and the number of injured is very high. Other fatal fires of last week are that which caused a property loss of $2,000,000 in Cincinnati, this also being a factory fire; a second Cincinnati fire

on the same day, December 21, resulting in a loss of $225,000; and the Chicago fire of December 22, which destroyed a portion of the Morris & Co. stockyards, and cost the lives of Fire Chief Horan and twenty-three other persons. Attempts are being made to raise a subscription of $250,000 for the benefit of the injured and for widows and orphans. On December 21 fire destroyed a building at Hudson and Vestry streets, New York City, with a loss of $75,000. It is pointed out that the New York Building Code permits the construction of buildings not fireproof even in the most congested quarters, and that even the New York code is more stringent than that of most American cities. On December 23 a witness declared to the legislative committee referred to above that Chief Croker, of New York, albeit "a good fireman," is "twenty years behind the times."

"What we want is a general recognition of the fact that fires can be prevented. . . . The general service of water ought to be utilized. Put sprinklers in, even in the little shops. . . . Jail your agent who sells fake insurance to the ignorant foreigner, and jail the president of your biggest insurance company if he makes a misstatement."

The Railroads

The annual report of the Interstate Commerce Commission shows that the total operating income of American railways, for the first quarter of the present fiscal year, was $230,051,828, as compared with $242,079,975 in the corresponding period of the last fiscal year, a loss of $12,028,146. For the year ended June 30, 1909, the operating income was $838,617,180, as compared with $741,547,922 for the previous fiscal year, a gain of $97,069,257. The commission says that, by means of the monthly reports required of the railroads it is possible to obtain current information respecting "present tendencies in transportation." In regard to the pending rate cases, the report says that every effort has been made to expedite the proceedings. The commission repeats its recommendation for "reasonable control of railway capitalization," and says that the system of accounts it has prescribed for railroads "has been drawn in full recognition of the possibility that it may be used in the administration of a law which will give to some Federal body supervisory control of capitalization." The report also says that:

"previous reports have made frequent reference to the need of adequate provision for the valuation of railway property, and the experience of the Commission during the past year serves only to emphasize such arguments as have been submitted."

Since December 1, 1909, forty-four indictments for criminal violation of the Act to Regulate Commerce have been returned and forty-three prosecutions have been concluded. Thirty-one pleas of guilty were received, and the aggregate of penalties received is $63,500. Of the forty-four indictments returned during the year twenty-five have been against carriers or carriers' agents and nineteen against shippers or passengers. In June Congress placed telegraph and telephone companies doing an interstate business under the jurisdiction of the commission. The report says that there are from 25,000 to 30,000 telephone companies which make provision for interstate commerce, and the commission is in doubt as to whether it was the intent of Congress to place all these companies under its supervision and control. It now has the matter under consideration.——On December 21 the appointment of J. H. Myer and C. C. McChord as members of the Interstate Commerce Commission was confirmed. The reorganization of the commission will take place by January 3. Chairman Knapp, whom Mr. Myer succeeds, has been confirmed as Chief Justice of the new Court of Commerce, and the term of Commissioner Cockrell, whom Mr. McChord will succeed, does not expire until December 31.——On December 24, at the close of a conference between railway managers, representatives of the Brotherhood of Locomotive Engineers, and United States Commissioner Charles P. Neill, it was announced that there would be "no strike on the railways west, north and south of Chicago, by the engineers." The agreement provides for a general increase in the wages of engineers of 40 cents a day, or 10⅓ per cent.

The Prosecution of Trusts

Testimony was taken last week in the suit of the Government against the Great Lakes Towing Company, for violation of the Sherman Anti-

Trust law. It is asserted that this company controls towing on the lakes at all ports except Milwaukee.——Three of the sixteen companies which, as members of the so-called Bathtub Trust, were indicted on the 6th, have since withdrawn from the combination and returned to the prices current before it was formed.——It is said that the first object of attack in the approaching movement of the Government against the great electrical manufacturing companies will be a pool controlling the supply, sale and prices of incandescent lights.——Following the decision of the Federal Court in the Government's case against the anthracite railroad companies, under the Sherman act, a decree has been issued forbidding the Reading, Jersey Central, Lackawanna, Lehigh Valley and Erie roads to acquire or vote upon shares in the Temple Iron Company, or to exercise any control over that company, which, on the other hand, is forbidden to exercise control over the subsidiary coal companies.——Reports in the press show that a corporation capitalized at $4,500,000 is acquiring control of the oyster trade, having recently purchased the property of several companies on the coast of Rhode Island, Connecticut and Long Island, thus becoming the owner of 44,000 acres of oyster ground, with the accompanying wharves, buildings, etc.——As the result of an investigation as to frauds committed by the Sugar Trust in connection with tariff rebates on exports of sugar made out of imported dutiable raw material, Collector Loeb and the District-Attorney at New York recommend that the Treasury Department accept $700,000 offered by the Sugar Trust in settlement. The negotiations relate only to exports from the Trust's Brooklyn refinery.——The decision of the Supreme Court, reversing that of the lower court in New York concerning the indictments against Gustav E. Kissel and Thomas B. Harned (who sought to avoid prosecution by pleading the statute of limitations), requires the prosecution not only of these two men but also of the six Sugar Trust officers and directors who were indicted at the same time. Among these are President W. B. Thomas and John E. Parsons, the Trust's general counsel. The case is the one which relates to the closing of the refinery erected in Philadelphia by Adolph Segal and his associates.—— New indictments have been found against the Chicago beef companies and their officers, supplementing those reported in September.

The Philippine Islands

Nearly two years ago ago Theodore Kalaw, editor of the Manila *Renacimiento,* and Martin Ocampo, manager of the same paper, were found guilty of criminally libeling Dean C. Worcester, a member of the Philippine Commission. The sentences then pronounced were confirmed last week by the insular Supreme Court. Kalaw, now a member of the Philippine Assembly, goes to jail for one year and pays a fine of $3,000. Ocampo's term of imprisonment is six months and his fine is $2,000. In a suit against them for damages, Commissioner Worcester, a year ago, obtained judgment for $50,000.—— Troops are pursuing and attacking the rebellious Manobos tribesmen in the island of Mindanao, who have renewed their raids upon the planters in the Davao district.——An agreement has been reached for a parcels post between Hong Kong and the Philippines. Parcels not exceeding 11 pounds in weight and 3½ feet in length will be carried at 12 cents a pound.——In the Philippines, Secretary Dickinson says, there are more than 20,000,000 acres of public land fit for agriculture. Mindoro, with an area of 3,851 square miles, has an average of only 8 inhabitants to the mile.——It is alleged in a newspaper article that a Japanese wireless telegraph station, under the direction of a colonel in the Japanese army, was recently discovered in the northern part of Luzon.

No Intervention in Cuba

There was published in a New York newspaper, last week, a sensational article alleging that a large force of United States troops was held in readiness to be transported quickly to Cuba, because reports as to the condition of the insular Government indicated that intervention would be required in the near future. President Taft, the State and War departments, and General Wood, say that this is not true, that reports have not pointed to any need of

interference, and that the subject has not been discussed by the authorities at Washington.——General Guerra, commander of the Cuban army, whom one Perez and others recently attempted to assassinate, has resigned, and his resignation has been accepted. President Gomez desired to give him a mission abroad, but he declined it and left the army. He is affiliated with that Liberal faction which is politically hostile to the President. A statement addrest by him to the public indicates that in his opinion the Government was indirectly responsible for the murderous assault which nearly caused his death.——General Estenoz and seventeen other negroes who were arrested last spring, upon the charge that they were conspiring against the Government, were released from jail last week, the court having found no evidence connecting them with a conspiracy. ——A bandit named Solis has caused much excitement in Santa Clara. He kidnapped a boy named Fernandez, promising to kill him if a ransom of $6,000 should not be paid. Afterward he demanded $10,000, and now it is thought that the boy is dead. He also kidnapped a prosperous planter named Hera, who regained his liberty by paying a ransom of $5,000. The relatives of a second boy taken by the bandit paid $10,000 for his release. Solis gives a large part of the ransom money to the poor, and therefore, it is said, has the protection of many natives when officers pursue him.

Mexico and Other Countries South

At the end of last week the Mexican Government's forces had made little, if any progress in the work of subduing the revolutionists in Chihuahua. General Navarro and a part of his small army were practically surrounded at Padernales, and were so short of food that they were killing their horses. Altho he reported to the capital that a force of 500 men sent out by him on a railway train had met the rebels and routed them, it is now known that this force suffered a loss of about 100, killed or wounded, in the cañon at Mal Paso, and was driven back. Reinforcements will soon give him an army of 5,000. There are said to be 3,000 armed revolutionists in the rough country where he is in command. Mal Paso is 120 miles west of the city of Chihuahua. It is asserted that he put to death thirty-two civilians at Cerro Prieto, and that the rebels in revenge shot ten prisoners whom they had captured at Guerrero, together with several civilians.——The grand jury at Rock Springs, Tex., which has been inquiring as to the death of Rodriguez, the Mexican who was burned at the stake there, reports that there has been no identification of the persons who were in the lynching mob, and that therefore it returns no indictments.—— The "Hornet," formerly a gunboat in the United States navy, sailed from New Orleans on the 23d. As she carried no war material, the formal protest of the Minister of Honduras at Washington did not prevent her departure. Ex-President Manuel Bonilla and General Lee Christmas, the revolutionist adventurer, disappeared from New Orleans at about the same time, and it is thought that arms have since been placed on the vessel, which, it is alleged, is to be used in a revolutionary movement against the Davila Government in Honduras.——General Antenor Firmin, who led the revolt of 1902 in Hayti, has left his post (that of Minister to Great Britain) and is on his way to St. Thomas, intending, it is said, to organize there a revolt against President Simon. The Haytian Government has given orders that he shall not be permitted to land in Hayti.——The story, telegraphed from Port Limon, Costa Rica, about the sinking of an island in Ilopango Lagoon (Salvador) with 170 of its inhabitants, had no foundation in fact.——President Taft has increased from two to four weeks the annual vacation, with pay, of those Panama canal employees who are paid by the hour.

Aviation

A new record was established for length of flight without touching ground by M. Legagneux, who flew a distance of 320 miles in six hours at Pau, France, on December 21. The longest previous record was that of Maurice Tabuteau, who made 389 miles in almost the same length of time. Both were competitors for the Michelin prize, which consists of a bronze trophy and $4,000 awarded annually for the longest flight made during

the year. M. Legagneux also broke the record for high flight on December 9, by attaining an altitude of 10,499 feet. The highest previous record was 9,714 feet, made at Belmont Park, N. Y., by Ralph Johnstone, who shortly afterward was killed by a fall at Denver. The other member of the Wright team, Arch Hoxsey, won the world's championship for high flight from Legagneux by going nearly a thousand feet higher than the French aviator, on December 26, at Los Angeles. His barograph recorded an altitude of 11,474 feet. There was a high wind blowing and he was stiff with cold, but he came down in his characteristic spiral glides.——Cecil Grace, a nephew of the late Mayor Grace, of New York, flew from Dover to Calais on the morning of December 23, but was lost in the attempt to return. He reached the French coast a little more than an hour after leaving the English, and passed over Calais intending to go on to Paris, but he mistook the direction and went toward Belgium. At the frontier he met with adverse winds so turned back and landed at the aviation grounds of Les Barques, west of Calais. In the afternoon he started for England but apparently steered too far to the east and fell into the sea. A guardsman at Ramsgate caught a glimpse of the aeroplane about six miles off shore for a moment as the fog lifted, but that was the last seen of him.

English Affairs

As a final result of the English elections, the Government has gained one vote. The new Parliament will be constituted as follows: Unionists, 272; Liberals, 272; Laborites, 42; Nationalists, 74; Independent Nationalists, 10; coalition majority, 126. The total number of votes cast was 5,229,071, distributed as follows: Unionists, 2,415,280; Liberals, 2,293,894; Laborites, 382,158; Redmondites, 95,426; O'Brienites, 39,470; miscellaneous, 2,843. The composition of the last Parliament was as follows: Liberals, 275; Unionists, 273; Laborites, 40; Nationalists, 71, and Independent Nationalists, 11.——A terrible mine disaster occurred in the Hulton Colliery, Lancashire, England. An explosion early in the morning of December 21 fired the mine, and only a few of the three or four hundred miners escaped with their lives. Rescue parties, tho provided with air helmets, were able to do little.——Captain Trench and Lieutenant Brandon, the British spies, who were seized at Borkum on August 22, sketching the German fortifications, were found guilty by the Imperial Court at Leipzig and were condemned to four years' imprisonment in a fortress. Both officers confessed that they were gathering information for the Intelligence Department of the British Admiralty. Considering the Anglophobe tendencies of the German press just now, this punishment is unexpectedly lenient, and it is likely to be still further mitigated by a pardon within a year.

Canalejas Wins

The "Padlock bill," prohibiting the formation of new congregations of friars, passed the Chamber of Deputies by a vote of 108 to 20. The bill passed the upper house nearly two months ago by a large majority, but in the lower house of the Cortes the struggle was longer and fiercer. It was not so much on account of the bill itself, which does not interfere with any important interests of the Church and is limited by a Senate amendment to two years. But it was recognized on both sides that this was the first engagement of a serious conflict between State and Church, and would be followed by anti-clerical legislation of a more serious character. Premier Canalejas in his closing speech disclaimed any hostility to the religious orders, but insisted that they must not be allowed to interfere in politics or to absorb the industries of the country thru the advantage of exemption from taxation. The Clericals, realizing that they would be outvoted, resorted to filibustering and tried to talk the matter down. The Deputies were in bad temper and the Chamber has of late been the scene of disorderly sessions, in which strong epithets were exchanged and fist fights threatened. The Carlist leader, Vasquez Mella y Candido, brought the most serious charges against the Premier, accusing him of engaging in a plot some years ago to dethrone King Alfonso. The chief evidence brought forward by Señor Mella was a series of letters written by Cardinal Cascajares to Queen Christina,

then regent, urging a *coup d'état* in the interests of the Church. Premier Canalejas declared the charges were baseless calumnies, and in his turn read a letter from the cardinal denying that he had anything to do with the conspiracy. On the morning of December 23 Señor Mella gave up the fight and allowed the question to come to a vote, saying that he stopped the speeches out of pity for the stenographers. In spite of this victory the stability of the Canalejas Ministry is questionable, for it is not united. Three of the Ministers—those of Public Instruction, Public Works and the Interior—are said to be dissatisfied with their shares of the budget and are likely to resign.

The Chinese Parliament

If this title is not yet proper it seems likely to become so shortly. The Senate or Assembly which was convened at Pekin for the purpose of facilitating, or, as some surmise, retarding, the establishment of a representative government six years hence, asserts that the representative government is already established and regards itself as a genuine national parliament. It concerns itself with foreign affairs, finance, sumptuary legislation, army and navy, appointments and internal improvements. It keeps in close touch with the provincial assemblies by constant use of the telegraph, and its resolutions on local affairs have more power than the Imperial edicts. Young China, now for the first time given power, or at any rate given voice, shows itself unexpectedly democratic, progressive and business-like. The provincial delegates have dominated the Senate from the start, notwithstanding the fact that the Court nominees and the Manchu nobility constitute a majority of that body. In fact, many of the Manchus side with the Chinese. When the Senate passed the historic resolution demanding the immediate convening of a parliament which the Regent had thrice refused, the Manchu nobles and bannermen voted unanimously for it. The progressives are not without friends at court, even in the Grand Council. It appears, however, that the Government is determined to resist the assumption of power by the Senate. The demand of the Senate that the Grand Council be converted into a Cabinet and that its members be responsible to the Senate was refused. Upon this the Senate proceeded to stronger measures. A resolution calling for the impeachment of the Councillors was carried by a vote of 200 to 25, tho in a rump session, for the Manchu nobles and Court nominees absented themselves. A memorial to the Throne was prepared criticising specifically the official conduct of members of the Government, including the Regent. The memorial declares that the Regent has no longer the power to disregard the legislative acts of the representatives of the people. At this the Government took decisive action. An edict was issued ordering the leading provincial members to return to their homes. The Viceroys were instructed to break up the provincial assemblies by force and to treat agitators as revolutionists, punishing them with the greatest severity. Another edict defends the Councillors criticised, and upholds their policy. Another reform on which the delegates have entered with enthusiasm is the anti-opium crusade. The plans adopted by the Government for the gradual abolition of opium are not rapid enough or efficient enough to suit the reformers. Not without reason, they suspect the sincerity of officials who are themselves addicted to the drug. The Senate has repeatedly petitioned the Government to prohibit absolutely both the cultivation of opium in China and its importation from India. Either alone would, of course, be futile. But Great Britain stands in the way of any interference with her opium traffic, for this would upset the finances of India, already in a precarious state. So it is doubtful if the Chinese Government could prevent importation if it wanted to, for this might bring on a war with England, as it did before.——The bubonic plague is spreading in Mongolia and Manchuria. The German Consul at Harbin has addressed a pressing note to the Chinese Taotai demanding that radical measures be taken to stay the epidemic, and stating that otherwise Germany will interfere. The municipality of Harbin has invited Japanese physicians to attend the plague victims in the barracks, as the Russians refuse to expose themselves.

The Naval Comedy and Peace Policies in Brazil

BY DAVID LAMBUTH

[Very little was heard in this country about the recent successful mutiny of the Brazilian navy and nothing at all about its inner meaning and results. Mr. Lambuth, who was in Rio de Janeiro during the affray and, very literally, "under fire," sends us a graphic account of it and an explanation of its political effects.—EDITOR.]

WHEN in the course of human affairs a country makes a fool of itself, it sometimes stops and thinks. It has long and honorably been maintained that the building of navies promotes international peace. It looks at the moment as tho Brazil, by a wholly original and rather circuitous route, has come to cast a certain amount of discredit upon that noble maxim. It has been a story of Frankenstein all over again. And certain of the Brazilians have taken the story to heart. Perhaps Frankensteins are more valuable than the world imagined. As a spectator I confess to numerous desires to retire discreetly and laugh. It has been such an odd way of learning convenient truths. Of course it was a Comedy. Nevertheless the whine of a shell—and it does whine—and the vicious spat of flame and the roar of guns from two of the biggest and most modern of Dreadnoughts infused just that serious and realistic element into the farce that even Broadway dramatists sometimes neglect. There is value in verisimilitude.

The bugle had just sounded "silence" at 10 o'clock of Tuesday night, November 22, when the crew of the battleship "Minas Geraes," at a shrill and repeated bugle call to "fire drill," or "collision stations" or something of that sort, rose *en masse* and overpowered the officers of the watch. Yelling "Viva á liberdade!" they burst into the officers' mess, tearing down guns and bayonets from the racks, broke open the ammunition room, and in a quarter of an hour had shot and stabbed the commander to death, killed two other officers and a seaman, and taken possession of the ship. With pistols at their heads the engineers were given an hour to get up steam. Before 11 o'clock the 22,000-ton battleship, with her round dozen of 12 inch guns, swung from her anchorage, her searchlights flashing, her "wild cat" whistle shrieking like a lost soul—or a whole boiler full of them—and the blood-red flag of revolt flying from her fighting top. Inspired by this example, the sister ship, "Sao Paulo," just one month arrived from her English makers, fell into line. The old cruiser "Deodora" and the high-speed scout "Bahia" were close behind. Firing an occasional shell that sent the torpedo boats scudding for the protection of the neutral shipping or that screamed menacingly over the roofs of the city, they steamed slowly up and down the bay, clicking wireless messages of defiance and demands to a frankly terrified Government.

The army rushed regiments in khaki to the water front. Beside the stone balustrade of the sea wall they waited in ambush for the "Minas" and the "Sao Paulo" to come ashore. (That, as far as I could gather, was their purpose. Ruy Barbosa carefully explained to them a little later that it was impossible for land forces to fight on the waves. So, presumably, the only way to get together was for the navy to come ashore.) When day broke at last and the searchlights dimmed and the gun flashes looked less red, it became evident that the whole navy, with the exception of the escaped torpedo craft, had run up the bloody ensign. The two great Dreadnoughts swung leisurely past each other, patrolling the city like sentries on guard, their long white guns gleaming in the sun, while spurts of yellow flame and wisps of smoke heralded a roar that echoed back from the cliffs of Corcovado, and Tijuca, and the Sugar Loaf, and struck panic into the city.

The ultimatum of the sailors was clear enough. Even the running populace could read. More pay, more food, less

work, no corporal punishment and a complete amnesty. Let the Congress pass the bill and the President sign it, and then, said the men behind the guns, they would surrender the ships. Otherwise—and the city trembled and the Government too—otherwise they would shell the city and lose no time about it, either. That was Wednesday. The bombardment would begin at noon. . . . It would begin at 2 o'clock. . . . It would begin at 7. Sr. José Carlos de Carvalho, emissary of the Government, of the army, of all Brazil, under a white flag, sped from ship to ship, begging time, pleading inevitable delays in governmental machinery, arguing and cajoling, while the President and his advisers vacillated and ran frantically from one recourse to another, bringing up each time breathless and more helpless than before. (The fact is, it is not altogether the place to laugh. The Government was in a most deplorable hole. Every way they turned was about as bad as the other. And the rebels laughed.) In the meantime the torpedo boats amused themselves, but more particularly the hostile fleet, by poking their sharp black noses round the corner of the Ilha das Cobras to reconnoiter, and then running like deer from the 4.7-inch shells which followed them. By and by they sneaked for the island of Mocangué, where all the war heads of the torpedoes were stored at a convenient distance from the torpedoes, but again they went scuttling back headlong into the foreign merchant vessels, chased by the splash and spurt of ricochetting shells. To put it mildly, the torpedo boats were scared.

Also from time to time a shell burst over the city. Two children were killed on Morro do Castello and a woman wounded. A woman was dead in the Saude. A shell had fallen in one of the police stations and in the railroad station of the Central of Brazil. Others had clipped the royal palms that stood around the President's Palace. At night the searchlights flashed incessantly over the bay, for fear of those black little torpedo boats. At last the ships steamed out to the open sea. They would return and bombard in the morning. The forts of Santa Cruz and Sao Joao, at the entrance of the harbor, put out their lights and said nothing. Outside, the ships played their lights on the suburb of Corocabana, while the citizens trembled and a frantic city grew more frantic waiting for dawn—and the bombardment. A hundred rumors ran thru the streets. The Senate would pass the demanded bill, and it wouldn't. The Deputies wouldn't and would. The President would fight to the end, this minute. The next he was shaking in his military boots. So it went. Meanwhile the infantry in khaki and in nice blue uniforms, artillerymen with red stripes and six-pound howitzers, and cavalrymen with clashing swords galloped along the street. It was all a most military scene. The soldiers had been taught to entrench themselves. Even the ornamental lamp posts shielded a good half dozen when a shell exploded a mile and a half away. (But I do not blame them. There were times when I wanted to duck myself, and wanted to badly, too.)

At noon the ships returned and the forts said nothing over again. The city knew well enough that the islands of Villegagnon and the Fiscal and of the Cobras were deserted. The Government troops had retired "in good order." The Government itself had entered on a new tack with an access of pride. They would starve the mariners out. They would use up all their coal and their water and their provisions, and the rest was easy. Even the city saw the point.

The "Sao Paulo" ran up the Red Cross flag and the Military Hospital put out a launch and brought back half a dozen sick. It was at least a civilized warfare. Then the "Deodora" decided she wanted coal and steamed across to Nictheroy, over the bay, and took what she wanted, while the guards fled. That seemed just a little awkward. But it would not occur again. And then, to make bad matters worse, the "Minas" hove to and sent word that she wanted water. The authorities on shore laughed. It was all hugely funny.

"Very well," clicked the wireless, "if you don't send the water we'll raze the Ilha das Cobras at once." And there was the sound of a bursting shell.

Somebody forgot to laugh in a remarkable hurry. Out went the water barge double quick from the shore. Thereupon

the Chief of Police—who must have been napping—telephoned to the Chief of the Maritime Police:

"Stop that barge at once!"

And the Chief of the Maritime Police telephoned back to the Chief of Police:

"Certainly—certainly. But for goodness' sake tell me how!"

Meanwhile the "Minas" got her water. And Joao Candida, day before yesterday seaman of the first rank, now "Commander of the 'Minas Geraes' and Admiral of the Fleet," looked up at his admiral's ensign floating from the masthead and smiled and drank another glass of water. But the city only gaped and mopped the sweat from their brows.

Of course, it all came out happily in the end, as all the world knows. The Brazilian Government and the army and a million people in Rio capitulated to some two thousand non-commissioned sailors ensconced behind the steel sides of those modern Frankensteins. It wasn't pretty, but it had to be done. The torpedo boats had cold feet, and the forts backed down, and the six-pound batteries on the hills along the water front of the city couldn't reach the ships from behind their attractive entrenchments of baled alfalfa hay. (I do not know who ate it when they got through. The papers were reticent about the matter.) But worse still, there was all that $10,000,000 apiece in those two big ships. To tell the honest truth, they didn't want to blow them up, and they couldn't think of any better way, and the sailors were most firmly bent on shelling the city if they had to. (It was only later that somebody discovered they could have fired but one or two of their 12-inch guns, because nobody could find the electric strikers, altho they scrambled all over the ships' magazines with firemen's torches and cigarettes trying to find them.) Anyway the Government capitulated—and everybody began to get over the habit of ducking whenever they heard a noise.

Now, all of this was the lesson which Brazil learned while the Government was busily engaged in changing its mind and eating up its words. And on Thursday the 24th, Ruy Barbosa stood up in the Senate and told them what it meant. The writing was not on the wall, but on the water, yet Ruy read it just as well.

Nominated on the 22d of August, 1909, by the first popular convention ever held in Brazil, Barbosa had gone to the polls as presidential candidate of the Civilista party against Marshal Hermes da Fonseca, of the Militaristas. On the 1st day of March of the current year Ruy was beaten, they said, but real public opinion had at last come to be a factor in Brazil. And Barbosa stood for peace, for anti-militarism, for the republicanism of civil government, nationally and internationally as well. Moreover, he had good right to talk about international peace, because he had come away from the last Hague Peace Conference two years ago the acknowledged master and molder of the policies of that great body. But on this Thursday in November Ruy Barbosa took the floor without so many as six adherents in the Senate, and he spoke after this wise to the Brazilian people:

"Cowardice is a sad thing, but a sadder thing still is idle boasting and foolish pride in the presence of a crisis which cries aloud for immediate and effective action. The brave are those who recognize the inevitable and make terms with it when such a compromise is the only means of preserving a nation's real integrity. The weak are those who tho already in their last ditch delude themselves by militarism into the belief that they have in their hands the means of resistance, whereas in the end they will be forced to abandon even these and sue for the most pitiful and dishonorable of terms.

"It is not a question of so-called honor, not of military traditions, not of the bitterness of a militaristic government face to face with its own impuissance. We are in the presence of a situation in which all alike, whether friend or foe, are of one mind in recognizing that we must find some means at once, not of saving our reputations, but of preserving the interests of our constituents, of constitutional government and of the civil order."

The Government with its battalions, its artillery, its gold braid, was first of all loath to confess its weakness. It tried to make a show of power, by which, however, it only endangered and nowise advantaged the safety of the city. Barbosa made quick work of that.

"I do not see any reason why we should not confess our utter powerlessness in the situation, any more than I see any means of resistance or any possibility of a successful use of them."

And then, with a quick, ironical turn he recited the various claims of invulnerability with which the Government had

attempted to justify the enormous cost of these new battleships. If invulnerable, how could they defend themselves? But if such invulnerable engines of war are to turn back upon the nation that procured them, where the use of all the sacrifice, the overwhelming taxation and the struggle that made the purchase possible? Were they not worse off rather than better? Had they not been far happier without these gigantic monsters with their black muzzles pointed at their own hearts?

But the trouble, declared the prophet, lay deeper than that. The very cause of the revolt was the brutal human slavery, the disregard of the rights and dignity of man that was fundamental in a militaristic conception of society.

"I believe that the whole movement, all that you have now to suffer, grew out of these abuses themselves which had reduced the sailors to that terrible pass where what had once been a man becomes only a slave. All that breaks down in a man his moral sense, all that brings him to the level of a brute, all that infuses into him the mere instincts of animal terror and revenge, cannot help leading the way to these terrible uprisings against order and against society itself. . . . A slave is naturally low, brutal and deceitful, made so by the exigencies of his own defense. It is the fatal miasma of servility which weighs equally upon the men who suffer it and the men who impose it. I am persuaded that a great part, if not the greatest part, of the social evils which afflict Brazil today is the moral result of slavery, tho now for so many years extinct among us. We have abolished slavery of the negro race. Shall we maintain the slavery of the white race under a brutal militaristic regime? It is high time to remember that soldiers and sailors are also men.

"All our severity may be little enough to condemn the violence and the barbarity of the means which the revolters employed, but let us not shrink from the justice of recognizing our own complicity in this moral situation which is responsible for the present events.

I read with pleasure yesterday the statement of Sr. José Carlos, who told us how the men with pride showed him their ships, saying, 'Sir, this is an honest revolt.' I lament their mistakes, but I must recognize the human demands which they represent.

"Let me, in conclusion, point out two profound lessons of the bitter situation in which we find ourselves. The first is that a military government is not one whit more able to save the country from the vicissitudes of war nor any braver or more resourceful in meeting them than a civil government. The second is that the policy of great armaments has no place upon the American continent. At least on our part and the part of the nations which surround us, the policy which we ought to follow with joy and hope is that of drawing closer international ties thru the development of commercial relations, the peace and friendship of all the peoples who inhabit the countries of America. [Cries of "Muito bene . . muito bene."]

"The experience of Brazil in this respect is decisive. All the forces employed for twenty years in the perfecting of the means of our national defense have served, after all, only to turn upon our own breasts these successive attempts at revolt. [More cries of "Muito bene."] International war has never yet come to the doors of our republic. Civil war has come many times, armed by these very weapons which we have so vainly prepared for our defense against a foreign enemy. Let us do away with these ridiculous and perilous great armaments, securing international peace by means rather of just and equitable relations with our neighbors.

"On the American continent at least it is not necessary to maintain a 'peace armada'; that hideous cancer which is devouring continually the vitals of the nations of Europe."

And when he ceased the Senate passed the amnesty bill.

The words of Ruy, the expostulations of the Civilista party, the manifest weakness of militarism, have not been useless. Perhaps, after all, the naval comedy in Rio Bay may "point a moral and adorn a tale." Who can tell?

Rio de Janeiro, Brazil.

Two Preachers

BY WILLIAM H. HAYNE

One thumps the pulpit with each thund'rous word,
And beats the Law of Sinai on a board;
One the hushed aisle and frescoed gallery fills
With words like honey from the Syrian hills.

Augusta, Ga.

The Interesting Election in Oregon

BY GEORGE A. THACHER

[Mr. Thacher has contributed before to THE INDEPENDENT articles on the novel political institutions of Oregon. He is a citizen of the State, a lawyer and a member of the American Political Science Association.—EDITOR.]

THE real significance of the election in Oregon was the intense interest in certain ideas about the plan of electing State officers and some theories about the administration of public affairs of the State. The men who were absorbed solely in the thought of a party victory were so much in a minority that they were a negligible quantity.

Who can say what such ideas in politics will accomplish in a few generations? The tendency is bound to grow when once rooted, no matter how crude or even apparently mischievous the first concrete results are. The voters are lawmakers, and if they are not all students and economists still they must either practically disfranchise themselves by neglecting to vote or else they will register their ideas, even tho they may be obtained by a sort of contagion which the psychologists call the mob spirit. That is the harshest thing that can be said of the Oregon system, and it is interesting to note the results in the election held on November 8.

It is a mistake to suggest that the polling booth is transformed into a legislative hall; it's the roll call by the Australian ballot. At the poll where I voted the policeman remarked to me as I stood waiting my turn for a booth, "It's voting a bed quilt." How far the homely metaphor was justified may be estimated by the fact that there was the privilege of choosing thirty-four State and eleven county officers out of a total of 131 candidates whose names were printed on the ballot. In addition to choosing officers there were thirty-two laws and amendments to the State constitution to be adopted or rejected by voting "yes" or "no." What is called a "ballot title" to each measure is prepared by the Attorney General of the State, and is intended to give in a few words the purpose of the measure. The following is a sample on this year's ballot:

Women's taxpaying suffrage amendment, granting to taxpayers, regardless of sex, the right of suffrage.

Vote YES or NO.

300. Yes.
301. No.

These measures are brought before the voters in three ways:

"Referred to the People by Legislative Assembly."
"Referendum Ordered by Petition of the People."
"Proposed by Initiative Petition."

The last method is the most common and requires that a copy of the measure signed by eight per cent. of the voters be filed with the Secretary of State, who sees that the measure is printed in the campaign book in full. Fifty-five days before election the Secretary of State mails to each registered voter a copy of this pamphlet, containing copies of all measures to be voted on. Arguments pro and con which are offered by advocates or opponents are also printed upon payment of the actual cost of printing.

There is also issued by the State another campaign book containing portrait cuts of candidates and arguments for their election, sometimes with biographical sketches, but this advertising is optional with the candidates. Then, too, practically all the newspapers in the State print arguments for or against candidates and measures as paid advertisements, generally closing with some such admonition as "Vote ballot title 301 x, No." Sometimes full pages in daily city papers are used for one measure, with the words "(paid advertisement)." Then besides editorial discussion, which is more or less irregular for months, but constant for the thirty days preceding election, there are innumerable letters from voters printed through the courtesy of the editors.

This, in briefest fashion, is the Oregon system, and the mere statement of it shows that the voter's interest is ab-

STUB
(TO BE TORN OFF BY THE CHAIRMAN)

STUB
(TO BE TORN OFF BY THE FIRST CLERK)

Official Ballot for Precinct No. 125, Multnomah County, Oregon, November 8, 1910

MARK X BETWEEN THE NUMBER AND NAME OF EACH CANDIDATE OR ANSWER VOTED FOR

STATE

SECOND CONGRESSIONAL DISTRICT

For Representative in Congress — VOTE FOR ONE

12 CRAWFORD, WM. A., of Wasco County — Socialist
13 LAFFERTY, A. W., of Multnomah County — Republican
14 MANNING, JOHN, of Multnomah County — Democratic
15 PRATT, GEORGE B., of Multnomah County — Prohibition

For Governor — VOTE FOR ONE

16 BOWERMAN, JAY, of Gilliam County — Republican
17 EATON, A. E., of Union County — Prohibition
18 RICHARDS, W. S., of Linn County — Socialist
19 WEST, OSWALD, of Clatsop County — Democratic

For Secretary of State — VOTE FOR ONE

20 BENSON, F. W., of Douglas County — Republican
21 DAVIS, N. A., of Umatilla County — Prohibition
22 McDONALD, ALLEN, of Multnomah County — Socialist
23 OLIVER, TURNER, of Union County — Democratic

For State Treasurer — VOTE FOR ONE

24 BUTLER, LESLIE, of Hood River County — Prohibition
25 KAY, THOMAS B., of Marion County — Republican
26 OTTEN, CHAS. H., of Multnomah County — Socialist

For Justice of Supreme Court (Four Year Term) — VOTE FOR TWO

27 BEAN, HENRY J., of Umatilla County — Republican
28 BRIGHT, C. J., of Wasco County — Prohibition
29 McBRIDE, THOMAS A., of Clackamas County — Republican-Democratic-Non-Political Judiciary
30 MYERS, J. D., of Coos County — Socialist
31 RYAN, R. S., of Marion County — Socialist
32 SLATER, WOODSON T., of Marion County — Democratic-Non-Political Judiciary

For Justice of Supreme Court (Six Year Term) — VOTE FOR TWO

33 BURNETT, GEORGE H., of Marion County — Republican
34 JONES, T. J., of Wheeler County — Socialist
35 KING, WILL B., of Malheur County — Democratic-Non-Political Judiciary
36 MOORE, FRANK A., of Columbia County — Republican-Democratic-Non-Political Judiciary
37 RAMP, B. F., of Marion County — Socialist

For Attorney General — VOTE FOR ONE

38 BRIX, C. C., of Crook County — Socialist
39 CRAWFORD, A. M., of Douglas County — Republican

For Superintendent of Public Instruction — VOTE FOR ONE

40 ALDERMAN, L. R., of Lane County — Republican
41 HINSDALE, GEO. A., of Multnomah County — Socialist
42 HORNER, J. B., of Benton County — Democratic
43 STEEL, ROBERT R., of Multnomah County — Prohibition

For State Printer — VOTE FOR ONE

44 BYLANDER, GEO., of Multnomah County — Socialist
45 DUNWAY, WILLIS S., of Multnomah County — Republican
46 GODFREY, JAMES E., of Marion County — Democratic

For Commissioner of Labor Statistics and Inspector of Factories and Workshops — VOTE FOR ONE

47 CURRY, S. L., of Coos County — Socialist
48 HOFF, O. P., of Multnomah County — Republican
49 HOUSTON, D. L., of Washington County — Democratic

For Commissioner of the Railroad Commission of Oregon — VOTE FOR ONE

349 No.

A bill for a law to create the County of Deschutes Oregon, out of portions of Crook, Wasco and Lake counties, providing for the organization of said county, the county seat and settlement of the finances between the counties

Vote YES or NO

350 Yes.
351 No.

A bill for an act providing for the creation of road districts, and providing for the issuance of bonds within such districts for the purpose of constructing highways therein, and changing the boundaries of existing road districts, providing that bonds for permanent roads may be issued on approval of a majority of those voting at such election.

Vote YES or NO.

352 Yes.
353 No.

An amendment of Section 10 of Article XI of the Constitution of the State of Oregon, prohibiting counties in which the assessment has reached $5,000 to build permanent roads, and providing that bonds for permanent roads may be issued on approval of a majority of those voting at such election.

Vote YES or NO.

354 Yes.
355 No.

A bill for a law to amend the direct primary law by extending its provisions to presidential nominations, allowing to the people's choice of their party candidate for President and Vice President, and providing for party candidates for presidential electors, election by party voters of delegates to national conventions, instructing delegates, each voter voting for one delegate, first party delegate receiving highest number of votes, second party delegate receiving next highest number of votes, and providing for each delegate and submitting the question to voters of candidates to the State nominating and general election campaign books.

Vote YES or NO

356 Yes.
357 No.

A bill for a law creating a board of people's inspectors of newspapers, providing for publication of an official State magazine, and board to be the editors and publishers thereof, the printing to be done by the State printer, the cost of the publication subject to regulations by the board of inspectors and reports thereof published in said magazine, all expenses of the board for printing and publication of magazine, and for salaries of the board, not to exceed appropriated, what is the State, the magazine shall be mailed every two months to each registered voter at public expense.

Vote YES or NO.

358 Yes.
359 No.

For an amendment of Article XV, Constitution of Oregon increasing initiative, referendum and recall powers of the people requiring vote of supreme courts and referendum on decisions declaring laws unconstitutional, requiring proportional election of members of Legislative Assembly from the State at large, special sessions and increasing members' salaries and terms of office, providing for election of United States Senators by direct vote, limiting number of members necessary for exercising corporate franchises to county board, providing for double penalty for advertised abstain from any roll call and prohibiting any member from voting on any measure necessary registering or voting.

Vote YES or NO

360 Yes.
361 No.

For amendment to the Constitution of the State of Oregon, providing for certain by three tiering of laws in civil cases, authorizing grand juries to be summoned separate from petit juries, providing for challenges to jurors, relating to statutes prescribing several writs and evidence to support verdict, providing for additions of judgment on appeal notwithstanding error committed in lower court, providing for appeals in all cases each judgment as should have been entered in lower court, fixing terms of Supreme Court, providing judges of all courts be elected for six years, and increasing compensation of Supreme Judges.

Vote YES or NO.

362 Yes.
363 No.

ONE OF THE BALLOTS USED IN THE RECENT OREGON ELECTION.

HON. JAY BOWERMAN,
Republican candidate for Governor.

sorbed in the State campaign to the exclusion to a great extent of party feeling as ordinarily manifested.*

Of course things fall into place in the order of their apparent importance. There were two questions of overwhelming interest in Oregon this year; one was concerning the working of the direct primary law in the election of Governor, and the other was the question of State-wide prohibition. Other questions received a vote in a descending ratio, according to the interest they aroused. With the exception of a few questions of national interest, the voting in Oregon can claim the attention of the readers of THE INDEPENDENT only as a question of the psychology of the voters in a State where there has been the birth of a new democracy.

Six years ago a direct primary law was enacted at the polls, which among other features actually provides for popular election of Senators. Under that law Oregon has a United States Senator who at different times has given allegiance to different parties, and another Senator who is a Democrat, but who has been identified with the new system in Oregon. Oregon is a Republican State by some 25,000 votes, hence many men who believe in government by party—their own party—have decided that the primary law is defective. They agree to it as a corrective measure in case the dominant party makes bad nominations, but they object to it most strenuously as a "wide open" affair, as some of them term it. In other words, they don't want to give up the convention system entirely, though they are willing that the convention should be rebuked if necessary. This faction is led by *The Morning Oregonian,* the strongest and ablest newspaper in the Northwest.

A Republican convention under the name of "assembly" was held this year before the primary, and the Hon. Jay Bowerman, an able man, President of the State Senate, and Acting Governor, was nominated. He also got the Republican nomination at the primaries, tho his opponents collectively polled twice as many votes on an anti-assembly platform. I believe that he would have won if he had not made a bad choice of a campaign issue. He did promise to maintain all the people's laws, including the direct primary, but to take away attention from the "assembly" that first nominated him, he and his friends made the United States Senators from Oregon an issue in decidedly personal fashion, tho neither one is running for office. Mr. Bowerman and his friends overlooked the fact that these Senators owe their positions in the Senate to the "wide open" primary, which was adopted by the voters at the polls, and so they unwittingly intensified a sentiment that they would have liked to soothe to sleep. The result was that Mr. Bowerman was defeated by over 6,000 votes in a strongly Republican State by Oswald West, the Democratic nominee, who used the opportunity thus offered to its fullest extent. Mr. West has made a good record as a member of the Railroad Commission.

Oregon has a local option law adopted six years ago. It permits whole counties or even single precincts to go "dry." Under its provisions practically all of

*I have written heretofore somewhat detailed accounts of the Oregon system and its workings, which were published in THE INDEPENDENT on May 28 and June 25, 1908.

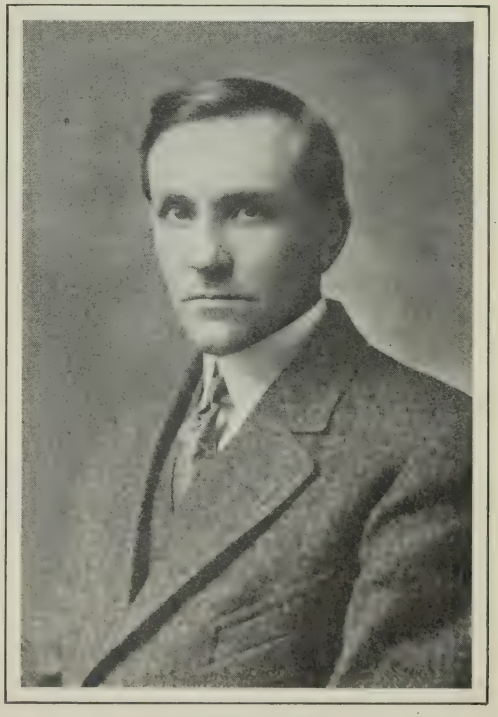
the State, barring counties having large river towns or seaport cities, especially along the Columbia and Willamette rivers, voted no license. The prohibitionists were so pleased with what they had accomplished that they fancied they could use the prohibition vote in "dry" counties to decree prohibition in the ocean port of Portland and other river towns, wipe out distilleries and breweries, and crush the "demon rum." They brought speakers from points as distant as the Atlantic Coast (some of them incendiary in utterance) and waged a hot campaign. They lost by some 20,000 votes, and even lost counties that have voted no license heretofore. The opponents of prohibition did a clever thing. They proposed a "home rule" amendment to the Constitution (cities and towns already have it subject to the Constitution and criminal laws), which practically makes cities and towns units in the matter of voting license. It was a good psychological appeal. "Home rule" won by 2,000 votes.

Woman suffrage has previously been defeated in Oregon four times. It has now been defeated five times.

A constitutional amendment providing for a complete reorganization of the Legislature and proportional representation was defeated.

An employers' liability law was adopted by a good majority, while a measure proposing a commission to consider the subject was defeated by a strong vote.

An amendment permitting counties to issue bonds for good roads won by a large majority. In Western Oregon, with its rainy season, the unimproved roads are bogs in winter.



A bill to extend the direct primary in nominating Presidential candidates and paying expenses (up to $200) of delegates to national Presidential conventions, and electing delegates by popular vote, was adopted by a narrow majority. Heretofore poor men have been barred from being delegates to national conventions. This was the most novel measure enacted.

A law creating a Board of People's Inspectors of Government to watch the State's business affairs and to issue a magazine every two months to every voter free, giving an account of matters and making suggestions, was savagely attacked as a proposal for a partisan press to be paid by the voters. Naturally the newspapers did not favor it and it was defeated.

An amendment to the Constitution was adopted cutting off the granting of new trials by superior courts on purely technical grounds, and also permitting three-fourths of a jury to return a verdict in civil cases.

Two tax amendments were defeated, tho recommended by the Grange. The ballot titles were doubtless to blame, because they mentioned repealing the words, "taxation shall be equal and uniform." That frightened men who have not studied taxation. On the other hand a probably mischievous amendment permitting the single tax in separate counties was carried by a small majority, for the probable reason that it proposed to repeal the poll tax.

The question of writing ballot titles got into the Supreme Court several years ago, and then the Legislature turned the task over to the Attorney-General. This year's election indicates

HON. OSWALD WEST,
Governor-elect of Oregon.

that the Attorney-General should be a professional psychologist and an advertising expert as well as a lawyer in order to be impartial.

Just a quarter of the measures offered were carried and the vote on legislation, which heretofore has averaged over 70 per cent. of the total vote, probably ran higher this year; that is to say, fewer men disfranchised themselves by neglecting to vote on the measures. When that brilliant English essayist many years ago prophesied that, where inequalities were great the greater would be the tendency toward spoliation, and that the deluge would come in America in the present century, no one could have imagined that there would be witnessed in even one State of the American democracy the spectacle of the poor and the rich meeting at the polls to adopt laws for the commonwealth. Critics would perhaps be justified in calling some of the measures crude and in some cases mischievous, but the underlying spring of action is good and not destructive. How far will the movement develop in the nation?

PORTLAND, ORE.

New Immigration Recommendations

BY HERBERT FRANCIS SHERWOOD

[Mr. Sherwood traveled with the Immigration Commission in Europe in the summer of 1907 and has been a student of immigration for many years. He is therefore well qualified to comment on the commission's report, which is the first complete survey of the subject ever made in this country.—EDITOR.]

NEARLY four years ago a national commission, consisting of three Senators, three Representatives and three appointees of the President was created to investigate the subject of immigration. At the beginning of the present session of Congress, as required by a resolution adopted at the last session, it filed its final report with its recommendations. It has had the use of nearly $500,000. Thru a large staff of investigators it has accumulated enough data to fill upward of forty volumes, original information having been secured regarding more than 3,200,000 individuals. It is expected that the two score volumes will be ready for distribution next June. What has it discovered in the course of its investigation and what are its recommendations?

Within the space at my command it would be impossible to mention, much less discuss, all of the findings of the commission. I shall, therefore, confine myself to those in which the public is likely to be most interested, and which present views in some degree contrary to preconceived ideas.

It has been charged against the present immigration that the percentage of criminals is high. The commission says that the available statistics do not show that criminality among the foreign-born increases the volume of crime in proportion to the total population, altho the present laws are not adequate to prevent the immigration of criminals, nor sufficiently effective as regards the deportation of alien criminals.

In the exclusion of criminals, in fact, we have not taken advantage of the facilities already provided. The crimes of aliens which have attracted the greatest attention in recent years have been those of Italians. These include homicide and the form of blackmail labeled "Black Hand." Italy has performed two acts of comity, which, if full advantage had been taken of them, would have greatly reduced—if they had not eliminated them entirely—the number of Italian criminals in this country. The Government of that country requires that every emigrant shall have a passport. This may not be issued to a man bound for the United States who has a record which would debar him under our laws. Yet, in the past, we have not taken the precaution to inquire of the landing immigrant of that nationality whether or not he had such a document. Its absence, or the fact that it had been countersigned in some other country, would be *prima facie* evidence that the applicant for admission was a case for special inquiry. Italy also has assisted the Police Depart-

ment of New York City in obtaining copies of the records of more than 700 Italian criminals, the work having cost the life of Lieutenant Petrosino. Altho such a dearly bought set of records was available, owing to the inactivity of a recent police administration few deportations have taken place. It has been asserted by competent authority that 1,000 Italians could be deported from New York City without further legislation. A conference of officials having charge of the deportation machinery was held at the City Club a few days ago to consider such action.

The commission reports that other countries stand ready to co-operate with us in reducing the migration of criminals from their territory to ours. It recommends that legislation be secured providing for the deportation of aliens convicted of serious crimes within a period of five years after their admission, and that our Government make arrangements with such countries as have adequate police records whereby copies may be obtained. It urges that thereafter immigrants from such countries be admitted only upon the production of papers showing an absence of convictions for crimes which would exclude them.

We have moaned about immigration's contribution to our almshouses. The commission's investigation indicates that there is comparatively little pauperism among the present immigrants. The immigration of twenty years ago, which has been held up by some as far superior to that of today, offers, the commission points out, a marked contrast in this respect. Nearly half of the foreign-born who received assistance, it was learned, had been in this country at least a score of years. The force of this discovery is strengthened by the fact that the investigation was made close upon the heels of the financial depression of 1907. Large numbers of the later immigrants had returned to their European homes. Those remaining here had the ability and the desire to take care of themselves. The small percentage of applicants for relief among the newcomers the commission credits to the present laws, which admit only those exhibiting capacity to support themselves. These conclusions coincide with the observations of the writer, who has visited many Calabrian, Sicilian, Croatian and Polish villages for the purpose of noting the effect of immigration upon them, and with the same object in view visited the foreign colonies in one State about the time the commission's investigation was in progress.

The extent to which assimilation is taking place, was naturally the most important of the subjects to be investigated. The commission corroborates previous testimony that there is congestion in industrial centers due to the immigration of unskilled labor in large volume, and that the process of digestion is greatly hindered by such herding of human beings. It says that the flow of the human river is so great that the standards of living and of wages of the unskilled are kept down. It, therefore, recommends that less stress be laid upon sentiment as a basis for our immigration policy and that "the economic and social welfare of the United States should now ordinarily be the determining factor in the immigration policy of the government."

Perhaps the most sensational and certainly one of the most unexpected results of the investigations was that obtained from the anthropological studies made under the direction of Professor Boas, of Columbia University. The measurements of native born children of foreign born parents suggested that an American type was being rapidly formed. It was found apparently that every part of the body, including the head, may be changed thru the single influence of environment.

The commission well says that "the measure of the rational, healthy development of a country is not the extent of its investment or capital, its output of products, or its exports and imports, unless there is a corresponding economic opportunity afforded to the citizen dependent upon employment for his material, mental and moral development. The development of business may be brought about by means which lower the standard of living of the wage earners." It therefore recommends that further general legislation dealing with the subject of immigration "should be based primarily upon economic or business considerations touching the prosperity and economic well being of our people."

New York City.

Science vs. Literature as a Professorial Profession

BY EDWIN E. SLOSSON, Ph.D.

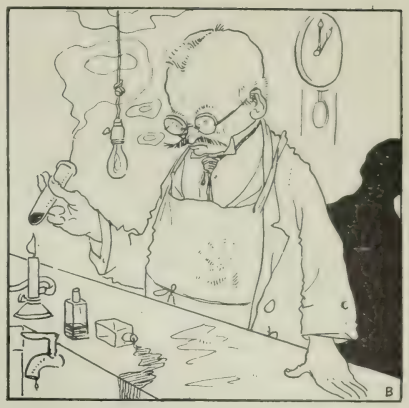
[To those who aspire to university positions but are undecided whether to devote themselves to science or literature, the following article by one who has been on both sides of the fence will, we believe, be of great help. Incidentally it may also throw light upon the question sometimes asked of us as to why Dr. Slosson dropped the test-tube to take up the pen. It appears from this that his motive was most despicable, *i. e.*, the desire for an easier life. We found the article in the alumni section of *Cap and Gown* for 1910, the junior annual of the University of Chicago, from which we borrow also the clever cartoons of Mr. Roy Baldridge.—EDITOR.]

THE custom in our universities is to pay the literary professors the same salaries as the scientific professors. Which is not fair. Because the scientific man has to work harder and more hours. If he works in the chemical laboratory he gets his hands covered with xanthoproteic reactions and he has to fuss with things that are messy and smell bad. If he works in the biological laboratory he has to fuss with things that are messier and smell worse. But his literary colleague can keep his hands and clothes clean and need not get anything smutty in the course of his researches. Except his mind. Which doesn't show.

The literary professor looks down on the scientific professor and he has a right to. The man who carries the little end of the log always has a right to look down on the man who is carrying the big end. This is a fundamental principle of our social system, and nobody can conceive of such a revolution as the reversal of the rule would be. The most daring of Utopian promoters has never gone farther than to imagine a state of society in which each man could look down on the other. Or neither look down on the other. Or both look up to each other. Very likely the same thing after all.

At any rate, the litterateur is in the enviable situation of being paid to do what other people do for nothing. The scientist, when he is fagged out with a hard day's work and everything going wrong, goes home and reads a novel for recreation. But who ever heard of a literary professor, when he was tired of reading novels all day, spending his evenings in the analysis of a silicate or the calculation of the orbit of Halley's comet, just for the fun of the thing?

Then, too, we are all of us somewhat fond of gossip, of overmuch talk about personal peculiarities and the petty details of the lives of other people, particularly of distinguished persons. We are most of us ashamed of this love of gossip. But not the literary man. He glories in it. Quite right, too, because that is how he earns his salary. His work is an old woman's pastime. You always feel a little mean when you read love letters written to others. That is, you would feel mean if you ever did it. But he does it and gets praised for it. He devotes a year to tracing out the amoristic ramifications of the Hugo household and their influence on the course of French literature, and if he succeeds in discovering some incidents which the writers of French memoirs had not thought fit to print, he gets a *magna cum* for it.



One summer day when I was working in the chemical laboratory of the University of Chicago, feeling that the cultural lobe of my brain was in danger of getting atrophied from too complete an absorption in the exact sciences, I strolled over to a literary lecture. The lecturer had spent some months abroad devoted to the study of the literature of the Lake district. No; that is the wrong way around. I should say to the study of the Lake district of literature. And he had discovered—or was it she? Never mind. At any rate, this arduous research had resulted in the momentous discovery at which side of the fireplace the jug had been set when Kit North and the Ettrick Shepherd held their *Noctes Ambrosianæ*. What we nowadays call boozefests. I gathered that the literary critics for fifty years had been divided on this question, some contending for the right, others standing by the left. And I rejoiced, as a loyal

Chicagoan, that our university had been able to settle this question. It would have been a pity to have had to devote another fifty years to it.

The literary wing of the faculty has a further advantage. For example, a professor of English literature aims to get his students to love Browning's poetry, not necessarily to understand it. A professor of chemistry aims to get his students to understand chemistry, not necessarily to love it. Now, it is easier to learn to love something than to understand it. We all know how that is. It is not necessary to understand a young lady before falling in love with her. Fortunately. Otherwise few of us would ever have married, or even now be in love with our wives.

The man of science has to discover new facts. The man of letters does not have to discover new authors. He never does that. He leaves it to the common herd and then, after a generation or two, he comes along and explains why. You see what an easy job he has. I could not have discovered the X rays. But now they are discovered I can explain as well as anybody how they came to be discovered and why they were worth discovering. And if the University of Chicago will give me a traveling fellowship, I will go over to Germany and find out what Professor Röntgen eats for breakfast, how many children he has, where he was born and whether it was a successful or unsuccessful love affair which drove him to sparking with a Crookes' tube.

The literary professor is not expected to write novels. It is regarded as rather

He has to fuss with things that are mussy.

discreditable if he does. Especially if they sell well. He lectures on the essential qualities of good fiction and the causes of its success, but he cannot pick the winners out of the eighteen hundred new novels that appear every year. If he could he would not be teaching. Any publisher would give him $10,000 a year as a reader of manuscript.

But the greatest advantage which the literary man has over his scientific colleague is that it does not matter what he says. That is why he is such a brilliant lecturer. Or can be. We could any of us be brilliant if we did not care what we said. The easiest way to get a reputation for pungent philosophy is to take some common saying and reverse it. The most ordinary coat looks funny when you wear it inside out. The scientist has to stick to facts. The belles-lettrist hasn't many facts to stick to, and if he gets them wrong there is no harm done. If the lecturer on chemistry gets confused and tells the class to run ammonia into chlorine water instead of chlorine into ammonia water, he is likely to lose a student or two. Perhaps a wing of the laboratory. But if the literary lecturer, in telling his students to trace the influence of Swinburne on Matthew Arnold, should get his instructions reversed, the student would not get blown up. Except by his professor. And that doesn't hurt much. As we all know. Even if the student should get an excess of Swinburne mixed with Arnold in the cold it would not matter.

Summer students do not take the literator literally.

Fortunately, no one takes the literator literally. Least of all himself. The temptation is irresistible when one gets before the usual summer audience of culture seekers to make them open their eyes as well as their ears; to shock them, to galvanize them into a semblance of life, to get some kind of a reaction from them indicative of independent thinking, of anything but tame acquiescence. Schoolmasters in long hair and spectacles, placid old ladies and ardent-eyed girls make up the audience. The lecturer shakes before them the insanities of Nietzsche, the vulgarities of Whitman, the vagaries of Shaw, the crudities of Tolstoy, and sets off some epigrammatic fireworks of his own as a grand finale. In vain. The most startling thing he can discover in literature, or invent, they calmly listen to and take down in their notebooks. Two things, fortunately, they never think of doing: to question what they hear or to apply it to their own lives. One is appalled at the thought of what would happen if they took the lecturer either less seriously or more. If they took him less seriously they would throw things at him. If they took him more seriously they would act in accordance with his suggestions. Which would demoralize society.

That is where Mr. Bolce *far niente* made his mistake. In his *exposé* of the universities he did not take into consideration the fact that students are accustomed to make allowances for their professors. They are careful to distinguish between literature and life. It is not hard to make such a distinction. Quite the contrary. The scientist, however, has to be more careful what he says. The sociologist or anthropologist is an exception. He can say whatever he pleases. In fact, often does. But this privilege is allowed him because anthropology and sociology are regarded, like literature and theology, as not having any practical application to human beings. It is otherwise with the professors of the old, orthodox and established sciences. They can't get much fun out of life, having to be so particular all the time about what they tell folks.

New York City.

Railroad Rates Again

BY PIERPONT V. DAVIS

[In our issue of October 13, 1910, we printed an article by Professor Harrison S. Smalley, of the University of Michigan, holding that there was no necessity for the railroads to raise their rates. This article was widely commented on in the daily press and in letters from our subscribers. We are glad to print this reply from a Wall Street writer, who is associated with the firm of Plympton, Gardiner & Co.—Editor.]

NO sincere apologist for the railroads denies that the railroads have themselves, in large measure, to blame for the resentment and misapprehensions that exist. There has been a long list of deplorable wrongs on both sides. That in three years thirty-three States should have enacted 334 laws, regulating the transportation companies within their jurisdiction, indicates the extent of the popular feeling.

Very much of this legislation was hasty, ill-conceived and even genuinely confiscatory. For example, the Railroad and Warehouse Commission and the Legislature of Minnesota, during the fall of 1906, compelled the companies operating in the State to reduce passenger fares 33⅓ per cent. and freight rates from 10 to 28 per cent., with the result that, in the year following, one of the roads affected succeeded in earning only 4.14 per cent. on the basis of its actual reproduction cost.

The impartial testimony of all who know anything about the subject proves conclusively the fairness of the rates charged by American railways. The report of ex-Judge Charles E. Otis, special master in Chancery, who heard the testimony of the railroads in Minnesota after they appealed to the Federal

court, has this to say of the rates prevailing before the reductions above noted:

"Alleged discrimination between localities and shippers, *not excessive rates,* was, with respect to tariffs, substantially the only ground of complaint." *

President Hadley's opinions always command respect. He has said:

"I also believe that there has been far less of extortionate profit in connection with railroad monopoly than has been incident to most other kinds of industrial combination." †

Of the 9,099 complaints entertained by the Interstate Commerce Commission during the first eighteen years of its existence, 9,054 were settled without reference to the courts, while of the 45 cases appealed to the courts only 8 were sustained. All of these alleged unjust discrimination and not one complained of exorbitant rates.

Rates in general have been fair because the permanent interests of the railroad and the public are indissolubly allied. If the profits of the former are too high, its patrons are impoverished. When they are too low, poor service and a decline in business follow. The railroads are now asking a moderate increase in rates. Is it likely that they are seeking rates that will hurt the business, the shipping ability, of their customers? In fact, certain large buyers of transportation, the Simmons Hardware Company, Marshall, Field & Co., and numerous others have openly approved of the proposed advance.

Prof. Harrison S. Smalley, on the contrary, in a recent article in THE INDEPENDENT, maintains that the railroads need no increase, because,

"while expenses have decidedly increased, traffic has also increased in even greater proportion with the result that the expense of furnishing railway services has actually declined."

The reason for this is found, according to Professor Smalley, in the fact that about two-thirds of a railway's expenses are not dependent upon the *volume* of the traffic, remaining the same whether traffic is light or heavy. In these fixed expenses he includes interest and depreciation, cost of providing and maintaining a minimum equipment, the corporate organization, supplies, and wages of officers and men. He then says: "Between 1897 and 1907, while mileage expanded 25 per cent., and the total expenses of all railway companies were augmented 106 per cent., passenger traffic increased 126 per cent., from 12,256,936,647 to 27,718,554,030 passenger miles, and freight traffic grew 149 per cent., from 95,139,022,225 to 236,601,390,103 ton miles. These facts show a very great increase in the *density* of traffic. It has much more than offset the advance in wages, prices and other items of expense."

We should hardly expect one who has served the Interstate Commerce Commission to be dealing in such dubious facts. In the first place, any increase in the *volume* of traffic will increase those expenses which Professor Smalley thinks fixed. If a road is called upon to move a much greater volume of business than ordinarily, it will require more locomotives and cars; more men must be hired to run the trains; more supplies purchased, and the interest on the cost of new equipment purchased will augment interest charges.

It was in order to meet this condition that railroad men devised those economies which have caused the great advance in the science of transportation in the past decade. They made one locomotive strong enough to do the work of two; they increased the size of their cars; reduced grades and straightened curves; made better roadbed and used heavier rails.

As a concrete illustration of these economies, the freight locomotives of the Chesapeake & Ohio had an average tractive power of 21,165 pounds in 1890 and of 34,567 pounds in 1910; its freight cars then had a capacity of 22 tons, compared with 43 tons now. The road was thus enabled to carry 701 tons of revenue freight in every train in 1910. (This is the highest figure recorded by any of the large railways in the United States.) In 1890 it carried only 225 tons. For reasons of this nature, each freight train now earns $2.85 a mile run compared with $1.20 a mile twenty years ago, notwithstanding the fact that the company received in 1910 only 4.1 mills for each ton of freight hauled one mile,

*Page 9 of the Report.
†Hearings before the Senate Committee on Interstate Commerce, May 9, 1905.

instead of 5.35 mills in 1890. By all things *density of traffic* was increased, and by increasing density the railroads have been able to reduce the cost per unit of transportation service. Increase merely in the *volume* of business does not reduce unit cost, as Professor Smalley imagines.

Therefore, when he states that the volume of passenger traffic increased 126 per cent., and freight traffic 149 per cent., offset by an increase of only 106 per cent. in expenses, the inference is misleading. Railroad profits have enjoyed no such increase, for it is thru increase in *density* of traffic that cost per unit is reduced. The increase in density over the same period (1897-1907) makes quite a different showing, the increase in freight density being 103 per cent. and 82 per cent. in passenger density.

The comparison between 1897 and 1907, tho frequently made, is plainly unfair. The former year, with the single exception of 1896, was the poorest for the railroads since the Interstate Commerce Commission has furnished comparative statistics; that is, since 1888. Gross earnings had shown practically no growth over those reported four years earlier. Only 29.9 per cent. of the total outstanding stock was paying dividends. The poverty of the railroads in 1897 is not generally appreciated. But the prosperity of the railroads in 1907 is too recent a matter to be forgotten. That 67.27 per cent. of the total stock was receiving dividends is eloquent of the changed financial status.

A comparison between 1899 and 1908, while not free from objections, is nevertheless fairer. In this period an increase of 47 per cent. in freight density and of 67 per cent. in passenger density is indicated, while the increase in operating expenses, exclusive of taxes, is 94 per cent.

From either the 1897-1907, or the 1899-1908 comparison, the conclusion is unavoidable that density of traffic and its resultant lowered unit cost, while increasing, is not increasing as fast as the expense account. However, the question at issue, as the *Railway Age Gazette* pointed out in its editorial comment on the article in THE INDEPENDENT, concerns 1910 and the future. The transportation systems of the country allowed wage advances last spring which, it has been reliably estimated, will enlarge operating expenses from $100,000,000 to $120,000,000 a year, and the end is not yet. The Brotherhood of Locomotive Engineers on the roads north, west and south of Chicago are now demanding increases in pay amounting to over $8,000,000.

The results of these enlarged payrolls have not yet been fully shown. The preliminary report of the Interstate Commerce Commission for the year ending June 30, 1910, shows that the railways of the United States increased their gross earnings 13¾ per cent., operating expenses 14 per cent., and net earnings 13 per cent. The actual increase in net is $97,456,400.* This record, it is freely confest, displays but little of the tendency toward higher operating costs. But it is necessary to remember that increases in wages were made so near the end of the fiscal year as to have slight effect on the whole year's expense account. Had the new schedules been in effect thruout the fiscal year it is evident that the entire increase in net earnings would have been absorbed and a decrease substituted.

The change that has come in railway income accounts since the inauguration of higher wages is indicated lucidly in the following table,† which gives the percentage of increase in gross earnings, operating expenses and net earnings since the beginning of the year 1910. The figures cover the operations of about 680 roads, except for September, for which the results of only forty-eight roads are so far obtainable.

	Gross earnings. Increase.	Operating expenses. Increase.	Net earnings. Increase.
January	15.2%	15.4%	12.6 %
February	15.8%	16.2%	14.9 %
March	15.5%	17.5%	11.6 %
April	14.0%	17.8%	5.8 %
May	16.2%	20.1%	8.1 %
June	12.2%	19.4%	0.95% Decrease.
July	5.5%	12.0%	6.4 %
August	7.6%	13. %	0.94%
September	5.7%	12. %	4.2 %

The decreases in net earnings are the more serious because the summer and fall are ordinarily the periods in which

**Wall Street Journal*, October 31, 1910.

†From figures appearing in *The Commercial and Financial Chronicle.*

the railroads make their most favorable exhibits. Volume of business is large and operating conditions good. In the last six months of 1909, the monthly increase in gross earnings averaged about 12¼ per cent., while the increase in operating expenses averaged only 10½ per cent. This year the increase in gross for July, August, September has been 7.5 per cent., but the increase in operating expenses 12.8 per cent. The Union Pacific, for example, made $1,421,924 more in gross during these three months, and lost $1,231,488 in earning it; the New York Central had $1,603,782 more in gross and $575,979 less in net. In the face of these facts the comfortable assertion of Professor Smalley that "the reports which the railways are publishing from week to week and from month to month indicate that traffic is growing at a rate which will speedily suffice to compensate for any wage advances that have been made or are likely to be made," hardly seems borne out. He also writes: "One would naturally expect to see railway net earnings steadily falling off—but just the reverse has been the tendency. Net earnings have in general become progressively larger." One cannot help wondering what reports Professor Smalley was studying.

It may be objected that this declining tendency in net earnings is only temporary. The railroads have met these conditions before and overcome them. This view, however, is not shared by railway experts. Net earnings can ordinarily be increased in only two ways—either thru a greater volume of business with consequent larger gross earnings, or thru the introduction of further economies in operation. If these fail, a higher charge for service rendered is justified.

It is the belief of Mr. James J. Hill that the introduction of new economies cannot be relied upon. In his judgment:

"There is, of course, a limit to density of traffic on any line, just as there is a limit to every sort of efficiency. The load that the modern engine places on the rails is all that they will bear. The steel is carrying all that such material can carry without danger. A mile of track can do no more than its maximum. What shall be done when this point has been reached? Some systems have very nearly arrived at it; and, in general, any future increase of load will be carried far less easily than that of the past." *

As to the theory that larger gross earnings will afford the necessary net earnings, Mr. James McCrea, president of the Pennsylvania Railroad Company, says:

"In my judgment it would be wholly unsafe to assume that the company will, *as a result of the growth of its business,* be enabled to recoup itself for the depletion in its surplus revenue, which is certain to result from a continuance of the present operating cost." †

It is a fact, altho perhaps not a well known one, that a railway can have too much business. A volume of traffic offered, too great for the road's facilities, does not mean prosperity. Take, for example, the showing made by American railways in the fall of 1907, just prior to the panic. The volume of traffic was never greater. In September of that year, gross earnings increased no less than $141,000,000, or 10.2 per cent.; operating expenses, however, were 19.5 per cent. larger, so that the companies were poorer by $42,000,000, or 6.7 per cent.; in October, the roads lost $47,000,000 in net. This happened when the demands of business were so keen that a famine in freight cars existed, a shortage of nearly 100,000 being reported.

The explanation of this, of course, is very simple. Too much business means congested tracks, delays that mean extra pay for train crews, crowded terminal yards causing loss of time in making up trains, extra switching and heavier demurrage charges.

For such reasons we cannot agree with Professor Smalley in his belief that "if the growth of traffic is great enough it may offset, or even more than offset, the effect of higher wages, higher prices, higher taxes and higher interest." With adequate facilities, this would probably be true, but facilities are not adequate. The national transportation system, as compared with the work assigned to it, is growing more and more inadequate. The safety of the public, in addition, demands the elimination of grade crossings, the increasing use of safety appliances, the elevation of tracks in cities,

*Highways of Progress, p. 245.

†Testimony before Interstate Commerce Commission, Washington, October 12, 1910.

etc., expenditures which in themselves do not yield much, if any, net return.

The railroads today are confronted with the problem of greatly enlarging their facilities—that is, double tracking, providing more sidings and passing tracks and larger terminal yards. Mr. Hill estimated earlier in the year that the railroads ought to spend $1,600,000,000 annually for the next six years in order to escape a very serious congestion of traffic. Whether one accepts this estimate or not, the needs of the railroads, both for their commercial expansion and their safety of operation, are very large. The railroads need rates that will furnish not only a satisfactory return upon their present securities but also upon those they will be called upon to issue. The company which is generally regarded as the strongest among American roads has been able to sell its stock and bonds, not merely because it has paid dividends of 6 or 7 per cent. (chiefly the former), but because it has been able to show at the end of the year large surplus earnings, which it has put back into the property. In the words of the president of this company:

"When investors have been asked to purchase its stock or bonds, the company has been able to show that it was then in receipt of enough income to enable it to make a fair return on the securities it proposed to issue, even if the proceeds of these securities could not be so invested as to enable the company to derive an immediate return thereon."

The question of higher freight rates finally resolves itself into this: Shall the railroad companies be allowed to earn a fair return upon their investment? We cannot believe that the majority of the American people wish to deny the railroads a square deal. We doubt if they sympathized with those farmers in the Red River Valley some years ago who demanded a reduction of 6 cents per hundred pounds on wheat consigned to Minneapolis. The attorney for the railroads, in the cross-examination, asked the leading witness for the farmers what he considered a man should earn on a farm investment.

"Ten per cent.," said the farmer.

"And what do you think the Great Northern Railway is entitled to earn on its investment?"

"Four per cent.," said the witness promptly.

The railways have done their best by promoting industries and encouraging immigration to their lines to increase the volume of business, which they have handled efficiently and economically. They have done everything in their power to provide themselves with a satisfactory compensation. With what result? The Pennsylvania system east of Pittsburgh earned in 1909 but 5.01 per cent. on the amount actually invested in the property. The Master in the Minnesota Rate Case found that the Northern Pacific was earning 6.02 per cent. on the value of its property in Minnesota, the Great Northern 5.91 per cent., and the Minneapolis & St. Louis 4.14 per cent. At the same time he was of opinion that, in view of the risks in the transportation business, a return of at least 7 per cent. was proper. The results in the four States where physical valuation has been attempted prove emphatically that the railroads in those States are under-capitalized, not over-capitalized. There is no reason to doubt that this is true of American railways, practically without exception. James R. Mann, Chairman of the House Committee on Interstate and Foreign Commerce, publicly deprecated physical valuation, declaring it his opinion that a physical valuation would show the roads to be worth more than the amount of their stocks and bonds.

The people of the United States have been given good service at very low rates. They desire that service perpetuated and improved. If the service is allowed to deteriorate, the shippers and the traveling public will suffer more than the stockholders. But there is only one way by which that service can be maintained efficiently—it must be paid for. The testimony from the investment markets the world over unanimously agrees that the compensation is inadequate. Justice to the railroads requires that the rates should be raised.

New York City.

The Babies' Birthright

BY MARTHA BENSLEY BRUÈRE

SOMEBODY, I think it is Mr. H. G. Wells, has had a pleasant vision of the world's wise men solving a fantastic problem. He isn't like Hans Andersen or Grimm, setting them to interpret dreams, disenchant princesses, or build magic towers. He just imagines them—all the philosophers and teachers and scientists—collected in a great hall and turns into it the stream of new born babies, some forty-three to the minute.

"Do you suppose those wise men would have time to discuss anything except what to do with those babies?" he inquires.

But as things really are outside Mr. Wells's picture, our wise men mostly *are* discussing other things, while six of those forty-three babies die every minute; fourteen out of every hundred before they are a year old.

It is this appalling death rate and the conviction that about half (Prof. Irving Fisher of Yale says 47 per cent.) of it is unnecessary, which led the American Academy of Medicine to call a conference on the Prevention of Infant Mortality at New Haven in November, 1909, out of which grew the American Association for the Study and Prevention of Infant Mortality, which has just held its first annual meeting in Baltimore. For people do not want their children to die, and they are calling the wise men together and holding them to account.

So far the association is practically in the hands of the medical profession. As Dr. Gerstenberger, head of the Babies' Dispensary and Hospital of Cleveland, said:

"The physician has got to be back of it everywhere. There's the trained nurse on one side and the social worker on the other, but they both lead back to the doctor."

But if it is true that the physician must be back of this saving of babies, it is also true that he has to do his work indirectly, for not a doctor of them all but took the primitive platitude, "The child needs its own mother to take care of it," as a basis of work. This new Association merely supplements the accepted platitude with the comparatively untried principle that it is the nation's duty to see that the mother is able to do this. It is not a thrilling program from the sensational standpoint, because it is nothing but plain common sense. As Prof. Irving Fisher said, it is an effort to give back to the baby his birthright of pure air and pure milk. But we have swung round the circle from the old sentimental stage where it was thought that every woman just by virtue of having a child knew how to take care of it. Also, we no longer exalt the trained nurse and the kindergartner, as we did when we first learned how badly the mother was doing her work. And our idea today is that the care of her child is the mother's job after all, that it is best for society that she should personally attend to it, but that motherhood is not an unskilled profession and that a woman should be definitely educated to it.

In attempting to begin this infant mortality campaign at the beginning we run head on into a dead wall. We ask how many babies are born in the country, and not even the Census Department knows. For only about half the country have we even fairly accurate records of deaths, and while we know approximately how many eggs the hens of the country lay, the birth rate of the United States, past or present, is unknown! Therefore it has been necessary to retire from this blockade and begin further back—before the babies are born. How effective this prenatal work can be even under the most adverse circumstances is shown by an experiment of the New York Association for Improving the Condition of the Poor, which in one year reduced the mortality of new born children in the families in their charge from 17 to 4.7 per cent., simply by instructing and caring for prospective mothers. Beginning with the growing girls in crowded parts of New York

City, 32,000 of whom Dr. Josephine Baker has organized into Little Mothers' Leagues, and extending to the university students in Wisconsin and Michigan, an effort is to be made to give all women education that will prevent improper marriages—with epileptics, inebriates, insane or diseased men; and to instruct them in hygiene and baby tending.

Of course this campaign has to be, among other things, a fight against that disastrous sort of prudery which prefers death to information. There could not be a more happy contrast to the decadent sex discussions which cater to purient curiosity than the sane plea of the teachers who are members of the Association that our educational system should consider every pupil as a potential parent; that the colleges and training schools give a scientific setting for the sex problems which the teacher has to meet, and establish through teachers and schools higher ideals of parenthood; that some system of pensioning expectant and new mothers be established so that they may be properly housed and fed; and that education be directed toward the prevention of vice and drug habits, and of bad housing and the political mismanagement which allows it. It is through this education of the mothers that we may be able to cope with the problem of the midwives who at present attend 50 per cent. of the mothers of the United States. It is idle to say that women ought to employ physicians; the fact is that through long established custom women, especially from the Latin countries, prefer midwives, and it will be generations before the prejudice against medical attendance fades. In the meantime their children are born and die, and among those who live a large porportion suffer in lifelong blindness. In spite of these facts we continue to ignore the midwife and neither eliminate nor educate and supervise her.

The wind is being taken out of the sails of a good many old pirate craft which have been cruising about in the waters of our misunderstanding. American mothers are *not* unable to nurse their children. On the contrary, they are increasingly able, and as for the cry that they are unwilling, that is just a pandering to those to whom the thought of a woman sacrificing her child to her freedom gives a pleasant shudder and a delightful creepiness of the spine. The only women who as a class are unable to feed their children naturally are those who have to support them by work away from home, and this industrial separation of mother and child is the real race suicide. This can only be prevented by freeing mothers from financial anxiety, through pensions and gifts, if necessary, and of feeding them properly. What this proper feeding of nursing mothers can do is shown in France, where the establishment of free restaurants for them raised last year's birth rate 21,000 above the death rate for the first time in twenty years. The most important factor in the welfare of the child is that the mother should be able to breast-feed it. All the specialists on milk—Dr. Goler of Rochester, Mrs. Ware of Boston, Mr. Phillips of New York—insist that no matter how pure and industrious and robust a cow may be, she is no fit substitute for a mother. This seems to show that we get rather better public service from these people who are not trying to make a profit out of the child than from the commercial companies which advertise their baby foods as "as good as or better than mother's milk." Only if the mother cannot nurse her child is it society's duty to see that she is furnished with the purest milk at the lowest price and taught how to use it as a substitute, and in the last emergency it is society's duty to give motherless children the nearest possible approach to maternal care—not in institutions, but with foster mothers. But the first effort should be to make the mother competent physically and intellectually and then put it up to her.

Strange, isn't it, that while for years we've had societies to help the mothers educate their children, guilds to sew their clothes, church festivals to give them toys, playground associations to provide them amusement, committees to prevent their working, special courts to try them when obstreperous, until this year of 1910 we have had no society with the simple avowed purpose of helping the mothers to keep their children

alive? Life, to the casual mind, seems just as fundamental a need as any of these other things.

Of course the important thing about this movement for the reduction of infant mortality is not the proceedings of the Association, but just who they can reach with their propaganda, for, after all, the specialist reader of papers is no more able than the State to take the pin out of the baby's throat So far it is only possible to guess who are interested from the audiences who attended the open sessions of the first annual meeting in Baltimore.

There came the usual set of social workers with tailored hats and the wearied air of perpetually attending conferences, but who occasionally burst into the discussions with the story of some Mrs. Mulvey's baby who came trailing clouds of disaster and went leaving the whole Mulvey family forever overwhelmed.

At the other extreme from those who made emotional protests were the doctors and statisticians dashing on and off the platform to prescribe the whole science of percentages in indigestible capsules for their hearers. There were a few lovely ladies drooping upon chair arms, soft eyed and serene—the sort who to an outsider seemed able to mold social opinion in Baltimore for or against the campaign of the Association—and near them often sat hatless, beshawled working women with children in their arms. One of these I knew for the wife of a carpenter, who told me while he hammered at a frame to hold a mortality chart in the exhibit, that he was going "to send the woman over to see the stuff because he didn't want his kid to die—see?" Of all the audience I think none got more good from the meetings than some members of a Catholic sisterhood who, shut in by their crisp bands and veils, drank in every word of the proceedings. They had been foster mothers to foundlings for years, with only tradition to guide them; but since a prince of the Church, Cardinal Gibbons, had sanctioned this conference by making an invocation at the opening, they felt it was possible for them to come here and find how modern science could help them reduce the mortality of the infants in their care, which in one institution has averaged 70 per cent. in the last twenty years, while another has not raised a single child which has come to it under six weeks old in ten years. I do not think there was one word of the papers nor one chart in the exhibition which these sisters missed.

The most hopeless visitors of all were the medical students who dropped in from their classrooms in the same building. They seemed so indifferent and detached that I made a point of talking with them.

"I'm sorry I missed that talk of Dr. Henry Helmholz, of Chicago, on milk sugar," said one; "but you see it came just before one on 'The Duty of the Municipality in Relation to Infant Mortality,' and one makes such a disturbance going out."

Said another:

"Isn't that vaccine treatment for the prevention of dysentery in infants that Dr. Lucas is going to talk about something new? But why does he take part of his time from that to speak about the education of the father?"

Dr. Ira S. Wile, of New York, explained this attitude of mind in his arraignment of the medical schools.

"There is in the medical schools a total failure to grasp the underlying social conditions upon which infant mortality rests," he said. "The teaching of the relation of infant disease to social conditions does not exist. There results the constant addition to the medical profession of men ill trained and incapable of being of great service in the work of preventing infant mortality."

Dr. Wile finds that the average number of hours spent in pediatrics—the department of medical science that relates to hygiene and care of children and treatment of diseases peculiar to childhood—in the medical schools is sixty in the whole course. This is the number spent in Johns Hopkins itself out of a course of 4,100 hours, or 1.4 per cent. of the time, whereas, according to the mortality statistics of 1909, 26.8 per cent. of all the deaths in the United States are those of children under five years old. It would seem from this that the newly

graduated doctor is indeed "ill prepared" for over one-fourth of his work.

I can't give a better showing of the fine social temper of this infant mortality campaign than to quote from the paper of Mr. Wilbur C. Phillips, secretary of the New York Milk Committee.

"In the last analysis," said he, "infant mortality is to be solved, not by philanthropy, or by institutions, or by the medical profession, or by the state, but by intelligent motherhood.

"We who dream believe that some day this new spirit of service, which is replacing the desire for dividends, will abolish poverty, which, after all is said and done, is the ultimate and only cause of infant mortality. Pure milk, medical service, nursing assistance, light, air, sanitary surroundings, even knowledge itself, are purchasable commodities. With money to buy them, babies will live. Without money, babies will die!"

New York City.

Abolishing the House of Lords

BY RAYNER W. KELSEY, Ph.D.

Instructor in History at Haverford College.

"The Commons of England assembled in Parliament, finding by too long experience that the House of Lords is useless and dangerous to the people of England to be continued, have thought fit to ordain and enact, and be it ordained and enacted by this present Parliament, and by the authority of the same, that from henceforth the House of Lords in Parliament shall be and is hereby wholly abolished and taken away."

Not an ultra-Liberal of the year 1910 proposed the above bill as a fit solution for the modern constitutional problem in England. The quotation is from the beginning of the act which abolished the House of Lords in 1649. The likeness of the present crisis to the past is further emphasized by recalling that a few weeks before the above act was passed, the House of Commons formally abolished the veto power of both King and Lords by the following resolution:

"That the people are, under God, the original of all just power; that the commons of England, in parliament assembled, being chosen by and representing the people, have the supreme power in this nation; that whatsoever is enacted and declared for law by the commons in parliament assembled, hath the force of law . . . although the consent and concurrence of the King or House of Peers be not had thereunto."

The Civil War period of English history wrought out constitutionally the logical and ultimate ends of representative government. For almost exactly four centuries a representative element in the government had been growing up alongside of the hereditary King and House of Lords. The representative House had moved forward gradually. In the crisis of the Civil War it took at one bound the remaining distance to the goal of absolute supremacy.

The inevitable reaction brought back the despotic Stuarts in 1660. But Charles II and James II had learned little from their father's bitter experience, and when the people were once more supreme, after the revolution of 1688, Englishmen began to do slowly and reasonably what they had attempted before in haste and passion.

In the Civil War and Commonwealth period, therefore, can be seen in hurried drama the counterpart of the slow, toilsome steps that the English people have been taking in the two centuries that reach to the present. The King's veto was abolished *in practice* at the beginning of the Civil War, when Parliament began to issue its ordinances and enforce them without the royal signature. The cabinet system, too, was clearly forecasted when Parliament petitioned in 1641:

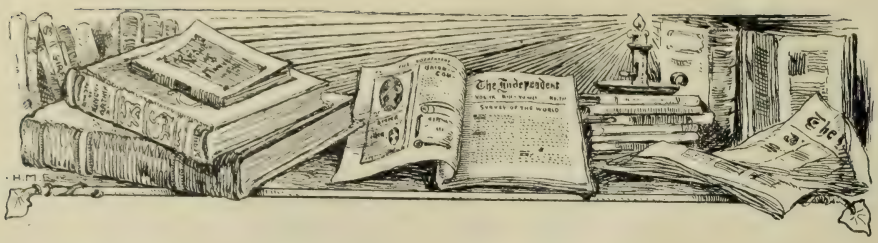
"that for the future your Majesty will vouchsafe to employ such persons in your great offices and public affairs, and to take such to be near you in places of trust, as your Parliament may have cause to confide in."

When Parliament secured the Bill of

Rights and changed the succession after the revolution of 1688, the victory over royalty seemed complete. But this time the English people went more slowly. The veto by the Crown was tacitly dropped after the reign of Anne. The cabinet system matured gradually. The parliamentary franchise was extended to the masses of the people by stages during the nineteenth century. And today the people of England have come again to the question of the Lords' veto power.

It is interesting to note that the abolition of the Upper House did not last long after 1649. Cromwell himself soon felt the need of another chamber as a check or balance, and the "Humble Petition and Advice" of 1657 provided for a "reformed" House of Lords, the members to be nominated by the Protector. When some of the army officers objected to the new arrangement Cromwell is reported to have said to them: "You are offended at a House of Lords. I tell you that unless you have some such thing you cannot be safe." Thurloe, the close friend and adviser of the Protector, wrote as follows about the same matter:

> "We judge here that this House thus constituted will bee a great security and bullwarke to the honest interest . . . and will not bee soe uncertaine as the House of Commons, which depends upon the election of the people."



It was at this same period that the Commons tried and probably well nigh succeeded in persuading the Great Protector to accept the kingship. The drift was clearly back to the forms of the old regime. The newly constituted "Other House of Parliament" had short experience of life. The members of it were summoned once under Oliver and once under his son, Richard Cromwell, but each time the Parliament was quickly dissolved. In 1660 the Stuart exile and the ancient Peers of the Realm returned to the seats of power.

Perhaps the full growth of the Cabinet system will preclude for the future a desire for a real balancing and checking chamber. Defenders of the Cabinet system often urge in its favor—as against the system in the United States—that it enables the people to make their voice heard at any time, and quickly. If this is the genius of the Cabinet government, then the logical thing to do is to abolish the House of Lords or render it entirely impotent.

Aside from the power of hereditary Lords, one peculiar remnant of the king's power in legislation may be mentioned. Queen Anne was the ultimate legislative authority when, in 1711-1712 she created enough new Peers to change the majority in the upper house. Similarly, the threat of "swamping the Lords" helped to carry the Reform Bill of 1832, and the ministry was sore taxed to secure the assent of William IV to such extreme procedure. An interesting question in the present crisis is already being propounded in some quarters: Suppose the Liberals carry the coming elections; suppose the Lords still refuse to consent to the reform proposed by the Liberals; and finally, suppose the King stoutly refuses to "swamp the Lords." This contingency will probably not occur, but the mere statement of the supposition shows that the King still holds a card. He still has this indirect, ultimate legislative power. This is a strange remnant from the days of Norman absolutism.

Thus does the political crisis in England today find its explanation in the far past. Especially the present question of reforming, limiting, or abolishing the House of Lords seems to bear further witness to the fact that nothing is new under the sun.

HAVERFORD, PA.

The Minister's Attitude Toward Divorce

BY WILLIAM E. BARTON, D.D.

[Dr. Barton, pastor of the Oak Park Congregational Church, is the author of thirty volumes of theology, history, fiction and sport.—EDITOR.]

RECENT decision by the bishops of the Episcopal Church in America places them unmistakably on record in the matter of divorce, and is sure to be followed by the declaration of reformers that, since the leaders of one great denomination have set a standard, and that the Scriptural standard, all others ought to come up and rally about it. There is sure to be a demand in the name of interdenominational comity that ministers of other churches decline to marry those thus refused. And those who do not go so far as this will demand of us that at least we refuse to marry any but the innocent party, and that we marry her or him only when the separation has been on so-called Scriptural grounds, and that we accept at their face value the grounds alleged before the court, refusing to hear private testimony to the effect that a divorce granted on the alleged ground of desertion was really granted for adultery. It begins to be a time when a man who does not intend to bind himself to do any of these things may be required to speak, or else forever after hold his peace.

Speaking for myself, and in all kindness toward those who feel bound either by these acts of ecclesiastical authority or by interdenominational courtesy, I wish to say that in future, as in the past, I shall be the custodian of my own conscience in these matters. And I presume that now and then I shall remarry some person who has been divorced. Let me, however, disclaim any intention of desiring such weddings in general, or of promising to perform all such marriages as may come to my door. And let me give what I conceive to be the reasonable attitude of a minister toward divorce.

First of all, I do not believe that the words of our Lord are to be regarded as legislation on this subject, or as covering the whole field of the problem, or as constituting an eternal and inflexible edict to which every man must conform, in the baldest and most literal sense, on peril of his immortal soul. Our Lord was asked whether a man for any and every cause might put away his wife, and he answered that marriage was not divinely intended thus to be broken for a mere whim; that from the creation the sexes had been divided in a ratio that constituted a divine approval of monogamy; and that any other system as a system spelled adultery.

He is supposed to have added, as a sort of footnote, that adultery itself, committed by a wife, might justify the husband in repudiating her. And this is proclaimed as the one and only "Scriptural ground" for divorce. Professor Terry, of the Garrett Biblical Institute at Evanston, has just issued an interesting pamphlet in which he gives ten good and learned reasons that the exceptive clause is an interpolation; and I am inclined to think he has proved his point. But his conclusion is that the marriage relation is then, by the law of Christ, indissoluble on any ground whatever.

With this conclusion I cannot agree. If Jesus said "Except for fornication" it seems to me the exceptive clause is to be regarded as merely illustrative. If he

did not say it, then the more surely are we to understand that he was merely answering in general terms the question whether a man, at his own pleasure, might put away his wife. Jesus was not a law giver. The words that He spoke were not law, but spirit and life.

It never occurred to any one to ask our Lord on what terms a wife might put away her husband; and it is a pure and reckless assumption that the answer must be the same. Yet this question, which is far more than half the question, is one on which we have no decisive word of Jesus.

In that day, and for purposes of illustration, it might have been assumed that there was one offense against the marriage relation which a man might not be required to bear in patience. But are we to assume that our Lord meant that for a single act of infidelity, the result of a passing infatuation and followed by such penitence as gave good promise of future chastity, a man might put away his wife, but that he was bound to live with her tho she proved a thief, a drunkard or a murderer? The book of Hosea would seem to answer that question. Not only so, but ministers of this present day know and cannot fail to know of homes that have survived such experiences, and been worth the saving. On the other hand, most of us know of homes where there was no act of marital infidelity where the home was broken asunder by some act at least as bad as adultery.

I once married a pure and beautiful girl to a hard-hearted and selfish man. I had known him but little, but on the wedding day I saw enough of his character to make my heart heavy for her. He was not an adulterer. I could almost say that he would have been a better man if he had been. He was too cold-blooded, too cruel, to be an adulterer. The girl went forth to a life not of shame but of continual, heartless, loveless agony. At last, when she could bear it no longer, she came home. And in process of time he got a divorce, by agreement, on the ground of her desertion of him. It was done quietly, as I think it should have been.

She lived a year or two at home, quietly, modestly. The neighbors asked few questions; they merely knew that things had not gone well. She told me all the reasons, and I said, "If you were my daughter, you should do just what you have done." Now, after a while, there came into her life another lover, a true, clean, worthy man, who knew the sad story, but loved her. And she came to me and said, "I know you do not like to marry people who have been divorced, and I will not ask it. Nor will I bring up to my parents the sad memories which would come to them if I were married at home. We will go away quietly, be married, and send our cards to our friends." I answered her, "You shall do nothing of the kind. You shall be married under your father's roof, and no one but I shall marry you. People who have confidence in me will know that I know and believe in you; and my name and your father's name shall be for your protection. Plan it thus, and not otherwise."

She did it so. People were disposed to think well of her, and asked few questions; and I have no doubt that the fact that I married her was of some value to her. And she is happy, and deserves to be.

Tell me, my friend, who stand for the letter of the law, do you think our Lord would have loved me more if I had sent her to a justice of the peace? Or is the pastoral relation established, in part, for this, that in such a trial, where an unmerited sorrow has come into the life of a pure girl, the minister may share the sorrow, and by the measure of his people's confidence in him extend confidence to her in her need of it?

Moreover, instead of holding that a minister has no right to go behind the records of the court, and must assume that desertion means desertion and nothing else, I maintain that a minister has a duty to act in the light of all his knowledge, and not that mere fragment of it which is supplied by court records.

A woman leaves her husband because he has a shameful disease, certain to contaminate her and her children if she bear them. She flees from him, as from the leper he is, and in time applies for a divorce, which, in the name of all that is sane and reasonable, she deserves. Shall she go on the stand and declare that he

has such a disease and that she also has it, having contracted it from him? Not unless some fool of a lawyer or greater fool of a minister so advises her. And if, ten years later, healed in body and partly healed in soul, she marries again, shall the minister who knows the whole horrible truth say: "The court records show that you obtained your divorce for desertion, and that is not a scriptural ground"?

Sometimes I grow exceeding weary of the talk of theorists on matters of this kind. They legislate on the basis of ideal and unreal conditions, forcing the words of Jesus into a legal rigidity which they never were intended to assume. And then these brethren arrogate to themselves a certain sanctity, as of those who in some special sense held the words of Jesus in honor. But the letter killeth, even when applied to the words of Jesus. It is the spirit that giveth life.

Do I then favor divorce? I do not. I abhor the whole miserable business. Yet twice of late have I sat with friends of mine who are judges, and have looked from the bench beside them into the eyes of suffering womanhood, and have heard things which it is unlawful to utter and terrible to hear, and when we have left the bench the judge has said to me: "Now, tell me, you who abhor divorce, which of these ten women shall I condemn to added years of misery and shame with the brutes about whom you have been hearing?" And I have said: "Divorce them all, Judge, and may the Lord have mercy on your soul!"

Try the experiment, my brother minister, and sit beside the judge for a few sessions when he is hearing divorce cases. He would like to have you there. He would be heartily glad to have you show him any reasons he has overlooked why divorces should not be granted. But when you have heard it all you will say: "Dare any man, speaking for righteousness, compel these women to bear more of these unspeakable horrors?"

"Yes," you say; "let them live apart, but let them not remarry." That would be a fine rule for heaven, where they neither marry nor are given in marriage, but most divorced people are not as the angels of God. Putting it plainly and bluntly, remarriage is better than fornication.

And not only so. Sometimes such a marriage, as nearly as we can judge, is a positive good. If a woman has made a mistake in her first marriage, has lived modestly thru her widowhood, and in time has come to a new and pure and unexpected love, dare you, speaking in the name of Christ, forbid the banns?

We live in a mightily mixt world, where things are a mile and a half from the millennium. Some things that miss the ideal by at least four rows of apple trees must be suffered for the hardness of men's hearts, and something more, alas! for woman's folly.

No one of us is competent to act as a traveling day of judgment. There is much which we must leave to the Lord. And the Lord Himself must assume His full share of the responsibility for the way in which He has mixed things up, scattering the holiest of emotions around loose in the same Pandora's box with the passions least pleasant to talk about, so that sometimes when people reach for one in this grab-bag of life they strangely pull forth the other, or maybe both at once. I am disposed to believe that the Lord knew what He was doing when He made us as He did, but I still maintain that the Lord must assume His full share of responsibility for letting a good many things happen, and indeed in mixing matters so that some of them are almost sure to happen. The recording angel is a mighty unsuccessful chaperon, and so, I venture to hope, is a somewhat charitable gossip.

Now he who reads this declaration of independence may assume that the writer thereof goeth about like a roaring lion seeking whom he may divorce, and remarrying them. On the contrary, I can count on the fingers of one hand the marriages I have performed of people known to me to have been divorced. And far from encouraging divorce, I have sometimes influenced married people to forgive and forget, to kiss and make up, and live happily ever afterward. What I am affirming is that, in a world so mixt as this, and with social and personal conditions just as they happen to be, I am not persuaded that divorce is always and everywhere inad-

visable, or that the remarriage of any and every divorced person is a sin. I entered the ministry twenty-five years ago a free man, and a free man I shall be when I leave it or die. And while I have remarried very few divorced people, and hope to marry still fewer, no council, synod or assembly has the right to tell me my duty in this matter. For I deal not with the law only, but with the Gospel, and with life. And life is very short, and the millennium is below the horizon. There are certain people who have been shamefully wronged, cheated, disillusioned and trodden upon thru no fault of their own, to whom some little reparation seems to promise itself in a second marriage. I want to be free to discover such of those cases as lie over against my own door. And even in the case of the erring I should like the privilege of not being required to say, "I also condemn thee; go and sin some more."

And if in this I err, I shall hear it from the gracious Lord Himself, who at the same time will explain to me several things which I wish I knew right now. Thank heaven, no one else has any right to condemn me for it.

Oak Park, Ill.

New Year's Eve

BY WILLIAM ADDISON HOUGHTON

Joyfully, joyfully hail the New Year!
Everything everywhere beams with good cheer!
Gone be our sorrows,
Blest be our morrows!
Hearts full of hope will have nothing of fear.

Bright gleams the holly branch, scarlet and green;
Low hangs the mistletoe: what may it mean?
Ask blushing Gladys,
Blanche—or those laddies
Watching their chances with glances so keen!

Jolly the times when the young and the old
Meet and make merry tho Winter be cold;
Young folk trip lightly,
Old folk be sprightly,
While the Old Year's dying moments are told.

Hark! bells of midnight are tolling the end!
Horns and loud whistles their choruses blend!
Happy New Year to you!
Pain ne'er come near to you!
Health, wealth and happiness kind Heaven send!

Off with the old one then, on with the new!
Suns will be brighter and hearts will be true;
Hands around every one,
Leaving out never a one!
Happy New Year—many, many!—to you!

Brunswick, Me.

Literature

Oriental Books

A HANDFUL of Oriental books lately published, including travels, letters, poems and new religions, makes a pleasing change after a course of novels, and tho none of the Orientalia is probably a "best seller," all of them are worth reading, which is more than can be said for most best sellers. To begin with a book of travels of unusual sort, *A Military Consul in Turkey*,[1] records the unique experiences of a soldier stationed in Asia Minor for three years before the Young Turkish party came into power. A military consul is an officer sent about to different stations where it is thought that his training may prove of value. He acts also as a civil consul, and in that capacity Captain Townshend seems to have learned more than he could teach, at least in regard to the wiles of traveling beggars, of whom he gives a very humorous description. The author describes in a colloquial manner a country apparently quite unknown to him until he attempted to enter it without even having a passport, whereby hangs another amusing tale; but one wonders what were the special qualifications which made useful so ignorant an officer. The triteness of some of his observations, such as that Kurds are proud and dominate the village where they live, is offset by the candor of other remarks, such as "It was disgusting to observe the way in which the Greeks never lost an opportunity of trying to get the Bulgars into trouble." The reader need expect little more from the book than the title page promises, but such as it is it makes an attractive and not uninstructive story.

A recent volume of the "Romance of the East" series[2] contains tales out of the native "Ocean of streams of tales" of the poet Somadeva, who lived in the eleventh century. The three stories selected and here translated by Prof. L. D. Barnett are, however, long enough to make quite a little volume, which, ably rendered into English, is sufficient to give the reader a just idea of the romance-literature of India.

To the same publisher are due half a dozen additions to the "Wisdom of the East" series,[3] the first book in this list being due also to the same scholar who made the translation for the "Romance of the East" series just mentioned. In *The Path of Light*, a manual of the Great Vehicle of Buddhism, Professor Barnett has given a careful but abridged translation of one of the later theological works of so-called Northern Buddhism. It is, in fact, a religious tract of the Middle Ages, perhaps about 700 A. D., and to those who think Buddhism a cold and purely logical religion, as do some of the philosophers of Neo-Buddhism, there can be no better antidote to error than a careful study of *The Path of Light*. It is, indeed, more conspicuous for fervent devotion to Buddha (now a god) and brotherly love than for clarity or logic.

Other little volumes of this excellent series are *The Burden of Isis*, containing a translation of an Egyptian lament of Isis and Nephthys, by Mr. J. T. Dennis. It consists in chants and a hymn to Osiris-Sokar, an interesting and useful contribution to comparative religion (more valuable than the author's introductory thesis as to the connection between Egypt and Mexico in prehistoric times); further, *A Lute of Jade* (selections translated by Mr. L. Cranmer-Byng from the Chinese poets, 500 B. C. to 1000 A. D.); and thirdly, a similar selection from Japanese poets, by Clara A. Walsch. The ancient poetry of China is certainly inferior to that of Japan, or the translators reflect their originals with

[1] A MILITARY CONSUL IN TURKEY. *By Captain A. F. Townshend.* Philadelphia: J. B. Lippincott Co. $3.50.

[2] THE GOLDEN TOWN AND OTHER TALES. New York: E. P. Dutton & Co. $1.

[3] WISDOM OF THE EAST SERIES. The Path of Light (60 cents), The Burden of Isis (40 cents), A Lute of Jade (60 cents), Master Singers of Japan (60 cents), The Splendour of God (60 cents), The Singing Caravan: Some Echoes of Arabian Poetry (60 cents). New York: E. P. Dutton & Co.

varying fidelity. One is tempted to quote at length from the delicate genre pictures of the Japanese lyric, but space suffices for only a specimen or two. How exquisite is the following:

"On a cold, snowy morning, somebody's child picking up,
With stiff, chilled fingers, empty cans in the street."

This is a poem entitled "Poverty," by Ransetsu. And here is one called "Existence," by Chiyo: "All things that seem to be but in one mind exist and have their being." These are complete poems, like the toy trees of this refined land, perhaps almost too refined.

Another volume of the "Wisdom" series will attract many readers, as it treats of a new religion which has been more spoken of than understand. *The Splendour of God* gives a short but sufficient account of the Babists and Bahaists, followers of the remarkable man known as the Bab (the Door), who, after stirring up a religious revolution in Persia, was executed in 1850. The introduction by Mr. Eric Hammond sketches the three phases thru which this popular new religion has passed, first under the Bab; then under Mirza Hassein Ali, who, an aristocrat of aristocrats, attached himself to the Babis; and lastly, under Abbas Effendi. It is a religion which appeals to the poor in calling men of every creed to unity and in emphasizing the brotherhood of man—Christless Christianity.

A book of a very different class completes this group of Orientalia, a volume of the Columbia Indo-Iranian series, published by the Columbia University Press. It is called *Iti-Vuttaka*,[4] that is the logia or *ipse dixit* of Buddha, translated (not always with exactitude), by Mr. Justin Hartley Moore. The style of these sayings of Buddha is simple and the teaching is in accord with the style. "He that speaketh falsehood goeth to perdition, and he that, having done, saith, 'I have not done,' these two are equal after death, for in the other world they become men of evil deeds." etc. An introduction discusses the subject matter, style, etc., in a scholarly way.

The Oxford Dictionary

The *Oxford Dictionary** emphasizes in its title its construction "on historical principles." The work has been enormous, long and expensive; but it has been carried on in "the still air of delightful studies," and the supposed needs or prejudices of the public have been little regarded, except in the matter of spelling. Here it has been as rigidly medieval as the most popular American dictionary. But in the related matter of the notation of pronunciation, the Oxford editors have been free, and they have adopted a phonetic representation which is far in advance of American customs. They have made the structure, as well as the basis, historic; and the pedagogic purpose is hardly perceptible, except that fundamental pedagogic purpose which appears in the accurate and full statement of facts.

This is the supreme excellence of the *Oxford English Dictionary*. It is a thesaurus of the facts of the English language. The facts are stated with accuracy, with precision, with fulness. They are printed with scientific clearness and artistic neatness. The quotations are printed in fine type, but the type is sharp and clear, and one sees that the editors have achieved the just compromise of economy of space with fulness of quotation. There are other dictionaries as well, or even better, printed, but they lose in fulness what they gain in comeliness of print.

It is the quotations of the Oxford Dictionary that constitute its greatest interest and value. In this respect it is without a rival. Cut out all the other matter, and the quotations alone would be worth all the work that has been bestowed upon the whole. And yet it would be unfair, even in a brief notice, to omit mention of its definitions. They are almost uniformly sound and good. In the elaborate analyses of special words, like "make," "put," "rise," the definitions show an ability to split hairs that no American lexicographer can sur-

*The Oxford English Dictionary. A new English dictionary on historical principles. Edited by Sir James A. H. Murray, with the assistance of many scholars and men of science. Vols. I to VIII, A to R, $13 each. Oxford: Clarendon Press. New York: Henry Frowde.

pass; and yet the next editor will, no doubt, divide the hairs nearer to the southwest side. Here all lexicographers fluctuate; for they are not recording separate facts, but are suggesting the phases of the same complex fact.

But the *Oxford Dictionary* is too great to be right in all details. There are many errors and defects. Many words are left without quotations. Many are left without etymologies—a good fault, which Professor Wright judiciously imitated in his admirable "English Dialect Dictionary." An etymology is a history; and the writing of a history when it is not known, tho an ancient and an interesting custom, is most commendable in the omission.

The *Oxford Dictionary* not seldom gets the wrong date. And oddly enough, this is often the case with the dates of Shakespeare's plays, which are often quoted as of two or more dates, according to the guess of the successive Shakespeare editors as to the time of composition, of presentation, or of printing; and the plays are often quoted from the 1623 folio with the date of the earlier print or of supposed earlier mention or presentation.

There are errors, too, in the names of the works quoted. Hawthorne's "Marble Faun" is cited more than once as the "Marble Farm"—an error due, perhaps, to the fact that this novel was published in England under the title of "Transformation." A curious slip appears in the etymology of "Elpasolite," which is said to come from *"Elpaso Cocolo."* The wholesale abbreviation of titles of works is responsible for "Artificial Hands" where "Artificial Handsomeness" is meant. But serious errors are few. One appears under *great*, in an early quotation where the words "Kyng Alisaunder the gret" appear as the first instance of the epithet "the Great" attached to a man's name. But a reference to the poem quoted shows that the words mean "King Alexander thee greeteth."

The *Oxford Dictionary* often fails to give the earliest accessible quotation for a word. Thus, under "brown paper" the phrase "vinegar and brown paper" is cited from *"a.* 1848 Marryat, R. Reefer, v." And yet who could forget the classical instance, Mr. Squeers and his vinegar and brown paper, in "Nicholas Nickleby," 1839, ch. 34, where the phrase occurs twice? The first quotation it gives for *gerrymander* is dated so late as 1868. The earliest dates given for *hello* are 1883 and 1888.

The dictionary marks all senses of "naughtily" obsolete. It ignores "négligé" shirts (perhaps that is proper). It says that the suffix—*ese* is "adapted from OF.—eis (mod. F.—*ois*,—ese), from Com. Romanic—*ese*," etc.; but the Eng. —*ese* is in most cases adapted from the Italian—*ese* or Spanish—*es*. The dictionary does not contain an article on *"-ate"* in *"magnate," "primate,"* etc.

The dictionary uses "hoop-skirt" twice in the definition of *"hoop,* sb. 6"; but that compound is not entered either as a main or as a subordinate entry; and there is no quotation. We may look for "hobble-skirt" in the coming supplement (to which it ought to be strictly confined).

There are numerous indications that the editors have not been able to keep track of American usage. American authors are, however, frequently quoted, and "American slang" is duly honored—too much, indeed, as all "slang" or other infelicitous diction found in American newspapers, or credited to us by British travelers or compilers, is pretty certain to be classed in this dictionary as "American slang." A vocabulary composed of the locutions classed in this dictionary as "American slang" would be full of information to American readers. But the editors are after all only recording what they find in print; and happily America has not yet enriched the world with anything like an accurate vocabulary of American slang. In saying which, we remember various compilations associated with well known names.

We mention a few instances of unwariness in regard to American matters The dictionary allows it as possible that "bush-whacker" may be allied to Dutch "bosch-wachter," forest-keeper. It gives "fox" as a slang use in "United States colleges" ("Yale"), equivalent to German "fuchs," a freshman. The citation shows that the writer is merely translating the German word. It pronounces "calaboose" as if it were spelled "calabooze." It does not give the exclamation *haw* as addressed to horses. The

American use of *janitor,* is ignored—as if the evil could be cured by not mentioning it. There is no notice of "gospel tent."

And so on. The catalog of omissions of words in known use at the time of printing could be stretched to great length, and yet this is a part of the great game; and omission is the least sin that an editor can commit.

Here is a great British dictionary of the English language. It would be a great thing for American history and American literature if scholarship and money should unite to produce an American dictionary, also upon an historical basis, and confined to American authors; not as a rival to the Oxford Dictionary, but as an additional contribution to the lexicographical wealth of the world, and of the English language as it flourishes on the American Continent.

We congratulate Sir James Murray, Dr. Bradley and Mr. Craigie, and their learned assistants, upon their great international achievement. To Sir James Murray especially it must be an unspeakable satisfaction to reflect that he has brought so near to completion the greatest single work of learning ever produced by any group of men under the guidance of one man—a work which in accuracy, in usefulness, in interest, in range, and in permanent value, surpasses every other production of modern scholarship.

Types from City Streets. By Hutchins Hapgood. New York: Funk & Wagnalls Co. $1.50.

Mr. Hapgood believes that "the best things are found in public places, that privacy is less attractive than publicity, and that the deepest pleasures are almost universally attainable." He assembles a great number of brief sketches of persons belonging to what is commonly called "low life." He pictures the Tammany leader, the tough, the shop girl of several varieties and the prize-fighter. The Bowery, or "de lane," as it is called by some of its denizens, is his main province, and he draws freely upon its many types for his material. Yet he also makes excursions into other fields, the newspaper world of Park Row not escaping him.

Erewhon, or Over the Range. By Samuel Butler. New York: E. P. Dutton & Co. 1910. $1.25.

Erewhon Revisited Twenty Years Later. By Samuel Butler. New York: E. P. Dutton & Co. 1910. $1.25.

The Way of All Flesh. By Samuel Butler. New York: E. P. Dutton & Co. 1910. $1.50.

The world has quite enough sin and sorrow in it to make a basis for a pessimistic novel of almost any description, and many there be of late years who are willing to try a hand at the work. Heredity is a favorite theme, the latest as it was the earliest. "In Adam's fall we sinned all," was pessimistic enough, many think, but the later form, where heredity is all in all, with little hope in environment, less in signing the pledge, and none at all in outside interference, is deeper in the depths than the other, and Mr. Samuel Butler, who died in 1902, but began his literary labors thirty years earlier, goes very near the lowest depths in the three books under review "Erewhon" was published during the author's lifetime. "Erewhon Revisited" and "The Way of All Flesh"—the latter written between the years 1872 and 1884—were still waiting for a publisher at the time of the author's death. In the three books we have the theory of the "Fall" attacked, that of a hopeful heredity, as illustrated by Darwin, gently set aside as not of much importance, and the "no-good" theory illustrated in two books, wherein something other than an "Altruria" is set up and reported on at intervals of twenty or thirty years. The book most recently come to light—"The Way of All Flesh"—boldly delineates the life of the son of his ancestors, as he was left at birth, as he was twisted in his boy-life by twisted parents and teachers, as he was held by undue interference in his young manhood, and finally as he made himself in new surroundings which also came upon him from the twisted lives of others. One who works in heredity, works with the moles, and the moles may lead him where they will. It is unfortunate that they so seldom come to the surface of life as shone upon by the sun. The world loves the man who finds sin, but finds it corrigible. As to the other some who find it quite incorrigible, the world can only turn them

over to the moles. They do not belong to the body of the "good physicians."

A Land of Romance. By Jean Lang. New York: Dodge Publishing Co. $2.50.

Lovers of Scottish song and story, border tales and history, will here find a feast. The author fairly steeps her readers in the glory of a stirring and romantic past, charmingly mingling stories with known record and constantly bringing in bits of verse from the vast literature of poetry associated with the Cheviots. From the time the building of the Roman Wall began, thru the troubled times of the Covenanters and the period of the ill-fated Stuarts and Bonnie Prince Charlie down to Sir Walter Scott, who dwelt and wrote in this same borderland, we have a story that makes our blood warm and calls up every last drop of sentiment and feeling in us. A busy bit of country has that borderland been in the past. What with its national plotters and its fighting religionists, its gypsies and its smugglers, it has been the scene of countless adventures which even Sir Walter himself, for all his marvelous latter-day activity in his many, many books, never exploited to the end. Miss Lang's task, therefore, must largely have been one of elimination. The wealth of material at her command was a veritable treasure-trove. That she has compiled carefully and selected happily is to her credit, and in saying this we are also giving high praise, as the selected best from so much that is good can only be excellent. The familiar but ever fascinating story of Queen Mary is retold with charm and vigor and a pathos that dims the eyes. After the fair head of Bonnie Mary fell beneath the executioner's axe and Scotland was left kingless, there followed many years when the clash of arms was constant thruout the debatable lands. Border feuds were frequent and furious, and the fighting spirit of a sturdy people was kept to its highest pitch. This stormy time has given Miss Lang much that makes interesting reading for this and a long time to come. To those familiar with the border, the Cheviots and the Eildons, the hills of Ettrick and of Yarrow, *A Land of Romance* will be welcomed, for its pages tug at the heartstrings. Those who have never known this land of glorious deed, of strife and stress, of beauty and romance, will want to after reading this book. Six exquisite plates in photogravure, from paintings by Tom Scott, R. S. A.—the greatest of border painters—materially add to the beauty and value of the book.

Literary Notes

....Tales told in verse by Otto von Sattler make up the little paper-bound volume entitled *Stille und Sturm;* issued thru Lemcke & Buechner as New York agents.

....From Balzac to Washington Gladden, and beyond, is the range of H. Wellington Wood's *Golden Words Fitly Spoken,* an anthology of aphorisms printed in two colors by the Lippincott Company. ($1.50 net.)

....Clinton Scollard's new novel has for its title *The Vicar of the Marches* (Boston: Sherman, French. $1.20). Here are lively adventures with an Italian background, reflecting conflict of Guelph and Ghibeline.

....Mr. Nicholas Vachel Lindsay, Ruskin revivalist, of Springfield, Ill., carries his Ruskinian aversion to the machine so far as to get out a *Village Magazine* lettered and illustrated entirely by his own right hand.

....*The Rhyming Ring* is the title of a book of verses by Louise Ayres Garnett, most attractively published by the Rand McNally Company (Chicago), with page decorations and colored pictures by Hope Dunlap. ($1.25.)

....*The Recall of Love: A Message of Hope* is the title of a slim volume by Ralph Connor, published in two editions (35 and 50 cents respectively) by the G. H. Doran Co., and stated to be the author's only book of the year. The tract is fully illustrated in colors.

....From the Sunday School Times Company we receive Sir William M. Ramsay's *Pictures of the Apostolic Church* ($1.50). Fifty of the fifty-two pictures were drawn for the *Sunday School Times* in comment upon the International Lessons for 1909.

....Not to be confused with catchpenny books about Africa issued for reasons of "timeliness," is Sir Frederick Treves's *Uganda for a Holiday,* a well illustrated and beautifully printed narrative by one who knows. (Dutton. $2.50.)

....Will Irwin is known to the public chiefly as a humorist of California origin. Today, as the author of *The Readjustment,* a story of old San Francisco (old: *i. e.,* the San Francisco of ante-earthquake times), he bids for reputation as a "legitimate" novelist (Huebsch. $1.20).

....In these days of traveling more and more outside the beaten track, Michael Myers Shoemaker's *Islam Lands,* an account of Nubia, the Sudan, Tunisia and Algeria, with its 44 excellent illustrations, is sure to find a ready welcome and to fill a real gap. (Putnam's. $2.50.)

....A new *Introduction to Political Science* is published by Ginn ($2) in the study by Raymond Garfield Gettell, of Trinity College. The subject is approached from three standpoints: The nature of the State, the organization of government, and the influence of the State; and the resultant volume is especially intended for use as a text in elementary college classes.

....Friends of the late Charles Sprague Smith, who founded the People's Institute of New York and who was perhaps the most devoted "Worker with the People" up to the time of his death last year, will be glad to learn that a Brotherhood Calendar has been prepared containing selections from his writings in prose and verse. The price is 50 cents. Address M. P. Williams, 318 East Fifteenth Street, New York City.

....A most attractively got-up edition of the Erckmann-Chatrian *Conscript* is a seasonable offering of the Macmillan Co. ($1.50). The text is based on the translation by Hotten, but is corrected by an early French edition for inaccuracies The American boy may or may not have enjoyed this tale of Napoleonic campaigning, reading it in his French class; there is every reason for his enjoying the English edition.

....The volume called *The Mastersinger* by its maker, Dr. Frank R. Rix, and issued thru the American Book Company at sixty-five cents, is a collection of choruses and part songs arranged for the classroom and for assemblies, large and small. Including compositions of Mendelssohn, Handel, Beethoven, Mozart, Wagner, Gounod and Verdi, it also lets down the bars to modernists like Richard Strauss, Elgar, Raff, Kjerulf and Mascagni.

....The two most recent editions to the Memorial Edition of George Meredith (Scribner's; $2) include, respectively, *Farina, General Ople, The Tale of Chloe,* and *The House on the Beach, The Gentleman of Fifty, The Sentimentalists.* The last named is the unfinished comedy acted in London last season, and was apparently written forty or more years ago. There has been no completing of the fragment, whose parts have, however, been assembled by J. M. Barrie.

....In a translation from the old French by Eugene Mason, Dutton publishes *Aucassin and Nicolette,* with colored illustrations by Maxwell Parrish. These add to the charm of an already delightful romance. Yet the book is inexpensive in price—eighty cents net. A volume to be mentioned with the above is Isabel Butler's *Tales from the Old French,* beautifully yet most simply made into a book by the Houghton, Mifflin Co. ($1.25).

....*Sugar and Spice and All That's Nice* is the book to get for the children in exchange for the impossible volume contributed by the Joneses, or for the duplicate copy of Uncle Jim's offering. It is a book of nursery rhymes and verses selected by Mary Wilder Tileston, editor of "The Child's Harvest of Verse," and is published in a new enlarged edition, fully illustrated, by Little, Brown & Co. ($1.50).

....The Rev. Isaac Taylor's *Words and Places, or Etymological Illustrations of History, Ethnology, and Geography* was first published in 1864. The second edition speedily followed, with the addition of fresh material and the correction of errors. Now we have a brand-new and handsome edition, prepared by the care of Mr. A. Smythe Palmer, and issued by E. P. Dutton & Co ($1.50 net). This work was a pioneer effort, and that it still has a considerable value and interest commensurate, in spite of the eternal flux, speaks volumes.

....When Charles Francis Adams wrote in 1890 a biography of Richard Henry Dana, Jr., it was planned that Richard Henry Dana, Third, should later publish as a supplement his father's speeches. These are now issued, with an introductory sketch and notes, by the Houghton, Mifflin Co ($3), forming a handsome volume, richly illustrated. The author of "Two Years Before the Mast" appears here as the interviewer of English statesmen, and as orator on anti-slavery, the judiciary, the Halifax Fishery Commission and other vital themes.

....The French Academy has received from the Comte de Lovenjoul a priceless collection of letters written by Balzac. The story of his acquisition of these letters is as follows: One day he saw a cobbler light his pipe with a twisted letter. The ink on the paper thereof was faded, but the handwriting interested the collector. He had recognized the great novelist's script, and straightway bought the letter for a napoleon. The cobbler then informed the Count that he had bought a barrel of these letters as waste paper, which he used for wrapping shoes when he was not lighting his pipe. And that is the history of the Academy's Balzac Letters, *fonds Lovenjoul.*

....The fourth edition of *The Principles of International Law* has just come from the press of D. C. Heath & Co. of Boston, revised and rewritten. ($3.) Since the first edition was published fifteen years ago, there has taken place three world wars, the two Hague Conferences and the Naval Conference of London; Japan has emerged as a world Power, the Pan-American movement has assumed a definite shape, and the advanced Central American Court of Justice has been established. Prof. T. J. Lawrence deals with the new problems brought out by these events, as well as with all the older questions. It is an arsenal of information for the legal student and peace advocate, written by a publicist of standing in the field of international law.

....At the recent session of the American Academy, one of the most interesting and informal papers read was that by John Bigelow: "A Retrospect." It had to do with a breakfast which this Grand Old Man of American diplomacy had, forty-seven years since, with the elder Dumas, at the novelist's cottage. Mr. Bigelow was able to repeat the menu, which was Gargantuan: or Balzacian, if one prefers nineteenth century allusions. Besides carp, there was roast mutton; the latter served with a sauce that filled with fury the author of the

"Musketeers." "I can't leave the kitchen one moment," he said, "but something goes wrong." When they finally rose from table (grapes and pears constituted the final course); champagne, claret and an excellent burgundy had gone before), "Dumas went to sleep for an hour. . . . It made me feel as if I were the chief guest at one of La Fontaine's feasts of the animals."

....Edmund Clarence Stedman was critic as well as poet (and banker), and the fact is brought out in more than one chapter of the newly issued "autobiographic biography" (Moffat, Yard. $7.50). When John Lane, the London publisher, visited America ten years ago, he sang to Stedman the praises of a new poet, Stephen Phillips, whose early works he had recently brought out. He particularly praised the originality of the themes chosen by Mr. Phillips. There was the tale of Paolo and Francesca, he said, that no other modern had thought of making into a tragedy. Straightway, Mr. Stedman turned to his shelves and took down the work of George H. Boker, one of the American poets forgotten today even by literary historians. Mr. Lane next ventured that at least no other poet had hit upon such a subect as "Christ in Hades." Thereupon Mr. Stedman again turned to his shelves, and took down a volume of poetry with that identical title, being the work of William Wilberforce Lord, who lately died at almost ninety years of age. Mr. Stedman held Lord to be the "most Miltonic" of American poets.

....Several years ago a number of Protestant scholars united in the publication of *Prachwerk* entitled *Der Protestantismus am Ende des neunzehnten Jahrhunderts in Wort und Bild*, the two volumes of which, each costing 30 marks and published by the Wartburg Verlag, gives an excellent and complete account of the Protestant Church over the whole globe. The Catholic Leo Gesellschaft of Vienna has issued in two volumes a similar magnificent work, costing 65 marks, covering the whole Catholic Church and its organization and activity. The general title is *Die Katholische Kirche; unserer Zeit und ihre Diener*. The first volume bears the special title *Rom, der Papst, die Regierung und die Verwaltung der Kirche;* the second *Die Katholische Kirche auf dem Erdenrund*, dealing particularly with the organization work, membership, etc., of the Church in all the five parts of the earth. The first volume is the work of Prof. Paul Maria Baumgarten; the second the joint production of the same author and of Heinrich Swoboda. The work is almost extravagantly illustrated, in colored plates and otherwise, and issued by the Munich Allgemeine Verlagsantalt.

....William James was a name to conjure with it France during his lifetime; Paris always regretted the fact that he never went to the Sorbonne as a lecturer on the Hyde foundation: as Professors Van Dyke and Bliss Perry, to recall only two names, have done. At the annual public meeting of the Academy of Moral and Political Sciences, recently held in Paris, Emile Boutroux, the veteran philosopher, paid a high tribute to James, who was a member of the Academy. "William James was one of the greatest and most influential masters of contemporary psychology," he said; adding that he made of the human soul "a thing of the laboratory." Also, "he gave back to conscience her just rights." Finally, he restored introspective psychology—"and, examined in this way, the soul appeared infinitely vaster and richer than laboratory designs showed it. James extolled religion because he placed life above abstract conceptions and theories. William James did not simply put back psychology into the soul, he put back philosophy into man. He dared to say that common sense, life, human interest, our desires, efforts, passions, joys, aspirations, beliefs, have a purport even for a mind fed on modern science, and that a philosopher has the right to say with the Latin poet 'I am a man, and judge nothing human foreign to me.'"

Pebbles

We have a longing to live in Germany. Joe Schott says a man is just as good as a woman in Germany.—*Atchison Globe.*

Gayly she joined in the mazy dance,
And wofully to her hurt.
Bitterly she regretted the step—
For it burst her hobble skirt!
—*Chicago Tribune.*

Litigant—Your fee is outrageous. Why, it's more than three-fourths of what I recovered.

Lawyer—I furnished the skill and the legal learning for your case.

Litigant—But I furnished the case.

Lawyer—Oh, anybody can fall down a coal hole.—*Boston Transcript.*

"Do you believe in making a genuflection before you enter your pew?" asked Mrs. Oldcastle.

"Mercy, no!" replied her hostess, as she flecked a bit of dust from the $2,000 grand piano. "If I have genuflections to make about people, I always do it outside of church."—*Chicago Record-Herald.*

FAVORITE FICTION.

"Your Face Is Familiar and I Can Almost Call Your Name."

"I Hate the Taste of the Stuff, but My Doctor Says I Need a Tonic."

"Why, Papa, My Belt Isn't Tight! See How Loosely It Fits!"

"Your Most Obedient Servant, J. Brown."

"Yes, Madam, This Is the Kind of Cigars Your Husband Likes Best."

"All Wool Garments Our Specialty."

"We, the Representatives of the People of This District, in Convention Assembled."

"I Play Bridge Whist Occasionally, but Merely for Amusement."

"We Expect to Prove an Alibi, Your Honor, by a Dozen Reputable Witnesses."—*Chicago Tribune.*

The Independent

Entered at New York Post Office as Second Class Matter
Publisher, Clarence W. Bowen
130 Fulton Street - - - New York

A WEEKLY MAGAZINE. FOUNDED IN 1848.

One Year, $3.00. Single Copies, 10 Cents.

Single copies over six months old 25 cents. Postage to any foreign country in the Universal Postal Union, $1.75 a year extra; to Canada, $1.00 extra. Subscriptions will be received for other periodicals, and clubbing rates will be granted as low as offered by any responsible agency.

Order for the change of an address should be received two weeks before change is to take effect. The old as well as the new address should be given.

For the convenience of our subscribers we will send on receipt of publisher's price any book reviewed or advertised in our columns.

Volumes of The Independent are completed at the end of December and June, and a full index is furnished free on application. Neat binders holding in book form thirteen current issues will be furnished for 45 cents.

If the numbers comprising any semi-annual volume are returned to us prepaid in good condition with $1.50 we will bind the volume in handsome and substantial half buckram and deliver it free anywhere in the United States.

We are always glad to receive articles for examination, but writers desiring the return of their manuscripts, if not accepted, should send a stamped and addressed envelope. We cannot, however, even so, hold ourselves responsible for their return. Authors should preserve a copy.

Advertising rates will be furnished on application.

An Eventful Year

A HALF year of this present yeasty world is more than all the cycles of Cathay. And the fermentation is not local; it is everywhere, in both hemispheres and in all the continents. Old, slumbrous nations have awakened from their poppied sleep and are dancing as lively as the republics that have boasted that they were leading the march of civilization and freedom. The United States finds itself in danger of lagging behind what were thought to be tortoises, but are racing like hares.

How is it to be accounted for that so suddenly, after centuries, Argentina's civilization and progress are proving equal to ours, if not superior? Where is the boasted Anglo-Saxon superiority over all other races? What has waked up the Spanish people, who have this year declared for religious liberty and the end of clerical domination? How are we to explain the startling creation of a republic in Portugal? It is an event of tremendous importance for Europe and particularly for Spain; and again it declares the deliverance of the people from intolerable oppression and the rule of a Church allied to feudalism. While England and France are moving steadily in the maintenance and development of the rights of the people, we find Russia and Turkey not going backward, but forward, developing constitutional government in steady and sure movement, and with no crisis. Even Persia, poor Persia, has suffered no backward step since it attempted to create a parliament, and the demand of Great Britain that she police her roads means help rather than hindrance. There, as in Turkey, we find that the Koran can be interpreted to mean equal rights and more than toleration, even for infidels. What extraordinary spirit is this that is abroad in the world?

And this new, meddlesome spirit that is overturning ancient rules and conventions shows itself not only in Christian lands, Protestant, Catholic and Greek, and in Islam also, but in the lands we have thought pagan. We are beginning to think of ours as not merely a Christian civilization, but as adaptable for Buddhists and Confucianists and Hindus as well. Japan had taught us this, and now this very year China is giving a marvelous lesson of the same sort. Four years ago it was decided that a parliament and a constitution would be given by the Throne to China in ten years, but the awakened people would not wait ten years; but that was too long—think of that, ten years too long for Cathay! And the upper house, or Senate, has been convened and shows its power and refuses to submit to the councillors of the Emperor, and demands that they shall be removed when they fail to obey the orders that come from the people. This is incredible, or would have been a year ago.

Then turn again far afield to South Africa, and to a Christian land only a few years ago engaged in a bitter war. It is a wonder of wonders that only a few weeks ago the foes, British and Boer, met in perfect amity in the new Parliament, and the beaten General Botha sat as Premier, while Dr. Jameson, the head of the invasion in the Transvaal, was leader of the Opposition. It would seem as if meek-eyed Peace, clad in her olive green, had come down softly sliding to dwell with men. And is it not true, when the nations have learned the

way of arbitration in place of war, even if they have not yet learned its corollary, and are still building armies and navies for the scrap heap?

But again, we ask, what is the explanation of all this, to which we might add not a little evidence that in our own country there is a new fight against all social and political evil and wrong, and a new desire to advance mercy and justice and the equal rights of men? What is it but the rapid unification of humanity, by intercommunication, by the opening of eyes long blinded, thus to see the better ways of other peoples, added to the new passion to give to other peoples the privileges and rights which we enjoy? That is the meaning of all the growing sense of obligation, whether it possesses knowledge or wealth, to use them for all the world in the spirit of benevolence and sacrifice. Our religion teaches us this and shows its faith in thousands of missionaries; our altruism teaches it in works of mercy for the poor and ignorant; even our governments learn that selfishness is not the end of patriotism.

It has been a great year, one of extraordinary development. It is good to live and have part in such a year. To observe it is not enough; one must help it along, each in his own way. We must help it in our own land, in the Philippines and Porto Rico, and in all the world, and all the world is sure to help.

And the next year will move along yet faster; for the forces behind the movement are stronger every year, and they shall prevail, until Truth and Justice shall come down to men orbed in a rainbow.

The University of Chicago and Its Founder

In 1885 a little group of Baptist ministers met under most discouraging circumstances. The University of Chicago had failed. For twenty-eight years its feeble existence had been maintained at great trouble and self-sacrifice, and now its property was seized by an insurance company under foreclosure proceedings. The University was homeless and penniless.

Should they give up or try again? They decided to try again. One of them, Dr. Northrup, was rash enough to express the hope that they might raise $10,000 a year for a new University of Chicago and urged them to "try to secure an endowment fund of $250,000." Another, Dr. Goodspeed, showed the true Western spirit of local confidence when he said:

> "Chicago is growing southerly, and if we could secure a site ten miles south of the present limits, we should in a few years have a valuable property; for in ten years there will be over a quarter of a million people south of the present limits. Get a new charter and a new board of trustees. The time for us to act is now."

Last week the new University of Chicago counted up its contributions and announced that they amounted to $41,580,758. It occupies a very valuable site on both sides of the Midway Plaisance between the two great parks. It has become one of the foremost universities of the country, both in numbers and scholarship. It has been a leader in science, letters, sociology and theology. It has educated thousands of young people of both sexes and has extended its influence far beyond its walls.

It is a great source of satisfaction to us when we look back thru our files and see that we have at a critical moment encouraged some worthy movement. That is why we take the liberty of quoting a few paragraphs from an editorial published in The Independent January 17, 1889, when the question of the location of the proposed university was in the balance:

> "An educational project of the first magnitude, or, to speak strictly within bounds, one that certainly promises to be such, is on foot for Chicago. This is nothing less than the founding in that city of a university truly worthy of the name, and, what is more, truly worthy of the great mid-continental metropolis itself and of its yet unmeasured future.
>
> "As we wish only well to this generous undertaking, we must be careful to say nothing here that can hereafter prove to have been unwisely premature. It cannot, however, be amiss at this point of time to say that very large wealth—wealth acquired and held and administered by the highest business sagacity, and, as we are led to believe, wealth ready to take the true path, once accurately ascertained, of the noblest, the most magnificent liberality, has already virtually committed itself to the work thus indicated; that self-committal being conditioned solely on favorable affirmative answer rendered to the question, Is this a real

opportunity, and is the opportunity ripe? Our own disinterested and loyal purpose is herewith to do what we can to make the favorable affirmative answer overpoweringly clear and decisive.

"No thinking person can for a moment doubt that, after you have left the Atlantic slope, Chicago is the one point you find of first strategic importance for Christian education within the bounds of our country. Let but a broad and firm foundation once be laid, and the spirit and pride of the city may safely be trusted to see to it that the superstructure reared shall not be second to any institution of learning in America. It is, however, fairly due to the towering pre-eminence of Chicago as a great receiving and distributing emporium of ideas and of influences, both moral and intellectual, as well as of material products and wares of all sorts, for the whole country—it is, we say, due to this relative national position of Chicago that the foundation of her university should be laid with treasure contributed outside of her own limits.

"Whatever may turn out to be the final fortune of this noble undertaking, THE INDEPENDENT promises to itself always to be glad that it did what it could to make it successful."

It may be permissible to say now that this editorial was based upon information furnished us by one who afterward became a leading professor in the new institution and we are credibly informed that the editorial was not without influence in securing the university for Chicago. Our anticipations have been far exceeded and the objection against which we argued, that Eastern money would check Western liberality, has proved illusory. Altho the gifts from Mr. Rockefeller to the University have been of unprecedented magnitude, amounting altogether to $34,426,049, they have been given in such a way as to stimulate the people of Chicago to equal generosity, indeed, much greater generosity if we consider relative means. The gifts to the University from other sources amount to $7,154,709, or more than a fifth of Mr Rockefeller's total. Of these gifts thirty-nine persons gave more than $10,000 each, and nearly $600,000 has been contributed in smaller amounts.

We recall a little joke which Mr. Rockefeller played upon the University of Chicago on the occasion of its fifth anniversary, because it illustrates his way of giving. It was the first time he had visited the University and the big circus tent in which the convocation exercises were held was full of eager spectators. After a series of academic addresses to the Founder from representatives of students and faculty, Mr. Rockefeller came forward to the desk, a not unimpressive figure in his plain business suit against the gorgeous background of faculty robes. After a few remarks about his gratification at his investments in the University he announced, "But I want to say that this is only half of it."

The students went wild at this, manifestly expecting him to plank down upon the desk a sum equal to his previous benefactions. It was some minutes before the college yells had died down sufficiently to let the speaker go on, which he did by adding in a nonchalant tone:

"No, it is not half of it. I have done my part to make this a great university. Now you must do yours."

Somewhat more formally he now says much the same thing in the letter announcing that his latest gift of $10,000,000 is to be his last and that he will withdraw from all connection with the University. He has given it a good start. No university has had a better. It is in good hands and it is pervaded by a good spirit. There is every reason for believing that it will prosper.

Unfortunate Delays

ARGUMENTS in the railroad freight rate cases will be made next month before the Interstate Commerce Commission, beginning on the 9th. They will consume about two weeks, and the Commission expects, as it says in its recent annual report, to announce its decision on or before February 1. Chairman Knapp is going to the Court of Commerce, and Commissioner Cockrell is about to retire. Dispatches from Washington say that the two new commissioners, Mr. Meyer and Mr. McChord, will take their seats at the beginning of the year and participate in the Commission's proceedings with respect to the rate cases.

It was at the beginning of May that tariffs showing the proposed increase of freight charges were filed at Washington. Eight months have passed, and still the railroad companies do not know whether any part of the increase will be allowed. At least one more month will

elapse before the decision is made known. This long delay should have been avoided.

There are signs of reaction in trade and the industries. The upward movement which followed the panic, and which restored a good measure of prosperity in the second half of 1909, has been checked. A general decline is shown in the securities market for 1910. In many instances the loss in share values exceeds the gain made last year. If we turn to the iron and steel industry, whose condition is usually a barometer of trade, we see that the output of pig iron was maintained at a high level during the first four months of the year, and that it has since declined steadily, until the product in November was only 1,909,780 tons, against 2,608,605 tons in January. The steel business is in poor condition. Many steel mill employees are out of work, and the great Steel Corporation's unfilled orders on hand have fallen from 5,929,021 tons at the beginning of the year to 2,780,413 tons at the end of November. Political events, to whose disturbing or restraining influence we give all due weight, have affected the condition of business. It has also been affected by this dragging controversy over railroad freight rates, and by the long delay in reaching a final decision as to the pending cases which relate to the Standard Oil Trust, the Tobacco Trust, and the scope of the Sherman act.

The admitted purpose of the railroad companies was by an increase of income to meet the additional expenditures due to the increase of wages. They have been paying the higher wages since about July 1. Not being able to ascertain whether the desired increase of rates would be granted, they have pared down their expenditures for rails, cars, and other material. Our railway system, having two-fifths of the world's mileage, is the largest customer of our iron and steel industry. That industry suffers by reason of the restriction, and other industries are affected to some extent by its condition. We are not now expressing an opinion as to the merits of the freight rate controversy. But it will be recalled that the greater part of the wage increase, which is said to exceed $100,000,000 a year, was made upon the basis of an arbitration award procured as the result of mediation by officers of the Federal Government, under the provisions of the Erdman act, and that one of these officers was the chairman of the Interstate Commerce Commission. For this reason, and also on account of the general injurious effect of delay, the railroad companies were entitled to a reasonably prompt decision as to the higher freight charges. A reasonably prompt decision they have not had, and the whole country has lost something because it was not given to them.

We know how great is the Commission's burden of work. It has too much to do. Either it should be enlarged, or its labors should be decreased. Still, if it realized that it could not reach a decision in this very important case in less than nine months, it should have said so, and let the blame for delay rest elsewhere. The Supreme Court also has too much to do. Mr. Wickersham's report shows that it fell behind last year in its consideration of pending cases. Delay with respect to the Trust cases was caused by death. It is unfortunate that a decision in these cases was not made some months ago. Business interests of considerable importance have been waiting for it. Prompt action in the freight rate and Trust cases would have enabled the country to rely with more confidence, at the beginning of the new year, upon the support of its great crops and healthy banking institutions.

The Menace of Well Doing

We ordinarily think that in civilized communities one's life is not endangered by such peaceable habits as thrift, frugality and the desire to live quietly in his own home in the enjoyment of what he has accumulated thru his good habits; but in one very large community, at least, that is not the case, as is shown by the following clipping from the *Atlanta Constitution* of October 26:

"NO NEGROES WANTED IN THIS TERRITORY.

"Only three weeks old, but with several hundred members already enrolled, the Fourth Ward Improvement Club met last night at the old Grace Methodist Church with every member present filled with the idea that no more negroes should move into the section that has

been laid off as barred to them, and those there now should be gotten rid of as smoothly as possible.

"Dr. J. T. Holsey, a negro dentist, has purchased a house at 114 Irwin Street, and intends to move in today. The club, by a unanimous vote, adopted a resolution which was sent to Holsey by special messenger Tuesday night, telling him that he was not wanted and that he must stay out. According to the statement of several of the members, must means must, too. Negroes who are already within the restricted area will be worked on from time to time At first they will be asked to move, but in case of refusal the matter will come down to must again."

Here has been formed an association of white people whose intent is, as exprest in their own resolutions, to dispossess by threats and otherwise, if necessary, all negroes of their homes, which are somewhat better than the homes of most negroes and as good as the homes of some white folk. The negroes in question are those who, by saving, have been able to buy the homes of some of the more prosperous white folk who have desired to move into the newer and more fashionable sections of the city. These newer sections of Atlanta have so rapidly developed that in some cases whole streets of these better residences have fallen into the hands of the more prosperous negroes.

It might be supposed that this has happened because this property has had to be sold cheap and often at a sacrifice, but such is not the case; in point of fact, just the reverse is true. The houses sold to negroes have in every case brought a price much higher than they could bring in the open market. That fact is interesting as showing that the property is not obtained thru any favoritism or thru any desire of certain white folk who sell to spite those who do not sell, but merely thru ordinary business dealings and a desire for profits. Negroes do not desire these houses merely because they have been owned by white folk, or because they are near white folk. What negroes want is wholesome surroundings. They desire these houses because the city of Atlanta acts in the matter of sewerage and water mains as it does in the matter of public schools: it gives the white folk first choice and to negroes what is left; and often there is nothing left, as 3,000 negro children out of school and on the streets of Atlanta will testify, according to the published statement of a member of the Board of Education.

But the chief thing of interest in this case is this: Here we have a concrete illustration of the working out of the philosophy that has gained the allegiance of many of the well-meaning white people of the North, and that has made great headway, to the detriment of the negro, by its system of half truths. It says to the aspiring negroes: "Work, wait, acquire property, be patient, and live decently in your homes," and then as fast as he approaches this standard set him as a task, he is thrust back on account of color. Here, too, is an interesting comment on the spirit developed in a Christian Church—a spirit which is willing not only to refuse encouragement to negroes in their desire for better things, but one which is willing also, according to these resolutions, to intimidate and even to despoil by violence, if necessary, those negroes who have pushed forward to attain something of the fitness to which these same people have told them they must attain.

The action reported above was taken by a public meeting in a church, and will doubtless be effectual, for mobs—and this is a mob—are as effective as laws. But Baltimore has put the same cruel absurdity into a city ordinance, and forbids negroes to move into any street occupied chiefly by whites. In the City Council all the Democrats voted for it and all the Republicans against it, which proves that white opinion is divided. That at least is hopeful.

Compulsory Arbitration in France

THE French are a logical people. They think clearly and utter themselves clearly. They look for principles and find their applications. This is true in philosophy, in literature, in art, in physics and mechanics, and no less in sociology and politics.

It is to the basal principles and their application that M. Briand, formerly Socialist, perhaps so now, but now Prime Minister of France, calls attention in the bills which he has presented to the Legislative Assembly for the purpose of preventing general strikes, and

particularly those engaged in by employees of the public service corporations.

They are well called public service corporations. While all sorts of business serves the public in their way this is peculiarly the case with railways, telegraph, telephone, water and lighting companies. It is for this reason that many who are not Socialists, or think they are not, would have all such service belong to the state; and particularly has logical France seen the propriety of this. The nation or the municipalities are in France to a very large extent the owners of these utilities.

When the employees in such public service strike the damage and wrong to the public is much greater than when strikes occur in the field of manufactures; and if these public utilities are owned and conducted by the state a fresh question of obedience and loyalty comes in very much like that which would affect a strike in the army or navy, which would be treated as treason.

The general strike of last year cost France more than fifty-five million dollars, not to speak of the discomfort and the paralysis of business. The railroad service was interrupted; Paris was in darkness, and the telegraphs and telephones ceased for days to answer calls of the people. It might be for the benefit of the strikers, but surely not of the people. Somehow such strikes ought to be prevented, with due regard to those employed, but no less to the public at large.

The report accompanying the proposed French laws goes back to fundamental principles. It declares that the public good is the business of government, that public services have been instituted for the public good, and not for the private interests of those who conduct them; and it deduces the conclusion that to interrupt this purpose to the injury of the public is a crime. At the same time the rights of employees must be fully protected. They, too, have their personal rights, whether they serve the state or are employed by private corporations. Further, the state has a special right to interfere for their protection, because it has given them public service monopolies, and can therefore interfere to see that what it has given shall not be selfishly and cruelly abused.

From all this it follows that there must be no strikes; also that employees of public service corporations must have fair dealing in the interest of public good and the preservation of public order; and it further follows that it is the duty of the state to require and compel both attendance to the public welfare, and fair treatment of public servants. There is only one way to do this, and that is by arbitration; and there is only one way to make arbitration effective, and that is by making it compulsory.

This will be done in France. No more strikes in the public service will be allowed. France has had enough of them, with all their discomfort, their interruption of business, their violence and their murders. The people will be protected and the employees also. Compulsory arbitration will be fair to both. It has been tried in New Zealand and Australia and works well. They have it practically in Canada. Now France accepts it definitely, and one of these days our own conservative and dilatory country will follow after. We are still too much concerned in defending the claims of property, and too little in protecting the rights of men.

A Little Home

THE INDEPENDENT has fathered and fostered the "back to the land movement" from the outset, and now that the tide has risen high countryward, we are still in full sympathy. There is room enough in this world for every one to have a little home, and there is no well-rounded life possible apart from home. The trouble now is that a great many are going out from familiar town life, and investing in a few acres of land, without the least knowledge of land culture. They seem to imagine that country life is the simplest thing expressible; that all a farmer has to do is to walk across his field in the spring throwing handfuls of seed to right and left, and nature will do the rest. Of course there is such a thing as existing in the country without special knowledge of the work to be done, but every year makes it more

and more important to understand at least the outline of what is to be done in making a country home. Farmers are going to elbow each other more closely, and it is getting to be important to bring tillage up to maximum production.

Country life is necessarily a failure unless it be growth. Everything in the country grows, and so must the home maker allow his ideas and plans a chance for development. If he comes out with an architect's plan and a landscapist's picture, which he proposes to work out on the soil, he is cramped from the beginning. Be simple, but be thoughtful. Be a student of conditions, and a student of possibilities; then be teachable by events, and failure will be impossible. We do not say that five acres is enough, or that ten acres is enough, for every one. Two acres will be quite enough for the untrained land tiller. We must not go to the country to exploit wealth, or to expound knowledge and skill. One acre, well tilled, will be quite enough for most to begin with.

What must be avoided hereafter is a lot of half-tilled acres; farms of one hundred acres, with fifty of them untouched by the plow, if not gone to waste. Every thing must be brought to its maximum of production, in the future country home. We owe this to the other folk. Farming has become a social affair, in which no one can live to himself. The old-fashioned free-handed style of farming, under little obligation to the neighborhood or the town, or the public in general, has passed away.

Home-building should come first in thought and not market. It is to create, in its fullness, that which the city forbids, an organic life, in full relation to Nature, that you go into the country. Where the farm is made an attachment of Wall Street, and there is no thought in the tiller's mind but of dollars and cents, there is no gain whatever from the associations of country life. Simplify your ambition to the raising of all that you can consume. Begin by cutting off expenses, where you can substitute home raised products. When you have well settled into the charm of a complete garden and a complete orchard then look out for the surplus and the market.

Try the garden first, and always have the beginning at least of an orchard. It is easier for the city-bred person to comprehend vegetable growing than fruit growing and soil making. Small fruits pay quicker than orchard fruits, and for this reason, that you must have at once your strawberries, raspberries and blackberries; and beside these your plums and cherries. Within five years you can have all these well at work, contributing to family comfort, and helping to cover expenses. For apples and pears you must wait five or six years, and then be satisfied with a moderate increase of yields year by year. It will take about ten years of home-making, along the lines we are suggesting, before you will get fairly well surrounded with that sort of vegetable life which will give you rest. By rest we mean not cessation of labor, but the harder work of planning and preparing.

Special farming very rarely should be undertaken by the newcomer. We mean that he stands a very poor chance of learning enough about apple-growing or strawberry-growing, or dairying to make a success of it from the outset. This sort of farming also leaves out that which we have placed at the very threshold, raising everything that is needed for home consumption. Diversified farming is the only rule that is safe. Grow a little of many things, and do not rely upon one or two things alone. If you have berries, cherries, plums, apples, pears, with honey, you may lose two or more of them any year without disaster. The rest of your crop will give you abundance. In fact, it is rather desirable that, among a dozen sorts of fruits, not all shall crowd you in a single year. This is specially true when you have got by your home supply, and are beginning to raise for market.

By the tenth year you are well engaged in adding to the productive power of the country. Instead of a city consumer you are a country producer. You eat your own green peas and sweet corn; you pick your own Bartletts and barrel your own Baldwins. Now you are to send a surplus from your well-tilled acres, where your love as well as your toil have worked, to increase the supply that will ever be needed by the non-producers. Reduce their ranks as you will, we shall

need a race of producers, constantly on the increase, and doing their level best. There is nothing necessary at this point but honesty, industry and common sense —three very simple affairs, if folk only knew it.

But by this time the problem of help is all around you, in the garden and in the orchard and in the corn-field. The only solution that is coming for this problem of help is to grow it. It is to our children we must look to carry us thru the organization of a right sort of country home. They must learn that work and play are one, and that to achieve something in the field or the garden is as manly and as pleasant as to achieve it on the ball field. Something wrong has been going on, and we must right ourselves. Give the young folk a year or more in an agricultural college, and put them into the closest possible relation with that grand race of thinkers whose thoughts and deeds coincide. Where the agricultural college is out of the question, have your own shop and laboratory. Cutting off superfluities and waste, put what is gained thereby into tools. In one way and another manage to make a home in the country seem to your youngsters the most wonderful spot in the world.

If we are driven to tell how this can be done, we should say by adapting home life to the natural tendencies and temperaments of the young folk. A father who does not know the tastes of his boys, and will not help to develop any of them that are manly, deserves to be deserted to work out his problems alone. By all means make your country home, whether of two acres or of twenty, a thing of beauty as well as of profit. In reality nothing is lost financially by cultivating the beautiful. A little home, on a little land, well tilled, and well studied, that is all we want. When we get that we have got a co-operative family, and the children will not desert their parents. We do not go into the country to pile up wealth, but to have the beautiful and the good, and enough of it. The rich live in a maelstrom; notables are forgotten in a single generation; what we want is a large, sweet, full life. Home tells the whole story. The trouble is the cowardice that blushes because it cannot indulge itself in the useless or the injurious.

A Year for Optimists

It had been going on for a generation or more, they say, the wholesale purchase of the votes of farmers in Adams County and the counties adjacent in extreme southern Ohio. Hitherto no noise was made of it and the rest of the country knew nothing about it, but now the whole land rings with the disgrace. It is, then, no proof of an outbreak of great crime, but there is proof that the local conscience will stand it no longer, and hundreds of people who have sold their votes to both parties will be disfranchised in that dark corner of the State. It is a good sign, a healthier condition, as when Hercules had washed out the stables of Augeas. The past year has been marked by discoveries of political corruption, and punishment therefor, in Albany, Harrisburg, Pittsburgh, Springfield, Ill., and elsewhere, not to speak of enormous frauds on the United States Treasury by the Sugar Trust and individuals. All this is grist for the optimist. It shows that things that were bad are getting better, that laws that were disobeyed are being enforced. There will be wrongs enough left to keep the fighting optimists busy for some years yet, witness bloody strikes and lynchings.

Two Preachers

Curious, is it not, that the two deaths during the past year that have attracted the most attention abroad and in this country have been those of two preachers, Tolstoy and Mrs. Eddy? We do not include that of King Edward, for useful as he was his position was chiefly formal and decorative. Tolstoy gained his first fame as a writer of stories, but since "Anna Karenina" he has been a preacher, a voluminous preacher, and nothing else. The world has listened to him, only partly approved, but has been affected by his fundamental teaching of the Christian doctrine of the fatherhood of God and the brotherhood of man, even if it has not accepted his extreme applications thereof. The world is very much better for Tolstoy's teaching that war is a crime and that it is the business of government to protect and not to oppress its subjects. And Mrs. Eddy's life has not been wholly in vain. If she gave her followers a new Bible, she kept the

old Christian Scriptures. If speaking of her death we have said that Christian Science is neither Christian nor science, it was, like most epigrams, in need of limitation. Christian Science does hold to the essentials of Christianity, and adds somewhat more, and thus changes the balance of truth. It devotes itself too much to the side of sickness instead of health. And yet its followers, all taken out of the Churches, maintain a good Christian character. Besides, the power of auto-suggestion which they apply to disease is of very great value, and they have done well to emphasize it, even while discarding other methods of healing. The influence of Tolstoy and Mrs. Eddy will not fade for a generation or two.

A Local Valhalla

Park Commissioner Stover does well to plan for New York an outdoor gallery for statues or busts of distinguished Americans. He would have it extend along Riverside Park from 72d to 129th street, and make it one of the greatest outdoor galleries of the world, more majestic even than those of Greece and Rome. The first statue to be set up is that of the distinguished Catholic scholar Orestes A. Brownson, and it is to be followed by an extensive memorial to Robert Fulton. The danger in such an undertaking is that there will be no unity to it, but that, as the friends of a distinguished man wish to give his statue, the place for it may be chosen with no proper reference to leaving room for those that may follow, and that the result may be an irregular, ragged, and ineffective display. We doubt if to the ordinary visitor the effect of the famous series of outdoor monuments at Berlin, devoted to Prussian royalties, is quite satisfactory. Probably the most magnificent monument of the sort ever constructed was that at Palmyra, the ruins of which surpass for beauty those of any other city in the world. There are still to be seen long colonnades lining the way to the central square, and each column was devoted to the memory of some citizen who had attained distinction. A shelf, or postament, attached to the column gave space for the bust, while under it remains still the inscription giving his name and honors. What could we have better than a long, covered colonnade that would be itself a thing of beauty, and which would provide a place to commemorate citizens of local distinction, while more notable provision might be made for those of national fame?

Philippine Schools

In the generally admirable articles in the *London Times* reviewing the effect of American occupation of the Philippines great credit is given to the excellent work done by our officials, and particularly in education. The following paragraph, however, represents a view quite too common in this country also :

> "The tendency now is to give much larger attention than heretofore to manual and technical training in the schools. It is not exhilarating to listen to a class of Filipino boys and girls in a provincial high school translating Cæsar into English which is pronounced worse than the Latin itself, or struggling with algebra or systematic botany; but it is difficult not to be impressed by what one sees in any school wood-working or iron-working department."

Doubtless the correspondent would send his own boy to Eton or Harrow to translate Cæsar into English and to struggle with algebra, and why not the bright children of well-to-do Filipino families? As soon as his boy has learned to read and got his multiplication table he does not finish his education at the carpenter's bench and the forge. Is not the future of the Filipinos, or any other race dependent quite as much on brain culture as on hand training? It is splendid to have the great mass of ordinary and unambitious youth taught useful crafts, but for the progress of civilization it is much more important that the elect tenth should have that wider education which will fit them to be leaders. This is not for all. It hardly pays to give a thousand-dollar education to a ten-dollar boy.

Bread from Cotton-Seed

The United States Department of Agriculture has under test samples of bread, cake and biscuit made of cotton-seed meal. It is proposed to make this a thoroly scientific examination, so that the people will know for a certainty whether we have a valuable substitute for wheat flour. The experiments made in Texas were very favorable, but it is desired to

have the endorsement of the very highest authorities before much is said about this matter of a new food. The object, of course, is not so much to displace wheat or rye or corn, especially wheat, as it is to find a cheap substitute for meat and bread. It is said that the stock of cotton-seed has been very much reduced this year by the frost of last May, but the planters will generally be able to supply a large amount of this new food product, provided the scientists pronounce favorably on its value. We get at the same time reports from France of a new and very important use of the sugar beet—nothing less than the manufacture from it of a very good bread flour. This flour is already being turned out in considerable quantities by a factory at Suresnes. Beets, to begin with, are about seventy-two per cent. of water, and this must be removed by evaporation. The dried material contains over seventy per cent. of sugar. This, of course makes a very sweet flour, adapted to making cakes and puddings. It contains over eighty per cent. of pure nutriment. It is not only very nutritious, but guaranteed to be germ-free, to start with, by reason of the high temperature to which the raw material has been exposed. Now let us hear further concerning that flour from bananas which has been repeatedly promised us. The problem before civilized people is not only how to increase wheat production, but how to secure substitutes for this standard cereal, in bread making. In some way we must increase while we cheapen the food of the people.

Scribner's Magazine, in its current issue, gives space to Price Collier (listed in "Who's Who" as being "in Unitarian ministry nine years") to utter the following ethical concept:

> "War is the essential condition of all life whether animal, vegetable, individual or national. The cow and the lap dog are fruits of peace, useful and ornamental, if you like, but not sufficient, not ideal."

Mr. Collier should have stated the corollaries of this proposition. Generalizations are generally too general, but perhaps this will do: Mutual aid is never a factor in evolution, as that impossible old anarchist, Prince Kropotkin, tried to prove. Peace is never accompanied by prosperity, power and happiness as the history of the United States and Australia clearly shows. The fighting cock, the tiger, the weazel and Napoleon, all fruits of war, if you please, are, tho neither useful nor ornamental, quite sufficient and ideal—i. e., for several centuries ago.

If either the Spanish Senate or its House of Deputies has any representative character, then the people are overwhelmingly with the Government in its limitation of the activity of the religious orders. By a vote of 149 to 58 the Senate passed the so-called Padlock Bill, and last week the Deputies voted for the same by the overwhelming majority of 108 to 20. It was opposed bitterly by the Carlists and Clericals, who are as close together as the bishops and the breweries in England. This Padlock law forbids the introduction of any more monastic institutions for two years. The Clericals call this a violation of the Concordat, while the Spaniards' interpretation sees no violation of it.

The London *Daily Graphic* gives us a list of articles received by post. This list includes apples, chickens, all sorts of meats, ice cream, and many more table articles, besides what cannot be eaten. From another list we discover a baby carried in the same way, and quite safely. The United States will not send any parcel by mail that weighs over four pounds, and that would exclude not only the babies, but a good sized dinner. We should have to pay 16 cents a pound for a fish costing 12 cents, and everything else in the same ratio.

Free trade is helping the Philippines; has nearly doubled both their exports and imports the past year. Canada wants it with the United States, and the United States wants it, or as near it as possible, with Canada. Who objects?

The negress said that old maids are happy enough when they "quits struggling." A woman said that when married she did not know as she was any happier, but she was better satisfied.

And Dr. Cook came back on the "George Washington"!

Insurance

American Life-Waste

In a statement prepared by E. E. Rittenhouse, president of the Provident Savings Life Assurance Society of New York, some very interesting facts and figures are presented. The announcement that during the coming year the entire population of North Dakota were to die of yellow fever, or other avoidable disease, would shock the civilized world, and touch the hearts and purses of millions of generous and sympathetic people, and the imperative duty of saving the people of the threatened State would be promptly performed. And yet, scattered thruout our country, human lives equaling the population of that State are annually sacrificed thru ignorance and neglect of reasonable and known preventive measures.

The destruction of an American battleship and crew staggered the nation and precipitated the war with Spain. Preventable disease and accident—our perpetual enemies—destroy every day American lives equaling the crews of two battleships. They destroy every three months American lives exceeding the combined forces of the army and navy of the United States. They destroy in a year American lives exceeding the number lost in all our wars since the Declaration of Independence. But the annual destruction of this vast army of American lives neither staggers the nation nor precipitates a war for their protection. At the present death rate from preventable cause over 6,000,000 lives will be needlessly lost in the United States during the next ten years.

Our national Congress has been as indifferent to life waste as the lawmakers of our States and municipalities. Of the enormous total expenditures authorized by Congress last year, amounting to $1,122,000,000, but $15,000,000, or 1.3 per cent. of the total, was used for the protection of the public health. The State of New York spends for the protection of game, fish and forests about four times more than it does for the State Health Department. Our people face commercial and political problems with tremendous earnestness and determination; why should they turn their backs upon this vital problem of human life-waste? Charles E. Hughes, ex-Governor of New York, well expresses the attitude of the public on this question: "It is only because we are accustomed to this waste of life and are prone to think it is one of the dispensations of Providence that we go on about our business, little thinking of the preventive measures that are possible."

No better field is offered for the research of scientists, the bequest of money and the subject of improvement by legislation.

Men and women are coming more and more into active competition in all branches of modern industry. Within a comparatively short time many women seeking new channels in which to provide for individual maintenance are becoming life insurance agents. One case known to the writer was that of a woman who had achieved considerable success as a retail piano saleswoman, but who turned to life insurance as offering larger opportunities. She was very successful in underwriting. Many other women who have made similar ventures have also found that it is easier for them to reach women than it is for their masculine competitors. With women as with men, however, equipment counts for much, and a woman to be successful must be able to meet the exacting requirements of the business. Women of large incomes who take advantage of the protection afforded by life insurance frequently, if not always, prefer to contract for the life insurance they require thru keen women agents. Life insurance as a career for women is not to be reckoned as a refuge for those who have failed in everything else, but as a profession in which every ability, every energy and all skill may be used to the highest possible advantage.

Financial

The Monetary Commission

THE National Monetary Commission was created by an act approved in May, 1908, which said that the commission's duty should be "to report to Congress at the earliest date practicable what changes are necessary or desirable in the monetary system of the United States, or in the laws relating to banking and currency." Two years and a half have passed. The commission has made no report. It is asserted that none will be made during the present session of Congress. The chairman recently remarked that he thought one could be presented about a year hence. According to the dispatches of a careful correspondent at Washington, a dissatisfied member of the commission says that at none of its sessions has "any proposition relating to banking in the way of a general conclusion, or a basis for a report," been submitted or taken up for discussion. It is also asserted that the commission has declined to make a recommendation as to any one of a few changes which the Treasury Department desires to have made in the administrative provisions of the banking statutes or the laws relating to bond issues and the circulation tax. This may account for some signs of impatience shown in that part of Secretary MacVeagh's recent annual report which spoke of currency reform legislation.

After March 4, the controlling minds of the commission will be those of members of Congress who are retiring from legislative service or who have been elected by their constituents to stay at home. Messrs. Aldrich, Hale, Burrows and Money are going out of the Senate. Mr. Teller, now in his eighty-first year, has been out of the Senate for some time, and Mr. Bonynge, also of Colorado, has ceased to be a member of the House. Secretary Knox has plenty of work in the State Department. Senator Daniel and Representative Overstreet are dead. It is held, we understand, that the law does not provide for the appointment of men to succeed them. The remaining members are Senators Burton and Bailey, and Representatives Burgess, Padgett, Pujo, Smith, Vreeland and Weeks. It is expected that Messrs. Aldrich, Hale, Burrows, Money and Teller will stay in the commission. Membership carries a salary equal to that of a Senator or Representative, with an allowance for clerks or secretaries. If the members make no reports or recommendations, their failure to do so tends to prevent independent action in Congress or the presentation of recommendations by the President. It is not a commission of ideal excellence, and its record thus far does not promise any considerable achievement in the future.

The Stock Market

LAST week's stock market was notably dull, transactions on the New York Exchange amounting to only 1,418,180 shares, or less than half of the number reported in the corresponding week of 1909. There was little change in prices. A majority of the active issues showed slight declines. Nearly 60 per cent. of the week's business was confined to Reading, Steel and Union Pacific. An improved demand for bonds was noted, owing probably to some anticipation of the approaching release of January dividends. Retail holiday trade thruout the country was, as a rule, active and generally not below last year's level, but reports of production were not encouraging. It was known that in the steel trade expectation of lower prices dominated and restricted the market, and that the New England cotton manufacturers, at the meeting of the Arkwright Club, had decided to curtail output if the situation should not improve.

....The *Journal of Commerce* publishes figures showing that in the last ten years the street and steam railroad companies have expended $549,784,000 in improving the transportation facilities of New York City.
